Mr. Loomis arose again to explain that some of the gentlemen probably misinterpreted his statement, that he believed in educating the farmers, the chief patrons of the mail order houses. In his remarks he said, "The sale of agricultural implements is possibly affected about as little as any line of goods, while with vehicles, it is quite different and the catalogue house sales on these are very large. Farmer demand standard implements, which are not listed by the catalogue houses, also their necessity for repairs impels them to buy the implements sold by the local dealer.

Mr. Hallberg expressed himself that the educational campaign should cover all the classes as follows: Manufacturers, jobbers, retailers and consumers, which are the factors in the old established system of merchandising. To eliminate any of these will revolutionize the merchandisng system of the country. He said: "I believe farmers read more than any other class. I believe they can be converted to the idea that if they buy their supplies from the large catalogue houses, they will, eventually, eliminate the country retail merchant, which will be a calamity to the country communities and will be instrumental in establishing a few large mail order houses, which will have a practcal monopoly of the merchandising of the country." As an illustration," Mr. Hallberg said, "Two million people in Chicago are largely served by a few stores on State street, so it may transpire that the ten millions of farmers and other millions of consumers in the country towns and small cities will, in time, be supplied by a few large catalogue houses, and when the country merchants are eliminated, there will be no competition, except such as these mail order houses may have amongst themselves, and there will be no check on these houses charging unfairly high prices."

Mr. Foster spoke as follows:

"In our Retail Furniture Association, State and National, we have pretty effectually knocked out the catalogue and mail order houses, by educating our members to discriminate in their purchases in favor of such manufacturers as do not sell mail order houses or allow them to catalogue their goods. We have published a booklet, which we call our 'Roll of Honor,' which we have supplied to all our members. This booklet contains the names of such manufacturers as have expressed to us their intention not to sell mail order houses and not to retail, nor permit their catalogues to be used for retailing by "curbstone brokers," who carry no stock and have no place of business. Ninety-five per cent of all furniture manufacturers of the country are with us in this fight, and the remaining five per cent are principally composed of small and weak concerns, which cut but little figure in the trade. From these booklets, a buyer can, in an instant, inform himself as to whether the particular house represented by any particular salesman, is or is not on the 'Honor Roll,' and govern himself accordingly. We find our plan is very effective. We have shut out of the mail order catalogues nearly all the well made furniture of the country, and that they are having to send their customers poorly made stuff, that is cheaply packed by the factories when shipped, is proven by the statement recently made here in Chicago, at a convention of freight agents of various railroads—that ninety per cent of all the claims for furniture damaged in transit came from the mail order shipments. We should embrace every plan to educate the farmer and other customers of the mail order houses, and there is no means more effective than a farm paper, devoted to the idea of the equity system of merchandising, as UP-TO-DATE FARMING, represented here today by Mr. Everitt. Let us encourage him in every way we can. In many towns in Indiana we have strong retail merchants associations. These should encourage and assist in the distribution of Mr. Everitt's paper. Wherever possible, they should make an appropriation from their treasury to assist in a canvass for subscribers. Let a farmer read UP-TO-DATE FARMING for six months or a year, and he will come to see the inestimable value of his home market to him, and of the damage he is inflicting on his own interests when he sends his money out of his own town to purchase goods of these mail order concerns."

Mr. Corey, in considering the matter of support for the proposed campaign, said as follows: "We have in our Association a large number of members who do publicity advertising, but in the past they have not advertised in farm papers, because of the fact that farm papers uniformly carried the advertising of the mail order houses. These members will advertise in a paper, such as UP-TO-DATE FARMING proposes to be in this campaign, and thus support the movement. Also, in my locality we can hire a man and send him out through the country to solicit subscribers, even though we may offer the paper to the farmers at a special price and our Association make up the difference to the publisher."

At this juncture, Mr. Everitt asked permission to submit some resolutions. This permission being granted, the following preamble and resolutions were read:

RESOLUTIONS

Whereas.. the direct selling system of merchandising, also called the mail order and catalogue house system, has developed to enormous proportions and is still increasing at a remarkable rate, and

Whereas, there have been, and are, many influences at work to promote this system, among which we mention: Some of the magazines, all of the mail order papers, and many of the farm papers. These have been a tremendous educational force in favor of the mail order system of buying, and

Whereas, we believe the system is wrong, and against the best interests of the purchasers, chiefly farmers, and has done great injury to establish business houses, manufacturers, distributors, retail merchants and country communities, and

Whereas, we believe if the tendency to direct selling it not curbed, the old system of selling and distribution will be greatly weakened and in some lines, may come to to an end, the result will be the closing of thousands of retail stores, a great reduction in volume of business for those that remain, the dismissal of thousands of clerks and traveling men, and thousands of manufacturers will be forced to adopt the new, or mail order, system. Also the merchandising of the country will then be in the hands of a few houses so powerful that they can make prices without regard to equity or the interests of consumers, and

Whereas, we believe there is no way to curb, curtail or eliminate the new and dangerous system except to oppose another educational force against it.

Therefore, be it Resolved:

First. That we will give encouragement and such support as is possible to every worthy movement that has for its object the curtailment of the catalogue house evil and to deliver the trade back to the country merchants at equitable prices and terms made by such merchants.

Second. Since we believe a remedy can only come through wise education directed to the patrons of the mail order houses, we commend all papers and institutions that aid in this education and recommend them for the support of merchants and manufacturers. And particularly do we approve of the course pursued by the publisher of Up-to-Date Farming, and the campaign this paper is conducting with manufacturers, merchants, country newspapers, the trade press and farmers, to promote home trade.

Fourth. That we recommend all Merchant's and Manufacturer's Associations to subscribe for Up-to-Date Farming for all their members, or, when this is impracticable, we recommend that the officers of such Associations urge their members, by letters and otherwise, to subscribe for it, so they may learn of this movement and help to make it successful.

Fifth. That we appeal to country merchants to interest themselves more in farmers and their problems, cultivate their friendship and promote a condition of co-operation between the farmers and merchants for good markets for farm crops and home trade, which will result in building up and enriching country communities.

Sixth. That the trade papers should join in this campaign and educate the merchants so the campaign may be promoted by their intelligent co-operation.

Seventh. That the representatives of each Association represented here will report these resolutions and other acts of this meeting to his particular Executive Committee, or to the next general convention of his Association and recommend owcial endorsement of this movement.

Eighth. That the motto shall be, until the Equity System of Merchandising is established, "Equity in all the Business Relations of Life," and we recommend each National Association to endorse and confirm the action of this meeting in the selection of a motto.

Ninth. And we further select as our slogan, or campaign cry, these words, "All for Home," and we recommend that each National Association here represented will endorse our action and urge their members to give the motto and the campaign cry, as much publicity as possible by words and print, in their advertisements, circulars and catalogues.

Mr. Loomis moved the adoption of the Resolutions.

Seconded.

After a general discussion, Mr. Loomis withdrew his motion and substituted the following:

"We, the parties here present, recommend that the Resolutions read be referred to our respective Associations and further we recommend their favorable consideration."

The motion was seconded and carried.

Our object in this meeting we have stated, but state it again. It was to enlist the co-operation of the merchants of America in our movement that means more to all the people than any movement since the christian era began. We are extremely gratified at the results. Think of **eight great merchants' and manufacturers' associations** being represented in this meeting and anxious to co-operate with farmers to **secure Equity in all the business relations of life!** These associations have a membership of about 50,000 merchants and these merchants now will be glad to aid our organizers in securing meetings, halls to meet in, and will join the organization for co-operation to build up and enrich country communties.

Also think of the great opportunity that is now present. Does not this hearty response by nearly all the national merchants associations of the country indicate that farmers should forever be done with farmers' stores, stick to their own business and let other people have theirs? If the old grange and allaince secured millions of members when they fought merchants and were fought at every turn by merchants, why should not our American Society of Equity soon have mil-

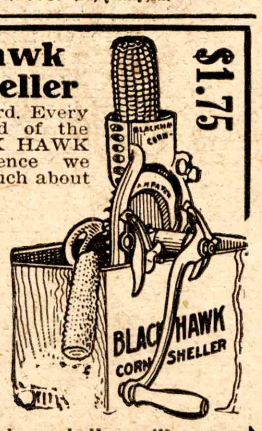
Black Hawk Corn Sheller

It is the standard. Every body has heard of the famous BLACK HAWK SHELLER, hence we need not say much about them. This is absolutely the highest grade sheller on the market. Made of best material. Separates cobs from corn. Runs easy. Practically indestructable. Our *Special Price* only **$1.75**



A good first-class sheller will save its cost in a week's use.

O. K. SEED STORE, Indianapolis

Every farmer should take an interest in the National Convention beginning October 27, 1908, at Indianapolis, Ind. Prices of all farm crops will be agreed upon.

The Farmer

Between the rising and the setting sun he stands,
A Silhouette against a background sky,
He holds the pulse of ages in his hands,
He times the heart-beats of eternity.
He cradles with his grain the lives of men;
The sinews and the muscles and the thought
Which guide the court, the camp, the mart, the pen, by him are wrought.
—*H. F. Blodgett.*

AUGUST CROP REPORT

The August report of the Department of Agriculture gives the corn acreage for this year as normal, but the condition is slightly below the ten year average. By States in the corn belt the condition is given as folows: Illinois, 77 per cent; Iowa, 84; Missouri 74; Nebraska, 86; Kansas, 76; Oklahoma, 80; Indiana, 75; Ohio, 85. It will be seen that every one of these States is low. Some of the Southern States make a better showing, North Carolina giving as high as 91, but these States do not greatly affect the general crop.

The average production of winter wheat, harvest of 1908, is found to be 14.3 bushels per acre against 14.6 last year. The total crop is given at 425,940,000 bushels against 409,442,000 bushels for the crop of last year. The condition of the spring wheat crop is only 80.7 per cent against 89.4 per cent a month ago. This would seem to indicate a smalled crop than last year.

The condition of the oat crop is put at 76.8 per cent against 85.7 per cent a month ago, which indicates a loss of nearly 9 per cent during July.

The condition of potatoes is below that of last year, not a single section showing up to that of last year, and not one up to the ten year average.

The August condition of tobacco is a fraction above that of last August, but it lost a point during July.

POTATOES AND TOBACCO

In a recent issue of the Lexington, Kentucky, Herald appeared the following article. It strikes us as being suggestive and good. Blue grass soil is undoubtedly productive of potatoes, and when the farmers of that section learn to fertilize for potatoes, to plant, cultivate, handle and market as is done in the regions now devoted to that crop, we are sure yield and quality will be entirely satisfactory. And we believe Kentucky may produce potatoes without coming into serious competition with the present producing regions. It is quite distant from the present regions of commercial production, and this is emphasized when we say we know of places not two hundred miles from Kentucky where potatoes are now selling in a small way at three cents per pound or at from $1.00 to $1.50 per bushel.

The Herald article follows:

In this section of the Blue Grass, it is said, there are more than three times as many acres planted in potatoes than have ever been before. It seems probable that Lexington, with its many shipping facilities, is destined to become one of the leading potato markets of the world. The fertile soil here is in many ways specialy suited to the growth of potatoes.

Tobacco has for many years been the chief source of income for the farmers in this section, but since the recent tobacco troubles many have planted potatoes in the ground which had been previously used for tobacco. This is thought by many dealers and farmers to be a wise step and one that will for good change the crops of the Blue Grass. Last season was the most profitable for potatoe raisers for many years. A few farmers broke away from the tobacco crop last year and the crop was so profitable that many more decided to try it this season. This would seem to disprove the old saying that a Blue Grass farmer cannot live save for raising tobacco, is untrue.

Potato raising should be more profitable because two crops can be planted in one year to only one of tobacco, and since there are no troubles in the potato market at present a ready sale can be secured for the product.

This would have been the boom year for the Blue Grass section had the weather conditions been in any way favorable. But even as it is all hopes have not been yet given up. There are about 50,000 acres in this immediate section planted in potatoes, as compared with about 15,000 of last year, according to local dealers. Only about from 25 to 100 bushels an acre, it is estimated, will be the general run of the crops, but in Woodford and Franklin counties the crops are perhaps better and more per acre may be expected. The vines are thick and luxuriant, but there are not a great many potatoes to the hill.

For the last two weeks many potatoes have been coming into the local markets and have been selling for good prices. This is the first crop and is mostly consumed in Lexington.

The second crop is now being planted and it is said this crop will surpass the first one. This crop will not be brought in until after the first frost and will bring about the same price, that is from 65 to 70 cents per bushel. Seed for the second planting is in and now sells for $4.50 per barrel.

The second crop will find markets in Cincinnati, Philadelphia, New Orleans and Dayton, as well as in Lexington. The wholesale dealers here have already received extensive orders from those cities for large consignments of potatoes this fall. There will be many bushels brought in, the number of which cannot yet be even approximately estimated.

Exploiter—Look at the doughnut, not at the hole.

Farmer—Yes, but we must consider the size of the hole. It is what we often get when we raise big crops.

The Roofing Proposition

Is prepared roofing all right? How does it compare with shingles when used in Nebraska? I am told that the wind plays smash with this kind of roofing here in the West. Tell us something about it.—T. H. D., David City, Neb.

The cheap, thin, poor roofing is dear at any price, and we would not advise its use. The good, heavy roofing is all right and you can use it without fear of its blowing away or leaking if you use even ordinary care in putting it on. There is roofing on the market that is not much thicker than common paper, and this we advise everybody to pass up. The heavy mineral roofing that does not need painting when put on is the kind to get. It will cost you a little more at first, but in after years you will be glad that you invested in that kind. "Amatite" will give good results used on any roof no matter of what pitch. It requires no paint or asphalt dressing, so can be used on a steep roof. The old time shingles made the best roof we know of aside from slate, is costly, but that kind of shingles are gone with the white pine lumber. The shingles that are furnished today are very unsatisfactory and are getting worse all the time. We know of roofs that have been covered with this "Amatite" for a long time and it is giving the best of results. It is easy to put on and easy to haul out from town. Try it on the next building you put up and you will not be disappointed with the results. *Farm Progress.*

You can obtain a free sample of Amatite by addressing the nearest office of the manufacturers, The Barrett Manufacturing Co., at New York, Chicago, Cleveland, Allegheny, Kansas City, St. Louis, Boston, Minneapolis, Philadelphia, New Orleans or Cincinnati.

How the Farmer Can Save Money

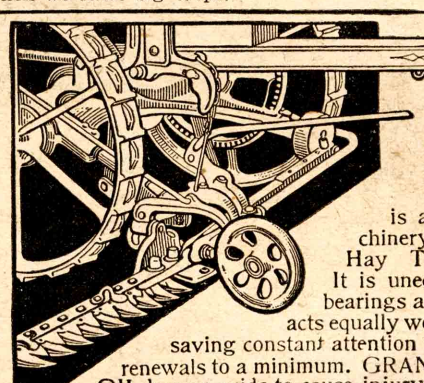
Those who are always on the lookout for opportunities to increase their profits, have realized for some time that the old wooden-wheeled farm wagon is a thing of the past, and that the low-down steel-wheel wagon is the kind that will save money and horse flesh.

So that every farmer who reads this paper will readily understand how much labor and money can be saved by the use of low-down wagons with wide steel tires, and how little these improvements cost. The Empire Mfg. Company, Box 68AH, Quincy, Ill., have issued a little book, giving some astonishing facts of the greatest value to everyone who uses a wagon or needs a wagon.

The Empire Mfg. Company will gladly send you one of their books. Write today. It will be worth your while.

The Tubular Separator claims a great advantage over others in the fact that the vital working parts are much simpler than others. The parts are fewer and much easier cleaned. They offer to prove its superiority by a test in your own dairy without cost to you. Better take them up on this proposition if you have three or more cows. Write for catalog No. 136 and address Sharples Separator Co., W. Chester, Pa.

The Heider Mfg. Co., Dept. 23, Carroll, Iowa, make two, three, four and five horse power eveners for Sulky, Gang and Disc plows. They are sold by good dealers. If yours can't supply write direct to the manufacturers. Heider Eveners are standard—there are none better made.



Granite Harvester Oil

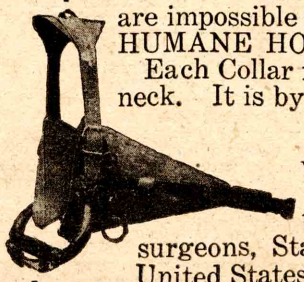
is a superior lubricant for heavy farm machinery and for use on Harvesting Machines, Hay Tedders, Mowers, Feed Cutters, etc. It is unequalled especially if bearings are loose or worn. It acts equally well on light machines, saving constant attention to parts and reduces renewals to a minimum. GRANITE HARVESTER OIL has no acids to cause injury and is but slightly affected by extremes of temperature. A team will work longer and easier when it is used, because of the lessened friction. It will not run off the bearings and never gums or turns rancid.

It is undoubtedly the best all around farm oil.

All dealers in farm supplies sell it.

STANDARD OIL COMPANY
(Incorporated)

SORE NECKS OR SHOULDERS



are impossible if you work your horses in the "WHIPPLE" HUMANE HORSE COLLAR.

Each Collar fits all horses regardless of size or shape of neck. It is by far the cheapest Collar to use.

FIFTEEN DAYS TRIAL

when used on sore necks or shoulders.

We guarantee to cure the horses while they work. Recommended by all veterinary surgeons, State Experimental Farms and used by the United States Government. **Write for prices and testimonials today**

HUMANE HORSE COLLAR COMPANY, 1916 So. 13th St., Omaha, Neb.

BROOM CORN

In a few and rather widely separated areas in this country, broom corn is an important crop. It is not a crop whose production we very much admire, but those who understand it, sometimes find it quite profitable. The last year or so the supply seems to have fallen short of the demand, and for that reason, we give the following article on the cultivation of broom corn, as given by R. B. Rushing in the Farmers Voice:

The preparation of the soil for broom corn should have careful attention; all stalks and other field rubbish should be removed; the ground should be broken up as soon as the field is in proper condition to work; plow the same depth as for corn, let it stand until about the 20th of May, then disc and give vigorous harrowing. If it should be rough and cloddy roll until it is fine and well broken up. It should be prepared as well or better than for a seed bed for wheat.

The seed should be thoroughly cleaned, using about one bushel to 15 acres. Adjust the planter 3 feet 4 inches wide and drill from 60 to 75 seeds to the rod or the row.

It should be planted from 1 and 1½ inches to 2 inches in depth.

As soon as the little plants appear above the ground it should be rolled if the surface is dry; when it is in such condition cultivate it with the lower surface cultivator, but if the surface is damp, use the eagle claw cultivator.

A good shed should be made before the harvest begins. A shed 24 feet by 48 feet will usually hold 25 or 30 acres of brush as it usually requires three acres for a ton. Strips to support the shelves should be 1x3 inches, nailed three inches apart; this will make the shelves six inches apart. Shelving slats are 1x2.

The proper time to harvest is when it is in full bloom; if harvesting is delayed the fiber is injured and the brush retains a bad color. When the brush is in condition as stated above, break it crosswise of the row making a complete table of convenient height to the breaker; the stems should be six inches long after it is cut and laid on the table, laying off every third table for a drive table. After it is well cured, it is ready to bale.

By the use of the baler it is made into neat bales weighing about 300 pounds.

DO FANNING MILLS PAY

So far as we are able to learn, no one has kept a close account to that we can tell actually whether it pays to keep a fanning mill on the farm. We are convinced that it pays without having gone to the trouble to keep an accurate account of the comparative difference in cleaned and uncleaned seed, says a writer in one of our contemporaries.

We have had three different fanning mills on our farm in the past thirty years, and one would think that they had been very much used to wear out three mills in that time. Not so, for it was not altogether use that brought on wear and final disuse. We fell into the practice of loaning our fanning mill many years ago when the country was new, and most people were poor, and we never felt that we were in a position to refuse it to any neighbor who had a desire to grow better grain by cleaning his seed. It was hauling the mill about over frozen and rough roads that caused them soon to go to pieces. The first mill we bought would not do as good work as we desired and we bought another that would more easily take chess and other foreign seeds out of winter wheat, hence we bought another, and for a while we loaned the old mill. Neighbors soon got on to the fact that the new mill was the best for cleaning, but it was not so substantially built, and soon went to pieces hauling it about over the roads.

We have tried cleaning grain for the market and found that it paid when certain market conditions prevailed. If the elevator man had a number of bins and was buying wheat according to grade, we found that it paid us to clean our wheat and bring it to grade, but when the grain buyer would pay as much for dirty grain as he would for that which had been cleaned, we felt that it did not pay us to clean the grain.

Aside from cleaning the market grain we have felt that it always pays to clean the seed we sow, and by keeping up a system of this kind there will be less use for cleaning the market grain. It stands to reason that no one is benefited in the least by sowing broken, shriveled or sprouted grains; that straws, sticks and chaff interfere with the drill's doing good work and that all foul seed will interfere with good crops and unmerchantable grain. We have found in our experience that the grain as it comes from the threshing machine will yield about one-fourth of the product that is not fit for seeding purposes. Therefore the farmer who sows about sixty bushels of seed throws away about fifteen bushels of grain that may as well have been placed on the market or fed to stock on the farm. Could fifteen bushels of good seed have been sown in its stead the improvement in the crop would have more than paid for a mill. Considering that the lifetime of a good mill (not loaned) would be twenty years, it sems to be a good investment.

We feel safe in saying that not much grain is grown but what contains many seeds of noxious and dangerous weeds. This of itself is sufficient reason for cleaning the seed grown, to say nothing of the many produce inferior stalke which invite disease and shortage of crop.

Note.—UP-TO-DATE FARMING fully endorses the above, and urges it readers to secure a good fanning mill at once, for no piece of machinery will pay better. In this connection, we urge our readers to write to Johnson & Field Mfg. Co., Racine, Wis., who manufacture the famous Racine fanning mill, and learn how they can obtain one of these excellent mills without costing a dollar. The Racine mill separates barley and oats from wheat, and barley from oats. It cleans all kinds of grass seed and has a bagging attachment.)

The Chatham Fanning Mill, manufactured at Detroit, Mich., also meets all the requirements of the farmer.

Before You Buy Your New Buggy

Write to THE OHIO CARRIAGE MFG. CO., for their new 1908 192-page Vehicle and Harness Catalogue.

You don't have to buy your buggy from them if you don't want to, and your sending for their catalogue will not obligate you to buy their goods, but if you want to get posted, if you want to find out just how buggies are made, what they are made of and the lowest price at which they can be sold.

Possibly you have, in the past, been simply picking out the kind of buggy that appealed to you as something pretty and have paid the price asked for it without any quibbling over it—but you certainly have made a mistake doing this.

This large catalogue will quote you the prices at which buggies should be sold. It can do no harm and will only cost you a penny for a postal or a two-cent stamp to write for this catalogue. If you do not want to buy from this company after you have received their catalogue, you can place your order anywhere you please and wherever, in your opinion, you will get the best value for your money, but be fair to yourself fully on all prices before you do buy.

Address THE OHIO CARRIAGE MFG. CO., H. C. Phelps, Pres., Station 99, Columbus, Ohio.

Arizona, a Wonderful Field for Farmers

The United States government is building a $5,000,000 dam and reservoir in Arizona which will assure a never-failing water supply for some of the richest soil in the world. Arizona, once supposed to be a desesrt waste, contains land whose productiveness is almost belond belief. Not only do the Arizont farmers get tremendous big crops but they get what is more important, the earlymarket and fancyprices.

The Salt River Valley in Arizona affords opportunities to the farmer, investor and homeseeker that have never been surpassed in the country's history. This valley comprises about half million acres of very fertile land. The climate is mild, dry and free from snow, ice, cold winds and violent storms. No cyclones, sunstrokes or frostbites. It is difficult to make an outsider believe that for only a month or two vegetation is at a standstill, and that from four to six hay crops can be harvested during the season. Yet this is true.

The Roosevelt Dam will give a continuous supply of water for about 200,000 acres of land. The land to be irrigated lies within a radius of 20 miles around Phoenix—the Salt River Valley.

Stretching behind the dam will be the largest artificial body of water in the world, a lake 25 miles long, with an average width of 1½ miles,sufficient water to cover 1,300,000 acres one foot deep. The cost wil be $3,850,000.

A $2000.00 PRIZE For Only $1.00

A $2000 AUTOMOBILE OR $2000 IN CASH

Which do you want? Try for it. Any man, woman, boy or girl who can read or write may win this magnificent $2000 PRIZE with but a small effort. TRY FOR IT!

$2000 cash, if you want it—$1.00, that's all the money it will cost you. Think of it, a $2000 prize for $1.00. That's just exactly what this advertisement means. Read every word and accept at once. You have a chance to get this $2000 prize for $1.00 and don't miss it.

This is the famous **WINTON AUTOMOBILE** one of the very best touring cars in America, **and remember,** if you win this automobile and would rather have the cash we will agree to sell it for you and send you the cash, a pretty nice bundle of money, too, for you to get **FREE.**

We are the publishers of **FARM PRESS** of Chicago, a big paper with nearly 800,000 readers. The biggest, brightest and best farm, home, garden and story magazine published in the great Middle West. We are determined to advertise it the world over and spare no expense, hence this wonderful free prize offer, where you can actually get this magnificent $2000 automobile for $1.00, or the cash instead if you want it. Think of it!

HERE'S HOW TO GET IT

Just send us one dollar for a special five year's subscription to **FARM PRESS** of Chicago, for yourself, or a friend, or one year each to five friends, then take the **following letters only,** found in the word

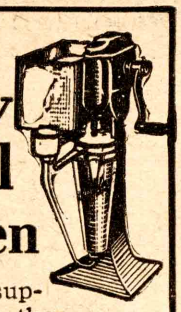
A-U-T-O-M-O-B-I-L-E

Make two hundred correct words, no more, which are found in any standard dictionary of the English language. The one person whose 200 words contain the smallest **total number** of letters will receive this magnificent $2000 automobile, or the cash. In case of a tie, which is almost out of the question, the cash value of the prize will be equally divided. This is positively all there is to do in this contest. Be sure to send in your dollar **at once,** and we will send you word blanks and detailed information by return mail. If you hurry now we will give you plenty of time to make up your list of words. The thing to do is to get entered and that quickly. Isn't it worth trying for? Whatever you do don't wait. Send the dollar now and get full instructions to help you.

This $1.00 may get you a $2000 prize, if you act at once. There has never been a contest like this given by any reputable publisher, and an easy chance like this may never be presented to you again, so take advantage of it. Address to-day without fail.

FARM PRESS, 118 Medinah Bldg., CHICAGO, ILL.

TO Satisfy Practical Dairymen



You must supply their needs in the best, simplest and most economical way. For it isn't the question of price so much, as it is reliability, and giving satisfactory results that wins their approval.

That is why

THE TUBULAR

is the most popular separator with them; it fulfills dairy requirements, easily and well, in a profitable and satisfactory manner.

The Tubular is built to skim clean, run easy, fill easy, wash easy; and to save labor, time, repairs and attention—**and it does.**

The simplicity, durability and efficiency of the Tubular are recognized the world over.

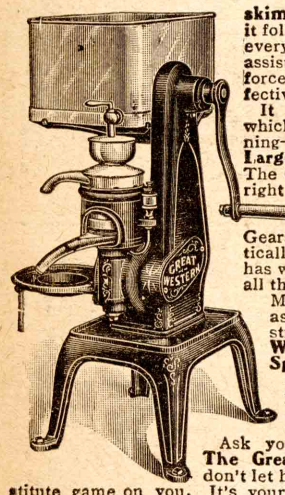
To get in the **satisfied class** use a Tubular and prove these claims.

Catalog 136 will assist you in your investigation.

THE SHARPLES SEPARATOR CO.,
West Chester, Penna.

Toronto, Can. San Francisco, Calif. Chicago, Ill.

The Great Western



skims closest because it follows most closely every law of nature, assisted by artificial forces in the most effective way.

It is **Ball-bearing** which means easy running—has low down **Large Supply Tank**—The **Crank** is just the right height to make the machine turn easy.

Gears run in oil—practically self-oiling and has wide base to catch all the waste.

Made as accurately as a watch and as strong as our **Great Western Manure Spreader.**

Increases your yield of cream and butter $15 per cow each year.

Ask your dealer about **The Great Western** and don't let him work any substitute game on you. It's your money you are going to spend, you should insist on having the best.

The Great Western is the world's best.

Write just these words in a letter:—"Send me 'Thrift Talks,' by a farmer, and your book No. 5B91 which tells all about the breeds, dairying, the care of milk, etc." They are free. Write now

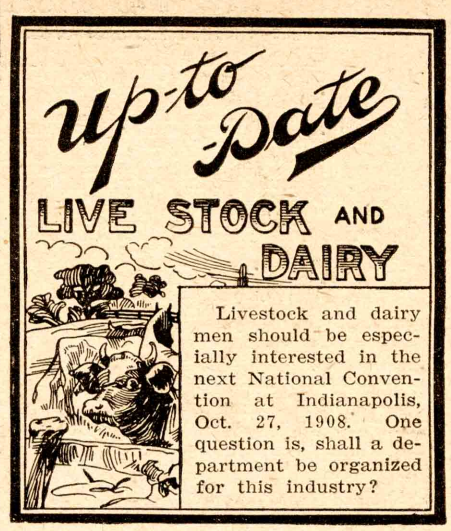
GARRETT WALL

Subscription Mgr. UP-TO-DATE FARMING

Indianapolis, Ind.



Livestock and dairy men should be especially interested in the next National Convention at Indianapolis, Oct. 27, 1908. One question is, shall a department be organized for this industry?

Lord of All

Man claims to be the lord of all
That God about him here has placed,
But many a man will read his doom
When treatment of his beast is traced.
Without the lower life around him,
Man's needs would utterly confound him.

BABY BEEF

Much is said now about "baby" beef, and occasional reports of unusually high prices paid for it, gives farmers a desire to produce it, and leads to many inquiries concerning it. We do not like the name, and a better one should be found for that quality of beef. Besides sounding silly, it is misleading. So-called "baby" beef is not the beef of baby cattle, but rather of young cattle that have been brought to an inordinately heavy weight, and have had the treatment that should be accorded to babies. Unless it took its name from this latter fact we know of no reason for it whatever.

Ordinary farmers are not likely to produce "baby" beef. It has to be begun the day the calf is born, and there must be not a moment's relaxation until the animal is on the block. Those accustomed to sell calves for veal, and have made a reputation for marketing the best of veal calves, know the treatment the calf must have from birth to market. To produce "baby" beef the calf must have that treatment all the time. So long as it can take nothing but milk, it must have all the milk it can digest and assimilate; and it must be taught to eat other feed as early as possible; but even when it begins to eat other things, its milk supply must not be shortened until the animal has so advanced that it will experience no shock to its alimentation. And when it learns to take feed it must have none but the very best. No ordinary feed for the animal that is to make "baby" beef. Nothing must enter into its system that would not stand the test of freshness and purity, and perfect nutrition.

In other words, the calf must be made round fat as soon as it is possible to make it so, and then it must never be allowed for one day to fail to add to its weight and fatness. And it all must be done on the very best of feed. In six, eight or ten months it should be as heavy as a good quality two-year-old steer, and then it is—"baby" beef. It ought to bring a big price and it does; but not very many common farmers will try for it in the midst of their other work and responsibilities.

FARMERS AND SHEEP

The farmer who owns his own land and lives upon it ought to seriously consider the raising of sheep. If his acres are so few that all must necessarily produce crops, or if his land is low and wet for even a portion of the year, it is not likely that he can handle sheep profitably. But if his land is hilly or even ridge land, or what is usually called up-land in any sense, and he has enough that he may rotate in pasture, he cannot have a more certainly profitable animal than the sheep. The difficulty in caring for and handling is purely imaginary. Sheep must be cared for, and so must any other animal, different animals requiring different treatment. The treatment given the cow will not entirely serve the horse, nor will that given the hog fit the sheep, but that one may be more exacting or difficult than the other is doubtful. It is largely a matter of taste and the exercise of common sense.

No animal will keep the farm freer of weeds than the sheep. As a weed destroyer the sheep beats cultivation. A field used as a sheep pasture for a year or two, and then put to cultivation will be found easier cultivated and freer from weeds than any other. And it will be richer, more productive, for the sheep is the most honest of all manufacturers of ready mixed fertilizer, and it is the most perfect manure spreader yet invented.

The sheep is a double harvester. It produces two profitable crops every year—wool and lambs. The wool crop usually pays for the sheep's entire keep, and the lamb crop is all profit, barring the attention required to be given to the lambs, and that usually comes outside of work hours, and is equal to an "extra job." If only one lamb is produced, the profit for the year on the investment is nearly 100 per cent. If two lambs are produced, a thing not at all infrequent, the profit approaches 200 per cent. If three lambs are produced, which sometimes occurs—well, let that go for good count. A flock of young ewes, therefore well cared for and properly treated, is the most profitable investment on the farm.

DANGERS IN CONTAMINATED MILK

It is not often that men devote their fortunes to the correction of bad practices that are more dangerous to the rest of mankind than they are to themselves. Such has been and is the work of Mr. Nathan Straus, an eminent American citizen of German birth. After sixteen yaers work in the interest of pure milk in this country, Mr. Straus has been touring Europe in the same interest, and not long ago delivered an address before the political economy class of the University of Heidelberg, in which he said:

We have traced to the use of cow's milk the excessive mortality of infants in their first year, and the annual tribute of lives claimed by consumption. It being altogether impossible to give up the use of cow's milk in the nursery, and most undesirable to banish such a food from the adult dietary, it becomes imperative to seek for means to render the milk harmless.

In the course of his address, Mr. Straus pointed out that a large proportion of the cows are tuberculous; that the milking is rarely satisfactorily conducted; that Berlin consumes 300 pounds of manure in its milk daily; that after milking, it is too often left to take care of itself, so that on reaching the consumer it is swarming with bacteria; that there were plenty of chances for milk to become infected with germs of disease; that there was often more bacteria in a drop of milk than in a drop of sewage; that the germs may be those of tuberculosis, typhoid fever, scarlet fever or diphtheria.

These dangers are not nearly so great in the country on the farms as they are in the cities. On the farms the consumers do their own milking. Not many cows are milked and the milk is not taken in cumbersome quantities. It is, therefore, by no means so great a difficulty to keep the milk clean and in a sanitary condition. The sows, too, running in fresh and not over-stocked pastures, usually with plenty of good water, are themselves much more likely to be healthy. Besides, those who do the milking and handle the milk, know it is for the use of themselves and families, and they have every incentive to cleanliness in drawing it from the cows and in keeping it clean and free from contamination until it reaches the table. In cases where several cows are milked and the milking is done by hired help, that process should be subject to careful scrutiny.

But with the city supply it is very different. That milk usually comes from dairies, where many cows are kept. Such cows seldom have green, rich pastures, and they are not always furnished with a good supply of pure

THINK OF IT!

BICKNELL, IND., June 26, 1908.
Have used a U. S. six months; it's perfectly satisfactory. I made 17 pounds of butter the week before using the U. S. The following week with the U. S. I made 27 pounds from the same cows, under the same conditions. It's the best investment I ever made. ALEX. NEAL.

An Investment Paying 33⅓%

and this is exactly what the **U. S.** earned for Mr. Neal over his former methods of skimming.

If you are not using a reliable

U. S. CREAM SEPARATOR

but skimming your milk by some other method, **you** are losing just as large a per cent. of cream (which **is money**) as did Mr. Neal.

It is clean skimming that counts, and the U. S. holds **World's Record for clean skimming,** therefore it is the separator that **every one** ought to purchase.

FLOWER POST CARDS Free to You

In order to introduce our large illustrated monthly, The Epitomist, which is of interest to every member of the family, we make this big offer to you.

Send 10c for a six months' trial subscription and we will send you, prepaid, twelve beautiful flower post cards absolutely FREE. These cards are strictly high-class and are something entirely new. Each card represents a scenic view and has THE LANGUAGE OF THE FLOWERS worked out most beautifully in mottoes in flower designs. For instance, in this series the violets spell out the words "Faithfulness;" the sweet peas, "Wish You Joy;" Chrysanthemums, "I Love You;" roses, "Love," etc. You won't be disappointed, for these cards are not like any you ever saw, and REMEMBER, we have a surprise for everyone that sends for these cards. There are only a limited number, so send today if you want them. THE EPITOMIST, 55 Main St., Spencer, Indiana.

SAVE YOUR BRAIN $1.00
An Adding Machine for

A MODERN BUSINESS NECESSITY 98765
A practical, simple, rapid, accurate, handy and durable machine that makes adding a pleasure instead of an exhausting mental strain, a time and labor saver. When you get to the bottom of a column of figures you will know they are added correctly. Why ponder over figures? 56789
Let steel brains do your work. A triumph in mechanical construction and simplicity, a little machine that nearly everyone needs and is in the reach of all. It will pay for itself six times a week for every week it is in use. Farmers, Merchants, Mechanics, everyone who has adding to do wants them. Avoid errors usually made by a tired brain. Try a column of figures like the following, in the old way, and then try a $1.00 adder and see the difference in time and labor. 54324
They are gotten up in good style, being nickle finish with solid steel wheels put together with eight heavy brass rivets, show good value for the money, and will do all that we claim for them, two years guarantee with each machine and positively as represented or money refunded. 43245
Sent all charges prepaid on receipt of price, P. O., express money order or draft. Make all orders payable to 34567

water. Their feed is very likely to be of the cheapest, and therefore, the least wholesome. The milking and handling is all done by hired help, or at least by those who know that it is for public and not for family consumption. If all men and women were truly human this should make little difference, but they are not, nor are they likely to be during the lives of babes jeopardized by contaminated milk. If Berlin consumes with its milk 300 pounds of manure, as Mr. Strauss asserts, it is reasonable to suppose that other cities do the same in proportion to the milk consumed.

Mr. Strauss believes that the only remedy now available is pasteurization, and recites numerous instances where that has been done with eminent success. Pasteurization is not boiling nor sterilizing, the flavor of the milk is not impaired, nor it is rendered any more difficult of digestion, but the germs of tuberculosis, typhoid, scarlet fever, diphtheria, dysentry, cholera, etc., are effetively destroyed. After the Straus milk charity was opened in New York, the mortality sank, it is said, as if by magic. The improvement was gradual, of course, but reports show a saving of 50 per cent of the young lives formerly sacrificed durthe three hot months of summer, not all, it is admitted, by the distribution of pasteurized milk, but that was evidently a prime element in the gratifying results. This claim is confirmed by the report from the village of Sandehausen, where Mr. Straus distributed pasteurized milk, and where the death rate dropped two-thirds.

We must be pardoned if we see in all these great works a place for organization and "Equity in all the business relations of life." If there were a world wide organization of farmers and business men, and the rules of equity were enforced, the claims of humanity recognized, how easy it would be to accomplish all these great reforms!

MUTTON AND WOOL IN THE YELLOW STONE VALLEY

Shearing and Handling Sheep in the West

Written for Up-to-Date Farming.

I should judge by the unanswered questions and the great mortality among sheep, that the above topic, if properly handled, would prove equally interesting to eastern Tenderfoot and western hearder. And so it was with these thoughts in my mind that I arranged with O. C. B., Laurel's leading dairyman, to transfer me and my chattels to the Ten Spring Ranch, that great oasis, that picturesque landmark, which has been the Mecca for wandering herds of sheep, cattle and horses for 30 years.

It was a bright morning in June; the atmosphere balmy and humid, was freighted with the scent of new mown hay and vibrant with the song of the bobolink, the warble of the robin and the chirp of the black bird.

As we journeyed northwest from Laurel, a beautiful rolling country, rich in soil and still richer in promise to the coming generation, unfolded itself, terrace above terrace, to our view until we reached the tableland which forms the divide between the Lake Basin and the Yellowstone river. Still farther to the northward arose another such elevation which forms the waterhead between the former and the Musselshell river, while to westward could be seen the somber slopes of Crazy mountains, and southwest the snow clad peaks of Bear Tooth, with the Pryor mountains to east of them.

We were hungry when we reached our desination, and picketing our horses and putting the pot on the fire, I went out in search of something to cook in it, soon returning with a juicy young jack rabbit and four large bird eggs. Out in the tall blue joint and bunch grass which grow equally well on this range, I heard a plaintive bleating, and soon beheld a round, wooly head with long protruding ears, raised above the green sward. A ewe sheep had met with misfortune during the night, but had been driven away from her offspring early in the morning, and had soon lost her identity among the three thousand of her comrades being hurried along toward the shearing pens on Valley creek, ten miles distant. A solution of condensed milk and water soon revived the little stranger, and he became a fully qualified member of our party.

I saddled up at 3 a. m. next morning and rode over to the pens, to witness the fate of the other three thousond, whose pitiful appeals for sympathy could be heard a full mile from the works, from and to which large bands of sheep were going and coming in all directions, the ones coming invariably leaving their wooly coats behind them, the only marks of identitiy being a few paint spots, and a piece of cord rudely tied around each fleece as it was tossed into the baling machine, and from thence hauled to Billings, the great wool market, 30 miles away.

Arriving at the plant at 5 a. m., I found a dozen men under the management of Capt. Thomas, the owner of the works himself heavily interested in sheep, separating the ewes from the lambs in a large band that had just arrived, the property of F. Mault, whose home ranch lay some 25 miles to the northeast.

The sheep were first driven into a corrall whose walls converged into a narrow passage just wide enough to admit one sheep at a time. The men, each equipped with a bundle of empty milk cans on a string, rattled them together on the sides of the herd, so frightening the sheep that they jostled and crowded upon each other toward the narrow gateway, where, calm and serene, stood the Captain himself, swinging a valve gate to right or left, so as to switch a ewe into the shearing department or a lamb into the dipping vat. The latter consists of a short iron trough 60 feet long, 4½ feet deep, and an average of 15 inches wide, which was filled to a depth of 3½ feet with a blood warm solution of 2 parts creosote to 98 parts water. The sheep were forced to swim through this single file after shearing. This destroys their vermin and heals their cuts and bruises.

The shearing house consists of a frame building about 30 feet by 200 along which runs a sheep alley and a steel shaft with 20 clipping machines attached thereto. Each machine is set up in a stall to hold 8 sheep, and each is controlled by an operator who holds his instrument in one hand, and manipulates the sheep with the other as skillfully as if it were a thing inanimate and utterly helpless.

The shearers are generally tall, muscular men, and are paid 9½ cents per head for their work. There is considerable rivalry among them, the highest score for this season being 293 sheep in the 9½ hour day, made by Charles Kiester and Jake Dahby, both making the same score. These two men will earn about $400 each during the shearing season which does not exceed 30 days, and in that time there will be sheared about 100,000 sheep, with an average fleece of about 7½ pounds.

The sheep in this vicinity are a cross between the Merino and the Cotswold, the former giving weight of fleece, the latter size and hardiness. The average loss or mortality for the whole State is 35 per cent, while that of the Yellowstone Valley, owing to its warm climate and abundant feed, is only 25 per cent. I have known cases where the loss in a band of 3,000 was only 5 to 10 per cent.

The markings are systematic, plain and descriptive; the male lambs (wethers) have a piece clipped off the left ear to indicate the sex, with a series of other marks added thereto each year to designate the age. The proprietary paint markings differ in color. The wethers are marketed at 3 years of age, while the ewes, having reached their prime at 4, are usually marketed at 5 or 6 on account of loss of teeth, which brings on general decadence.

Sheep herding is an occupation that calls for both tact and courage. On some of these western plains the worst storms in winter often gather in the space of an hour, and the mercury may drop 20 to 30 degrees in that time. At such times the sheep, if not properly handled, will turn and drift with the storm, traveling fast and huddling together until overcome by heat, dampness and exhaustion, when they lose courage, drop behind and perish, a band of 2,000 of 3,000 often collapsing within a few minutes and on a few rods along the line of march.

The original or parent stock of all our domestic sheep was Persian. These sheep were black, and inbreeding or carelessness in handling may cause them to revert to the ancestral types; hence the black sheep which seldom appear in a well-bred band.

W. E. SINGLETON.

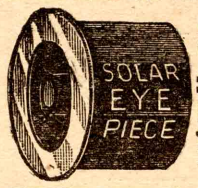
To Introduce Our New Excelsior Solar Telescope



Pat. Applied for.

THIS is a large powerful Achromatic Telescope for Terrestrial and Celestial use. This telescope is provided with an adjustable Solar Eye-piece. With this wonderful eye-piece you look the Sun square in the face, on the brightest and hottest day, and study its face as you do the moon by night. Every student needs one. This eye-piece alone is worth more than we charge for the entire telescope. Remove the Solar Eye-piece lense and you have a perfect telescope for land observations. Read what this customer says:

Never before sold on any telescope for less than $8.00 or $10.00.

Stevensville, Ont., Dec. 18, 1906.
R. C. Irving & Co., Indianapolis.
Dear Sirs.—I received your telescope last Saturday. It is a dandy and I am well pleased with it.
Yours very truly, Enos. Winger.

Positively such a good telescope was never sold for this price before. These telescopes are made by one of the largest manufacturers of Europe. Measure closed 12 inches and open 3½ feet in five sections. They are BRASS BOUND, BRASS SAFETY CAP on each end to exclude dust, etc., with POWERFUL LENSES, scientifically ground and adjusted. GUARANTEED BY THE MAKER. Heretofore telescopes of this size have been sold for from $8 to $10. Objects miles away are brought to view with astonishing clearness. Sent by mail

Postpaid for $1.10.

This is a grand opportunity and you should not miss it. We WARRANT each telescope just as represented or MONEY REFUNDED. Remit by Registered letter, Postoffice Money Order, or Bank Draft, payable to our order.

Poultrymen should come to the next annual convention and help to bring Equity of price in eggs and poultry to both producers and consumers.

BEATS "EGG FOOD"

There is growing in almost every garden vegetables that for poultry health and activity, beat all the advertised egg foods yet imposed on a credulous public. Green onion tops chopped fine, and mixed with a little corn meal or wheat bran, slightly dampened is a most healthful egg stimulant. Green peppers treated in the same way are just as good. And so are horse radish roots.

In winter, onions chopped up fine and mixed as above, make an ideal occasional feed for laying hens. Ripe peppers may be so treated also, as may also horse radish roots in winter. These feeds should be given only occasionally, a feed or two every two or three days. Where one is preparing for winter eggs, it is well to provide a supply of these simple, well known vegetables.

Speaking of winter eggs, of course it is known that any kind of vegetables that can be kept green or fresh, such as cabbage, is exceedingly valuable, as helping to bring the conditoins nearer to those of the main laying season of spring and summer.

THE ORCHARD FOR A POULTRY RUN

We have often mentioned the suitableness of the orchard for a poultry run, and we wish to keep talking about it, for the farm does not afford a more suitable place. There are generally more insects in the orchard than any other place on the farm. Many of these insects are injurious to the orchard, but they are exceedingly valuable as food for the poultry. Hence while the orchard contributes much to the feed of the fowls, the fowls do much to rid the orchard of its worst enemies.

THE GUINEA FOWL

The writer's mother always had a flock of guineas around the old cabin home in the back woods of their unsettled part of Southern Illinois. We all liked them. If a stranger came in sight the guineas were not at all modest in telling about it, and if a dog that did not belong there appeared, there was such a racket as would awaken the forest echoes. The hawks, too, found it difficult to get among the chickens unheralded, the guineas were so watchful.

But as fowls they were not very valuable, and they are not yet. The hens are fair layers. Beginning to lay in May, they lay pretty regularly every other day until they have laid from 50 to 75 eggs each. For the eggs to be fertile there ought to be nearly as many males as females, though one rooster will sometimes mate with two or more hens. They are great birds to hide their nests, though the hens while on the nest have a peculiar cry which enables the nest to be easily found. It is better to not let the guinea know, however, that her nest is found, for if she does she is very apt to leave it and make a nest farther away. If the eggs be taken out with the hand, or if too many be taken out at a time, she is sure to leave it. We generally lifted the eggs out with a large spoon. The eggs are small and pointed, reddish covered with dark specks, and with very hard shells, but they are quite as good on the table as hens' eggs. It takes about four weeks incubation to hatch them. The young are very active and wild, about as much so as quail or pheasants. The meat is dark, but it has a gamy taste that makes it popular for occasional meals.

TECHNICAL TERMS

Almost every business has words peculiar to itself. The poultry business is not an exception. We give the meaning of the following more common ones:

A cockerel is a male bird that is less than one year old.

A cock is a male bird that is over one year old.

A pullet is a female that is less than one year old.

A hen is a female that is more than one year old.

A tom is a male turkey that is more than one year old.

A poult is a turkey less than one year old.

Thirteen eggs is usually considered a setting of eggs but many call fifteen a setting.

A bird weighing two pounds or less and six to twelve weeks old is a broiler.

A capon is a male bird castrated or deprived of the power of reproduction. A poularde is a pullet treated to the same effect. This is practiced quite extensively with males, but not so much with females. Young fowls so treated attain much larger size, are more delicate and juicy as food, and command higher prices in the market.

A breeding pen is from six to fourteen hens and one rooster.

POULTRY PACKERS' PREFERENCES

The experiment station of the Kansas State Agricultural College, consulted a number of leading packers as to the varieties of poultry preferred by them. The result may be summarized as follows:

For dressed fowls Barred Plymouth Rocks hold unquestioned first rank. For broilers or roasters the White Plymouth Rocks or White Wyandottes are considered equally good. The great popularity of the Barred Rocks is illustrated by the fact that sometimes a half cent more on the pound is offered for them. The only objection to the Wyandottes as compared with the Rocks is the smaller size of the former.

The Leghorns are disliked on account of their small size, but they are invariably ranked above scrub chickens of similar size. The qualities liked in the Leghorns are, their yellow skin and legs and plump bodies. Some dealers claim that they equal any chicken where a small carcass is desired. It was also said that Leghorn hens continue to grow and improve in appearance with age, and that they rank better in the packing house or market as old hens than as pullets. Leghorn cockerels are desirable as broilers, but when older they are not desired.

Of the Asiatic breeds, the Langshans are the most popular; the Brahmas rank next, and the Cochins last. Langshans are well liked except for their dark color. The Brahmas and Cochins are specially unpopular, the principal objection given being the large, coarse frame, out of proportion to the meat upon it. This contradicts the prevalent idea that the Asiatics are peculiarly the fowls for the meat market.

CHICKENS AND GARDEN

A resourceful friend of ours has made the poultry help in the garden and she has made the garden help with the poultry. She has cheap but roomy roosting boxes for the broods, in front of the openings to which she has wire netted or slatted runs. These runs need not be large, three by four feet, or even two by four feet, will be large enough; and the tops must be closed as well as the sides. The object is to give the hen a little open air room, but so that she cannot roam at large. There must be plenty of space for the chicks to get out. These boxes and runs are put in the garden. The hen cannot get out, but the chicks can and will range freely all over the garden, and they will devour many an inpurious insect to their own great benefit, and to the benefit of the growing plants the tenderest of which they will in no wise injure.

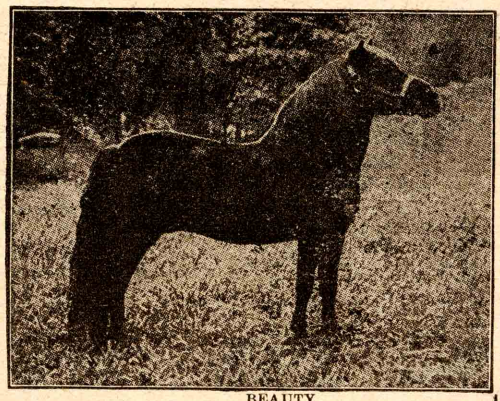
BITTER ROOT VALLEY LAND---

The MARCUS DALY ESTATE offers for sale 8,000 acres of HIGHLY CULTIVATED farm land on the FAMOUS Bitter Root Stock Farm, suitable for FRUIT GROWING, DAIRYING and DIVERSIFIED FARMING. SOIL, CLIMATE and IRRIGATION system are unsurpassed. This land will be sold in tracts of twenty acres or more. Long time—easy payments. For Booklet and further information write,

BITTER ROOT STOCK FARM, Hamilton, Mont.

Two Beautiful Shetland Ponies Like this to Boys and Girls..... **FREE!**



BEAUTY

We will give away FREE Two genuine Shetland Ponies.

This Pony's name is BEAUTY and she is certainly a dandy, and is perfectly gentle.

We will give with TRIXY, the other pony, a fine cart and harness. Trixy is just as pretty as Beauty. They are the best we could find at any price.

Do you want one of these beautiful Ponies without it costing you one penny?

IMOGEN MEANS.

You Can Get It. Write Quick.

This little girl received a Pony free. Read what her father says about it. "I have just received the Pony. I have two little girls 7 and 8 years old and words are inadequate to express their joy in when the Pony arrived. Had I been going out to buy a Pony I could not have found one that suited me so well.—T. J. Means, Dearborn, Mo."

Either one of these Ponies is worth $200.00 but will not cost you a cent if you hurry. Send no money, just send your name and address,

SUCCESSFUL FARMING, Box 816, Des Moines, Ia.

EXERCISE AND CLEANLINESS

Exercise and cleanliness are the essentials if success with poultry. Without exercise fowls become dull, sluggish, inactive and non-productive. As a general thing hens as ordinarly kept on farms,find exercise in their search for food, but if confined in narrow quarters, or kept in the house by bad weather in winter, they must be fed in such a way as to induce exercise. A good way to do is to feed small grain or even chops in litter that they will continually scratch for.

Cleanliness is necessary to preserve health. Filth is a breeding place for almost all kinds of germs, and if they remain healthy fowls must be kept free from them. An occasional cleaning up is not enough in hot, humid weather. The very air of the poultry house should be kept pure.

A third essential may be mentioned in plenty of fresh, pure water. To have that the drinking vessels must be kept clean, and frequently replenished. Given plenty of exercise, clean, wholesome quarters, well ventilated, and plenty of clean water, with proper feed of course, the poultry keeper has a right to expect his fowls to do their best, and to be profitable.

THE LAWN MOWER IN THE POULTRY YARD

The lawn mower is nowhere quite so useful as it is in the poultry yard, especially that part of it devoted to young chicks and laying hens. Cut frequently the clippings are short and tender and make an ideal part of a balanced ration for the hens, and they will consume more of the clippings than anyone would suspect who had not tested it. As a run for young chicks a closely clipped grass plot cannot be beaten. It does not hold dew enough in the morning nor water enough after a shower, to "drabble" them, and small insects are so exposed in the short grass as to be easily found and caught even by very young chicks.

THE BEST LAYERS

All farm poultry raisers envy those who get the most eggs in proportion to the hens kept. It is agreed that some cows give more milk than others, and the inferior milkers are disposed of. It is agreed, too, that some hens lay more eggs than others; but is any effort made to thin out the less fruitful hens? Not by one in a hundred, perhaps.

If each flock of poultry were carefully watched, and the best layers noted and kept, and the light layers culled out and sent to market, there is no doubt but a flock of great layers could be produced. And not only so. A strain could be produced of special value as breeders. Take pains to cull and thin out the flock, always keeping the best layers.

AGE OF EGGS

It is reported in the papers that a young farmer in Indiana wrote his name and address upon an egg he was taking to market, with the request that whoever received the egg for use should write and tell him about it. Two years later he received a note from Pittsburg saying the egg had just been consumed as a part of a family meal in that city. A young lady friend of the writer in Southern Illinois, a farmer's daughter, wrote much the same thing on an egg as she was packing eggs to be sent to market. About a year and a half thereafter she received a letter from New York City stating that the egg had just been used there in a restaurant. The writer read the letter and knows the incident occurred.

These people supposed they were eating fresh eggs, and would have promptly rejected them had they known their age. And yet there was nothing in the appearance or flavor of the eggs that betrayed them. In the steam car, the electric motor and the auto man has conquered distance, in the telephone he has suspended the power of earth and air to obstruct the human voice, and in cold storage and preservatives he has overcome the powers of decay. The hen may perish and be forgotten, and yet her eggs may be served "fresh" on the epicure's table.

WHY IT IS SAFE TO BUY

INTERNATIONAL MACHINES

THERE is an International Agency right near you.

If you do not know where it is, write us and we will gladly send you the address.

This Company has 42,000 agents all over the world, and more than one hundred general agencies located at the important trade centers in the United States and Canada, where large supplies of machines and repairs are carried in stock.

Thus the International Company has made it **easy** for you to buy

Champion, McCormick, Osborne,
Deering, Milwaukee, Plano,
Harvesting Machines.

This Company has made it **safe** for you to buy these machines because of many reasons:

You are **safe** in depending upon the underlying principles of these machines because **you know** they are the six machines in which farmers have placed their greatest confidence through fifty years of practical tests.

You are **safe** in this respect because these machines have proved that they are built upon the right principles by withstanding every test while hundreds of competing machines were condemned and ceased to be manufactured.

You are **safe** in depending upon the greatest improvements in these machines, because the manufacturers maintain a $350,000-a-year staff of inventors and designers to constantly improve these machines and keep them in the place they have established as standard.

You are **safe** in depending upon the quality of material used in constructing these machines because the manufacturers have been able to buy their own coal and iron mines, thus securing the best fuel and ore—their own iron and steel mills, thus producing the best iron and steel, and their own timber lands and saw mills, thus securing the best lumber, and the quantities in which this company buys all other raw materials insure every advantage of highest quality.

You are **safe** in depending upon the quality of workmanship which goes into these machines, because the capital of these manufacturers has enabled them to perfect their equipments and manufacturing facilities in every way that inventive genius and the highest mechanical skill can devise, and gather to their plants the most skillful workmen in every branch of the business.

The business of farming is both profitable and pleasant—if you use International machines.

These machines are durable, because the best materials procurable enter into their construction.

These machines are efficient, because they are correctly designed.

Every precaution possible is taken to guard against the use of inferior materials. Well equipped laboratories are maintained at the Company's steel mills and at each of the several manufacturing plants. All raw materials are subjected to a careful analysis in these laboratories, the second examination at the works being a check on the test made at the steel mills. This rigid system of testing the materials makes it next to impossible for any defective iron or steel to be used in the manufacture of International machines. Without such tests it is impossible to tell the difference between superior and inferior materials. Therefore the small manufacturer must necessarily work at a great disadvantage, for he is continually called upon to replace defective parts.

Before being shipped out, every part and every machine produced by the International Harvester Company must pass the most rigid inspections and tests made by experts who devote their entire time to this work.

Binders are tested by actually binding wire-grass, and even chains are tested link by link by a violent pneumatic machine.

No machine is passed if a single imperfection is discovered, and the trained eyes of the inspectors instantly detect every defect.

Another point of safety for you in the International line is in the matter of repair parts.

If your team runs away or an accident occurs you can **always** get repairs near at hand because a full stock of repair parts is carried at every agency.

And your repairs always fit.

One part is an exact duplicate of another—all exactly like the original pattern.

Repair parts for machines in the International line are being sent out all over the world today, for machines that were built years ago, and each part fits perfectly.

With its 25,000 employes and 42,000 agents, this Company is supporting as many families as there are in Utah or Montana.

So you see you may safely depend upon the strength and reliability of the company behind the International machines.

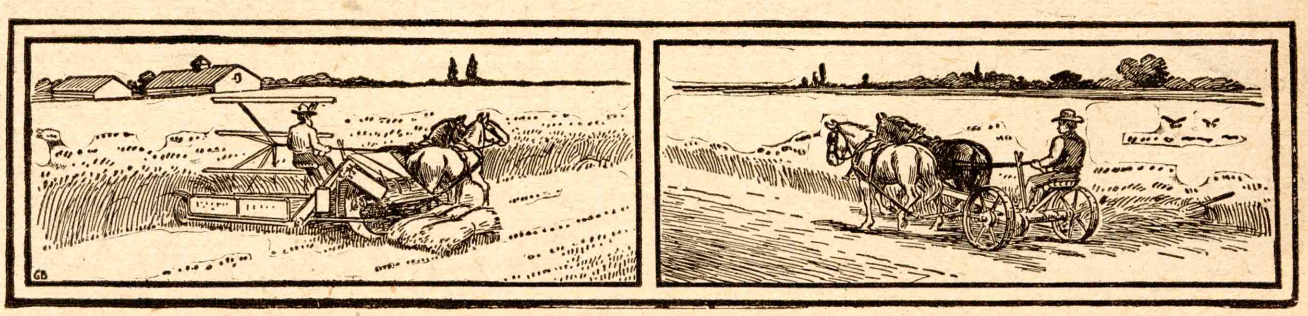
In the end you get the benefit of the magnitude of this business, because it is by doing business upon such a large scale that the International Harvester Company is enabled to give you these superior machines at such reasonable prices.

Equal in importance with a perfect machine is perfect twine. The most perfect twine made may be had in Champion, McCormick, Osborne, Deering, Milwaukee, Plano and International sisal, standard, manila and pure manila brands.

INTERNATIONAL HARVESTER COMPANY OF AMERICA
(INCORPORATED)

Chicago, U. S. A.

International Line:—Binders, Reapers, Headers, Header-Binders, Corn Binders, Corn Shockers, Corn Pickers, Huskers and Shredders, Corn Shellers, Mowers, Hay Tedders, Hay Rakes, Sweep Rakes, Hay Loaders, Hay Stackers, Hay Balers, Feed Grinders, Knife Grinders, Tillage Implements, Cream Separators, Gasoline Engines, Pumping Jacks, Manure Spreaders, Weber Wagons, Columbus Wagons, New Bettendorf Wagons, International Auto-Buggies and Binder Twine.



SCALECIDE

CONQUERS SAN JOSE SCALE

Now Is the Time to Spray

Leading fruit growers endorse SCALECIDE as the only remedy for the dreaded San Jose scale. Kills the scale without injury to the tree or bud.

SIMPLE, SAFE, ECONOMICAL

Scalecide is antiseptic and healing to the skin. Absolutely non-poisonous. Don't allow your good orchards to be ruined by the terrible San Jose Scale. Use Scalecide—

A SURE REMEDY

Use 1 gallon of Scalecide to 20 gallons of water. We will send 1 quart for 35c, gallon for $1.00, five gallons for $4.00. Sent by freight or express f. o. b. Indianapolis.

O. K. SEED STORE, Indianapolis

Equity in the price of the harvests of the orchards and gardens wait on reorganization of the Fruit and Produce Department, Oct. 27th next, at Indianapolis, Indiana.

APPLE CROP OF 1908

The Apple Growers of America held a congress in St. Louis last month. The committee on statistics reported the crop of 1908 as follows:

Illinois and Arkansas only 10 per cent of a crop; Missouri, Kentucky, Nebraska and Oklahoma, 20 per cent; New York, California, Oregon and Washington, 75 per cent; Kansas and Colorado, 25 per cent; Ohio, 50 per cent; Indiana, Virginia, Iowa and West Virginia, 30 per cent; Pennsylvania, 45 per cent; Michigan, Maine, Mississippi, Maryland, Vermont and Connecticut, 50 per cent; New Jersey, 56 per cent; Utah, 80 per cent; Idaho, Montana and New Mexico are the only States and territories credited with having a full crop.

We take it this is the smallest apple crop ever before reported in the United States, and to make it still worse, the quality of the apples is so strangely inferior as to make them unsalable and unusable in a year of ordinary yield of ordinary apples. The trees themselves in most places present an exceedingly unhealthy appearance. The leaves are not well grown and appear almost as though they had been scorched.

How does this compare with the government report a few months ago of an excessive fruit crop for 1908?

BECAUSE THEY WON'T CO-OPERATE

Speaking of the great fruit crop of California, other than apples, the Co-operative Journal says: "Thousands of tons of fruit will go to waste in California, or be sold below the cost of production, **just because the growers will not co-operate with each other in marketing.**"

But why will they not co-operate? That is the mystery. They are intelligent enough to do so; earnest enough; honest enough; sufficiently firm in their purposes, and they know enough about business. Why don't they? Almost every season gives them lessons as they see their efforts crowned with heavy crops, and their tons of good products go for less than what smaller yields would bring.

Glutted markets are by no means an evidence that too much has been produced, for it is often the case that during the most congested condition of the central markets outside, and even nearby, markets are bare and hungry. The whole trouble is lack of wise co-operation and intelligent shipments. The essential of these things is organization. Will not the growers organize? The growers are not averse to organization. They have frequently organized. But their organizations have been short lived and insufficient because on too narrow a basis and without the true end in view. The organization that will bring seller and buyer, producer and consumer, farmers and merchant, together in their mutuality of interest and true equity of purpose, will solve the problem. Then we shall hear no more of glutted markets, of people hungry for what they cannot get though produced in abundance, nor of growers selling their stuff for less than it took to produce it.

FALL PLANTING OF TREES

Prof. H. E. VanDeman, one of the most widely known promologists of the country, confesses himself a convert to the doctrine of the fall planting of the trees. Trees, plants and vines, says the professor, properly planted in autumn, survive our winters and are in better condition to make an early growth in spring than those not planted until the ground has got in suitable condition to be worked in the spring. The fall planted trees are in much better condition to stand the almost certain summer droughts than are those planted in the spring. The reason is not far to find. The one thing more than all others that leads to loss in tree planting is that the soil is not sufficiently and evenly firmed about the roots of the trees. The most experienced tree setters some times neglect this and loss fololws. The smallest air spaces about the roots lead to disaster when the hot, dry weather of summer comes.

Trees planted in the fall are not in so much danger from this almost universal neglect. The tree changes location at the beginning of its period of sleep, and if the earth fails to be packed tight about the roots, it does not affect it. During its long period of sleep, however, the freezes and thaws and heavy rains of winter come, and nature does what the planter fails to do, and by the time the tree awakes and is ready to begin growth in the spring, the earth is packed as firmly about it as it was in its original position, and it has no reason to know that it was ever moved.

There is one thing, though, to provide against in autumn set trees, and that is upheaving or freeze lifting. A mulch of well rotted manure is ample surety against this, but it is better to keep the mulch a little from the stem of the tree. Wrapping the stem from an inch below the surface to say two feet above it is a good precaution against mice and rabbits.

FRUIT GROWERS LOSING

The peach growers of Georgia have played a losing game this year, as they have so often done before. In the name of distributing they have shipped a large crop virtually to one market and to one firm. And this, too, when other markets were unsupplied any paying profitable prices.

When will growers and shippers learn that the world is wide, and that one point may have more than its wants of certain article while other points are actually hungry for that same article. Growers may expect to remain poor so long as they heedlessly pour their stuff into one place without any regard as to whether it is needed there or not. To make fruit growing profitable the fruit must not only be shipped, but it must be distributed, and to properly distribute involves a daily knowledge of the market, and central direction of co-operative shippers.

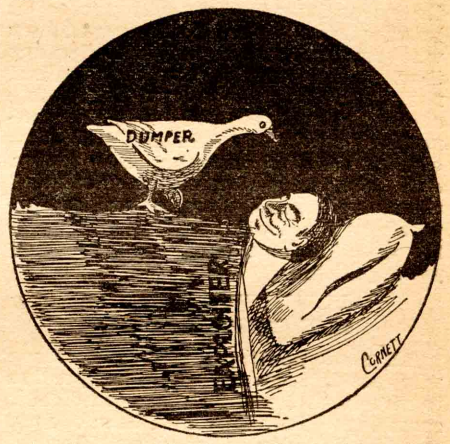
Mr. W. F. Dair of Cincinnati, gives the Georgia people a good lesson on the subject of disposing of their fruit. They should form companies, says he, and erect canning factories throughout the State. They should then invite all parties to come and buy, and when they cannot get living prices, quit selling and can the surplus. This would make them independent of glutted markets, and enable them to save even the inferior fruit. Growers must exercise their heads as well as their hands, and they must learn to co-operate.

PACKING APPLES

The markets still prefer apples packed in barrels, but the barrels should be brought to the standard size, and the apples should be packed honestly. Aside from careful and uniform selection, the most delicate point is to give the apples enough pressure to insure that they will not come loose and get shaky, but yet not enough to unnecessarily bruise the fruit.

Every season we read articles about packing apples in boxes. That is all right, but it is not popuar except for exceptionally fine fruit to be used at the fruit stands or to be displayed in fruit stores. The general market still prefers barrels.

THE EXPLOITER SMILES



Another contribution. The text supplied is: "When dumpers are plentiful the exploiter sleeps with a broad smile, but when they become scarce he will have a night mare."

Poor Fellow

"Poor fellow!" said the benevolent woman kindly, "what has brought you to this destitute condition?"

"My wife, mum."

"Your wife! How is that?"

"Well, you see, mum, I've found her three good jobs, and blessed if she ain't lost every one of 'em!"—Tit-Bits.

Wm. Galloway President Wm. Galloway Company

Get my Special Proposition which is real co-operation between the Manufacturers and the Farmer. It gives you a chance to cut down the cost of your spreader and almost pay for it in one year. It means exactly what it says.

If You Buy a Baldwin County Farm Now

Price Advances $5 Per Acre Oct. 1st.

There will be further Advances in Price

BALDWIN COUNTY farms have long been worth more money than we have asked for them. We have been doing much improving in a general way of benefit to the community. We have demonstrated that shade grown tobacco can be grown here as well as at Quincy, Florida. Experts say our land is better for it. Our own experiments are proving this. The article from the Onlooker printed in this advertisement gives the result of the test.

It is up to the reader of this advertisement to come in now for a farm while the price is still $20 an acre for a few days only. Some who have held back now have an opportunity to buy at the the present price before the advance. After Oct. 1st the price will be $25.00 an acre—and worth more. Buy a farm of 40 acres now and save $200. Buy more and save more. Consider well, reader, and investigate Baldwin Co It is well worth investing in this land of opportunity.

From "The Onlooker"

TOBACCO

Proves Successful

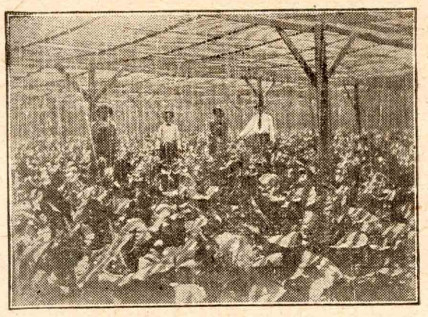
ON ROBERTSDALE EXPERIMENTAL FARM

WILL BEGIN HARVESTING IN ABOUT 30 DAYS, EXPECT 1,800 POUNDS PER ACRE

Robertsdale, Ala.—Baldwin county has now proved itself to be the future home of the shade and sun grown tobacco, especially the Florida Cuban and the Sumatra wrapper grades which are the most profitable varieties. A visit last week to the experimental tobacco farm of the Southern Plantation Development Company, near Robertsdale has most effectively proven to the writer that Baldwin county will become one of the finest and most productive sections of the "Sunny South" for the raising of the fragrant weed. Although the above Company only planted a small tract for the experiment, it is proving very successful under the care and superintendance of Mr. Berryman who is an expert tobacco grower from the Quincy, Florida, district and who has done nothing but raise tobacco all his life and to whose credit is due the success of the wonderful crop he is raising. Although the plants were only planted one month ago they are in splendid condition, most of the leaves measuring twenty-six inches across and of the finest grade. Mr. Berryman says that in all his experience he has never seen so many good leaves to the stalk and he is now assured of a most successful harvest which he will commence to gather in about thirty days. He estimates that his crop will average about 1800 pounds to the acre and of the finest texture, and which under his careful handling will no doubt bring high prices in the tobacco market and prove to all that Baldwin county is the new home for the growing of the shade and sun grown tobaccos. Mr. Glendinning the company's representative at Robertsdale reports that although there is a large tract of tobacco land east of Robertsdale it is being taken up quite rapidly by the homeseekers that are coming in who know a good thing when they see it, he also states that his company is making preparations for the growing of a large tract of shade tobacco next season as this experiment has proven to their satisfaction that tobacco growing in Baldwin county is a money maker.

Tobacco is one of the greatest money-making crops grown by farmers. Shade grown tobacco is of very fine texture. It is used for wrappers and where only the finest kinds of tobacco are needed. To grow it requires a certain climate and a peculiar soil. Around Quincy, Florida, the shade grown tobacco industry has assumed large proportions—a few years ago the land was selling for a few dolars an acre. Today this land produces from $500 to $2,000 an acre when planted in tobacco. When for sale the price is from $125 to $150 per acre.

We offer you just such an opportunity as was given the Florida people. Land now selling at $20 an acre and will advance to hundreds. We have already proved that we have as good or better soil than the Florida district for shade tobacco. This is your opportunity.



Last year shade grown tobacco sold for from 95c to $1.60 per lb. With from 1000 to 2000 pounds to the acre you can figure what this means. The demand is increasing faster than new land is becoming available.

Sun grown tobacco also grows abundantly and makes money for the planters. An illustration on this page shows a crop 29 days after planting.

Tobacco is only one of our crops. Besides this Baldwin county is adapted to General Farming, Stock Raising, Poultry, Fruit, Trucking, etc., etc.

Look at a map and calculate the distance of principal markets from Baldwin county as compared to California. Baldwin county is a thousand miles nearer —besides it has the additional advantages of water rates for transportation. Baldwin county has the advantage in freight and time over California.

The rainfall is plentiful and well distributed. The opportunities for making money by intelligent farming are no better anywhere else in the country, I know this. I have investigated the claims of every section and I say to you Baldwin county leads in advantages.

The delightful climate of Baldwin county makes it a winter resort par excellence. The cooling breezes of the Gulf of Mexico keep it cool in summer. Its bays and rivers afford fishing, oysters and water fowl in abundance. No place in the country is more healthful. The coast line of Baldwin county is longer than that of ony other county in the country. It is often called "The State of Baldwin."

The water is very pure on our lands. Many flowing springs. It is bottled and sent to Chicago because of its great purity.

Money crops mature practically every month. Work goes forward all the year. Livestock and Poultry raising are especially favored industries. The climate and soil are well adapted to general farming.

I want every reader of UP-TO-DATE FARMING to investigate our property. If you want to change location you should go to Baldwin county, where climate, soil and natural advantages co-operate to benefit the farmer.

In farms of 40 acres or more land is selling now at $20 per acre and as stated advances October first to $25. On 40 acres the wise man saves $200 by purchasing now. We sell for as little as $2.50 per acre cash or $100 down for 40 acres. Balance as low as 20 cents per acre a month. No interest on deferred payments. A liberal discount if all cash is paid.

We agree if land is half paid for and purchaser dies to deed it to his heirs without further payment. This is better than life insurance.

Evansville, June 22, 1908.
MR C. H. LEE,
Chicago.

My wife and I have returned from the excursion to Baldwin County and I think it is my duty to drop you a few lines. We find the land all right. It is the first time in my life that I saw such crops of cucumbers, tomatoes, and egg-plant, and the corn tasseled out by June first. Here, the farmers don't get done planting by June 15th. The second crop of corn was knee high on the same ground where they raised a crop of potatoes. Your Cuban and Sumatra tobacco looks as fine as I ever have seen, and I think it will surely be a success.

Another thing I must say, that you never misrepresented anything. I found everything the way you told us and I believe no one will make a mistake by buying there. Mr. Bosch, Mr. Oglesbe and we will move there in November. We have each purchased farms.

Your friend,
THEODORE DENSTORFF,
2207 Fulton St., Evansville, Ind.

I do not ask any one to buy without investigating. I go down on the excursions the first and third Tuesday of each month. Go along with me and look at what we have. If you purchase 40 acres or more we refund your railroad fare up to $30, the round trip from Chicago. Write to me that you will go down. Send for maps and full information.

MAIL ORDERS. There are some who will not find it convenient to go down now and look at farms. These may reserve location subject to change to any unsold farm later. I will select a farm for you using my best judgment as to what will suit you, if you will give me an idea of what you want. Do not miss the opportunity to get in on this at $20 an acre. Send order for a farm before the advance takes place. I will select a farm for you as carefully as if it were my own. Try it and change later if you want to.

Don't delay in securing a farm in Baldwin county for either a home or investment and do it at once before the price advances.

Yours for health, wealth and happiness in Baldwin county,

C. H. LEE

FLOWER-LANGUAGE POST CARDS, A SET OF 12 FREE

Do you know the "Language of the Flowers?" If you will send 10c for a six months' trial subscription to our large paper, The Epitomist, we will send to you, free, a set of twelve beautiful flower post cards. Each is different and represents the natural colors of the flowers and every card has the language of the flowers, portrayed in verse. These cards are strictly HIGH-CLASS and are not like any you have seen, for they are entirely new.

Write today and we will lose no time in sending them to you. Ask about the surprise which we are sure will interest you. We have only a limited supply of these beautiful cards, so send today if you want them. Address The Epitomist, 44 Main St., Spencer, Ind.

SEE YOUR NAME IN PRINT AND GET A BIG MAIL

For only 10c. silver we will send you our magazine for 3 months and if you send the names of two good agents we will give you 200 Gummed Labels with your name and address thereon, convenient for use on your stationery or to paste on your books or other articles to prevent their loss, and print your name in our mailing directory, from which you will receive lots of free samples mdse., books, magazines, letters, etc. **All this for only 10c** (silver) or 12 cts. in stamps. Address: **NEW IDEAS, Dept. 24, Box 3693, Philadelphia, Pa.**

SURPRISE POCKET CAMERA

Press the button, the Camera does the rest. Snap shots or time exposures. Bushels of fun. You can carry it with you in your pocket, and everybody you meet will want their picture taken. You get them to pose for you in some nice position, and tell them to look "pleasant" or look at the "birdies," and to their surprise, after you press the button, they will have a picture produced, nicely mounted, 2x2 inches. You can make as many as they want, and that will almost make them die laughing. You can have more fun with this than any other article made. Everything carefully made and bound to work perfecly. Price complete, only 20 cents by mail, postpaid, or given for one yearly subscription at 25 cents. Address THE WELCOME GUEST, Dept. 180 PORTLAND, ME.

CORNS

leave you in peace when you use **A-Corn Salve.** Always removes the whole corn by the root, without cutting or poison. Quick and safe. 15c at your druggist's or by mail. **GIANT CHEMICAL CO., Philadelphia**

Improved and perfected. Catches 60,000 Flies a day. Agents wanted. Write for particulars. **Baier Bros. Mfg. Co., Dept. F, Cissna Park, Ill.**

2941 Hidden Name, Friendship, Silk Fringe, Envelope and all other kinds of CARDS and premium Articles. Sample Album of Finest Cards and Biggest Premium List, all for a 2cent stamp. OHIO CARD COMPANY, CADIZ, OHIO.

10 HANDSOME EMBOSSED FLOWER CARDS 10c
No two alike. In 12 colors and gold. These cards are positively worth 5c each or money refunded. JAS. LEE, Dept. 79, 72 A CANAL STREET, CHICAGO.

Fashion Book Free!

I want to send you my handsome new book showing over 400 of the latest styles with illustrated lessons on cutting and dressmaking. I will agree to sell you all the patterns you want for 5 cents each. They are the same patterns you have always paid 10c and 15c for at the stores, made by the same people, and correct in every detail.

HOW I DO IT.

I publish **The Home Instructor,** an illustrated woman's magazine and I want your name on my subscription list. **The Home Instructor** is bright, entertaining, clean and instructive—just the sort of a paper you should have in your home. It has departments for every feature of home life, and prints the choicest fiction every month. Every issue has several pages devoted to the latest fashions, fully illustrated.

My Special Offer.

Send me 25 cents and I will send you **The Home Instructor** for **two years** and will send my big fashion book to you free. I will also agree to sell you any pattern you want thereafter for 5 cts. I can sell them for 5 cents because I buy them by the thousand and don't make any profit. I don't want the profit. I want your subscription to **The Home Instructor.** You will save many times the cost of my offer in a year. Write to-day. A. OTIS ARNOLD, Dept. U Quincy, Ill

A Mother's Love

A mother's love—how sweet the name!
What is a mother's love?
A noble, pure, and tender flame,
Enkindled from above,
To bless a heart of earthly mould;
the warmest love that ne'er grows cold;
This is a mother's love.

—Montgomery.

PLANTING SEED

The farmer places the tiny seed beneath the inviting soil, and it at once seems swallowed up and lost in the multitude of soil particles that everywhere surround and cover it. Will it grow?

The mistress of the home on the farm dreams of love and beauty, and sees where all of these might open to her about the home and unfold their loveliness to encourage and to cheer. She knows that the green plant springs from the earth, the leaves spread out like beckoning hands, the buds appear with happy promise, and soon beauty crowns it all. She puts to bed the sleeping seed, and gently covers it where dew and sunlight may invite its wakening. But will it grow?

The teacher illusrates an unknown of forgotten truth, explains a problem untrained minds have been unable to solve, plants a seed of thought here and there, all upon a higher plane. Will they grow?

The minister points from earth to Heaven, makes an impassioned appeal for better things, for a life more like the Divine, and plants the seeds of spiritual strength and glory. Will they grow?

The parent looks upon the helpless babe. All around is bright and beautiful, but within is dark, almost unconsciousness, because there is not yet strength to reflect the light nor power to comprehend. But there is growth. The tiny arms get longer and the dimpled hands larger. The little legs reach out and become stronger. Dimples appear on cheek and chin. Love brightens the eyes and awakening consciousness looks out of them and smiles. Love answers back to love, and seeds are planted to bloom in virtue and goodness as the years go by. Will they grow?

All the time we are planting seeds. It is the farmer's first great step in all his crops, and however he may work and strive afterwards and before, it all depends on—will they grow?

About the home the work may be done, the weary feet and hands may disdain to rest, the price of beauty may be paid, the seed, the hidden promise of it, may be planted, but the empty air will remain a blank if the seeds fail to grow.

How like this is every good thing in life. Away back in other years most likely good seeds were planted in our own souls. Opportunities came for doing good, chances to help others, times to do a kindly deed or speak a friendly word. How did we? Did the seed grow?

Boy or girl, pet of a household, light it may be, of a home on the farm, cherished hopes cluster about you. Precious seeds have been planted for you. Sleepless nights have garnered them, tireless days have winnowed the chaff from them, uncounted vigils have prepared the soil and planted them. Oh, did they grow, and are you caring for and cultivating, shielding them from the seeds of wickedness that choke and smother the good? Are you encouraging the tender plants to put out leaf and bud and flower to beautify your way and bear the fruit of goodness, honor and success?

The world is growing better. Men and women are becoming wiser, and they are looking, moving higher and higher. They are walking on plains more nearly on a level with those the Master trod. The home on the farm is getting more nearly like the home in Eden.

Hence, as we wander on in life; sometimes in sadness, sometimes in joy; sometimes in darkness, sometimes in light; let us continue to plant seeds that will grow and add beauty to the paths we have trod—continue to plant for others till we ourselves—

Are planted in the realm of rest,
Where roses never die,
Amidst the gardens of the blest,
Beneath a stromless sky,
We flower afresh, like Aaron's rod,
That blossomed at the sight of God.

HELPING ONE ANOTHER

No place except about the home on the farm does one so often meet incidents which so completely knit humanity together, and prove us all akin. We have in mind such a case. Just as a farmer was ready to begin plowing for wheat, he was taken down with a severe case of typhoid fever. As the days of his suffering went by, that which depressed him most was thoughts of his unplowed, unharrowed, unsown wheat field, which lay just before his window in plain view. He could do nothing. His wife and small children had more than they could do waiting upon him, caring for his idle team, and doing the necessary chores about the home. The time for seeding was rapidly passing, and he had been unable to hire any one to do the work.

One morning, however, after a restless night, he had slept later than usual, to contribute to which his window had been kept darkened. About ten o'clock he asked for the light and as the shade was lifted and he got a glimpse across the wheat field, a strange sight came to view. The wheat field was nearly half broken, and several teams were passing back and forth, and the green of the field was rapidly changing to the rich, dark color of the freshly turned fertile soil. Already several harrows were following in the wake of the plows, and a drill was just starting on the side of the field where the plowing had begun. The pain of disease was forgotten as he recognized neighbor after neighbor passing up and down the field, until his joy and gratitude became so intense that his wife prevailed upon him to turn his face and allow her to close the window upon the exhilarating scene at least for a time.

Before the sun went down the entire field had been well prepared, and the nicely cleaned seed put to bed in the mellow earth. The sick man's neighbors had each contributed a day's work, and proved man's right to the claim that he was created in the image of God, and they that day did more to cure the sick man than the physician had yet been able to do.

No where but in farm communities do such demonstrations take place, and fraternal co-operation is the instrumentality that sets them in motion. In the cities, or in mining and manufacturing centers, the same spirit is manifested in contributions of money to

STEREOSCOPES FOR OUR READERS FREE!

Every subscriber to UP-TO-DATE FARMING should have one of these beautiful illuminum stereoscopes in his home. It is as interesting for the "grown-ups" as for the boys and girls. With a stereoscope in your home, you can pass many pleasant evenings. It entertains your friends and visitors, amuses the boys and girls, and is as interesting as it is instructive. The hood is made to fit closely to the face and the stereoscope is guaranteed first-class in every respect.

With each stereoscope we will include a collection of 25 of the finest views, in natural colors, all new.

OUR SPECIAL OFFER

Send me one new subscriber to UP-TO-DATE FARMING at 50 cents a year, and ten cents extra to pay part of the postage on the stereoscope, and I will send it to you by return mail, together with the views. Positively only one of these stereoscopes to each subscriber.

We guarantee you will be pleased with the outfit. Any of your neighbors will subscribe just to have a chance to see the beautiful natural colored views through the stereoscope. Write at once before they are gone—the supply is limited.

relieve the sick and distressed, but cash contributions do not take so firm a hold upon the heart as does the doing of the work the sick one is unable to do. It takes equity and co-operation to show the good that still predominates in man.

NOT ENOUGH FLOWERS

At the semi-centenial Shaw banquet given in St. Louis a few days ago in honor of the fiftieth anniversary of the founding of Shaw's Garden in that city, Nokola Kaumanns, agricultural attache to the United States for the German Government, who was one of the speakers, chided America for its meager cultivation of flowers. Landscape gardening in the city parks throughout the United States, he said, had greatly developed within the last few years, but the lack of flowers around the farm houses and on the lawns of the wealthy city residents was so striking as to immediately attract the attention of foreign visitors. As Mr. Kaumanns views it, without these flowers American farm homes look dreary and desolate.

UP-TO-DATE FARMING has urged the planting of flowers about the homes in the country as the cheapest and most beautiful of all decorations, and we are glad to add to our case the testimony of this distinguished foreigner. We believe the taste for flowers among our up-to-date people is very greatly increasing, and that their homes this year show many more flowers than formerly, but we want to see every home brightened by these beauties so cheap and yet so universally admired.

KINDLY COURTESY

Certain little business relations bring a small boy to our home every day. His parents are excellent people, and he, himself, is a bright, intellectual, industrious, kindhearted boy, with no wicked habits we know of. But he is rude. And yet rude is scarcely the word, for his conduct, though objectionable, scarcely takes on the element of rudeness; it has neither the spirit of impudence nor impertinence. When he comes into the house he seems to have no idea that he has entered anybody's home. He is apt to whistle or sing as he passes through the hall or the rooms as he is used to do on the road or in the fields, and the apparent lack of respect marks his actions as might characterize the conduct of the most uncultured.

The little fellow does not think. He has not the proper idea of the sanctity of a home—of the common courtesy we all owe to one another. His parents have evidently failed to call his attention to these things; and yet we have in them a lesson more important than many of the lessons children are sent to school to learn. The kindly courteous boy or girl, the one who studies the rights and privileges of others, who is ever mindful of the respect we owe to one another, and is mindful of the common courtesies of life, is never without friends, and is on the certain road to success. But, on the other hand, lack of courtesy and politeness may neutralize or obscure any number of other good qualities.

AT SCHOOL

The boy or girl at school, we had almost said the farm boy or girl, is one of the most interesting members of the human family. Not only the future of an individual is centered there, but the hope of parents and friends and the welfare of the State are also involved.

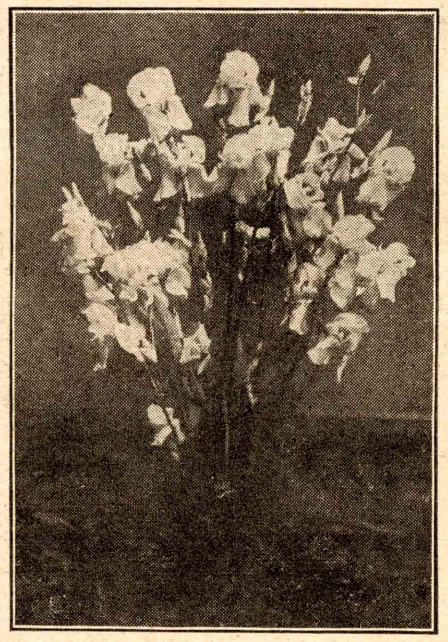
The future of the boy and girl depends upon how the school days are employed. The intellectual person must grow as well as the physical. Each day in school should be a banquet of good things for the mind. But no matter how nutritious the food, nor how abundant, nor how well prepared, if the student refuses to eat or fails to digest and assimilate what is given and received, the mind may remain a dwarf, though possibly in a giant's body.

The parents' hopes are centered in the children's success, and the foundation for that success should be laid in the school room, but its strength and permanence depends upon the child—the boy or girl. And the State is interested in every day of school in all this broad country, because the greatness of the State depends upon the greatness of its people, and that greatness is involved in the work done in the schools.

Hence, as the time approaches for the schools to open, interests are awakened which should reach not only the heart of the individual, but the heart of the public; and we cannot conceive of any more inspiring or impelling force that could be held up before human ambition than the things of the school room. The boy or girl who does not do his or her best in school is neglecting privileges and opportunities for which intellectual greatness has sighed during all the years.

IRIS FLORENTINA OR ORIS PLANT

This beautiful blooming plant is a native of Itally. It thrives exceedingly well in this country, having a most exhuberant bloom, a perfect and delicate lavander color. Commencing in shades and ending in very light or delicate hue the buds often exceed thdee inches in length, and send forth the most fascinating fragrance, when fully open. It is a hardy plant, lives and thrives out of doors all the year around. It blooms about the middle of May in this lati-



tude. The leaves are sword shaped and attractive; beautiful for borders or clusters. The bloom springs up from the center of the bulb, and often attains the height of 3 or 4 feet and furnishes from one to eix buds, which open at different periods, the bloom often lasting ten days or two weeks. They will last, if cut when first bloom opens (if put in water) until the remaining buds bloom, hence they are prized very highly for bouquets. A few plants scent the neighborhood with fragrance. Lovers of flowers are fascinated with it. They are very showy and can be seen for a long distance.

This plant has also a commercial value; it name is orris.

"What orris is?"

Orris is the commercial name for the perfumed root used in making all the perfumed powders sold by druggists, perfumers and manufacturers—it is to all perfumed powder, the basis. No lasting perfumed powder can be made without it; at least one-half of every face powder, sachet powder, tooth powder, violet powder, and every other perfumed powder is made from powdered orris root. Its fragrance is lasting and permanent. The orris plant is one of the family of beautiful plants known as orris, of which there are several hundred species known to botanists. Most of them bloom in spring—April or May.

The orris is the only one that contains any perfume in the root. There is a vast amount of roots and powder imported to the United States every

year. To know the orris is to own or see it, above only fairly describes. When the real plant appears, it can be transplanted in fall or spring. Every home should have at least a half dozen to start with. To insure a bloom next near, they should be transplanted in August, before the fall bulbs start to grow. They make a most handsome border along walks or drive ways; are hardy and easy to cultivate; will do well in good loam. Soil, the richer the better, as all plants love rich soil.

THE LATEST FAD

Everybody enjoys collecting Souvenir Post Cards. The greatest difficulty, however, is to get cards from certain sections of the country in whcih you are particularly interested. This great obstacle is easily overcome, however, by joining a Souvenir Post Card Exchange. The Exchange sends you a list containing the names of hundreds of post card collectors who will willingly exchange Souvenir Post Cards with you.

But best of all is the list containing **your** name which is sent to hundreds of collectors. After this list has been mailed by the Exchange, you should receive a perfect deluge of post cards. Patriotic, sentimental, comic, views, and, in fact, post cards illustrating the interesting features in all parts of the world. It is not unusual for members of the Exchange to receive beautiful cards from China, Japan, Russia, and other foreign countries.

The writer is a member of the Up-to-Date Post Card Exchange and knows it to be the quickest, cheapest and by far the most interesting means of getting a large collection of Souvenir Post Cards.

Join now and watch your mail increase and your collection grow.

Usually there is a heavy charge imposed upon members who join these Exchanges, but if any reader of UP-TO-DATE FARMING wishes to join an Exchange, they may do so by sending their name to Garrett Wall, Mgr. Up-to-Date Post Card Exchange, 227 West Washington St., Indianapolis, Indiana, and you name will not only be sent to collectors all over the country, but you will also be sent 20 beautiful post cards called the "American Girl" series, with which to start your collection.

There is one condition, namely, that each reader must send one 3-months' trial subscription to UP-TO DATE FARMING to some farmer friend. Send 10 cents which will include the cost of membership to the Exchange, also 20 beautiful post cards, and a 3-months' trial subscription to UP-TO-DATE FARMING to any address. Some member in each family should join the Up-to-Date Post Card Exchange at once. The next lists are being prepared now, and if you want your name listed, **join now.**

Breaking the News Gently

"A certain gentleman who had been absent from home for a long time and out of communication with his family, was met at the station by his faithful colored man.

"'Well, George,' said the gentleman, has anything happened?

"'Well, nothing worth mentioning, sir.'

"'Why didn't you bring the dog along as usual? I like to see him running alongside the wagon.'

"'Wel, sir,' replied George, 'fac' is he's took sick. 'Fraid he et too much hoss flesh, sir.'

"'Why, what do you mean, George? Where did he get horse flesh?'

"'Why, sir, when the barn burned down and all them fine horses of yourn burned up he must have got in there.'

"'My God, George, why didn't you tell me of the fire? How did the barn get on fire?'

"'Well, it was like this: We couldn't jist exactly tell; it must'a got afire while we wus looking' at the house burnin' down, sir.'

"'Say, George, you don't mean that my house is destroyed! For Heaven's sake, how did it take fire?'

"'Yes, sir, it's all gone, sir. As near as we can figure it out, it must 'a been from a curtain blowin' acrost one of the candles, sir.'

"'Why, George, we haven't had a candle in our house for ten years.'

"'Oh, I know that, sir, but you see it was this way: When your mother-in-law died they had candles at the funeral, you know.'

"'My mother-in-law dead, George! What was the cause of that?'

"'Well, sir, that was something of a mystery, but as near as the doctor could figure it out, sir, she was took with a killin- shock when she heard that your wife had run away wid the coachman, sir.'"

BUSINESS EXCHANGE

This Department is Intended to Bring Buyers and Sellers Together at Moderate Cost

THE BUSINESS EXCHANGE can be made the most valuable department in UP-TO-DATE FARMING. It can be made the medium of sale for surplus crops and as valuable to buyers to supply their needs. It should be used to a much greater extent than it is and thus one of the missions of this paper will be accomplished.

RATES—The Cost for Advertising Under This Head is 4c a Word Each Insertion

Each initial and number counts as a word. No display, except the first word will be set in two-line black letter without extra charge. To bring sellers and buyers together there is no surer way than thru this BUSINESS EXCHANGE. Advertisements under this head are small and we cannot investigate every advertiser. Our "Guarantee of Advertisers" does not apply. Rogues shall not advertise here if we know it. Report any unsatisfactory transactions promptly. When writing please say: "I saw it advertised in UP-TO-DATE FARMING."

Agents Wanted

Agents make $103.50 per month selling wonderful self-sharpening patented scissors and cutlery. V. C. Giebner sold 22 pairs in 3 hours, made $13; you can do it. We show you how. Free outfit. Thomas Mfg. Co., 53 Home Bldg., Dayton, Ohio.

Sales Manager for exclusive district, newly patented staple necessity; permanent business, big profits, experience not essential. $250 or more required. President, 426 Ohio Bldg., Toledo, Ohio.

Dogs and Pet Stock

Pedigreed Collie pups, cheap. Also ferrets. Nelsons' Grove City, Pa.

Pedigreed Scotch Collie Pups—best blood. Eligible to register. $4 to $6 each. C. L. Bowlus, R. 9, Fremont, Ohio.

Farm Lands

Farm opportunities near Salem, Oregon, "The Cherry City," on the beautiful Willamette River. Hop, walnut, fruit and dairy; improved farms $25 to $200 per acre. Unimproved $5 to $25. Excursion rates to Salem in September and October. For information and hard facts address Board of Trade, Room 34, Salem, Oregon.

Farms fairly improved, well laying, ten to twenty dollars per acre; timbered lands, choice for range, corn, clover, fruit, from four dollars up per acre. Our productive soils excellent markets, good water, mild climate, healthy location, no negro population, attract wide-awake buyers. Investigate now. For price lists and booklet, write A. M. Knobel, Doniphan, Missouri.

Farms sold quickly. Write us if you want to buy or sell. Ohio Farmers' Real Estate Exchange, Cleveland, Ohio.

If you want to buy or sell property, any kind, anywhere, write the Northwestern Business Agency, Minneapolis, Minn.

Nineteen years experience ranching, farming and gardening qualify me to properly assist you selecting a new home. Irrigated, unimproved and ranch land for sale. Homesteads near R. R. Longest electric R. R. in world now building. Write me or come 1st and 3d Tuesdays. Howard Brown, Granada, Prowers Co., Colo.

Sacramento Valley, California, is the greatest agricultural valley in America. It is the "Land of Opportunity" for the farmer. A family may be independent on twenty acres. Write Sacramento Valley Development Association, Sacramento, California. We have nothing to sell.

Snaps in land in Central Minnesota. Send for list. A. MURRAY, Wadena, Minnesota.

Texas Panhandle. Are you going to Texas soon? If so, write us. We have something good. Do you know of others who are going or who might go? If so, write us. You may get a free trip and make money besides. Ben I. Tanner, Cedar Rapids, Iowa.

Ferrets

Ferrets for sale. Stamp for prices. Calvin Jewell, Spencer, Ohio.

Live Stock and Dairy Supplies

Choice strains of registered Short Horn heifers from 17 mo. to 2 years at low prices. Fine stock at Lawnview Stock Farm, Wampum, Pa.

Excelsior Swing Stanchion. Warranted the best; 30 days trial; stationary when open; noiseless, simple, sanitary, durable. The Wasson Stanchion Co., Box 615, Cuba, N. Y.

For Sale Angus cattle of either sex. Wm. Noonan, Hartford City, Ind.

Free Price List. Shorthorns, Southdowns, fox hounds, setters, pointers. I buy and sell foxes. J. D. Stodghill, Shelbyville, Ky.

Milk Goats. Going to send a bunch of milk goats east this fall. They will be bred to Toggenburg, Saneen, Calcutta, Indian or Spanish-Malteese buck as you may elect. Am pricing them at ten dollars each delivered in Kansas City. If you want one you will have to get busy. Haynes Bros., Haynes, New Mexico.

Rambouillet Sheep; best blood, all ages; rams and ewes. Address J. HARVEY, FORKVILLE, MISS.

Registered Poland Chinas, choice breeding, fine individuals, large variety to select from. Satisfaction or no sale. Write me your wants. S. H. Taylor, Mottville, Mich.

Tamworths Immense size, early maturers, economical feeders and most prolific of all hogs. Booklet free. W. W. Morton, Russellville, Ky.

Zenoleum Lice Powder.—Especially for poultry, but kills lice on all livestock; a full pound package at all dealers, 25 cents; postpaid, 35 cents. Zenner Disinfectant Company, 17 Lafayette Ave., Detroit, Mich.

Tobacco For Sale

For Sale 20,000 pounds best leaf tobacco. Send for samples and price. Anton Wavrin. R. R, 5 Franklin, Ky.

Post Cards

32 good post cards and an extra money making proposition 10c. A. B. Morgan, Dept. 13, 3824 Vernon Ave., Chicago, Ill.

20 Souvenir Post Cards representing in color the most beautiful specimens of womanhood—the American woman free, together with a membership in the Up-to-Date Souvenir Post Card Exchange. All for one new three months subscription to Up-to-Date Farming at 10 cents. This is the quickest, cheapest and most popular way of collecting souvenir post cards. Address Up-to-Date Farming, Dept. 93, Indianapolis, Ind.

Miscellaneous

Editor or assistant wanted for Home on Farm Department in this paper. Lady readers who are qualified are asked to correspond with Editor Up-to-Date Farming, Indianapolis, Ind.

20 American Girls Free

This set of beautiful Souvenir Post Cards is considered the most popular set of post cards ever issued. They represent, in color, the most beautiful type of womanhood — the American Girl. *Twenty different views of her, each fit for framing.* Some of the types are: The Country Girl (alone worth the entire set), the City Girl, Western, Southern and Eastern Girl, and other types.

If you collect post cards, your collection is sadly imcomplete without this great set. Send them to your friends.

MY SPECIAL OFFER

Send me one new 3 month subscription and I will send you *one complete set of American Girl Souvenir Post Cards.* If you take advantage of this offer within 10 days, I will also include your name as a member of the Post Card Exchange, and send you a list of collectors from all over the United States who want to exchange cards.

Remember, twenty Souvenir Post Cards, (American Girl Series), a membership to the Post Card Exchange, for one new three-months' subscription to UP-TO-DATE FARMING at 10 cents (stamps or silver.)

GARRETT WALL
Subscription Mgr. UP-TO-DATE FARMING
Indianapolis, Ind.

F. S. of E. OFFICIAL DEPARTMENT

THE FARMERS SOCIETY OF EQUITY

Headquarters, Indianapolis, Ind.

As its name would indicate, this is a farmers' society. Its organized forms are a National Union, State Unions, County Unions and Local Unions. Also Department, Section and District Unions are provided for controlling and marketing the various crops. Particulars for organizing the various unions will be sent on request.

MEMBERSHIP. The membership of the Farmers' Society of Equity shall consist of farmers. By farmers we mean people who are engaged in the vocation of farming or who own land on which crops are produced. (To be *also* engaged in merchantile business, manufacturing or the professions does not disqualify a farmer, or one who owns land on which crops are produced, from joining the F. S. of E.)

SPECIAL MEMBERS. First, an exception to the rule regarding eligibility for membership may be made by any local union by a majority vote of its members at any regular meeting. It can in this way elect any one of good character, not a farmer, to *special* membership in the local union on payment of the regular fee, but such special members must never be elected or appointed as delegates to conventions of higher unions. The object of this is to always keep the management of the Society in the control of farmers themselves.

Second, wives of members and daughters of the same may be admitted to *special* membership without the payment of any fee, also male children between 14 and 21 years may become *special* members in the same way. These *special* members may retain membership without the payment of any dues, but on reaching his majority the male members can only retain membership by paying the regular fee.

MEMBERSHIP FEE. The fee to join the F. S. of E. is $2.00. This is divided as follows: The local union retains 25 cents. The balance is sent to headquarters and 50 cents is paid for the official paper one year to the member; $1.00 goes into the organization fund and 25 cents, or as much of it as is necessary, will go to pay the general expenses.

ANNUAL DUES. Each member must pay Annual Dues of $1.20. This is payable when a year has elapsed after first joining, and annually thereafter. It is apportioned as follows: The local union may retain 35 cents and send 85 cents to headquarters. This will be used, 50 cents for the official paper and 35 cents, or as much as necessary of it, to meeting general expenses and extending the Society.

AFFILIATION. Local, county and State unions, now organized, of societies under any other name will be chartered by the Farmers Society of Equity on resolutions passed by a majority of members or delegates. Unions thus affiliating will be chartered free on remittance of the dues as above. Provisions will be made for the support of State and county unions so affiliating and their activities defined. Supplies and a seal of the F. S. of E. will be furnished free on report of annual dues.

REMARKS. Ten (10) or more eligible people may organize a local union by electing a president, vice-president, secretary and treasurer, and reporting it to headquarters. Blanks will be furnished on request. Members will receive the official paper (UP-TO-DATE FARMING) one year from the time the report of their membership is received, or one year from the time their annual dues were payable. They are advised to watch the date on their subscription label and if there is any delay in receiving paper, or changing date in the case of paying dues, please report to headquarters. Promptness in reporting will be required from all secretaries and organizers. ¶ *Write Plainly.* If you cannot, then print names and addresses or get some person to write who can write plainly. We must *guard against errors* if every person is to be satisfactorily served and our Society is to quickly accomplish its great and good objects.

OBJECTS. The FIRST and chief object of the Farmers Society of Equity is *to obtain profitable prices for all the products of the farm, garden and orchard.*

The SECOND great object is *to have built and maintained granaries, elevators, warehouses and cold storage houses on the farms, in principle market cities and in all localities where surplus crops are raised, so that farm produce may be held and controlled for profitable prices, instead of being dumped to pass into the hands of middlemen and trusts.*

OTHER OBJECTS. The F. S. of E. also has many other objects, but they must all wait on the accomplishment of the first. Also all farmers may as well understand that the *first* object depends largely upon the accomplishment of the *second,* because crops must be controlled before equitable, and always profitable prices can be secured. To control the crops, the facilities to control—store—must be provided. Therefore it is important that *a granary be provided on every farm that produces a surplus of grain and an elevator or warehouse be built at every shipping point.*

OFFICERS

President—W. H. Mitchell, Hutchinson, Kan.
Vice President—J. A. Everitt, Indianapolis.
Secretary—I. C. Rous, Indianapolis.

Send all reports, and address all communications to

FARMERS SOCIETY OF EQUITY,
Headquarters, Indianapolis, Ind.

33

NOTICES

LOCAL UNIONS. The Farmers' Society of Equity has ready for delivery a complete assortment of blanks, forms and instructions for the use of local unions. If your union has not received them please apply to headquarters at once. Price 50 cents, postpaid.

ORGANIZERS. Send us the dates of your meetings at least 10 days before the date of the paper you want them to appear in. Also send for report blanks, etc.

ADDRESSING. Always address communications and make all remittances payable to the *Farmers' Society of Equity* and not to individuals.

If your business is with the Society, always make money orders or drafts *"to the order of Farmers' Society of Equity,"* and not to any individual. If with the publisher of this paper, make them *"to the order of Up-to-Date Farming"* and not to any individual.

Members' buttons for F. S. of E. cost secretaries and organizers 1 cent each. A supply should always be kept on hand for delivery to new members. The same way with members' cards and fee and dues stamps, which will be sent on request without advance payment.

$1—$1—$1—$1—$1—$1 Wheat.

55c—55c—55c—55c—55c Oats.

$2—$2—$2—$2—$2—$2 Beans.

$14—$14—$14—$14—$14 Hay

50@75c—50@75c—50@75c Apples.

12c—12c—12c—12c—12c Cotton.

While most crops are selling high, enough wheat, oats, hay, apples and cotton need support. If farmers will fix the above prices in their minds and hold for them, they will be secured.

These prices are recommended pending the action of the 1908 convention, which will agree on the minimum prices for all the 1908 crops.

The 1908 convention will begin Oct. 27, 1908. Its work will be completed so all those in attendance can return to their homes before the day of the national political election.

The confession of C. R. Walrod, which continues in this number, is also published in pamphlet form and will be sent free to parties who will place it in the hands of people who may still be in doubt.

We are often asked about sending delegates to the 1908 National Convention, Indianapolis, October 27, next. To all, we will say that this will be a mass convention, representing all members who were in good standing in October, 1907. This means that any such member can come and will be seated as a delegate. Also farmers who may not have been members, but who are concrned for the future of The American Society of Equity, and we will say, for the future of American agriculture, should come and help by their presence and advice. Local unions should send delegates at the expense of the union, or a number of unions may join in sending a delegate. This convention will entail some expense on the delegates or unions, but its importance demands that this be not considered an obstacle to a good representative attendance.

At the 1908 convention, October 27, the Department of Fruit and Produce; the Grain Growers, etc., will be reorganized. Also it is expected some new departments will be organized. This should enlist the interest of all classes of farmers.

This may be said to be a convention for complete reorganization. The society has developed many weaknesses, which, now being apparent, and with years of experience back of us can be overcome in the reorganized society. Following the National convention, State conventions should be called and the State unions reorganized to conform to the revised constitution and by-laws of the National union.

In all the effort being made by this paper to reestablish the American Society of Equity, we want it understood that nothing of selfishness is behind our effort. Mr. Everitt is seeking only for the complete success of the society and the realization of its good objects. He knows the plan he gave the farmers is right and the only practical one. To see it applied is the height of his ambition, while to have it fail, will be a reflection on his judgment and a victory for his enemies who said "it can't be done."

It is the duty of every member to give sareful thought to the future officers of the society. We must have men of known ability to administer the prudential concerns of the society, but it might not be bad to select as president a man of national reputation that the people **will follow because he is at the head, or leads.** Barring the troubles in the society, this is a position that would honor any citizen of the country, not excepting the present President or Vice-President, whose terms of office will soon expire.

Five years ago this paper was alone in contending that farmers should give more attention to marketing their crops and old readers will remember how we were attacked by other papers because we assumed that farmers could have any power in that direction.

The teachings of UP-TO-DATE FARMING, which were considered strange and impracticable then, are now accepted by nearly all, and the President of the United States has come to look to the distributing end of farming as possibly the means to better social, sanitary and economic conditions on the farm.

Recently the President appointed a committee to make investigations into the whole matter of farmers and farming and report to him with recommendations. From the article quoting his letter to the chairman of the committee, was this:

I doubt if any other nation can bear comparison with our own in the amount of attention given by the government, both Federal and State, to agricultural matters. But practically the whole of this effort heretofore has been directed toward increasing production of crops. Our attention has been concentrated almost exclusively on getting better farming.

This is precisely our claim of nearly six years ago, and what we have persistently taught since. The problem now is: How can farmers best bring the marketing, or distributing end of their business up to the high efficiency attained in the producing end? There is only one way and that is through the system and plan provided in the original American Society of Equity.

If the President, or his commissioned representatives, or the farmers of America, want to improve the social, sanitary and economic conditions on American farms, and of American farmers, they will be obliged to start with the fundamental factor, profitable prices for all farm crops. This implies controlled marketing and must call into play the original, simple plan of The American Society of Equity.

Does it not appear to you that the Oct. 27 convention can be made the most important meeting of farmers ever held?

Four new one-year subscriptions accepted for $1.00. Send us a club.

We need a good representative in your vicinity. If you know of some live man who wants to earn a good salary, tell him to write to us for our agent's proposition.

STATE MEETING MICHIGAN UNION

Michigan Society of Equity

Owing to the fact that the convention called for the National Union is so near following the time set for our State meeting for the coming convention, it has been decided, after corresponding with some of the officers, to have the Michigan Union State Meeting at Traverse City, Mich., September 30th. The convention to be called at 1:30 p. m. The reason for this change is to give all members an opportunity to express themselves previous to the call of the National convention, and each local union is especially requested to send representatives to this meeting.

W. S. HOLDRIDGE, Pres.
E. N. BALL, Sec.

FEATURE OMITTED

The Farmers Pools column is omitted in this issue and will be resumed in the next. Since our last report, two weeks, the visible supply of wheat has increased nearly 4,000,000 bushels and was, August 15th, 24,313,000 bushels, which is still not half as much as a year previous. The visible supply of corn remains practically the same, 4,058,000 bushels; of oats it has increased 2,000,000 bushels. The great feature in price since our last report occurred in spring wheat. The cash prices at Minneapolis on August 8th were: No. 1 hard spring, $1.25@$1.27; No. 1 northern, $1.23. On August 24 they were: No. 1 hard spring, $1.07⅝; No. 1 northern, $1.05⅝. Prices of other grains have not changed much.

EXUITY EXCHANGES AGAIN

As time passes the folly of Tubbs and his supporters on the 1907 board is emphasized. We quote below from an Evansville (Ind.) paper:

Equity Market Closed

The Farmers' Equity Market, 419 Vine street, closed yesterday. It was not a financial success. This is attributed to the fact that the farmers left their produce on the consignment plan and had to take back the unsold stock. The farmers preferred to sell to the grocers for cash.

This is also the end of (mis) director of organization Speer's pet hobby, to market the crops of southern Indiana farmers through an Equity Exchange jointly with organized labor. Members of the society, are, no doubt, wiser now, if a little poorer and probably are near the time when they will come back to the unadulterated A. S. of E. plan.

Chicago Exchange

The Chicago Exchange, the first and last of the series, still manages to survive with ex-National Director Scott in charge. Some of the best organized districts in Illinois, Wisconsin and Michigan have shipped to this Exchange with less satisfactory results than they secured through the old line commission houses and the experiences have been bad blows to the society. Notwithstanding Wisconsin members, it is reported, have recently subscribed $3,000 to help the Exchange out of the hole, it is only a matter of time when it also must succumb because not established on sound business principles.

HOPE FOR THE FUTURE

The following, written by Charles H. Steinway to business men, we also commend to farmers:

Treat men fairly in the first place. Then give them hope of gain—personal gain.

The chief incentive for production of any sort is hope for the future. It is the motive that animates you in your business, and it is the motive that must animate your employees.

This is very true. Hope for the future is the great stimulus to effort. How much more certain and hopeful would the farmers' future be if they were entirely in control of the prices of their own products and free from the blighting curse of speculation and gambling.

OUR SOCIETY

Some Facts That Every Member Needs Before Entering on the Work of the 1908 Convention

(Continued from page 2)

made. The country was never in better condition to receive the organization than it was last year (1907).

The Conspiracy

My own time was devoted a good deal to putting Everitt in as bad a light everywhere as possible. Being in charge of the Equity Press Bureau, I was enabled to get in touch, through personal correspondence, with the publishers of a great many papers, and to enlist their support so that when the time came they could be depended upon to scatter news matter pertaining to and against Mr. Everitt. This was a matter that Mr. Tubbs wanted directed especially toward the agricultural papers.

There was logic in this campaign with the farm papers, for the reason that several of them were already hostile to Everitt. UP-TO-DATE FARMING has often truthfully stated that the majority of farm papers were not published for the real good of the farmer. Even though many of them believed in the plan of the society, they ridiculed the plan of controlled marketing for no other reason than the simple reason that UP-TO-DATE FARMING was making thousands of friends and followers where they were making only a "corporal's guard." Therefore it was a matter of business, of dollars and cents to them, to help oust Everitt and to afterwards publish the account of the affair.

Money Withheld From Mr. Everitt

In the early part of the summer of 1907, I started to making the divisions of the money that was received at the offices of the society. We never gave UP-TO-DATE FARMING a cent more than was due it and in many instances it didn't get near all that was its due.

An instance of how money was withheld from Mr. Everitt is best shown by the straight subscriptions that were received by us. For istance if we received a dollar from a man for a year's subscription to the paper, we never reported but 50 cents to UP-TO-DATE, the same as if the man had been reported as a member. As UP-TO-DATE had no way of telling what was received on the original order, and as Everitt had to rely on headquarter's honor, it was an easy matter to "steal" the extra fifty cents.

In many cases where not enough money was reported with the names of new members, the account was thrown into the "suspense fund" and held for later division. Many such reports dragged along until after the last annual convention and when divisions were made then, the names were reported to the Equity Farm Journal instead of UP-TO-DATE.

The Board of Directors at their meeting in March had placed the amount to be paid UP-TO-DATE for new members as follows: 50 cents first quarter, 40 cents the second quarter, 30 cents the third quarter, and 20 cents for the last. If good reports were received the last day or two of the quarter, we usually held them over until the first day in the new quarter. In that way we defrauded Mr. Everitt out of 10 cents per member.

In addition to the above methods of holding back money that belonged to UP-TO-DATE , I remember that in a few instances some locals that paid 1907 dues, also reported some for 1906. This 1906 money was always "cabbaged" onto by us as it was a matter that neither Everitt or UP-TO-DATE would ever be able to discover unless some one of us would tell him.

(To be continued)

A GUARANTEE BOND

INSIDE EACH ROLL OF

CONGO

NEVER LEAK ROOFING

A GOOD MANY roofings carry guarantees. Most of these are not worth the paper they are written on. They are full of provisos that no one can live up to, ***and you have only the manufacturers' word behind them.***

We looked into this proposition some time ago, and determined that we would offer a guarantee with every roll of Congo that would ***mean something.*** We therefore went to the National Surety Company, a corporation with over $2,000,000 of assets, and arranged with it to furnish with every roll of Congo a ***genuine Surety Bond.***

It ***guarantees*** that our three-ply Congo Roofing will last ***ten years,*** if the directions are followed—and the Surety Company stands behind that guarantee to the limit of its resources.

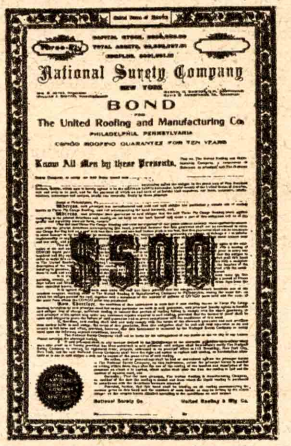
It therefore protects you absolutely. It substitutes absolute knowledge for guesswork.

If we went out of business to-morrow, it would make no difference. The Surety Company is behind us.

We mean to show the public that we have confidence in the ***durability*** of Congo, and that we are willing to back this confidence up in a way that no other manufacturer ever dared to.

We can afford to make this strong guarantee because we know Congo will last the full period of the guarantee, and more. It has always given better satisfaction and all round service than any other ready roofing made.

This bond is the broadest and most liberal proposition ever offered in the roofing business. It means we have faith in Congo. ***It protects you absolutely.***



National Surety Company
BOND
The United Roofing and Manufacturing Co.
PHILADELPHIA, PENNSYLVANIA
CONGO ROOFING GUARANTEE FOR TEN YEARS
Know All Men by these Presents,
$500

Fac-Simile of Guarantee Bond.

If you are looking for a watertight roofing that needs about as little care as a roofing could get along with and give satisfactory service, ***backed by a guarantee that means something,*** Congo is what you want. It is made of the very best materials that can be secured, and is the most pliable waterproof roof-covering on the market.

We do not ask you to take our word for this, but will gladly send you free samples on request. If you have these before you and consider that behind the roofing is not only our reputation but a surety bond, we know that you will not fail to purchase Congo. Write at once and let us send you Samples.

SPECIAL NOTICE—If any Congo rolls that you purchase do ***not*** contain Guarantee Bonds, write us at once, telling us where and from whom they were purchased, and we will at once mail you the missing bonds.

MERCHANTS AND MANUFACTURERS INTERESTED

A Great Opportunity to Develope the Society of Equity

(Continued from page 5)

lions of members, with this great army of enthusiastic, experienced business men to help us?

And don't think this proposes to be a war on the catalogue houses. Anything connected with the true American Society of Equity is not a war on anything, or anybody. It is proposed to be an educational campaign, and if farmers cannot be shown that their best interests will be served by buying at home, as they may not be if the merchants don't do their part, then the catalogue house trade will grow as before. It proposes to be an educational campaign that will teach Equity to the merchants as well as to those who deal with him.

One of the important matters for the National Mass Convention beginning October 27, is to launch a campaign of organization, with the aid of our merchant friends, that will complete the society, we hope, in a year.

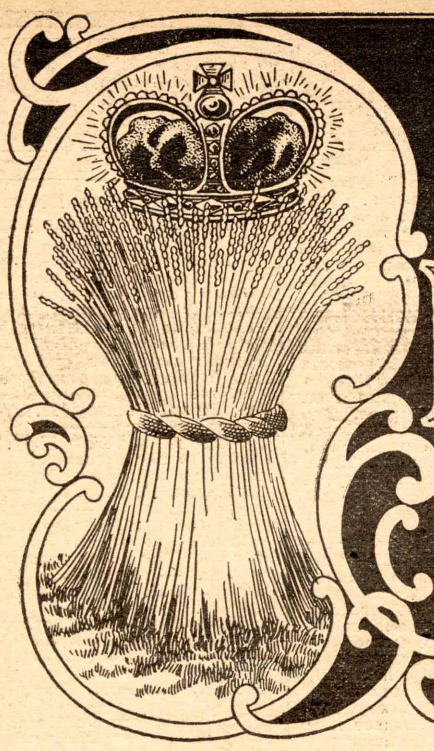
From an editorial in The National Hardware Bulletin, for August, referring to this movement, we print as follows:

All for Home

Behold the lure of the city! Like moths to a candle attracted our boys and girls rush toward the glitter and glare. Gilded vice and boasted vanities pluck thousands of innocents annually from town and country. Unheeded is the appalling record of hopes blasted, characters ruined, and lives sacrificed. On to the fascinating wicked city is the cry! Who cares for the never ending, shrouded procession of slugged, drugged, robbed or mobbed victims that move with constantly filling ranks toward oblivion? We risk being bumped by automobiles, caught by street cars, crushed in elevators, ground by machinery or run over by wagons or engines. We bring our families or send a son or daughter as a sacrifice to the modern Juggernaut. We turn from honest nature to the deceitful wiles of flattering charlatans. Flash the danger signals! Pass the warning ot the rising genations! Our hope for future and stability of government depends largely upon the loyal, rugged, patriotic, Americanized citizens of town and country. Opportunities must be opened, attractions developed and local prosperity encouraged. *"All for home"* is an inspiring slogan. It means honest, friendly, sincere co-operation between farmer and merchant for general community advancement. It means success. God help us when the city grows so large that it dominates and dictates in politics or business. When trade and population is centralized at the expense of the general country. "All for home." It is high time that we understand and appreciate the wisdom and advantage of this movement.

Although our slogan is "All for Home," we cannot cheat the cities and have no desire to. We don't propose to build up the country at the expense of the cities, but by being fair to the people in country communities, with the result that they experience greater prosperity, the cities will unavoidably prosper in like or greater ratio.

"All for Home" as a slogan, and "Equity in All the Business Relations of Life," as a motto; and these lived out in actual daily business, will make rural America a paradise and will be a great step toward the millennium.



HARVEST KING WHEAT

A REAL MONARCH of the WHEAT FIELD

THIS FAMOUS WHEAT HAS A RECORD OF UNPARALLELED SUCCESS, NORTH, SOUTH, EAST AND WEST.

Altho we have sold the Harvest King Wheat for several years, the demand continues to come each season in undiminished volume, and it continues to give the same satisfaction that was originally responsible for its great popularity. The Harvest King Wheat is one of the most reliable varieties of smooth headed wheats. In the past it has surprised growers by its hardiness, vigor and all-round reliability. The testimonials printed below will speak for the variety in this respect. It is one of the earliest varieties, hence one of the surest to mature sound, plump grain. The straw is strong, heads very long and filled with very large, red grains. Chaff red, heads beardless. The grain weighs very heavy and for milling it is all that millers desire.

It pays to change seed. It may pay you handsomely to sow a field of Harvest King Wheat if you are not already growing it. We have had thousands of reports for this fine variety speaking of its good qualities. We can print only a few of them here.

SUPERIOR TO ANY OTHER

The Harvest King wheat is superior to any other in this locality. The season was the worst in years, and the wheat is only half a crop or less. The H. K. has a plump, fine berry. I will try Fultzo-Mediterranean this year.
T. H. G. L., Jefferson Co., Mo.

AWAY BEYOND EXPECTATIONS

Last year we purchased two bushels of Harvest King and sowed it on 1½ acres, and threshed 38 bushels; and it weighed out to 40 bushels, 5 pounds. We will sow 33 acres of Harvest King this fall. In the spring this 1½ acres of H. K. looked as though there would be no wheat, as the ground looked bare as the floor, but oh! my! it began to grow and the result was away beyond my expectations. It is truly a remarkable wheat and a first-class yielder. We could have sold all of this H. K. for seed, as the people driving along the road to town kept watching it, and wondering what kind of wheat it was and where I got it.
M. P., Marshall Co., Ind.

A FIELD OF HARVEST KING WHEAT

A finer sight cannot be imagined than a good field of this noble Wheat, with its long, bright straw bending from the weight of the large heads loaded with golden grains. "As heavy as lead" is a common expression when referring to the heads.

WILL IT PAY? *Will it be a profitable investment* to secure new seed wheat? Suppose you want to sow 20 acres. If you sow your own wheat it will require 1½ bushels per acre, or 30 bushels. We will suppose that the market price of good wheat is $1.00 a bushel, and to clean your wheat and shrinkage, will represent, say, 15 cents a bushel. Or 30 bushels of your own wheat at $1.15, equals $34.50.

If you buy our hardy, vigorous seed wheat you should figure this way: 1¼ bushels per acre; 20 acres will require 25 bushels at $1.50 per bushel, equals $37.50. The bags will be worth $2.00, leaving $35.50 for the wheat. There will be something for freight, but it will not be very much. Outside the freight, the cost is only $1.00 more to seed with our fine, hardy, productive wheat, than to sow wheat that is probably run out and weakly—only 5 cents per acre.

Compare this with the extra yield that is certain to result; and the extra price you can probably get for the crop. Think about this matter and we believe you will conclude that it will be a good investment to change your seed and sow a good part of your crop with our justly famous Harvest King wheat. If you don't want to sow 20 acres, sow less.

CAN SELL 1,000 BUSHELS MORE

I sowed 15 bushels of your Harvest King wheat, and I cannot praise it high enough. It is the finest headed wheat I ever saw. There is not another field in my neighborhood that bears any favorable comparison to Harvest King. I sent to Ohio and got 40 bushels of Fultz, but is it not near as good as H. K. I can sell all I raise at a good price, and judging by the interest taken in it by my neighbors, can sell 1,000 bushels more. Wm. W., Sangamon Co., Ill.

THIRTY-SEVEN AND ONE-HALF BUSHELS PER ACRE

The wheat I purchased of you, 2½ bushels Harvest King, and 2½ bushels Fultzo-Mediterranean, I sowed 1¼ bushels to the acre, giving it a fair test with Fultz, all sowed the same day. Harvest King yielded 37½ bushels per acre, and Fultz 17½ bushels per acre.
S. P. M., Howard Co., Mo.

50 BUSHELS, OTHERS 10 TO 12 BUSHELS

Harvest King wheat was far ahead of all other kinds in the whole neighborhood in every way. It yielded 50 bushels per acre while other wheat by the side of it yielded 10 to 12 bushels per acre. My wheat this spring is the finest in the neighborhood. Harvest King pleases me better than any other wheat I ever raised. Wm. M., Clarke Co., Ind.

WELL PLEASED

The Harvest King wheat is promising indeed. It stood the winter well, and I think it is the most thrifty looking wheat I ever saw. I am well pleased.
E. R., Lawrence Co., Ind.

THE GREATEST EVER SEEN

The Harvest King, which is the king of the harvest field. My yield was 48½ bushels per acre. Nothing like it was ever seen about here before. I will sow all I raised. It's worth $5.00 a bushel for seed. C. M. L., Allegheny Co., Pa.

ALL WE CLAIMED

The Harvest King wheat is all you claim for it. I have it sown between other varieties. It is much stronger than either, and I have every reason to believe it will make a fine yield. O. E. V., Holmes Co., O.

NATURAL TO THE SOIL

I write to inform you that the wheat you sent to this county is fine and everyone is well pleased, and your trade here will be large in the future. A remarkable thing about your wheat is, they don't need any acclimating, but succeed as though natural to this soil. Last year many bushels of a variety of wheat were sent here from Ohio, which was an entire failure. Quite different with yours. Every person I have seen praises them and say they are as fine as silk. J. S. M., Christian Co., Ky.

64 POUNDS PER BUSHEL

The Harvest King wheat you sent me last year weighed 62 pounds per struck bushel, but I have beat you, as my wheat just threshed tests 64 pounds and a perfect sample. Yield very good—34 bushels per acre—which is 9 more bushels than our next best variety, the Early Red Clawson. R. H. S., Calhoun Co., Mich.

A WORLD BEATER

Harvest King for hardiness in winter is a world beater, and withstands great drought better than any kind I ever saw. From 2½ acres last year (a bad one) I threshed 82 bushels of 62 pounds per bushel. My Harvest King now looks fine and much better than any other kind. J. R. G., Fayette Co., Ill.

2,083 BUSHELS ON 53 ACRES

J. A. W., of Rush Co., Ind., believes he has the largest yield of wheat so far reported. He planted 53 acres (Harvest King Variety), 25 in "fallow ground", which yielded 43 bushels per acre; 28 in "stock ground," which yielded 36 bushels per acre. —Indianapolis News.

PRICE **Small introductory lots by mail, postpaid, 1 lb., 25c; 4 lbs., 75c. By freight or express, at purchaser's expense, ¼ bu., 65c; 1 bu., $2.00; 2½ bu., (1 bag for 2 acres), $4.50; 5 bu., (2 bags for 4 acres), $8.50; 10 bu., (4 bags for 8 acres), $16.50; 25 bu., (10 bags for 20 acres), at $1.50 per bushel. All bags furnished free.**

HOW TO ORDER **Send remittance with order, or we will ship to responsible parties payable on arrival and subject to examination, if $1.00 is sent to guarantee good faith. Remit by money order or send cash in registered letter. Give full address including county and shipping station if different from postoffice.**

The O. K. Seed Store has been headquarters for best varieties of Winter Wheat for 25 years. We sell more Winter Seed Wheat than any other seed house or grower. Our choice varieties are limited this year. Order promptly. We should hate to disappoint our customers later, but from the present demand it looks as tho we will run short. If you want to increase your yield 10 to 20 bushels an acre, send for Harvest King. Every reader of this paper can, with care, and good seed, raise crops like those reported above. We refer to our thousands of customers over the country; also to any bank or business house in Indianapolis. Send us your order for wheat and harvest a big crop next year. Central location. Low freight rates. Prompt shipments. All wheat thoroughly cleaned and graded, ready to sow. Circulars free.

O. K. SEED STORE, Dept. A, Indianapolis

THE FARMERS' POOLS

Only 25 or 50 Cents to Get a Profitable Price for all Your Crops.

NATURALLY the question arises with every reader, "what are the Farmers' Pools?" Everybody has heard of the speculators' wheat pools, corn pools, oats pools, potato pools, apple pools, cotton pools, egg and poultry pools, etc., but who ever heard of Farmers' Pools before? Read all of this advertisement and learn of the new power to be placed in the hands of farmers. *Never before in the history of American agriculture has an opportunity like this been offered to them.* Through the Farmers' Pools farmers will have absolute power to make the price on every pound, dozen, bushel bale or ton of farm produce sold and it will always be a profitable price. They can take price-making out of the hands of speculators and gamblers on boards of trade forever.

This is not a boast in any sense. What we claim has been done for some crops and can be done for all. The Farmers' Pools will be a great multitude of farmers who want steady and profitable prices instead of the fluctuating and often unprofitable prices made by a clique of speculators. . In the past farmers had little or nothing to say about the price of their own products while every other producer and even the laborers and professional men set the price on their goods and services. The farmer who worked harder and longer hours than any of them and produced what the life and comforts of other people and domestic animals depend upon, simply hauled his produce to market and meekly asked people who would starve, if it were not for the farmers' crops, "what will you give for it?" and accepted what was offered.

THE ONE THING

There was just one thing that made farmers so helpless and put all power in the hands of the speculators. The one thing was the *VISIBLE SUPPLY.* This is the temporary surplus in the big elevators controlled by people who produce no crops, but handle them. To illustrate: It takes a year to consume each crop. But a crop matures all at one time or nearly so. Therefore, farmers have all the *supply* of a crop at one time but the *demand* wants only one-twelfth of it any month. This inequality in the immediate supply and demand made the opportunity for the speculators. The farmers did not understand the problem, but the others did, and they saw their opportunity and built great elevators to hold the grain and warehouses to hold the potatoes, hay, broom corn, cotton, etc., and cold storage houses for meat, fruit, eggs, poultry, etc. that the farmers would not hold themselves. Then it came about that a few thousand people who produced nothing got hold of such a large portion of each crop the first few weeks after the harvest that they made the price on all the crops of about 8,000,000 farmers.

keep the crops out of the hands of speculators and they cannot compete with farmers in making prices. We will illustrate the problem with the wheat crop which is the first one to need relief:

THE 1908 WHEAT CROP

The prospects for the 1908 wheat crop are excellent and the speculators expect a great golden stream of wheat to soon flow from hundreds of thousands of farms into their great elevators in Chicago, Minneapolis, St. Louis, Kansas City, Omaha, Cincinnati, Buffalo, New York, etc. The problem is to keep the visible supply small or in other words

They depend on the farmers being as silly as geese and that they will *dump* their wheat as formerly, consequently they are buying and selling the new crop (before it is harvested) at 85 cents a bushel and they say they will buy it for 75 cents a bushel, although no crop of wheat should sell for less than $1.00, considering the prices farmers pay for what they buy, and for labor, taxes, etc.

The *visible supply* is now low, being 25,000,000 bushels and the cash price is $1.00 a bushel and above.

When the visible supply is 50,000,000 bushels the price will be about 75 cents and the higheer the visible the lower the price. In 1894 the visible supply reached 75,000,000 bushels and the price went to 50 cents a bushel. The *visible supply* must be kept low. This is the only way to defeat the gamblers and put price-making in the hands of farmers. Keep the *visible supply* of wheat low and we will defeat the speculators' wheat pool and make the Farmers' Wheat Pool successful.

FARMERS CAN WIN

But did somebody say, "Farmers can't do it?" They must market at once. We say they can do it. Very few farmers must sell *all* their wheat as soon as threshed and those who must let them sell. The demand needs about one and three-quarter million bushels every twenty-four hours. This will absorb all the poor farmers' wheat and some from those who can hold. This demand must be supplied or the price would go to $2.00 a bushel or more.

All that wheat growers need to do is to watch the visible and sell when the market is right. This is a simple matter if they are in the Farmers' Wheat Pool and it will be the same for all other crops.

Farmers will be in the Pools if they are subscribers to UP-TO-DATE FARMING, the paper that teaches the only correct and practical plan for marketing farm crops to compel profitable prices, and the official paper of the Farmers, or American Society of Equity. UP-TO-DATE FARMING has about a quarter of a million circulation already. But it should go to every farm home in the country. The greater its circulation the stronger will be the Farmers'Pools. Every subscriber to the paper is a member of the Pools for as many crops as he grows and through the advice of the paper is instantly ready to act with his brother porducers when the visible supply is in danger of becoming too large or when the price goes below the minimum.

A GREAT IMPROVEMENT

The paper, going to each farmer in the Pool gives each member the latest news about crops gathered from members everywhere and indispensible advice about markets and marketing; prices, visible supply, etc. All the members will have the same advice and direction, at the same time, about the same thing. This will be a great improvement over blind guesses or false reports and advice of market manipulators, as heretofore.

No Cost. No Dues, No Fees.

The subscription price is 25 cents or 50 cents as explained below. This is very low as every reader considers this paper is worth more than all other papers combined. It don't cost anything to join the Pool and get all the benefits. You pay no fee and there are not dues. You make any pledge. You are not asked to hold and will be your own boss to sell or *every member is a free agent to do what is to his best interest.*

$1.00 a Bushel For Wheat

That's it! We know every farmer wants at least $1.00 a bushel for wheat and profitable prices for all other crops. Therefore, when we put them in condition to simply reach out their hands, as it were, and get the prices they can be trusted to do the things that are to their interest and make them money.

Now honestly, is it worth 25 or 50 cents to get at least $1.00 a bushel for your wheat, and corresponding prices for all other crops? Is it worth 25 of 50 cents to be free from your old-time exploiters and price-makers? Is it worth 25 or 50 cents to assert your manhood instead of cowering before a few speculators who make the price on your crops months before the harvests and whose methods are stenches in the nostrils of the public? Is it worth 25 or 50 cents to uphold your brother producer in prices and be upheld by a million of them, rather than be a goose of a dumper to break their prices down? Members of the Farmers' Pools are not dumpers.

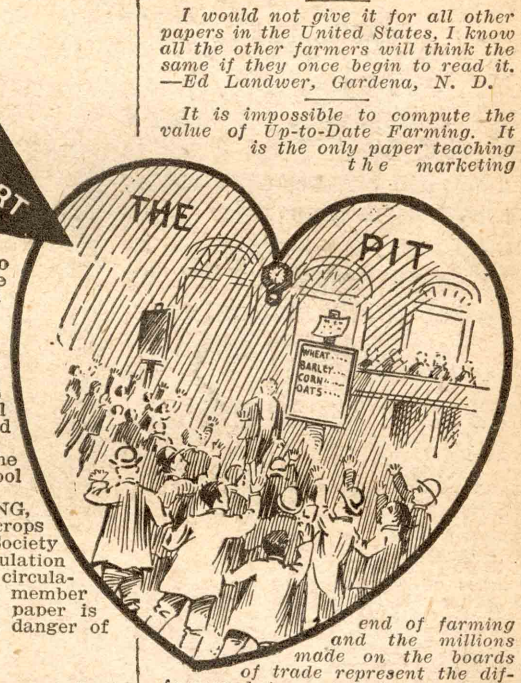
This Is the Only Way

Through the Farmers' Pools is the only way to beat the speculators for this year's crops. Later farmers may organize more solidly, but this simple plan can be made effective on all this year's crops. Every producer should be interested at once. The Farmers' Wheat Pool, if made succesful, will add about 20 to 25 cents to the price over what the speculators expect to pay. On a good average crop, this will be $150,000,000; on a Kansas crop about $15,000,000; on an Indiana crop about $9,000,000, etc. On many county crops about $250,000 and on an average farm crop about $150.00.

BROTHER WHEAT GROWERS YOU CAN HAVE THIS EXTRA MONEY.

We repeat, farmers, you can make the price on the 1908 crops if you want to. Will you do your litle share—25 or 50 cents—or do you prefer the exploiters on your backs another year? Send $1.00 for four subscripers (25 cents each) or 50 cents for UP-TO-DATE FARMING today and you will be a member of the Farmers' Wheat Pool at once and of the pools for other crops you raise as necessity for them arises. Also you will get the all important information about crops, visible supply, markets, and price, when to hold and when to sell, what price to ask in Dakota, Kansas, Illinois, Indiana, Pennsylvania, Virginia, etc. On the basis of the central market and which information makes UP-TO-DATE FARMING indispensible to every farmer because it cannot be gotten elsewhere. Use coupon to right.

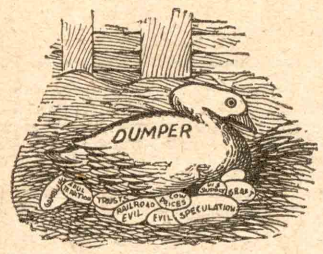
A book that should be read by every farmer in America. It shows how farmers are coming to the front and how they will be the greatest power of all. 320 pages, cloth bound. 25 cents post paid. ☞The Third Power book is not sold for profit, but to help farmers. Send orders to UP-to-Date Farming, Indianapolis, Indiana.



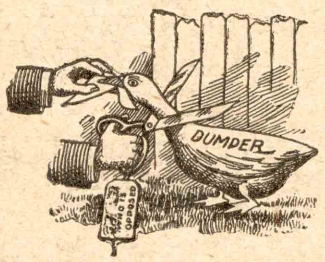
end of farming and the millions made on the boards of trade represent the difference between what we get for our grain and what we ought to get.—A. J. Smith, New Lathrop, Mich.

The Dumper's Fate

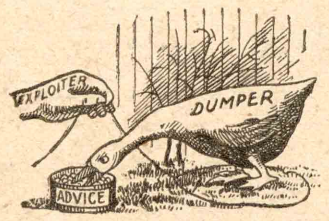
(NOTE:—*One of Webster's definition of "goose" is a "silly creature, a simpleton." Therefore we have employed the picture of a goose to represent the silly farmer who dumps his crops before the real demand comes and we call him a "dumper."*)



The dumper hatches all kinds of evils.

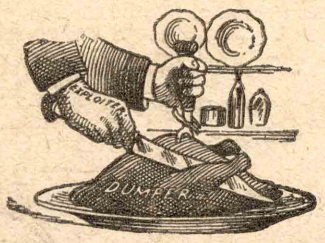


The speculator who feeds you on false crop reports gives it to you in the neck.



The exploiter feeds the dumper on bad advice and then will snare him.

The dumper hatches all of farmers' troubles; gets it in the neck; is snared with bad advice and then is plucked clean.



The dumper is at last a cooked goose and is carved for the benefit of the exploiter.

Worth More to Farmers Than All Other Papers Combined

Your paper, Up-to-Date Farming, has done more for farmers than any other paper has done or ever will do.. It has opened our eyes and shown us how shamefully we were being cheated, robbed and crushed by the expoilters, and it has taught us how to free ourselves from the tallons of these hawks.—Peter B. Orthman, Ramsey, N. J.

Up-to-Date Farming is indispensible to the success of the farming industry of the country.—W. L. Robinson, R. R. 3, Springfield, O.

Up-to-Date Farming teaches more of value to farmers in one issue than all the other farm papers together. — Frank C. Matgousky, Brule, S. D.

Up-to-Date Farming has benefited farmers more than all other farm papers combined in getting profitable prices for their crops.—Jas. B. Motley, Chatham, Va.

I do not exaggerate when I say that this paper has done more for the agricultural world than any other paper I ever saw.—J. K. Marshall, Franklin, Tenn.

I think Up-to-Date Farming has done more good for farmers than all the other farm papers combined. —John Busse, Glenburn, N. D.

I would not give it for all other papers in the United States. I know all the other farmers will think the same if they once begin to read it. —Ed Landwer, Gardena, N. D.

It is impossible to compute the value of Up-to-Date Farming. It is the only paper teaching the marketing

The most intellectual and practical advice I ever got in the line of profitable price-making on farm crops was from Up-to-Date Farming. I think to try to farm without your paper would be like getting into a deep rut with a heavy load on my wagon—where one would never get out again.—Fritz Schallert, Loose Creek, Mo.

CUT THIS OUT AND USE AT ONCE

Publisher Up-to-Date Farming,
Indianapolis, Ind..

Dear Sir: I, or we, the undersigned, desire to join the Farmers' Pool and oppose our force against the speculators' pool, to secure profitable prices for our crops. We want to stand shoulder to shoulder with our brother farmers which we can do when all read the same paper, get the same advice about crops, visible supply, markets, price, etc., and all at the same time.

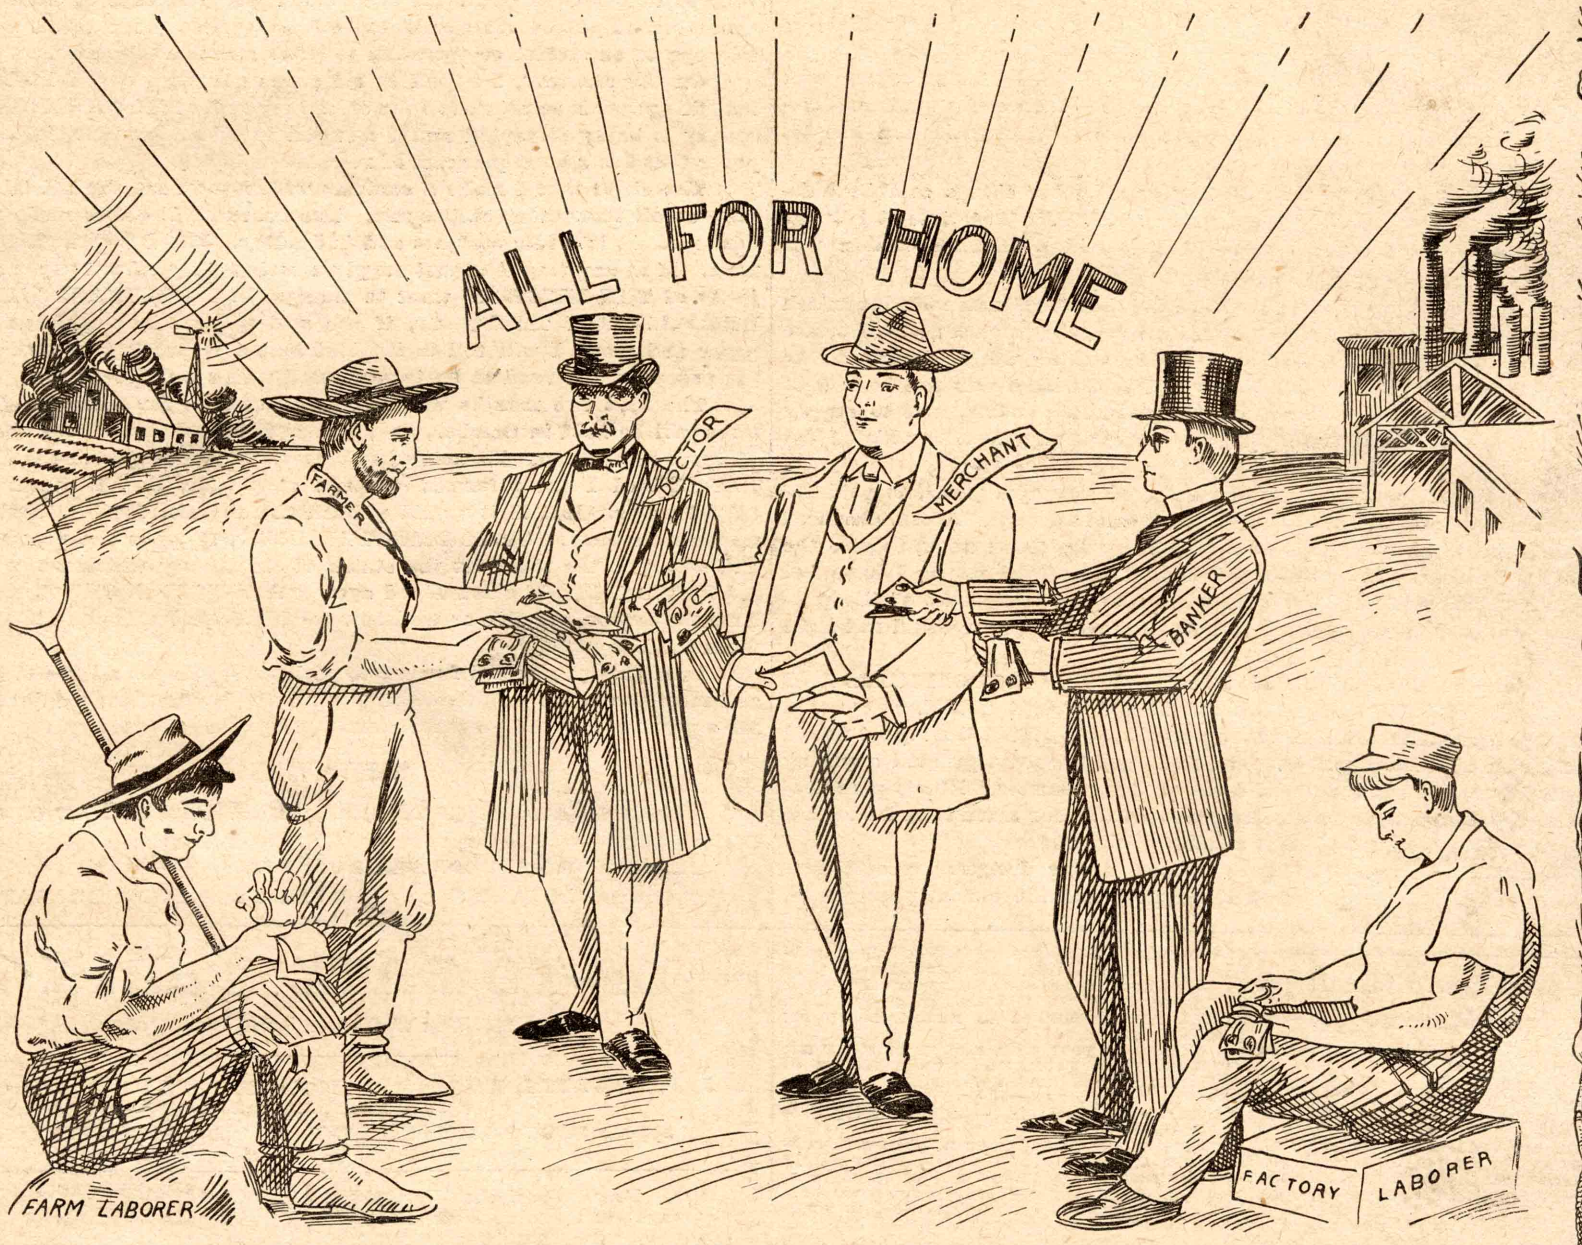
OUR MOTTO:
FARMERS TO THE FRONT
OUR OBJECT:
EQUITABLE PRICES FOR ALL PRODUCTS
OUR PLAN:
CONTROLLED MARKETING

Volume XI | INDIANAPOLIS, INDIANA, SEPTEMBER 15, 1908 | Number 18

The Key to Prosperity



Prosperity is the state of general business activity—labor employed at a remunerative wage, ready sale of products at profitable prices, everybody able to gratify proper wants, and improvements being constantly made. **The key to such prosperity is a free circulation of money in the community**—plenty of money at home.

That condition cannot be reached if the money coming into a neighborhood be sent abroad as fast as it arrives. Of course, prosperity means that the money is not only there, but that it is changing hands; it is buying things, hiring people to do things. As fast as one earns and receives it he is ready to invest it in something

(Continued on page 3)

"FOR THE CO-OPERATING OR ORGANIZED FARMERS OF AMERICA"

LOOKING TO THE FUTURE

To the Members of The American Society *of* Equity and All Readers of Up-to-Date Farming

IN VIEW of the gravity of the situation that confronts us as regards farmers' organization and co-operation in the future, the result of treason on the part of some trusted representatives, I make the appeal below to ALL the readers of UP-TO-DATE FARMING.

The plan of the American Society of Equity included on official paper. The functions of the official paper are to educate, so organization can be accomplish and to direct, so co-operation will result. As I said when giving the plan: SO ALL WILL HAVE THE SAME ADVICE ABOUT THE SAME THING AT THE SAME TIME, SO ALL CAN CO-OPERATE TO SECURE THE COMMON OBJECT.

For six years the official paper was considered, and was found to be absolutely necessary, to the upbuilding of the society and the success of the plan. It would be as preposterous to assume that farmers could co-operate in pricing and marketing their crops without ONE paper going to all with the same advice as to expect a large army to win battles without a general to direct. And a multitude of official papers would make as great a mess of co-operation as a number of generals would if each attempted to direct the army.

These things were true in the past, are now and will be for all future time as regards farmers' co-operation. And they are true with every other successful effort at co-operation. Every large and successful organizaiton has its official paper.

On the offical paper more than on any or all other things combined depended the power of the society previous to 1907. At that time it had attained a circulation of nearly 200,000 weekly and a German edition was started in 1907.

To supply such a large edition of the paper, and the German edition which was demanded, I was obliged to buy expensive machinery, presses, etc., because there was no office in Indianapolis equipped to do the work. Every dollar that the paper earned from subscriptions and advertising was put back into the paper or equipment to make it just as good as possible, and to supply millions of sample copies to the society for educational purposes which I did free.

In all the time I was at the head of the society, five years, it paid me $2,000 and I advanced it about $7,000 which it owes me now. Also I sacrificed my mercantile business, the result of twenty-five years' hard work, to give the society to the farmers. Also, while publishing the official paper, I have not put aside a hundred dollars other than went into the equipment of the publishing office and which was absolutely necessary or the paper could not have been furnished.

ALL THESE STATEMENTS ARE TRUE AND THE 1907 OFFICERS AND EMPLOYEES OF THE SOCIETY KNEW THEY WERE TRUE.

I make these statements because my enemies circulated the report that I was getting rich off of the society. The fact is, I have not profited anything from the society but it always was a drain on my resources. Ninety-nine-one-hundredths of the farmers have profited, individually, far more than I have because I have not profited, financially, at all.

Notwithstanding these well known truths, a few designing people concluded that the time had come when the society and the official paper could pay good salaries and would be profitable and they conspired to kick me out and take my business away. In short, to let me high and dry with my expensive plant on my hands and nothing for it to do. One of the delegates to the 1907 convention, referring to this, said: "Tubbs, Speer, Mulholland, Drayton and the balance of that crowd reminded me of a lot of vultures waiting for the carcas to be skinned so they could pounce on it and devour it."

These people, to carry out their plans, started a rival official paper. It has been an ignominous failure, as the supplement in this issue shows.

Failing to kill my paper, and for fear the members will again demand UP-TO-DATE FARMING as their official paper, the Barnett-Pauley faction propose to do away with the official paper entirely. Unless they change their program, this will be advocated at their convention. Thus they will depart still further from the original plan which was so successful for five years.

I now appeal to all farmers who still hope for the A. S. of E. plan to prevail, to defeat their plan. If the official paper feature is abandoned, or if a number of papers are considered official papers, you may as well abandon all hope of successful co-operation to price and market crops.

On the contrary, I appeal to all present readers of UP-TO-DATE to see that this paper is reinstated as the official paper for ALL THE MEMBERS. The society is badly disrupted and I ask you in all seriousness, is there another paper that has a good prospect of re-establishing it?

The claim that I made a contract with myself for the official paper is as false as all their other statements. The board of directors made the contract with me. It is a fair contract and is binding. But I care nothing for a contract. If at any time I cannot supply a satisfactory official paper and the majority of THE MEMBERS want to change, THE CONTRACT WILL NOT BE HELD AGAINST THEM. Or, if the society gets in a position to buy the paper and plant, I will sell to it. But before it can legally own and publish the paper, it will need to be incorporated under a different law.

The next two months will be important ones for farmers. The conventions will be held in October, and, I assume that every old member will want a report from them. Barnett's headquarters has repudiated the Equity Farm Journal, and I am informed are not supporting it. Hence they have no official paper. But if it would publish the reports, farmers could not place reliance on them. UP-TO-DATE FARMING will print the reports truthfully and will give the members the status of the society which we expect will be A UNITED ONE. If a few stand against A UNITED SOCIETY, we believe we have the law on our side as we know we will have Justice and Equity and will force them to yield.

I am going to appeal further to each reader to see all the old subscribers and members in his neighborhood that he can, and get their subscriptions now for a year, or at least for three months, to get the convention reports.

THE TERMS

Yearly subscriptions 50 cents. In clubs of four or more at 25 cents each.

Three months subscriptions 10 cents.

Address PUBLISHER UP-TO-DATE FARMING, INDIANAPOLIS, IND.

With Up-to-Date's Subscription Manager.

Reader, I want to take you into my confidence. My position brings me very close and near to you. Through your letters, criticisms and suggestions, I am able to feel the pulse of our readers generally. I take all of your criticisms patiently, and profit by them. All your suggestions are thoughtfully considered. You are the Judge, Jury and everything else as far as UP-TO-DATE FARMING is concerned. *We do as you ask.*

But you can help improve and build up this paper, at the same time that you criticise it, by sending in a club of four new subscriptions for $1.00, or by renewing your own subscription for one year for 50 cents, or three years for $1.00.

The busy subscription season has begun in earnest with us. Our subscription receipts for the month ending Sept. 1 show an increase of 400 per cent over last month. This is because our friends are lending us their support. Nice lists of new subscriptions are coming in each mail from old subscribers. One man from Grogan, Ohio, sent in 228 new subscriptions—the result of a few days' work.

Liberal pay is given for all new subscriptions and a special bonus of ten dollars is given to each agent who sends in one hundered subscriptions within three months. If *you* can devote *part* or *all* of your time to UP-TO-DATE FARMING, I can make it well worth your while. Write me for full particulars. You have nothing to lose, but everything to gain.

Everyone of your friends would be greatly benefited by subscribing to UP-TO-DATE FARMING. Send me a club of four subscriptions for $1.00, and we will send your wife, mother or sister, a pair of patent tension shears—8 inches long—the kind that are guaranteed to remain sharp for five years.

If you or your wife, mother or sister are interested in getting a large collection of Souvenir Post Cards from all over the world, ask us to send you our great Souvenir Post Card offer—its absolutely free for the asking.

Try to get ten of your neighbors to subscribe for the next three months at 10 cents each. If you can't get ten, get five, or three, or even one—*but* give us your help and co-operation *now*. We want to place *the next six issues in the hands of every thinking farmer in the United States.* This can be done with *your* assistance. Don't leave it all to one man, but give us a little boost in *your* vicinity. Surely you have derived enough benefit from UP-TO-DATE FARMING to feel justified in assisting us promote the teaching of equity.

Send in your lists—get every farmer who should be a friend of Equity to subscribe—and what farmers are not friends of Equity when they realize it means more happiness, greater prosperity, and closer co-operation in all the walks of life.

I appeal to you all—will you lend me your assistance to make UP-TO-DATE FARMING the most widely read agricultural paper in the world? Will you help? *I believe you will.*

GARRETT WALL.

Are you doing your duty by UP-TO-DATE FARMING? Can't you get four of your neighbors to subscribe at 25 cents each? Four new subscriptions accepted for $1.00.

UP-TO-DATE FARMING

227 West Washington Street, Indianapolis

J. A. EVERITT, Editor JOHN P. STELLE, Associate Editor

SUBSCRIPTION PRICE 50c PER YEAR A CLUB OF FOUR FOR $1.00

Foreign Subscriptions, including Canada, 75c a Year

Clubs. Four subscriptions for $1.00; Always state if a renewal or a new subscriber. *DON'T NEGLECT THIS.*

Your Address should always be written very plainly, including *COUNTY*. Do not give street or box number when not necessary to facilitate delivery of your mail. If on a rural route use the letters R. R. before the number.

Renewals and Change of Address. Give the same name as before. If a change from one member of the family to another, so state. If you change your post office give old office as well as new.

Imperative Order. When writing about your subscription, requesting a change of address, renewing or ordering cancellation, do not fail to send your printed address as on the wrapper along. Failure to observe this order may cause us much unnecessary work.

The Latest Date shown with your address is the date to which your subscription is paid. Subscribers are urged to keep their time paid *IN ADVANCE.*

Members of Equity will find the date on their wrapper to which subscription has been paid.

Responsibility Disclaimer The editor assumes no responsibility for correctness of signed letters and articles, nor for matter in departments conducted by others whose names appear in the head.

Agents Wanted. If you want to engage in a profitable business all your time or part time, write to us.

Only Reliable Advertisers are admitted to our columns and we guarantee that they will deal honestly with subscribers. Should they not, we will make good any loss to paid in advance subscribers. It is understood that this guarantee is not binding on the publisher unless you mention UP-TO-DATE FARMING when you write and you report any dissatisfaction within a month of the date of the paper.

UP-TO-DATE FARMING

Representing the Organized or Co-operating Farmers of America

PUBLISHED TWICE A MONTH
At 227 W. Washington Street

Re-entered as a Semi-Monthly publication as second-class matter, January 20, 1908, at the Post-office at Indianapolis, Ind., under the act of Congress of March 3, 1879.

Volume XI | INDIANAPOLIS, INDIANA, SEPTEMBER 15, 1908 | Number 18

EDITORIAL

FARM PRODUCE LOSSES

FARMERS ARE NOT THE ONLY ONES TO SUFFER LOSS

Farmers are not the only ones who suffer losses from the prevalent system of marketing farm products. We learn from authentic sources that the losses sustained by Chicago produce dealers between June, 1907, and June, 1908, were not less than $1,500,000. If the produce men in other cities lost in a like proportion, it is easy to see what a sag must have occurred in the fortunes of business men. Business fraught with such uncertainties and subject to such overwhelming losses, cannot be attractive, and prosperity on such a doubtful basis cannot be permanent.

It is a business rule that where one party to a transaction loses the other gains, but it is not so in this case. It is admitted that, during the year mentioned, prices paid farmers have ruled low, often scarcely covering the cost of production, sometimes falling below it. Nor have the consumers gained, for they have paid high for what they have bought. There is evidently something some where in the system, some power behind the commercial throne, a fourth party somewhere beyond the three most concerned, that gets the "rake off" and to which all the others pay tribute.

What is the trouble? How can such a party be, and what function does that party perform that it be not seen and eliminated? It is all in the making of the price. The producer does not make the price but accepts one offered by the purchaser and coming from some source neither knows exactly whence. The dealer in the city, the one who sustains the losses referred to above, does not make the prices he pays; they are attached to the goods he buys and he does not know who determines them and puts them there. He may fix the prices at which he will sell again, but he must do that in competition with a thousand other dealers, each of whom is working for business—trying in vain to gain trade and make an income out of many small profits. As a result profits go lower and lower, and a very little unfavorable turn brings the losses.

There are two sides to every business proposition, and these people, producers and dealers, retailers, both of whom may suffer losses in the same transaction, not with each other, but with some power between them, study but one side of the question, and with strange human perverseness, each ignores the side most important to him. The producer studies only the side of production. If he can harvest bumper crops he is happy. What concern is it to him if the elevators and storage houses are full already and the markets are glutted if he can score a record breaking yield, and pile up an unusual surplus. He learns what it is to him when he receives the price, but he is told the price is not a thing for him to make or even to consider. It is determined by somebody, somewhere, according to some law; he knows neither the identity of the one nor the provisions of the other.

The retail dealer considers only the price he is to charge, and that he cannot control because so many others are concerned with the same price, are trying just as hard to win customers, must have trade or go out of business, lose their capital, hence the margin constantly narrows as competition increases. With the price most vital to him,—the price he pays, and one which his competitors would join with him in an effort to make equitable, he considers entirely beyond him, made by a power somewhere between him and the producers, and that he cannot but obey.

There are two ways open to the retailers. They must co-operate and get nearer to the producers that they may buy at more favorable prices, or they must co-operate in the fixing of their selling prices and jointly tax their losses up to the consumers. There are also two ways open to the producers. They must study the selling side as well as production. They must know how much of a crop is needed and co-operate to plant to supply the demand but not to glut the market; and then they must co-operate to sell only for an equitable price.

Here are two classes, therefore, that depend upon each other, and their success lies along the very same road. The sponge that absorbs the profits of one, withholds the profits of the other. The dealers must co-operate or greed behind them and competition in front will destroy their business. The producers must co-operate or excessive production and greed ahead of them deprive them of profits. Can any one say that these two classes, plundered by the same greed, should not co-operate with each other?

TO LOOK AT THE OTHER SIDE

President Roosevelt is reported to have said in a letter to Prof. L. H. Bailey of the New York College of Agriculture:

"I doubt if any other nation can bear comparison with our own in the amount of attention given by the government, both Federal and State, to agricultural matters. **But practically the whole of this effort heretofore has been directed toward increasing the production of crops.** Our attention has been concentrated almost exclusively on getting better farming."

We have often referred, with unconcealed gratification, to the fact that a subject whose agitation was begun but a few years ago should be brought to such widespread consideration in so short a time. Still more gratifying is it that the President of the United States should make it the burden of an important letter to one of the leading educators of the country; and all the more so, as the object of that letter was to ask Prof. Bailey to become the head of a commission to investigate the side of farming this paper has striven so earnestly to bring to the attention of the agricultural and business world.

We regret to say that Prof. Bailey could not see his way clear to accept the task, but the mere mention of it marks a new era in American farming, and revolutionizes the idea of what farming includes.

Hereafter when a young man sets out to be a farmer, and a young woman decides to become a farmer's wife, each will realize that there is more in it than the eternal round of production; that when the crop is produced it is not yet money, nor may it yet be added to the income or the bank account; that it must be sold to some one who needs it more than money, and that the remuneration for the season's toil depends upon the price.

All this is very foreign to the heretofore teachings of the schools or of the press, which, as the President says, have been entirely "directed toward increasing the production of crops," and which does not always increase incomes nor add to prosperity. The farmer of the future has business problems before him as well as the problems of production. The farmer of the past had the same problems, it is true, but he had not been awakened to them, and left both the problems and their solution to others. The farmer of the future will solve them for himself, and will reap the profits that inure to is tohil as well as te crops produced thereby. The farmer of the future must and will be a business man.

We are glad the President has appointed such a commission, we are glad they are to report, and that the President is to transmit their findings in a special message to the Congress and the country. But it must not be overlooked that, as at present appears, the commission is of those who have persistently taught production with little to say of the selling side of farming. They are of the class who see agricultural prosperity in bumper crops with little regard to demand or price. We believe, though, that the work will scarcely open up before them until they see the dual nature of farming, the two sides there are to it, and realize that so long as our "efforts are directed toward increasing the production of crops" only, our education and our efforts are one-sided, and reach less than half of the farmers' great interests.

Would it not be well if the President, in addition to the work of his commission, would invite reports from others who may have made this side of farming a study, and who have already conquered the prejudices liable to grow out of ages of thought and a life-time of study and teaching the one-sided theories? It might result in some accumulation of documents, but it could not becloud or distort the truth, though it would not be a broader hearing. No, these independent reports should not be referred to the commission, for that would bring all under the same eyes and give all the same color.

PLANTING TREES

We have frequently urged the preservation of the forests and tree planting, and we believe this should become the fixed policy of the United States government. It has been well marked by a thoughtful writer that, if it takes fifty years to grow a tree to usefulness for lumber purposes, and if we would maintain our present supply, no more than one-fiftieth of the trees suitable for lumber must be cut during any one year, and then a tree should be planted for every tree cut.

Twice already has the center of lumber production shifted in this country. First it was in the white pine belt of the north, then it went to the yellow pine regions of the south. Now it has crossed over to the Pacific slope, where it has made its last stand in the United States, unless steps be taken to husband our timber resources, and to restore what has been destroyed.

Think of what a shifting of the lumber mills means, and the providing of transportation to meet their needs. Besides, there is now no more extensive set for them this side of Canada. Henceforth, if American acres supply American needs for lumber, our partially denuded forests must be protected and restored, and new ones must be grown. Therefore he who plants a tree in this country, or lays out and plants a forest, is as much a patriot as is he who leads an army to victory, and he provides for himself a more enduring and more honorable, certainly a more useful, monument.

THE KEY TO PROSPERITY

(Continued from page 1)

else—to keep it in circulation at home. Every person living in a neighborhood might be a millionaire, but if every one kept his money locked up, the neighborhood would know nothing but hard times, and it would go into decay. The same result would follow if everybody purchased his supplies abroad, and refused to spend or invest money at home. And a community must be poor in proportion as it does that. Referring to the practice of sending money away from home to get supplies from catalogue houses, which is directly in line with the conditions of which we have spoken, and which should not be done if the home merchants deal in equity, one of our North Dakota exchanges speaks thus plainly:

All taken together it brings about a most deplorable condition of affairs. It gives every community in the United States poorer schools, poorer roads on which to travel, and a general depreciation of public and private improvements of every nature. The practice of sending cash out of this particular part of the country has been alarmingly in vogue during the past several months, a period of time that is always dull—and when every cent kept at home would have amounted to just so much. We must say it, although it reflects on many, that people right here at home have, during the past several months, sent money regularly to these houses and at the same time asked and received credit at the local mercantile institutions. The unfairness of this needs no elaboration—it can be detected by any ten-year-old school-boy. Within a very few weeks farmers will be marketing their season's crop and receiving their money in exchange for same. It is then that the amounts sent out of this one local community will run away up into the thousands of dollars per month. About the only thing that can be done to lessen the financial damage done local trading places is to make an earnest appeal to the honesty and fairness of every person who reads these lines. If you believe in the protection of the little place you call home, you will cease the practice. If you wish for your children and your neighbor's children better educational facilities, you will cease your practice. If you have fraternal feelings towards your neighbors and

others you daily come in contact with, you will cease the practice. If you wish better roads throughout the country, you will cease the practice. If you prefer to see large, well stocked mercantile institutions in the town you patronize, you will cease the practice. Local merchants and business men of all lines can do their share by doing all in their power in the manner of conducting their business and arrangement of their stores, or in short do everything in their power to make their places of business more attractive to purchasers. We might add a few words to support our foregoing contentions. It is simply the time-honored maxim that every dollar kept at home helps just that much toward the betterment of local conditions. Every surplus dollar deposited in a local bank makes that institution a stronger local financial factor. Above all it creates a friendly and fraternal spirit and establishes a credit for many who are sure to some time be compelled to ask for it.

LOCAL OPTION THE ISSUE IN INDIANA

The mission of UP-TO-DATE FARMING is to secure "Equity in all the business relations of life." Its first aim and great purpose is to bring about such changes in business methods and ideas as shall concede to farmers business privileges and advantages that are freely accorded to all other classes that produce and sell and buy, and make farming more of a business calling. Secondly, to accomplish that we seek to bring all classes together, especially those classes whose business and dealings are so closely related as to make each dependent upon the other—those who buy of and sell to one another. But in all this we do not hesitate to say our first object is the good of the farmer. This justifies us in the discussion of any question which we think takes hold upon the best interests of the farming class, and we speak frankly and plainly to our patrons, as we would wish them to speak to us. It is scarcely necessary for us to say that UP-TO-DATE FARMING is in no sense partisan. With party politics, as such, we have nothing to do. In taking sides on any question our only inquiry is, which is best for the people in general and for the farmers in particular?

In the present gubernatorial campaign in Indiana the paramount issue is local option, or local government as regards the liquor traffic. Both of the leading parties, we believe all the parties, favor it, a fact not at all to be wondered at as it simply means that the people should rule on this question as on all others. Let the people say whether they want a thing or don't want it, the sale of intoxicants included, and give them what they have legally, really and freely, expressed a desire for. No friend of popular government can object to that.

But there is a vast difference in the way it shall be done. One of our leading candidates for governor, Mr. Watson, and the candidates on his ticket for the legislature, are pledged to county local option, to give the voters of the county a right to vote whether or not the sale of intoxicating liquors for beverage purposes shall be permitted within the county. The other leading candidate for governor, Mr. Marshall, and the legislative candidates on his ticket, are pledged to local option, but they would confine it to the smallest voting unit; they would not allow it to apply to the county as a whole.

We are unhesitatingly in favor of the county unit—of county local option—because it gives the rural population, the farmers, a better chance to express themselves, and gives them the power in government their numbers and importance entitle them to. We do not say farmers should or should not vote for or against the sale of liquors; that is a question for themselves to decide; but when given a chance to vote, they should be permitted to vote in such a way that their votes shall have the weight to which they are entitled in determining the result. To confine the local option to the smallest voting unit is simply to play with the voting farmers. A few men of questionable morality and possibly of doubtful honesty, may gather in a village, and in spite of the votes of the farmers vote for a saloon, the very stench of which may reach the farmers' homes, saying nothing of the dire evils of which such places are always the center. What good was it that the farmers were allowed to vote? In such case local option is a farce, a vexation, a meaningless statute, a pretence of giving a power which is not conferred.

The usual rule under the dramshop laws of most of the States, is to give city and village governments power to license saloons, and whether they will do so or not depends upon whether the city or village government favors it. The officers composing that government are elected by the voters residing within the corporation, and whatever revenue comes from the license of the saloon inures to the city or village corporation; the curse of the traffic, its baneful influences upon the young, the evils that follow in its wake, the additional taxes that must be paid to meet the cost of the outlawry it creates, must be borne in some proportion by the surrounding farmers, who get not a cent of the revenue, nor are permitted so much as a whisper as to whether or not it shall be.

How much better is local option if confined to the smallest unit? Concentrated aggregations on a few acres prevail in such cases; and since the levy and collection of taxes to pay court costs has the county for a unit, make the county the local unit, and give the rural population, the farmers, the same chance to express themselves as have the residents of the towns and villages within the counties.

Local option appeals to farmers as few measures ever did before. It gives them a chance to express themselves at the polls on a question that most vitally concerns them—a chance they never had before, and that may never be offered them again. Heretofore farmers have not been considered good enough to vote on the whisky question. That right has been reserved for those who live in cities, twons and villages. It is promised now, however, to throw down the bars and let the farmers in. Farmers of Indiana, while you have the chance, see to it that the county be made the unit. The county is yours; the little divisions inside belong to somebody else. "Keep what is thine."

A MARK AGAINST FARMERS

An extensive and well known dealer in one of our greatest market centers, writing to congratulate and commend UP-TO-DATE FARMING for the truth and fairness of our illustrated article on "The Great Need of Equity," which appeared in our issue of August 15, gives us some important facts concerning methods of marketing, and thinks he scores pretty strong against the farmers.

Buying produce in car lots, f. o. b. cars at shipping point, is beginning to be practiced quite extensively, and it is a method so safe to the shipper that there is every inducement for him to do it honestly. But, according to our correspondent, it is not likely to continue in favor with buyers. This season's Texas tomato deal is cited as an illustration of how it was done. Cars that arrived in Chicago looked right on the face of them near the door, but when a few crates were taken out, the bulk of the shipment behind the fancy ran to choice and culls, much below the contract grade. Cars shipped to other markets were reported as running the same way, and in some cases the reports were verified by the city authorities.

Tennessee, Mississippi and Illinois, says our correspondent, followed in the footsteps of Texas, and when car lots were sold the contract grade was used merely to hide inferior goods. It was the same it is declared, in the berry shipments from Louisiana and Mississippi. The apple deal a year ago was much the same, it is said. The shipper got the cash, and the buyers got apples that were not fit to pack into barrels or to expose for sale in the open market.

It is by no means certain that these dishonest shipments are chargeable to the growers, for it is a fact that growers seldom ship in car lots. Local shippers buy of the growers, gather at the shipping point, and there load the cars. If growers do it and act thus dishonestly, language is too weak to condemn them as they deserve, for in their deals with others they are first to demand honesty. Besides, in filling contracts with products inferior to the contract grade, they harm themselves more than they do the dealers whom they may thus cheat. They bring themselves into disrepute and surround their products with a suspicion that places them at a disadvantage in the markets. And local buyers and shippers who pack thus dishonestly are doubly criminal. They commit a crime against those from whom they buy by ruining the reputation of the products grown in the community from which they ship as well as wilfully robbing the house with which they deal. No matter which does the dishonest jacking the grower suffers. If he does it himself his own dishonesty reacts upon him. If his local shipper does it he suffers in the impaired standing of his products. From a moral standpoint of course nothing but strict honesty counts, and from a business point nothing else is safe. If a crate of anything put on the market is branded fancy, see that it is fancy; if it is only choice, mark it choice; if culls, let the label show it so. No one is more certainly on the road to prosperity than the one whose label is never questioned; and we positively would not sell to a shipper whom we had reason to believe would not make his shipments in their proper grade, because his shipments would injure the reputation of my products. Let us observe "Equity in all the business relations of life."

INEFFECTIVE ORGANIZATION

We read every day of a meeting of this or that organization to attend to the interests of various farm crops ostensibly for the benefit of the growers; but in vain do we seek for actual beneficial results. Not very long ago the apple growers congress met in St. Louis—no little affair, but an international concern. Of course the current crop was one of its studies, and it found a lower percentage of production than was ever before known. In some of the most productive areas the yield was found to be as low as ten per cent of an average, in others twenty, and so on, only two states, we believe, having a full crop.

But now comes a report from the other side, the buying side.

By the middle of August the market had opened in the east, and the prices ranged, according to the Produce News, from 15 cents per bushel to 70 cents per barrel! What think the American Apple Growers Congress? The smallest crop ever grown and the lowest price ever known. There is undoubtedly something out of joint, and the lame leg as usual is on the growers' side.

What is the matter? What is regulating the price now What has become of that law of supply and demand of which we hear so much on occasion?

Are there not as many apple eaters as ever? There is undoubtedly a very limited supply. Doesn't it look like the control of the price is on the wrong side? We shall see how the prices range throughout the season, hoping always for the best, for fairness and equity for the growers, but if the storage and speculative interests make the prices, we may be sure that supply and demand will have little to do with it; the only question is, "What can we force the growers to take?" But if people will not take care of their own interests it seems absurd to expect others to do it. We wish growers would consider the futility of the present pretended growers organizations, and join in the building up of a greatest national society that could absolutely root out the evil, and put all crops on a definite price basis.

UP-TO-DATE STANDS ALONE

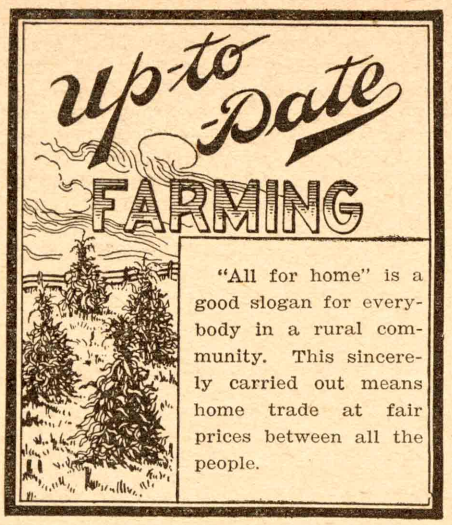
The trade paper is a necessity to the trades. So soon as an industry attains anything more than local importance, a paper representing it springs into life. And the trade paper is supported. Its subscription price is usually higher than that of the ordniary publication, and almost every person engaged in that trade subscribes and pays for it. And he ought to. It is the life of his business. It always leads in lines of progress, and it does not confine itself to production; it is foremost in information as to demand for the goods, and how, and where and when to market. The winning tradesman cannot do without it.

How about the farmer's trade paper? There is an abundance of farm papers, but what do they teach? Much that is valuable, we concede,—

How to plow, how to hoe;
How to plant, how to sow;
How to reap, how to mow.

But not a word about how to sell. Sometimes quotations from the Board of Trade markets are given occasionally letters from Board of Trade speculators; but never any information as to how to ship, where to ship and when to ship, and how or when to sell in order to control the market and maintain the price. This is the most important function of the real trade paper, and without that it would soon be rejected by the tradespeople.

UP-TO-DATE FARMING is the only farm paper that does that, and, therefore, we may say without blushing, that UP-TO-DATE FARMING is the farmers' only trade paper; and we are bending every energy to make each issue better and more useful than the one which preceded it.



Feed the Soil

"I'm hungry!" said the tired soil,
"And thirsty in this parching sun.
How can I pay you for your toil?
Your poverty and mine are one."
"Oh ho," Old Farmer Progress said,
"If that is so you shall be fed."

PERMANENT FERTILIZATION

Over a very large area of the United States fertilization is necessary to good crops. The naturally rich soil of the new world, its apparently inexhaustable area, and the portion of human sustenance yielded by the wild, naturally built up in the pioneer the habit of doing as little field work as he could get along with. This, like most other habits, clung to his descendants, and though driven to do much more than formerly, and to manage more wisely, there is still a recklessness of soil fertility that means still more work and better management in the future.

The fertility of the soil must be restored and maintained. There is no question about that. The only thing debatable is How? There are commercial fertilizers. In the main they are good. Some of them are not up to the standard claimed, but if properly applied they aid crops, and we use them. But the philosophical method of fertilization, the natural and permanent way to restore fertility, is to reverse the practices that have exhausted it, and build up again as it has been torn down. Constant cropping, too, often continuously and persistently of the same crops, from season to season and year to year consuming the same plant food, until that element is exhausted and in sympathy with it, all other elements are impaired —natrue's balance is overthrown.

And again. Constant cultivation, perpetual exposure to the frosts of winter, the burnings of summer and the washings of the rain, rob the soils of humus, of organic matter, the vehicle for preparing and serving the food to the growing plant, and sterility is the inevitable result.

This was all done gradually and its permanent restoration must be gradual. Plant growth took it away, and plant growth is the natural means of restoring it. Nature has provided the remedy; the intelligence of which man is so given to boast must apply it.

If the soil is only tired, rest it. Keep the plow out of it, and give it up to soothing growths as near like nature originally provided as possible—to the tender grasses under which the soil may sleep. Convert it into pasture, and permit the domestic animals to wander over it, quietly nipping the excessive growths and restoring more than they take away, as did the wild animals before civilization and invention came and upset the work of nature.

If there is actual exhaustion, then there must be restoration. The legumes, clovers, alfalfa, peas, beans, etc., draw from the inexhausible supply of the atmosphere the element most needed to give life to the soil, and help it to prepare the elements of plant food it may yet retain. Plant these, all or any of them, and let them have their way. A good plan, and one extensively followed by progressive farmers, is, in winter wheat districts to follow the wheat with clover—to sow clover on the wheat in the spring. When the wheat is harvested, and the clover has made a good start to grow, it may be pastured some, but in good time it should be turned under. During all its growth it has been gathering nitrogen from the air and storing it up in and about its roots. The stems and leaves above the ground no doubt have some of nitrogen and they have some potash and perhaps a trace of phosphorus. At all events, the growths above ground restore to the soil what it needs perhaps most of all, humus. Later the ground is ready for another crop of wheat, to be clovered and turned under again the following season. Or it will be ready for a crop of corn the next spring. If followed by corn, then at the last cultivation, seed richly to stock peas, which should make a luxurious growth. Gather the corn as early as it will keep, and at the same time it is no great task to hand pick peas enough for next season's seed. If this autumn is warm and dry, the field may be pastured a few days, but don't wait too long. Before there has been much frost, cut the stalks as fine as possible with a cutter, and turn the whole under deeply. A more valuable work has been done for the soil even than turning the clover after the wheat, and the fieeld is ready for any crop, fall or spring. This is not for once, but keep it up, not forever, of course, but until intelligent common sense recommends a change.

If clover had not been sown on the wheat, break the stubble as soon as the wheat is removed, and sow to stock peas. Before the close of September there should be a good growth of peas with pods forming and ripening. Again if everything is favorable there may be a week or so of profitable pasturing, especially for hogs, and peas may be hand-picked for seed. But in good time, turn the whole thing under. What a wonderful renovation of soil it accomplishes! We concede it takes courage to turn under what seems to be such a valuable crop of forage, either in the case of peas or clover, and some protest against the cost of the seed. But the seed does not cost more than would a single dressing of commercial fertilizer, and the forage, if saved, would make feed for but a single season, whereas the treatment recommended feeds the soil for continuous crops of double value.

OUR enemies are quite as sure as our friends to know of our doings, and our only safe way is to do what they might know of us without any discredit to ourselves.

INSECTS AND INFECTIOUS DEATH

On the farm injurious insects seem to "come and go". We mean by that that they may be exceedingly destructive for a period, and then for a period they may almost entirely disappear and their ravages be nearly forgotten, when they may suddenly burst upon us again with their old time fury and destruction. We do not refer to insects of periodic return like the so-called seventeen-year locusts; they are comparatively undestood; but insects like the chinch bug, the green bug, the boll worm, the grass-hopper, etc.

Each recurrence of these distructive periods sets the "experts," good, honest souls, busy in quest of serum, "cultures," or something, that shall sweep the pests off the earth. Generally something has been discovered, but no very extensive sweeping has been done.

We remember a few years ago when, in large areas of the Mississippi and Ohio valleys, the chinch bug made it almost impossible to grow wheat, and, after destroying the wheat, the pest frequently passed into the corn or the meadows and almost ruined those crops. The men on our scientific watch towers very properly got "busy as the bugs," and soon had a "culture" that was to do the business for the chinch bug. In a few places where natural conditions were favorable to the passing of the bugs, the cultures seemed to work,—just enough to get themselves and their discoveries a "great name;" but in the main the odoriferous little inebriates continued to drink the wheat and corn juice, and reveled with the cultures without any aparent effect upon themselves, until one spring they failed to appear. They had departed the fall before without leaving a smell or an egg behind them, and without even observing the formality of saying good-bye, or of tossing back to us the more modern "so long;" and up to this writing that has been the last of them. The cultures felt very lonesome for a time, but they soon went out of business and were forgotten. When the bugs may return —well, it is not best to borrow trouble, saying nothing of bugs.

A little later there was a plague of grasshoppers in Colorado, not the kind, we believe, that, a few years ago, came in clouds and storms to Kansas and other states this side of the Rockies, but a kind that is quite destructive when well organized and with outriders in the saddle. The "bug gazers" did as they had done in Illinois, and as good bug gazers ought to do, went to work and found a culture. This culture, like that which had seemed something of a "frost" on the chinch bugs, proved somewhat discouraging to the hoppers when sprinkled on them; but discouragements seldom kill, and the hoppers continued to "inhabit the land" until the atmosphere, the moisture, the dryness, the bright sunshine, the pale moonbeams, or all of them, or none of them, made Colorado an undesirable place for them to live in, and then they went away without leaving any address behind.

But it seems they have moved back to Colorado, and, to save trouble on the part of inquiring friends, the honest folks of the experiment station frankly announce that the cultures fired at the hoppers on the occasion of their previous invasion, were a frizzle, or words to that effect, and the station is not to distribute them any more.

Don't misunderstand us. We are glad that we have people to study our bugs. It is an absorbing occupation for those who have a taste for bugs, and it may keep active minds out of greater mischief. Besides, these bug studies actually give us leads on the little maranders, and it is soothing to get leads on them if we can get nothing more. It is better to pay money for a study of the bugs and a search for cultures than for many other things we pay for.

But, after all, when natural conditions are exactly favorable to the bugs they will come, and when the conditions are unfavorable they will go. Still it is all right to pitch the scientific dollars at them while they are here, for we may at least make their stay with us unpleasant. We have noticed, though, that luxuriant crops, growing in rich soil, with wise culture and adequate moisture, are least affected by any pest, and in that, perhaps, we get nearest to the solution of the pest problem.

SHOCKING CORN

We have noticed various ways of shocking corn cut by hand, and we have seen farmers troubled to make the shocks stand. Some even go to the trouble to drive into the ground stakes that had been previously split at the top and had cross pieces put in the splits, or use stakes that had cross pieces nailed to the top. This is all very well, but the stakes are too expensive and involve too much labor.

We know no better way to make the shocks stand than the one employed on the old farm at home years ago. Take four stalks each standing at or near the corner of a square, bend them toward each other to a common center, and tie them there. Set the cut stalks in the corners made by the tied stalks, setting straight and building equally in all the corners. When the shock is half finished it is well to give it a tie above the bent stalks. Now continue to build equally all around until the shock is completed, when it should be well tied. A shock so built will stand straight in almost any kind of a storm and for any length of time. It will

SAVE YOUR BRAIN $1.00
An Adding Machine for

A MODERN BUSINESS NECESSITY 98765

A practical, simple, rapid, accurate, handy and durable machine that makes adding a pleasure instead of an exhausting mental strain, a time and labor saver. When you get to the bottom of a column of figures you will know they are added correctly. Why ponder over figures? Let steel brains do your work. A triumph in mechanical construction and simplicity, a little machine that nearly everyone needs and is in the reach of all. It will pay for itself six times a week for every week it is in use. Farmers, Merchants, Mechanics, everyone who has adding to do wants them. Avoid errors usually made by a tired brain. Try a column of figures like the following, in the old way, and then try a $1.00 adder and see the difference in time and labor. 56789

They are gotten up in good style, being nickl finish with solid steel wheels put together with eight heavy brass rivets, show good value for the money, and will do all that we claim for them, two years guarantee with each machine and positively as represented or money refunded 54324

Sent all charges prepaid on receipt of price, P. O., express money order or draft. Make all orders payable to 43245

$1.00 Special 60-day Offer
To Introduce Our New Excelsior Solar Telescope

Pat. Applied for.

THIS is a large powerful Achromatic Telescope for Terrestrial and Celestial use. This telescope is provided with an adjustable Solar Eye-piece. With this wonderful eye-piece you look the Sun square in the face, on the brightest and hottest day, and study its face as you do the moon by night. Every student needs one. This eye-piece alone is worth more than we charge for the entire telescope. Remove the Solar Eye-piece lense and you have a perfect telescope for land observations. Read what this customer says:

Never before sold on any telescope for less than $8.00 or $10.00.

Stevensville, Ont., Dec. 18, 1906.
R. C. Irving & Co., Indianapolis.
Dear Sirs.—I received your telescope last Saturday. It is a dandy and I am well pleased with it.
Yours very truly, Enos. Winger.

Positively such a good telescope was never sold for this price before. These telescopes are made by one of the largest manufacturers of Europe. Measure closed 12 inches and open 3½ feet in five sections. They are BRASS BOUND, BRASS SAFETY CAP on each end to exclude dust, etc., with POWERFUL LENSES, scientifically ground and adjusted. GUARANTEED BY THE MAKER. Heretofore telescopes of this size have been sold for from $8 to $10. Objects miles away are brought to view with astonishing clearness. Sent by mail

Postpaid for $1.10.

This is a grand opportunity and you should not miss it. We WARRANT each telescope just as represented or MONEY REFUNDED. Remit by Registered letter, Postoffice Money Order or Bank Draft, payable to our order.

PEOPLES WHOLESALE STORE
INDIANAPOLIS, INDIANA

naturally spread at the bottom to give it sufficient base, and it will turn rain perfectly. In the old days we tied the shock with stalks; it is now much better to tie with binder twine. In hauling out it is necessary to reach under and cut the four brace stalks.

A SATISFACTORY PRICE

Scientists ought to be sensible as well as scientific. One of our agricultural exchanges cooly quotes the figures of an "expert" who says the manure from a single cow is worth from $35 to $40 per year. The price is quite satisfactory, and we know farmers who would take that for it and throw the cow in.

We do not mean that farm manure is not valuable. It is very valuable, and a far better use should be made of it. But there is no sense in—well, there is no sense in being foolish.

WHAT BECOMES OF THE CORN?

Corn is America's great crop. Two billion bushels is a tremendous quantity,—more bushels than there are seconds in sixty years,—and that is about the annual corn crop of the United States. What becomes of it all? It is put to uses that were not dreamed of a few years ago. We now ship to other countries no less than 83,000,000 bushels, besides nearly 800,000 barrels of corn meal. Much is claimed for the use of corn in the manufacture of liquors, but this claim is not well founded. The distillation of corn for the extraction of alcohol, does not take from the grain its nutritive qualities, but leaves these elements to be fed to stock in competition with the undistilled corn just about the same as though there had been no distillation.

Of course corn is given up to be the standard grain feed for all domestic animals, including poultry and the bulk of the crop is used for that purpose. We must concede, we suppose, that not so much corn bread, the old fashioned sort, is used now as was formerly, but it is very safe to say that more corn is at this time consumed for human food than ever before, and invention is constantly adding to the quantity. A semi-facitious writer asserts that it is now possible for a man to sit down to a full meal composed entirely of corn and its resulting products. He might begin with modern corn bread and cakes, have beef and pork corn grown and fattened, corn oil dressing for his salads, corn starch pudding, corn produced milk and cream, and corn sugars and syrups for his sweets, besides canned corn, etc., for his side dishes.

Corn oils are now used for mixing paints, and for lubricating purposes, as well as in the manufacture of soaps. A rubber is also made from corn that is used in the manufacture of of rubber goods and linoleums. Fine paper is made from the stalks, as is also the very best packing for the walls of water craft, especially of the great war ships.

Such is but a glance at the uses and possibilities of corn. He who plants a grain of corn plants more than does he who plants any other seed, and when it grows and matures its hundred fold, he often gets least reward for the toil that produces it. Isn't it a travesty upon human independence, and upon the conceded rights of men to govern themselves and direct their efforts and control their labor, when a class so numerous and so powerful, so necessary to the sustenance of man and beast, should be so helpless in the hands of speculation and gambling?

IMPROVEMENT AND BREEDING OF WHEAT

By A. E. Blount

Wheat will not cross and recross by the agency of the wind and insects; hence, in the following I shall give the best ways and means of improving them.

Wheat is the prime factor of all our starchy foods. It is the most popular, beneficial and useful products of the soil all over the world. It is susceptible of great improvement, also of putting upon our tables more kinds of healthful food delicate-viands and delicious pastry, than all the other cereals, grains and fruits combined. Unlike corn, wheat is not open to cross-fertilization by either insects or the winds. If a new variety is wanted, the breeder must cross two or more varieties artificially, by inserting the pollen of one variety into and upon the pisils of another.

It requires a steady hand and a complete knowledge of all the features of the plant, also, its habits and the demands it makes upon the breeder as well as those of the soil; temperature, moisture and fertilizers.

In making new and hitherto unknown crosses, the work consists of the most delicate operations. The first thing the breeder does is to open the glumes and polen of a single spiklet, and just before the three anthers within are ready to push up to be ruptured by their coverings, he takes them out and in their place puts the polen before gathered from the stamens of the father-plant, in upon the two pistils.

This is the whole story of artificial fertilization of the wheat plant to make better varieties.

The new crosses, thus made, will not show any of the heriditary characteristics or features of either plant until they are sown and made to produce the first crop. Then, and not until then, will some of the two or many heads on the same number of stalks exhibit like and unlike features of both parents—the same as in the offspring of different species of animals that produce more than two.

It takes three years or more to "fix" the type of any and all crosses so made. From among the many and various sorts shown in the different heads, the breeder must select some or all that possess desirable or fitting characteristics, to him worth re-producing, just the same as the fruit breeder selects his seedling apples and others that bear, after some years, fruits worth saving.

Like the stock breeder of fine, full-blooded domestic animals, the breeder of fine improved varieties of wheat meets with many failures among his crosses—only a few will be worth further trial after the second year's test.

Failures of like character occur, not only in the wheat field, but in the orchard and vineyard, among those fruits that are being improved by the most skilled scientists.

History tells us tat Von Mons of France, one of the most scientific fruit experts, brought into bearing 80,000 seedling trees before he put the eleven of the finest pears in Europe or America, on the market.

Rogues crossed over 300 of his seedling grapes before he gave us about a dozen of his best varieties.

Hale, on his Connecticut and Georgia orchards, put upon our market some very fine peaches, the product of his own planting, training and cultivation—all of them, the fruit of seedling trees, hence, it will be seen, that the breed of better sorts of wheats, as well as of stock and fruits, fail in more instances than they succeed in their efforts to produce offspring superior to either parent.

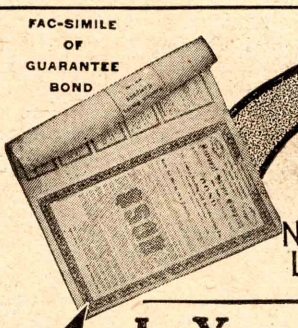
To illustrate the best methods of artificially crossing different varieties of wheat to make better offspring in quality and quantity, I will conclude this paper by adding a short outline, to the above, of my work in crossing wheats for more than forty years.

After experimenting with more than 350 different varieties, collected in ounce packages by mail from all over the wheat growing states of our own country, and half as many from the wheat growing countries and states in Europe, Asia, Africa and Australia, I began, right after the Civil war, to sow and raise from all these my first crop. Of course many failed in making even a head.

From the best of all that made a good, medium or fair showing I selected the best and crossed the best upon the best to obtain better offspring.

After three to five years raising and selecting the best many-featured offspring from the few first-selected varieties, I retained, for further trial, only forty-three, those being in some degree so promising as to merit further treatment. By the sixth year only six were found worthy to become of sufficient value to be distributed among the farmers as better standard wheats than any they had been raising for years. Those six varities have ever since been cultivated by many farmers in the west, south and middle states, as being superior to all sorts.

FAC-SIMILE OF GUARANTEE BOND



CONGO NEVER LEAK ROOFING

Is Your Roof Guaranteed?

To show our confidence in Congo, we now give a *Guarantee Bond* with every roll.

These Bonds are issued by the largest and best known Surety Company in the United States—The National Surety Company of New York, assets over $2,000,000.

Our 3-Ply Congo is *guaranteed absolutely for ten years.* If it wears out before, the owner is given a new roof *free.*

The Bond means that should we not make good our guarantee, the Surety Company would be compelled to by law. The buyer is thus *doubly protected.*

Congo is the only ready roofing on the market that *dares* to place a Guarantee Bond in every roll.

SPECIAL NOTICE—If any Congo rolls that you purchase do *not* contain Guarantee Bonds, write us at once, telling us where and from whom they were purchased, and we will at once mail you the missing bonds. Write at once for further information and samples.

United Roofing & Mfg. Co.

Successor to Buchanan-Foster Co,
584 WEST END TRUST BLDG.
PHILADELPHIA, PA.
CHICAGO & SAN FRANCISCO

THE SO-CALLED "ALASKA" WHEAT

The United States Department of Agriculture, Bureau of Plant Industry, has issued the following circular:

A variety of wheat, under the name of "Alaska," is being widely advertised as capable of yielding at the rate of 200 bushels to the acre, "under ordinary soil conditions." and even better, "under extra conditions." It is stated that this variety was found growing wild on the eastern coast of Alaska, and claims of the most extravagant nature are made for it. In consequence of this notoriety, the department is receiving many requests for seed.

This type of wheat has been known for many years, both in this country and in Europe. It has been tried at several State experimental stations in the Western United States during the past fifteen years, but nowhere have the yields been big enough to merit attention. The wheat has been grown to a very limited extent on certain heavy soils in France for many years. In such locations it is said to yield rather better than ordinary wheat; but, as it is one of the poorest wheats known for making flour, it is never grown where the ordinary varieties of wheat will thrive.

THE CORN EXPOSITION

The management of the National Corn Exposition to be held at Omaha, Neb., December 9 to 19, requests us to frequently call atention thereto in the columns of UP-TO-DATE FARMING. This we are glad to do, for we admire enterprise in any field, and we know the quality of corn and of other grain can be imprvoed, and perhaps the yield per acre can be increased. But we have yet failed to see anything in the announcements to indicate that there will be an inquiry as to whether an increased yield is needed or even desirable. That is so unheard of a proposition that it will almost startle the exposition management, as well as the corn growers themselves.

But it is a fact, logical and commercial, that if enough grain is now produced to meet the needs of the world at a price reasonable to the consumers and equitably remunerative to the producers then an increased yield is undesirable, and would be harmful to the growers. An excess of anything destroys the demand, gluts the market, and makes its production unprofitable. On that proposition we challenge the entire exposition, and submit if it does not call for an inquiry into the demand and the relation thereto of the supply, measured by the price and its relation to the cost of production.

That the quality needs improving there is no doubt. During the month of June there were sold on the Chicago Board of Trade, 7,978 car loads of corn. Of this great quantity it is said only one car graded No. 1, less than ten per cent graded No. 2, about 36 per cent graded No. 3, nearly 50 per cent or half of it, graded No. 4, and 460 cars were too mad to grade at all. This means a low quality of corn or a high standard of grading.

We are told that the dealers are taking a great interest in the exposition. We are glad of it, for the grain growers and grain buyers ought to be in closest harmony; but we see no proposition coming from the dealers looking for steady and remunerative prices for the grain, nor for permitting the growers to determine what prices they should receive for their property, the work of their hands.

The exposition is to have an exemplification of experiment station work. This is a good feature also, and each department or phase of experimentation is to have a special instructor to explain to the visiting growers the scope and effect of the experiments; but we see nothing said of their experiments or instruction as to how growers may market their grain so as to get remunerative prices, and make grain growing uniformly profitable on the general level of labor and investment values. The management has arranged for some fine work, but much of great importance seems to have been neglected.

BUCKWHEAT, ETC.

According to August 1 national crop report, the acreage of buckwheat is about 1.4 per cent. less than it was a year ago, which indicates an area for the United States of about 789,000 acres. The condition of the crop is considerably below the average. New York is credited with 319,000 acres, with a condition of 89; Pennsylvania, 260,000 acres, condition, 91; Michigan, 50,000 acres, condition, 82; Maine, 23,000 acres, condition 90.

Of other crops, potatoes is shown only a few points below the average, whereas private reports, market conditions and prices indicate that it is much below that. Rice is quite above the average, being reported in Texas at 94, Louisiana 95, South Carolina 87, and Arkansas 92. The ten years average is 90.7. Sugar beats show low, only 87.3. It was 92 last year, and 94 the year before. Beans were only 88 August 1, compared with 89.3 a year ago. In New York the condition is 89, and in Michigan 87. Lima beans lost four points during quly, and now stands at 86.4, against 85.1 a year ago. Peanuts lost a little more than three points in July, but still stand a point above the condition August 1, last year. Oranges and lemons both show slightly better than they did at this time last year.

A Ten Year Roofing Guarantee Backed By a Surety Co. Bond

The United Roofing and Manufacturing Co. are offering to every purchaser of 3-ply Congo Roofing a National Surety Co. guarantee bond, which covers a period of **10 years.** This Company is one of the largest Surety Companies in the world, (capital and assets of about $2,000,000) and when they back a proposition there must be a great deal in it or they would not have risked their reputation on something about which there could be any question.

The Congo people are desirous of making this roofing the most used in the world, and with their usual foresight hit upon this excellnt plan of giving the buyer satisfaction as well as increasing their sales. The bond is a plain statement of what they can and will do, and offers such protection that no prospective buyer can afford to overlook. This bond means protection to you.

It isn't necessary to buy the roofing to learn the contents of the bond—which is another pleasant feature. By writing to the United Roofing & Manufacturing Co., 584 West End Trust Bldg., Philadelphia, Pa., they will be glad to send you information regarding same and sample free.

What is a harrow worth to you if it will do this: Increase your crops 25 to 50 per cent; cut from 28 to 30 acres or double cut 15 acres a day; drawn by two medium horses; it will move 15,000 tons of earth one foot a day, and can be set to move the earth but little or at an angle to move in one foot; and it has many other improvements over ordinary harrows? The machine described is Clark's Double Action Cutaway Harrow. Send for catalog and full information to Cutaway Harrow Co., 863 Main St., Higganum, Conn.

Practical dairymen find the Sharples Tubular Separator a very saticfactory machine. The Tubular is built to skim clean, fill easy, run easy, save labor, wash easy, save time, repairs and attention. These are the points *you* want in a separator. Send for catalog number 136, which explains. Address Sharples Separator Co., W. Chester, Pa.

A Wonderful New Hay Press

The George Ertel Company, Quincy, Ill., have just placed on the market their latest development in Hay Presses. It is a press that one man can operate. With one horse he can bale a ton an hour. This is made possible because it has an automatic self-feeding device, a simple device for self-threading of the bale wire, so that no partition blocks are necessary.

With this press a man can do his own baling in spare time, instead of having a big baling crew around him when he would like to be doing other work. With the press being mounted on wheels it can be taken right into the field and the hay baled at the windrow. Circulars and full information will be sent free if you write to the George Ertel Company, Quincy, Ill. Their name is well known, as they have been in business for over forty years. They also manufacture Incubators as well as Hay Presses.

The Roof that Needs No Painting.

"Yes, I'm re-covering every roof on the place with Amatite"

WHEN you once put Amatite on *one* of your buildings you will be impatient to get it on *all* the others. That is the experience of everyone who uses it, because Amatite is its own best advertisement.

Not only is the first cost of Amatite low, but its real mineral surface does away with all the *bother and expense of painting.*

Once you have finished nailing down Amatite according to directions, you have a roof that will give protection for many years and which will require no attention whatever to insure it from leaks and trouble.

The busy farmer of to-day cannot afford to have his stock and farm products suffer because of leaks, nor can he spend time on repairs and painting.

For these reasons thousands of successful farmers all over the country are buying Amatite. They realize that painted roofings are out of date.

Amatite is as far ahead of the "painted roofings" as the farm implements of to-day are in advance of those used by our grandfathers.

FREE SAMPLE

To the progressive farmer we say—Send for a Free Sample to-day and get in touch with the best ready roofing made.

BARRETT MANUFACTURING COMPANY

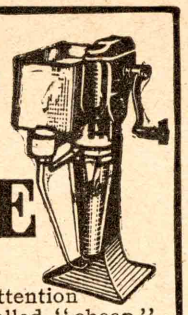
DON'T WASTE



your labor, time, attention and money on so-called "cheap" separators, for poor articles are no bargain at any price.

However, when purchasing a separator, consider not only the make, but examine the mechanism, noting these points:

Waist-low supply tank,
Bottom-fed bowl,
Smooth (3 part) bowl,
Enclosed, self-oiling gears,
Easy turning,
Clean skimming,
Interchangeable parts.

If you take these points into consideration we know that your selection will be a

TUBULAR

for these features, added to the simplicity and durability of the Tubular, establish its prestige as the separator for farmers and dairymen to use.

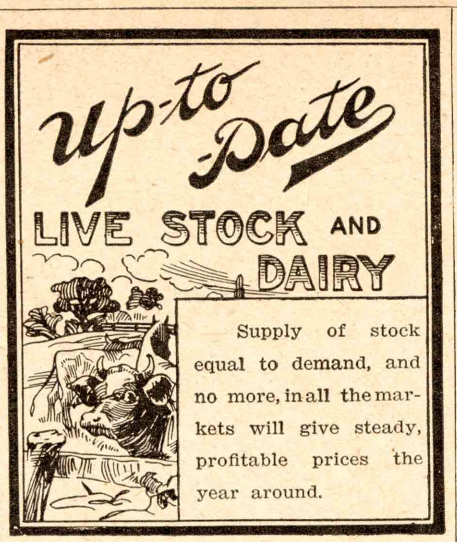
FLOWER POST CARDS
Free to You

In order to introduce our large illustrated monthly, The Epitomist, which is of interest to every member of the family, we make this big offer to you.

Send 10c for a six months' trial subscription and we will send you, prepaid, twelve beautiful flower post cards absolutely FREE. These cards are strictly high-class and are something entirely new. Each card represents a scenic view and has THE LANGUAGE OF THE FLOWERS worked out most beautifully in mottoes in flower designs. For instance, in this series the violets spell out the words "Faithfulness;" the sweet peas, "Wish You Joy;" Chrysanthemums, "I Love You;" roses, "Love," etc. You won't be disappointed, for these cards are not like any you ever saw, and REMEMBER, we have a surprise for everyone that sends for these cards. There are only a limited number, so send today if you want them. THE EPITOMIST, 55 Main St., Spencer, Indiana.

WRITE THE ADVERTISERS

Whose announcements you find in Up-to-Date Farming. You will profit thereby and it helps both the Advertiser and the Publisher.



What Is Eaten

The maggot worm abides in faith,
And carion birds seek filthy food;
But man, the clothed, with reasoning mind,
May take the clean and pure and good.
But does he always wisely choose,
And things unclean, impure, refuse?

HEALTH AMONG THE MILCH COWS

Cows' milk has been used as food by humans so far back that the "memory of man runneth not to the contrary," and we are not sure but much of the modern talk about bacilli and infection serves more to annoy than to benefit the average human family. Still the most thoughtless and reckless of what they eat, must revolt at the idea of drinking milk drawn from a diseased cow. Of all things, the farmer should know that his milch cows are healthy, and that the milk his family uses is manufactured from wholesome feed. How can a cow feeding in a stagnant marsh on doubtful growths, and drinking water known to be filthy and full of disease ,be expected to give wholesome milk? That the material has gone through the delicate machinery of the animal body, and been converted into what looks like milk, is no proof that the impurities and disease creating germs have been eliminated. And the cow that is badly sustained, all to scantily fed on a low quality of feed—how can she be expected to manufacture a good quality of milk? We have seen cows milked that were so poor they could scarcely stand steady during the process. A more cruel thing we cannot conceive. The animal needs every mouthful of the cheap feed doled out to her, to appease her hunger, sustain her life and build up her shrinking body, and yet she devotes the most of it to the manufacture of milk for the use of her stingy or improvident keeper! One has no moral right to keep a milch cow which he cannot feed well.

And the quarters should be kept clean. We have seen milch cows in a solution of manure and water (it is not correct to call it mud) up to their knees, and we have seen them come from their sheds or stalls literally covered with filth. Would any one at all careful of what went into his system use such milk?

We don't believe that milk is a prolific source of disease, especially of malarial and other germ diseases. The milk is not responsible for it, nor are the cows that produce it, but the treatment and the feed they receive at the hands of their owners and keepers. There is room for a revolution in the treatment and feed of milch cows, a revolution that would make for the health of mankind, and prevent the digging of many a short and narrow grave.

GOOD HORSES

The good horse need not fear an artificial rival. The auto and the electric car may fill "a long felt want," but the horse will still find work to do; and he will still command good prices.

It should be borne in mind, though, that it is just about as easy and as cheap to raise a good horse as an inferior one. It is all in the start and the after treatment. It is difficult to have a good horse without a good ancestry, and points and action are not enough. Condition comes in for its score, and some horse users very properly place condition above conformity to standards, for actual usefulness frequently depends upon it. Some people, many people, do not care to use a vicious horse at all.

Physical soundness is another thing that must not be neglected in choosing either the stallion or the mare. Too much is involved to risk the transmission of unsoundness. In some countries, France notably, the government makes the soundness of stallions a subject of official inspection, and other countries might well follow the example.

As an admirer of stately perfection in the horse, we cannot but regret the shipment of ill-bred western ponies into regions that have every facility for breeding fine horses. It not only adulterates, so to speak, the present supply, but it leaves its impress on the future generations.

We need a good representative in your vicinity. If you know of some live man who wants to earn a good salary, tell him to write to us for our agent's proposition.

THE DAIRY STEER

The she "steer" is the dude of the dairy herd, except that the sex is reversed. The human dude, who parts his hair in the middle, and does a great many other silly things, and—

"Since he can't a woman be, does all he can
To show the world he's not a man."

The dairy dude would evidently rather be a steer. At all events she does not give enough milk to entitle her to more honorable, if not more appropriate, name of cow. It costs as much to keep her as the best in the herd, and she does not begin to pay for her feed. It is she that brings down the herd's average, and makes the owner doubt if it pays to keep cows.

Get rid of the diary steer, the dude, and then see if your profits and losses do not show up on a different basis.

PRICE OF MEATS STILL ADVANCING

Live stock men are supposed to be interested only in the price of live stock, but they are interested in the price of meats also. Growers of live-stock want fair prices, prices in proportion to the general level of values. They would not be worthy to be called business men if they did not. But we stockmen demand prices inordinately high. But it is a fact that every time the price of live stock advances a cent, the price of meats advances two or three cents. In this the stock grower is interested, not only as his sympathy goes out to the consumers, but because it has a direct unfavorable bearing upon his own business. Such high prices cut down the consumption of meat and compel the adoption of substitutes. Some meat prices now are actually prohibitive, except by the very wealthy, and of course the demand for meat is seriously curtailed. This diminishes the demand for live stock, and gives the speculators an excuse to cut down the price of live stock. And it is a significant fact, that a reduction in the price of stock is seldom if ever followed by a reduction in the price of meats.

In this there is developed a situation that needs attention. Saying nothing of its other evils, it is depriving the poor of the better living they could have if the price of meats were on a more equitable basis; it is cutting down the meat consumption and impairing the market through a diminution of the demand for live stock.

We know of none whose personal interests should more strongly impel them to take this matter up than the live stock men themselves. They should demand equity, and place themselves in a position to secure it.

THE KIND OF HOG

It may be from habit, but we still stick to the old fashioned Poland China and Berkshire, and some of the most profitable market hogs we ever grew were a cross between these, and it does not make much difference which way the cross is. These two varieties are always reliable. They have no "frills" about them. They are prolific breeders, mature early, may be fattened at any age, are splendid feeders, tractable and easily handled, and are just about all that can be desired.

One of the most successful hog raisers we ever knew, kept a number of sows, and bred to sell as pigs for others to feed. He always had awo or three sows to farrow at the same time, and then, if it was necessary, he would "double up," so that each sow permitted to run with pigs would be sure to have a profitable number. Those from which he found it profitable to take the pigs he would at once breed again, or fatten for market.

A nice bunch of pigs, uniform in size and color, weighing from 80 to 100 pounds, were always in demand, and never failed to bring the market price. The first 100 pounds are made more cheaply than any other, provided the pigs are never allowed to know what it is to lack feed.

MATTERS OF OBSERVATION

The man who never feeds more to his stock than just enough to keep them alive, is the first and loudest to complain at the prices and to protest that live stock don't pay.

The animal body is about eight-tenths water, or eight parts water to two parts solids. To keep the body supply balanced, therefore, the animal must have an abundance of water; and since the delicate organs of the system must separate all the impurities from the water before it is available for healthy use, the importance of furnishing pure water is obvious.

Elasticity and pliability of the muscles, cartilages, tendons and even bones, as well as the healthy action of the nerves, depends upon their containing the proper proportion of water. Water also serves as a distributor of bodily heat and regulates the body temperature by the physical process of absorption and elimination. The animal is warned of a deficiency of water by the sensation of thirst, and the greater the deficiency the more intense the thirst. Can the owner afford to let stock suffer for want of water?

While it is true that many farmers do not give feed enough, it is entirely possible to give too much. It is not what an animal eats that benefits it, but what it digests and assimilates. If it eat too much the surplus is a burden, overtaxes the digestion, and does possible harm. A farmer may feed a hungry work team so much of good hay that it may gorge itself. Putting it to work again in that condition, finds it at a disadvantage, with a liability to injure its wind, or otherwise permanently harm it. Humans are never without an opportunity to exercise common sense.

What is the aim of the farmer who is striving to improve his stock? Has he any special aim, or does he simply desire to make them better? He ought to have a definite aim, a certain type to attain, and then he should select his breeding stock with a view to that type.

GOOD WAGES

We always have room on our staff for a few good hustlers. If you can devote any or all of your time to representing us in your vicinity, we will make it worth your while to do so. We pay both salary and commission. Write for particulars.

THE CHICKEN EATING HOG

About the best thing that can be done with the hog that has become a chicken eater is to put it in a close pen, fatten it as quickly as possible, and let it go to the butcher. But sometimes a valuable breeder that one can scarcely afford to give up, may contract the habit. A correspondent of the Journal of Agriculture gives a simple and novel means of making such a hog harmless. Take a bit of smooth wire, the size of smooth fencing wire or ordinary telephone wire, eight or ten inches long, pass it through the hog's nose, bend forward, and twist the ends together. The hog will eat through the loop, but it cannot catch a chicken, and will soon quit trying.

THE SLOP BARREL

One of the meanest things on the farm is the old fashioned slop barrel. People used to think that soured swill fresh from the kitchen, and that when slops of bran or chops and water were fed to hogs it was better to make it up at least a feed in advance, and give it a chance to sour. It is a mistake. Hogs and pigs so fed are seldom healthy. The slop barrel is a perfect nursery of disease, and if one be used at all for the accommodation of the kitchen, it should be thoroughly cleaned every day.

TUBERCULOSIS IN MILK

By Nathan Straus

That negligence must now be branded as criminal which allows animals suffering from tuberculosis to contribute to the supply of milk, destined for human food. It is rediculous at this late hour to quibble over any possible difference there may be between bovine and human tuberculosis. Englishmen will probably be content with the verdict of the British Commission on Tuberculosis as to the matter, but the doubter in America and even the Germans themselves have been forced to the same conclusion, viz., that tuberculosis, whether in animal or man, is essentially the same disease, and is communicable from animal to man in milk.

This I hold to be a reason of paramount importance for insisting on public control of the milk supply, or at least non-tuberculous milk for the innocent children who must have milk and who cannot protect themselves.

More than 1,500 of the cows supplying milk to the city of Washington were officially tested last year, and nearly 17 per cent had to be pronounced tuberculous. Had all the cows in all herds been examined no doubt the percentage would have been much higher, say 25 per cent. The figures are first hand and speak for themselves.

TUBERCULOSIS IN CATTLE

The cattle disease which is now receiving most attention, and which is most to be dreaded on account of its liability to be communicated to the human family, is tuberculosis. This disease does not always affect the same part of the animal body, and its symptoms are so obscure, that, without the scientific tuberculin test, only the expert can, with any degree of certainty, diagnose it.

Prof. R. M. Washburn, Missouri Dairy Commissioner, gives an exhaustive article on the subject, and we transfer the symptoms of the disease when it affects the lungs, and also when its seat of greatest activity is the udder; as these appeal more directly and manifest themselves more certainly to the general farmer:

In tuberculosis of the lungs, no symptoms which may lead to the suspicion of the presence of the disease, may make their appearance for a long time. One of the first signs to be noticed is a dry, hacking, short cough. This cough is especially produced when the animals leave a warm stable and suddenly breathe in the cold air of the outside or after the first swallows of food or drink, upon exercise or when the stable atmosphere is contaminated with dust or certain irritating stable gases. It may also be seen that the animals are short of breath, at first only when caused to move about, but later also when at rest.

When the disease develops and more lung tissue becomes involved, the cough increases in frequency and in force, while the respiration becomes hurried and short, and in many cases assumes an abnormal type.

In quite a number of cases, the general condition of the body becomes less thrifty; the animals do not do well, and do not seem to make the gain which they formerly made on the same amount of feed—in fact, in case of milk cows a loss in weight is experienced and the animals become poor. The appetite becomes capricious or fails altogether. The coat is dull and staring, while the skin presents the condition so well defined under the ter of "hide-bound." With the progressive emaciation, the mucous membranes become pale, the eyes are sunken and of a dull appearance.

Tuberculosis of the udder may be suspected when the organ presents a painless, dense ill-defined enlargement of one of the hind quarters which gradually extends to the other parts of the udderand finally assumes the features of a large, very hard and nodular mass. In other cases multiple areas of nodular formation may be felt in the soft udder tissue and which gradually increase in size and extent, until a considerable portion of the udder is transformed into a hard mass with a nodular surface. The lymphnode situated on the upper part of the hind quarter may be enlarged and nodular in condition, a fact which should always add to the suspicion of tuberculosis.

NEXT BEST THING

The next best thing to controlled marketing—to knowing how and when to market and having courage to act upon the knowledge—is having the stock in prime condition for market. It is a great loss to market anything that is not ready for market. A lean animal weighs light in proportion to inches, and it never brings the top price. The seller, therefore, suffers two losses, a loss in weight and a loss in price. And this is a case where the traditional "well enough" is not good enough. Animals for sale should be at their very best. We do not mean that an animal should never be sold until it is at the very top of the meat stock market; but should be at the best of the market for which it is intended. If it is sold as a stocker, let it be the best kind of a stocker, etc.

A gentleman who lived in a neighborhood where it was the habit to market stock without any regard to condition, thought to teach his neighbors a lesson. He bought a bunch of old and poor cows, as uninviting a lot as could be gathered, such a bunch as he was ashamed should be seen on his place, and he himself was a little doubtful of the outcome. He put them in a good pasture, and gradually on full feed. This he kept up for about six months. The improvement was almost magical. The "old crow baits" the neighbors had laughed at, became smooth and likely cows, and actually seemed to get bigger, as they really did. Toward the last the fullness and roundness of fat began to show itself in unexpected places, and when selling time came none of the neighboring farmers guessed above 75 per cent of their weight, and the price received was a splendid advance over the market price of cows.

The experiment was an unequivical success, and the designed lesson was forcibly taught, that the profit in live stock depends upon condition at time of marketing, and that condition depends upon feed and care.

Prevent Accidents

Keep the harness *soft* and it will be strong. No danger any time when every strap is made pliable and tough with

EUREKA HARNESS OIL

Nothing like it to save leather from the destructive effect of rain, wind and animal sweat. Makes harness look like new. Made by

Gets These Books on Fertilizing and Bigger Crops

Write to the American Harrow Company and get their literature free on fertilizing for bigger crops including their catalogs about Standard American Manure Spreaders and their famous Detroit Tongueless Disc Harrows.

Find out how a man with an American Spreader saves half the time and expense and spreads manure properly for bigger crops than is possible by hand. Get all facts on the fertilizing subject prepared by the best authorities. Just say that you are a reader of this paper to get free either or both catalogs on the American Manure Spreader and Detroit Tongueless Disc Harrow. Also most liberal 30 Days' Test offer and proposition for these highest quality machines, which come within the range of every practical man's pocketbook and needs. Address today the American Harrow Company, 531 Hastings Street, Detroit, Mich.

In the Salt River Valley of Arizona the yield of wheat is from 30 to 35 bushels, barley 30 to 35 bushels per acre. Alfalfa for hay is cut four to six times per year, yielding six to ten tons anl leaving at least four months of the year for pasturage. Barley and oats are also grown for hay. Wheat sells for $1.20 to $1.60 per 100 lbs. Barley brings from 80c to $1.25 per 100 lbs. Alfalfa hay, baled, from $8.00 to $12.00 per ton. Alfalfa hay in stack $5.00 to $8.00 per ton. Alfalfa for pasturage from $5.00 to $6.00 per acre per year.

There are 1200 to 1500 acres devoted to orange culture. The yield is large, and the fruit commands a high price. The grape fruit also does well, also the strawberry, raspberry and all kinds of garden truck. The peach, apricot, pear, fig, almond, grape, olive, date, melons, all thrive, and under proper culure, the yield is very large.

For full information about lands in this wonderful land of opportunity, write to the Board of Trade, Dept., O. Phoenix, Ariz.

Low Priced Roofs

Some ready roofings have so little protective quality of their own that they require painting every year, although there are better grades which can be left as long as three years without this protection.

The cheapest way out of the difficulty is to buy a roofing which *needs no painting whatever.* Such a roofing is Amatite, which our readers will find frequently advertised in these columns.

The mineral surface of this material scorns the protection of paint and faces the weather boldly. Rain, snow and wind have no effect upon it, and it will give good service year after year in the most extreme exposures.

A sample of Amatite can be obtained by requesting the same on a postal card addressed to the nearest office of the Barrett Manufacturing Company, New York, Chicago, Philadelphia, Boston, St. Louis, Cleveland, Pittsburg, Cincinnati, Kansas City, Minneapolis, New Orleans.

THINK OF IT!

Bicknell, Ind., June 26, 1908.
Have used a U. S. six months; it's perfectly satisfactory. I made 17 pounds of butter the week before using the U. S. The following week with the U. S. I made 27 pounds from the same cows, under the same conditions. It's the best investment I ever made. Alex. Neal.

An Investment Paying 33⅓%

and this is exactly what the U. S. earned for Mr. Neal over his former methods of skimming.
If you are not using a reliable

U. S. CREAM SEPARATOR

but skimming your milk by some other method, you are losing just as large a per cent. of cream (which is money) as did Mr. Neal.
It is clean skimming that counts, and the U. S. holds World's Record for clean skimming, therefore it is the separator that every one ought to purchase.

BRIGHTEN UP THE MACHINERY.

The farmer will catch at that heading, and think we are going to say something about the plows, cultivators, reapers, mowers, etc.; but we are talking now to those who have charge of the poultry. They have the care of much more delicate machinery than that mentioned above, and they are now specially interested in the machines that are to manufacture eggs all through next winter, and these machines need to be brightened up and got ready for business now. For the best work of that kind, new machines are most useful, and that means the early spring pullets of this year. The misfortune on the farm is that the egg machines, like those used in the fields, are tumbled all together at this time of year, and whatever attention is given one must be given to all—the old worn out things as well as the bright and new, and very soon the owner forgets which is the old and which is the new.

If it were possible to have the early pullets to themselves, and then keep them supplied with suitable feed, such as will furnish every need of their developing bodies, but not to pile up inordinate fat. What a fine condition they would be in at the time to begin business, and what splendid activity would they show in it. How fresh and bright would be their feathers, and red their combs and wattles. But in order to get them to themselves they must not be confined in a small pen; they must have exercise or they cannot be expected to get ready for the work ahead of them. On most farms the only alternative is to thin out the culls as close as possible, remove the heins that years have robbed of their greatest usefulness, get rid of the surplus roosters, taking a care to have in the flock the largest possible proportion of early pullets, and then with the one flock you may expect good results. See that they have suitable feed, with an occasional sprinkle of black pepper as a stimulant. By and by the combs and wattles will begin to show red, and a general aspect of maturity and activity will manifest itself, and in a little while there will be eggs to gather up.

LEAN FOWLS IN MARKET.

The old way of buying hens by the dozen make people careless of the condition of their fowls when they marketed them; and the old habit sticks now that poultry is sold by the pound. The farm family loses a great deal every year by selling poultry that is not in condition for market. No matter what has been the treatment of the flock, nor what its condition, when the flocks are ready to go to the market, the number desired is caught and out of the flock, fat or lean, and if an impatient man or boy happens to get hold of some of the best pullets, or a few of the favorits hens, there is no time to change, and away they go, even though a gentle protest and sometimes almost tears may follow them.

Having the poultry all in one flock is responsible for these losses, and it is a trouble farmers find it difficult to overcome. If the fowls that are to be sold could be picked out at leisure and put in a pen to themselves and then fed an abundance of fattening feed, as other stock being got ready for market is fed, the poultry income would rapidly increase, and the quality would so improve as to increase the demand and most likely the price—we mean if all could or would adopt that plan.

Surely there are at least four of your neighbors who would give you their subscription to UP-TO-DATE FARMING at 25 cents each. Send us a dollar bill, and four names. We'll send them the paper for a year.

MORE MEAT FOR POULTRY

As the cool nights and then the frosty ones drive the worms and beetles into their winter homes where the poultry can not find them, the fowls need more meat, and they must have it if they do their best. This applies not only to chickens, but to ducks and geese and turkeys also. It is well to keep close to nature, and we do not know of a bird or fowl that is still fed as nature provided for it, whose earliest feed is not of the nature of meat other than grain—worms, bugs and beetles—and their natures throughout life require the original diet. Birds learn to eat seeds and grain, and domestic fowls are taught to do so; but there is much that is lacking if they are entirely deprived of their natural feed.

Therefore, if the laying hens are expected to do their best this fall and winter, provision should be made for them to have a better supply of meat feed and ground bone. Where the family lard is rendered on the farm as in the older years, the cracklings make an ideal meat feed for poultry, not at any time in large quantities, but frequently and in light feeds. Avoid feeding meat that is very salty. A little salt is not harmful, perhaps is beneficial, but fowls, if they have access to it, are liable to eat enough to injure or even kill them, especially if it has any suggestion of meat about it. Also letting the fowls have spoiled or putried meat; they will eat it, but it is not good for them, and eggs laid by hens so fed are not fit for human food. Skim milk in moderate quantities is good for fowls, especially when used to dampen ground feed. Butter milk and clabbered milk are also good. The milk helps supply the need for animal matter, but it should never be thrown out to be gorged upon, nor should it be fed in filthy vessels.

EVIL disposed men usually do more by stirring up others to make mischief than they do in the line of their own active labors for evil.

EXERCISE AND CLEANLINESS

Exercise and cleanliness are the essentials if success with poultry. Without exercise fowls become dull, sluggish, inactive and non-productive. As a general thing hens as ordinarly kept on farms,find exercise in their search for food, but if confined in narrow quarters, or kept in the house by bad weather in winter, they must be fed in such a way as to induce exercise. A good way to do is to feed small grain or even chops in litter that they will continually scratch for.

Cleanliness is necessary to preserve health. Filth is a breeding place for almost all kinds of germs, and if they remain healthy fowls must be kept free from them. An occasional cleaning up is not enough in hot, humid weather. The very air of the poultry house should be kept pure.

A third essential may be mentioned in plenty of fresh, pure water. To have that the drinking vessels must be kept clean, and frequently replenished. Given plenty of exercise, clean, wholesome quarters, well ventilated, and plenty of clean water, with proper feed of course, the poultry keeper has a right to expect his fowls to do their best, and to be profitable.

THE LAWN MOWER IN THE POULTRY YARD

The lawn mower is nowhere quite so useful as it is in the poultry yard, especially that part of it devoted to young chicks and laying hens. Cut frequently the clippings are short and tender and make an ideal part of a balanced ration for the hens, and they will consume more of the clippings than anyone would suspect who had not tested it. As a run for young chicks a closely clipped grass plot cannot be beaten. It does not hold dew enough in the morning nor water enough after a shower, to "drabble" them, and small insects are so exposed in the short grass as to be easily found and caught even by very young chicks.

The moulting period is the most trying one for fowls, and all conditions need to be favorable at that time. The vital energies are doing their utmost to produce feathers, and the fowl must have shade and water, and an abundance of good food without requiring too much effort to secure it. Ground bone is quite necessary unless the fowl can get an abundance of insects.

Lend us a hand, Brother, by sending us the subscriptions of four farmer friends and $1.00 to pay for a year's subscription to them all.

CLARK'S CUTAWAY TOOLS

CLARK'S DOUBLE ACTION "CUTAWAY" HARROW

WITH EXTENSION HEAD is made especially for Orchard work. It will INCREASE your crops 25 to 50 per cent. This machine will cut from 28 to 30 acres, or will double-cut 15 acres in a day. It is drawn by two medium horses. It will move 15,000 tons of earth one foot in a day, and can be set to move the earth but little, or at so great an angle as to move all the soil. Runs true in line of draft and keeps the surface true.

All disk harrows have to run in half lap

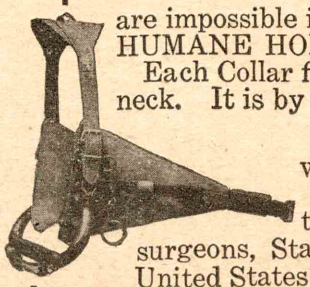
THE JOINTED POLE TAKES ALL THE WEIGHT OFF THE HORSES' NECKS, and keeps their heels away from the disks.

BIG CROPS

We make 120 sizes and styles of Disk Harrows. Every machine fully warranted. Entire satisfaction guaranteed.
Send today for FREE Booklet with full particulars

CUTAWAY HARROW COMPANY, 863 Main St., HIGGANUM, CONN.

SORE NECKS OR SHOULDERS



are impossible if you work your horses in the "WHIPPLE" HUMANE HORSE COLLAR.

Each Collar fits all horses regardless of size or shape of neck. It is by far the cheapest Collar to use.

FIFTEEN DAYS TRIAL

when used on sore necks or shoulders.

We guarantee to cure the horses while they work. Recommended by all veterinary surgeons, State Experimental Farms and used by the United States Government. **Write for prices and testimonials today**

HUMANE HORSE COLLAR COMPANY, 1916 So. 13th St., Omaha, Neb.

It is claimed Chicago produce dealers lost $1,500,000 dollars in the year ending June, 1908. Strange, but the producers organized could stop these losses.

PEACH GROWERS OF GEORGIA.

The peach growers of Georgia are in hard luck this season. Nature has given them too fine a crop—they have grown too many peaches this year. To those who are constantly shouting for greater production that must seem like a strange thing to say. But it is true. Reports more than a month ago were to the effect that this year's crop was practically three times the crop of last year, and that the market was glutted beyond all past record, and prices did not pay for the gathering.

"There is simply an over-production of peaches," declared a prominent grower and shipper, "and many of the growers are thoroughly disgusted, and will cut down a large part of their orchards as soon as the season is over. Another authority declared that three more seasons of such production would reduce the peach acreage of Georgia fifty per cent.

UP-TO-DATE FARMING does not take that view of it; but we have here a lesson for those who see nothing in farming but production, and who teach that the only effort worthy of farmers is to increase the yield. There may be too much of anything, and the wise farmer, the farmer who would always do a profitable business, must study demand as well as production.

However, over-production is often more apparent than real. Such was the case with the Georgia peach crop of this year. There never was too much of any good thing so long as there is a man, woman or child not supplied. Not half the people of the United States have been supplied with peaches this sceason. There are large areas accessible to railway transportation, that have none. There are other markets that have been but poorly supplied at high prices. The trouble with the Georgia and other localities of heavy production, is the miserable system of distribution, or what might be called no system at all. The government could do no greater service to fruit growers and farmer generally, than to issue regular bulletins in seasonshd issue regular market bulletins in season, as it does weather bulletins. There is no excuse for the great losses sustained on big local crops. It is only a question of getting the surplusto where there is a deficiency. We appeal to growers to consider this important matter, and, while it must be conceded that those who teach no limit to production are unwise, those who work out a more equitable distribution are the ones who will bring the greatest certainty to farming.

TOMATOES CAUGHT IT TOO.

Each crop gets it in its season. Toward the middle of August tomatoes were selling readily, in Indianapolis, at $1.50 to $1.75 per bushel. A week later they were offered freely by local merchants at 40 cents.

Why? Was it over-production? Reports from the fields did not seem to indicate that. The plants were injured by inclement weather in the spring; there was damage by drouth; green tomatoes did not set well. All these things, reports say, conspired to make the crop considerably short of the average.

What was the matter then? Lack of system in shipping . Car load after carload was poured into Indianapolis. Whether or not there was half a crop it was easy to glut a single market. There was no system, no investigation, no co-operation, no direction. Had the field of consumption been as well understood by the growers and shippers as the field of production, there might have been very different shipments and profitable prices maintained throughout the entire season.

It seems a hard matter to get farmers out of deep old ruts, but needless losses will finally bounce them out of them.

WHERE THE FRUIT GROWS.

We are indebted to advance sheets of Mr. White's book, "Commercial Apple Growing in America," for the following interesting table showing the strength of the different States in the production of apples and pears in the United States:

NUMBER OF APPLE AND PEAR TREES OF BEARING AGE IN THE UNITED STATES ON JUNE 30, 1908.

	Apples	*Pears*
Maine	4,184,781	39,902
New Hampshire	2,034,398	38,287
Vermont	1,675,046	28,357
Massachusets	1,852,046	148,503
Rhode Island	215,598	23,344
Connecticut	1,167,312	79,243
New York	15,054,832	2,183,909
New Jersey	1,810,793	926,117
Pennsylvania	11,774,221	815,349
Delaware	567,618	394,814
Dist. of Columbia	1,253	1,118
Maryland	1,824,183	690,483
Virginia	8,190,025	291,288
North Carolina	6,438,781	138,836
South Carolina	694,700	72,846
Georgia	2,359,975	385,166
Florida	8,219	208,145
Alabama	2,015,711	206,619
Mississippi	705,790	177,824
Louisiana	138,833	74,669
Texas	1,484,846	1,044,680
Arkansas	7,486,145	202,109
Tennessee	7,714,053	263,585
West Virginia	5,441,112	110,194
Kentucky	8,757,238	322,201
Ohio	12,952,625	921,412
Michigan	10,927,899	1,187,110
Indiana	8,624,593	868,184
Illinois	13,450,006	795,551
Wisconsin	2,557,265	26,766
Minnesota	875,905	3,602
Iowa	6,869,588	104,046
Missouri	20,040,399	548,702
Kansas	11,848,070	327,781
Nebraska	3,877,329	58,047
South Dakota	165,381	2,378
North Dakota	2,351	3
Montana	530,976	8,422
Wyoming	9,234	135
Colorado	2,004,895	168,737
New Mexico	483,157	39,877
Arizona	45,996	31,950
Utah	715,778	229,310
Nevada	83,393	6,214
Idaho	982,349	128,907
Washington	2,735,824	310,597
Oregon	2,825,898	374,165
California	2,878,169	2,512,890
Oklahoma	2,054,894	177,265
Indian Territory	677,068	16,445
Grand Total	201,794,642	17,716,184

Missouri ranks above all the other States in the number of apple trees, New York being second and Illinois third. California leads in pear trees, followed closely by New York, Michigan coming in as a rather tame third. This table is valuable and it should be preserved for its value in enabling one to determine the effect of per centage statistics upon the crop. For instance, if the per centage of apple yield is reported high or low in such states as Rhode Island, Florida or North Dakota, it does not mean much so far as the general crop is concerned, for these are not apple producing states. But the percentage in Missouri, New York and Illinois just about determines the size of the crop, for these three states are heavy producers, and they and states near them, liable to be affected by like conditions, make the bulk of the crop.

A glance at the table shows that the production of apples and pears, especially of apples, is a great and important industry in this country. It employs many people, and millions of families depend largely upon it for their income. Is it not surprising that, in this age of organization, the growers are not better organized to protect their interests?- We beg them to consider this phase of their calling.

MARVELOUS GRASS

An Appreciation by John J. Ingalls

Grass is a forgiveness of nature—her constant benediction. Fields trampled with battle, saturated with blood, torn with the ruts of cannon, grow green again with grass, and carnage is forgotten. Streets abandoned by traffic, become grass grown like rural lanes, and are obliterated.

Forests decay, harvests perish, flowers vanish, but grass is immortal. It invades the solitude of deserts, climbs the inaccessible slopes and forbidding pinnacles of mountains, modifies climates and determines the history, character and destiny of nations.

Unobstrusive and patient, it has immortal vigor and aggression. Banished from the thoroughfare and the field, it bides its time to return, and when vigilance is relaxed, or the dynasty has perished, it silently resumes the throne from which it has been expelled, but which it never abdicates.

It bears no blazonry of bloom to charm the senses with fragrance or splendor, but its homely hue is more enchanting than the lily or the rose. It yields no fruit in earth or air, and yet, should its harvests fail for a single year, famine would depopulate the world.

POTATO POOL

The Long Island potato crop is to be sold in bulk, or, rather, it is all to be sold through a single agency. Mr. Charles Pape is to have charge of the sale, and the method of proceedure seems to be much like the tobacco and other farm crop pools. Farmers must co-operate, or they will soon become inoperate.

Four new one-year subscriptions accepted for $1.00. Send us a club.

"THEY SAY."—These two little words, though simple enough in themselves, introduce untold trouble in the world, and are responsible for more gossip, scandal and injury, and have ruined more reputations than any other two words in the English language. Avoid the habit of quoting what "they say," or listening to what anyone else says "they say," anl you are then not likely to become a gossip and mischief maker. Those who are continually speaking or what "they say," and at the same time lifting their eyebrows and shaking their heads, are repeating, you may be sure, something the world would be better for not hearing. Those who cannot speak of what is excellent and of good repute had better, for the good of humanity, remain silent, until they learn to live in the love of what is good, pure and ennobling.—LIGHT OF REASON.

THE CHARACTER WRECKER

THERE are many violent things said and threatened about the bank wrecker and the man who does disreputable things in the field of "high finance" to the detriment of his more humble fellow man. And such remarks are wholly justifiable when directed against the guilty individual. Let us remember, however, in the humbler walks of life, among men who have no banks to wreck and who are not afflicted with weighty money bags and "high finance," there are many men and many women who are wreckers of character and thieves of good names—things that the wealth of banks cannot buy nor all the tricks of high financiers restore. And these character wreckers in humble life do their murderous work for very love of it, without even the bank wrecker's hope of gain. Let the crusade against these thoughtless and dangerous tongue shooters be pushed with vigor.—Ex.

Got the Genuine

Dr. Wiley, who is the government's pure food expert, not long ago walked into a Washington cafe and took a seat. He evidently knew just what he wanted, for, aside the bill of fare the bowing waiter proffered, he said:

"Bring me a chicken pie—one of those little individual pies."

A few minutes later it was set before him, brown and hot, and with a smile of anticipation he broke the crust to find just beneath a three-inch feather.

"Take this away!" he commanded. "What does it mean, anyway? Tell me that."

The waiter was evidently a man of resource, for he imediately leaned over and said in a confidential voice:

"Why, I'll tell yo', sah. It's dis way: Yo' know dat Doctor Wiley been raisin' such er howl 'bout food not bein' what hit was claimed ter be, de cook des puts one chicken feather in each one of dem pies to show ter folks dat dey's recebin' de genwine article, sah."

Guess

What is the difference between a woodpecker and a pec measure? One holds a peck and the other pecks a hole.

If three cats can catch three mice in three minutes, how many cats can catch one hundred mice in one hundred minutes? The same three cats.

30 FLOWERING BULBS FOR 10c

Together with our Catalogue and a complete treatise on the culture of Hardy Bulbs. All by mail, 10 cts

These 30 Bulbs, 6 kinds, 5 of each, different colors, will make beautiful pots of flowers for winter, or lovely clumps of early spring flowers for your garden. Pot or plant them now.

Our Illustrated Catalogue of Hyacinths, Tulips, Narcissus, Crocus, Lilies and all Hardy or Holland Bulbs, and rare new winter-flowering plants free to all who apply.

Fashion Book Free!

I want to send you my handsome new book showing over 400 of the latest styles with illustrated lessons on cutting and dressmaking. I will agree to sell you all the patterns you want for 5 cents each. They are the same patterns you have always paid 10c and 15c for at the stores, made by the same people, and correct in every detail.

HOW I DO IT.

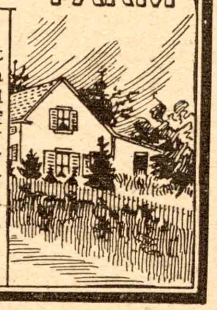
I publish The Home Instructor, an illustrated woman's magazine and I want your name on my subscription list. The Home Instructor is bright, entertaining, clean and instructive—just the sort of a paper you should have in your home. It has departments for every feature of home life, and prints the choicest fiction every month. Every issue has several pages devoted to the latest fashions, fully illustrated.

My Special Offer.

Send me 25 cents and I will send you The Home Instructor for two years and will send my big fashion book to you free. I will also agree to sell you any pattern you want thereafter for 5 cts. I can sell them for 5 cents because I buy them by the thousand and don't make any profit. I don't want the profit, I want your subscription to The Home Instructor. You will save many times the cost of my offer in a year. Write to-day. A. OTIS ARNOLD, Dept. U Quincy, Ill

up-to-Date HOME ON THE FARM

This department is about the best in our paper, and about the best of its kind in any farm paper. How many of our lady readers discovered this before we told them?



Coming

The world is growing better,
As the chimes of heaven play,
And hope's sweet anticipation
Soothes the waiting soul today;
Patience folds her downy pinions,
And bids care to fly away,
While the joys that duty brings us
Cheers our peaceful hearts alway.

WAITING

What are you waiting for? Dull must be the human life that has nothing to wait for, nothing to anticipate, nothing to hope; for waiting in the sense in which we now use it includes anticipation and hope.

But there is a waiting which carries with it a very different meaning, a waiting of procrastination and delay. It is a waiting in idleness before taking up the task that calls to us in the name of the imperative duty; waiting to say the kindly word that should have been said before; waiting to extend the helping hand for which some being is already suffering; waiting to dry a tear that glitters on the cheek of penitence; waiting to cheer a dispairing soul that the sweet endearment might light from the depths. Do not wait in a sense like these. When duty calls respond at once. When any act or message that points toward the Divine pleads to be done or delivered, never wait. "Delays are dangerous." The heaven given opportunity may not come again, and a star in your life's blue sky maye fade away your life's blue sky may fade away and be lost because it was not polished and fixed in its glittering setting at the opportune moment. Says the poet:

Why leave for the evening shadows
The duties of early day?
Why grudge until bleak December
The kindness we owe to May?
'Tis time for the bud and blossom
When skies are serene and blue;
Who soweth in chilly autumn
Reaps harvest of bitter rue.

Thy frown or thy kindness,
As bitter as draught of gall,
May sting thee as scourge of nettles
Ere lowers night's sable pail;
Beware lest thy tardy kisses
Fall madly on lips of clay,
Or heart thou this morn couldst comfort
Be pulseless ere close of day.

And again:

Do thy best always, do it now;
For in the present time,
As in the furrows of a plow,
Fall seeds of good or crime.

But we are writing this morning of the waiting that thrills with the sweet anticipation of something to come; of the waiting that gives us patience, and removes the hard pebbles and sharp thorns from the way we must travel; and waiting that takes our eyes from a weary present and places them upon a happy, cheerful, joyous future. It is the waiting for the blooming of a rose that has had our tender care; for the safe maturing of a crop we have planted and toiled in; for the arrival of a dear friend we have been expecting; for the time when the tiny babe shall whisper the name that always will be dearest to it; for the joys the future is to bring. Waiting for the fruition of all our hopes, when uncertainty shall fly away, and we shall live in a world of the good and the true.

The way sometimes seems long and the waiting dreary, but the sun has never yet set but that it rose again. No cloud was ever so dark but that the light burst through it and it floated away. Whittier says:

Soon or late, to all that sow,
The time of harvest shall be given;
The flowers shall bloom, the fruit shall grow,
If not on earth, at last in heaven.

While we wait for the good things in the opening future, the pleasant pictures in the past may mingle with our future hopes, and spread a halo over all. So must it have been with Longfellow when he sat in the chamber of his past, and sadly but sweetly sang:

When our last days are numbered
And the voices of the night
Wake the better soul that slumbered
To a holy, calm delight;

Ere the evening lamps are lighted
And, like phantoms grim and tall,
Shadows from the fitful light
Dance upon the parlor wall;

Then the forms of the departed
Enter at the open door;
The beloved ones, the true-hearted,
Come to visit me once more.

He, the young and strong, who cherished
Noble longings for the strife,
By the roadside fell and perished,
Weary with the march of life.

They, the holy ones and weakly,
Who the cross of suffering bore,
Folded their pale hands so meekly,
Spake with us on earth no more.

And with them the being beauteous
Who unto my youth was given,
More than all things else to love me,
And is now a saint in heaven.

With a slow noiseless footstep
Comes the messenger divine,
Takes the vacant chair beside me,
Lays her gentle hand in mine.

And she sits and gazes at me
With those deep and tender eyes,
Like the stars, so still and saintlike,
Looking downward from the skies.

Uttered not, yet comprehended,
Is the spirit's voiceless prayer,
Soft rebukes, in blessings ended,
Breathing from her lips on air.

Oh, though depressed and lonely,
All my fears are laid aside,
If I but remember only
Such as these have lived and died!

In infancy we unconsciously wait for the tottering steps of childhood. In childhood we wait for the ambitions of youth; in youth, for the triumphs of manhood; in manhood for the repose of old age; in old age for the return of the joys of the past, and the beloved of the past, and the final triumphs of eternity. How much of our lives is waiting?

HOMES BEAUTIFUL AS WELL AS COMFORTABLE

It is just as easy, especially in the country, to have a beautiful home as it is to have a comfortable one; and the improvements to be noted in this respect are in the highest degree gratifying. As the pioneer cabin yielded to the framed cottage, the stumpy, brushy surroundings gave place to the open and cleaned up yard; and as the commodious dwelling takes the place of the cottage, the yard surroundings to the grassy, flower bedecked lawn.

Indeed the farmer and his home are becoming metropolitan. The rural carrier and his mail every day, the telephone puts in instant communication with his neighbors and his places of business; and his schools are growing in popularity and efficiency to keep pace with the improvements in so many other things.

Envy is not the word to express the feelings toward these improvements everywhere visible, but our advancing years make us sigh for the lack of them thirty of forty years ago. We see what the young people of today are making, but we cannot imagine what the young people of our day might have made had they grown up in the midst of such facilities and opportunities. We wish we could inspire young people to line up to their surroundings, and take their places as far above their present happy environments, as the young people of earlier days did of theirs.

UP-TO-DATE FARMING is ambitious for rural progress and advancement. How beautiful would it be had we a little community of our own, and it need not be a very large one either, a community with whose people we could talk as neighbors talk with each other; together laying our plans, together solving the problems of beautiful homes, of truly up-to-date farmers, of crops adapted to the needs and demands, of prices steady and firm to producer and consumer, of better conditions constantly, and of ideal living. What a community we could thus jointly build up, and what an example could be set for the world around us!

But as we are now situated, the love that we could center upon the people of a definite area, must be spread over the whole country; the aid we could give to intimate few must be extended to the distantly located many, and the encouragement we could offer the chosen friends and neighbors, we now as freely give to all the world.

After all it is pleasant to see a bright home in the Dakotas to which UP-TO-DATE FARMING may have brought a ray of light, another in the Carolinas, another on the shores of the Lakes or amid the forests of Canada, another within the great Texan empire, and others still on either side of the Rocky mountains. How we do like to bring words of hopefulness and cheer to all these progressive homes of Our Up-to-Date People; and whenever we can say anything to make those homes more beautiful within and without, more like our ideas of the abodes of the blest, and the people in them happier, wiser, more comfortable and better, we feel that we are filling our mission, and in our inmost soul thank God for our opportunities.

Four new one-year subscriptions for $1.00. Help along the good work by sending a club.

"Children Teething"
Mrs. WINSLOW'S SOOTHING SYRUP should always be used for children teething. It soothes the child, softens the gums and allays all pain, cures wind colic and is the best remedy for diarrhoea. Twenty-five cts.

SOIL, CLIMATE and IRRIGATION system are unsurpassed. This land will be sold in tracts of twenty acres or more. Long time—easy payments. For Booklet and further information write,
BITTER ROOT STOCK FARM, Hamilton, Mont.

Making a Flower Garden

One of the things that a visitor in a rural community finds incomprehensible is the aparent indifference of the majority of the women regarding the condition of their dooryards. Unlovely front yards are all too often seen in farm districts, not even a few vines relieving the barrenness of the garden. Farm wives are the busiest women in the world, but surely there are few who cannot take the time to plant a half dozen packages of seed or transplant a few shrubs. If the price of a quarter's worth of seed canot be afforded, go out to the woods and bring in some of the beautiful bushes and vines that grow free.

It is a woman's nature to like attractive surroundings. Too often the home is far from beautiful, the furnishings being of the most meagre. In such cases, a small flower garden will furnish not only recreation, but it will satisfy the longing for color and beauty.

If a few plants and bulbs can be added, the garden will gain just that much in attractiveness.

There are many things that can be done this month and in October. The fall is the time for planting shrubbery. Why not take a bit of the butter money and buy half a dozen shrubs for the front yard? It will be a lasting investment, and the shrubs will increase in beauty from year to year, lasting with a little care, a lifetime. Good shrubs will cost 25 cents each, and they should be purchased from a reliable firm. Hydrangea paniculata is one of the best. It should find a place in every garden.

The althea is another good shrub for general cultivation. It comes in several varieties, the white ones being the most attractive. This flower is perhaps better known by the common name of Rose of Sharon. It is a prolific bloomer and forms a little tree of graceful form.

The old-time syringa bush should not be forgotten. It is one of the best, and adds a note of beauty to any garden.

Forsythia suspensa is the earliest spring bloomer, and is easily grown.

Then there is the lovely lilac. Every garden should have one of these.

All of these shrubs may be bought for 25 cents each, and they are beter planted in the fall. The method of preparing the grounds is the same for all. Of course, if the best results are to be obtained, the flowers should receive proper attention at the start.

In fact, the cultivation of the soil is of as much importance as for the regular crops. Nothing is to be gained by haphazzard methods. Women who set out to have a small flower garden, no matter how unpretentious, cannot afford to start wrong. If the ground is well prepared at the outset, but little further attention will be needed.

All beds should be broken to a depth of two feet, and if the soil is bad, throw it out and fill in with good rich earth. At any rate the ground should be dug deeply and the top soil thrown to one side for filling. Throw out the bottom soil and fill in with a deep layer of well rotted manure. Leaf is also excellent for flower beds. Ferns, in fact, demand it. Use the top soil for filling in, and put in plenty of good manure. The man of the family can give a valuable help about preparing the ground.

Whether the planting is to be of plants, seedling or shrubbery, the preparation of the ground should be the same. Then the worker can go ahead with the assurance that her labors will be crowned with a mass of bloom.

In the case of shrubbery, dig a hole two feet deep and about the same size in diameter. Fill it in with layers of manure, leaf mold and good soil. Put in some good wood earth if it can be had readily. Pack the earth in well until within about a foot of the top, stand in the shrub, continue putting in the earth, packing it well around the roots with the hands. When the hole is filled up, pack the earth tightly with the foot, and water freely.

If country women realized what an adition a few vines would be to their homes, they would plant them more freely. No vine is so beautiful as the honeysuckle and it stays green so late in the winter that it is almost an evergreen. One of the best varieties is Hall's Japan honeysuckle. This new and improved variety has glossy foliage and an abundance of bloom.

The clematis paniculata is another vine that should find a place in every garden. When in bloom it is a sight worth going far to see. It is covered with a profusion of star shaped blossoms that render it delightful to the flower lover.

Boston Ivy (botanical name Ampelopis Veitchi) is another beautiful vine. It does not bloom, but has beautiful foliage turning red in the autumn. The old fashioned Virginia creeper must not be forgotten.

A few tulip, hyacinths, daffodils, and jonquil bulbs may be added for early spring bloom. Plant in the fall, about two inches below the ground, in rich soil, and cover deeply with leaves. In the spring uncover and let the tender green leaves shoot up in the sunshine. A lovely spring garden will reward good bulbs and good planting. These bulbs come cheaper if bought by the dozen.

CITIFYING THE COUNTRY

City folks who visit the country at this time of the year are struck by the indifference of many in regard to making the most of country life. In the country are the best opportunities for green and spacious lawns, but an elegant lawn is seldom seen. Such luxuries are reserved for the city, where the land is bought by the foot, often at acre prices of the country, and where a man must first cover a lawn with greenbacks if he wants to become the proprietor of it.

To see handsome shade trees one must go to the city. After a summer sojourn in a treeless country house, one can see the force of the remark of the man who said that he always felt lonesome in the city, because there were "so many pesky woods there."

Much handsomer flower garden, too, are usually found in the city. The old-fashioned flowers which seem to spring up in the country of their own accord, are, for the most part, left to their own sweet will, to live or die. A little care and attention would turn them into beauty spots.

The city has been ruralized so much that many city homes are in reality delightful country residences. The country needs to be ruralized too, or should we say "citified." It is a fact that country people generally think they are too busy to attend to beautifying their homes and surroundings, especially in the summer, but a little extra work would do the trick, and the added pride and satisfaction given by a well-kept lawn and pretty flowers would repay one for the trouble.

Spoon Coupon

This coupon is good for

One Dozen Beautiful Teaspoons

We use them in our own home. Only one set to each reader.

To secure this complete set of 12 spoons, send me one new yearly subscription to UP-TO-DATE FARMING at 50c, or 3 new 3-months subscriptions at special price of 10 cents each, together with *this coupon.*

Address all orders for patterns and catalogue to UP-TO-DATE FARMING, Indianapolis, Ind., sending 10 cents for each pattern ordered, or we will send any pattern described on this page *free* for one new three-month's trial subscription to our paper at 10 cents. Get your neighbors to subscribe.

ALL KINDS OF HELPS.

Are we not apt to be too conservative in the matter of food? Are we not afraid to try new dishes or new ways of preparing old ones? Some of us do not eat soups, cheese or oil, because we fancy we do not like these things. We assume that caraway seeds in soups, tarragon leaves in salads or sauces, and nutmeg in vegetables, all savor of affectation, and hasten to discard these things—innovations to us—at once and forever.

But do not little things like these, in their proper places, add to the pleasures of the table and the comforts of life? Many will endure great trials and hardships without a murmur, but complain, as did the children of Israel, if their diet becomes the least monotonous. It is not money that is so much essential to successful housekeeping as the requisite timeat our disposal and the disposition to spend a portion of that time in the kitchen.

* * *

It is a well known fact that beans, lentils and split peas do not boil soft in hard water. The sulphate gypsum, the salts of lime coagulate the casein which these seeds contain. In some cases, however, the solvent power of pure soft water is so great that it destroys the firmness, color and skin of green vegetables and allows their juices to be extracted in the process of boiling. It is especially true of beans and green peas. Therefore, hard water, instead of soft water should be employed in these cases. A tablespoonful of salt added to a gallon of soft water hardens it immediately.

* * *

The use of potatoes in bread making is very extensively practiced in Europe, and is not unknown in this country. The result of mixing potatoes with flour in bread making is an increase of the carbo-hydrates and a decrease of the proteid matter in the loaf. In this country the use of potatoes in bread making is largely that a better bread can be secured. This notion is probably erroneous. The chief object in adding potatoes to the flour is to prevent the loaf drying too rapidly, but this can be just as well done by proper baking, inclosing the moist interior with a practically impervious crust. The admixture of potatoe and wheat flour is economical only when the price of the potatoe starch is less than that of the same amount of material in cereals.

* * *

The most important cereal that is grown in the United States, from an economic point of view is maize, or Indian corn. Rye is not used to any great extent by the native citizens of the United States as a source of bread-making. In Europe it is one of the most important constituents of bread, and is used to some extent by our European immigrants. Wheat is the typical bread-making cereal. The products of wheat are used as human foods in many forms. There are nearly one hundred different grades of food materials made from this cereal by the patent-roller process of milling.

* * *

When we investigate the great scientists, great poets or statesmen of eminence in the world, we usually find patient, loving mothers, wives or sisters, helping and sustaining them by making their homes havens of rest from outside cares and trials. Therein have some of the best women found their greatness, and the wisest of women have never scorned these tasks. Fortunate will we all be when we learn to take a stitch in time in our home work. The power to keep the web of our tasks moving forward in a systematic or orderly way, without nervous breaks and spasms, is what is needed everywhere, and especially in the household.

* * *

Every woman doesn't know that the teapot has a great deal to do with the making of good tea. Of course, tea can be made in almost any old thing, and still be drinkable for those who love the beverage, but to obtain the best results, china or earthenware pots are best, and they are more readily kept clean. A granite pot may be used, or silver, if desired, but the latter should never be placed on the stove. Tin should never be used for making tea. The inside of the teapot must be kept scrupulously clean. It should always be rinsed out with boiling water and thoroughly dried after being used; otherwise the best tea is ruined.

BULB CALENDAR

How to Plant—When They Will Bloom

All the following bulbs should be planted in the fall from September until ground freezes up. For best results they should be planted reasonably early so as to make some roots during growing weather of fall. When winter approaches they should have a light covering of manure or leaves. They are first plants to bloom, hence are prized very highly. Also they are as certain to grow as potatoes stuck into the ground, but more certain to produce their crop than are potatoes as they have no enemies and come so early that drought can not affect them.

I am fond of brown, and folks say it is very becoming to me, but I have never been able to get this color in thin dress goods that didn't fade Do you know of an inexpensive, thin material that doesn't fade? —A. S. G.

There is a charming material called Simpson-Eddystone Best Hazel Brown, made by a new process that makes it absolutely fast-color. Frequent washing does not fade it in the least. These goods come in many bautiful patterns, and I should say, would be just what you want. The price is very reasonable and they make up nto as stylish and attractive dresses as the high-priced cottons.

A Big Mail of Souvenir Post Cards Free

Your name is placed on a list and is mailed to 100 or more different collectors. You are also sent a list of collectors who would be glad to exchange cards with you.

The only rule is you must always return a card to each collector who sends you one with a request to exchange.

We supply you with 20 beautiful cards—American Girl Series—which you can either save, or send to collectors.

All this is FREE for sending me only one new three-month subscription to UP-TO-DATE FARMING at 10 cents. Join now—today—and watch your mail grow.

Garrett Wall, Subscription Mgr. Up-to-Date Farming, Indianapolis, Ind.

TO NURSE THE SICK

The world is in need of a greater number of skilled nurses. There is no doubt the death rate is much increased for lack of proper nursing of the sick. The greatest surgical and medical skill often goes for naught because the patient cannot have proper care in the absence of the attending physicians. The duties of the professional nurse are not at all inviting, except to those whose natural sympathies are very great, but we do not know of any calling that should appeal more strongly to respectful regard to both sick and well. As a calling that of the professional nurse is not accorded the consideration and honor it deserves. But the nurse is always respected and is generally well remunerated.

There are many young women even in the country, whose position and condition in life would be eminently improved were they to become nurses; but to do so almost always involves going away from home, and UP-TO-DATE FARMING is instinctively slow to advise young women to leave home except to take charge of homes of their own. Yet we have seen many young wives and mothers whose circumstances would have been much better had they entered a hospital or a training school on the day of their marriage, or before, instead of entering matrimony.

Speaking of training schools, we are reminded of the Philadelphia School for Nurses, which every year gives to hundreds of suitable and deserving young women free scholarships, and this year will give a greater number than heretofore. The free scholarships include a two years' course, covering all the essentials of the art and science of nursing, as well as room and board, nurse uniforms and all the necessary supplies for class room work. No fees are charged, the only expenditure being the student's personal expenses, with which the school has nothing to do. We are assured that the influences surrounding the students are of the best kind, and they are under the care of women of high qualifications for the charge. Persons interested may address School for Nurses 2216 Chestnut St., Philadelphia, Pa.

SWEET ODORS.

The delicious sweetness of summer evenings, when the air is heavy with the perfume of some old-fashioned garden, is too exquisite to be wasted. Imprison it, shut it up in dainty silk bags, hoard it like a miser for the winter time. Sweet lavender, dried in the sun or by the fire, will give you June in January; so will lemon verbena, cushed geranium leaves and many other sweets of the garden. If you wish the perfume of the "spicy breezes" that "blow soft o'er Ceylon's Isle," use the following recipe:

Half a pound of coriander seeds, half a pound of sweet orris root, half a pound or rose leaves, half a pound of calamus aromaticus, one ounce of mace, one ounce of cinnamon, half an once of cloves, four drachms of musk powder, three ounces of lavender flowers and some rhodium wood. Crush up all this together and you will have a perfume for your linen that will delight your heart. If the list sounds a little formidable, never mind; it is worth the trouble.

Pillows are made of dried rose leaves or the dried heads of the sweet, red clover are very soothing to the nerves. The tired woman who lies down for an afternoon nap will drop off to sleep with a delicious sense of rest if her head is on one of these aromatic pillows. Dried pennyroyal has the same effect if one likes the odor. All these sweet smelling herbs are easily obtained by the woman who lives in the country. All she has to do is to go out in the woods or garden and pick them. She is far more fortunate in this respect than her sister in the city, who has to buy all her perfumes at the drug store.

"BLUE DEVILS" AND CLOTHS.

Everyone, at more or less regular intervals, has a spell of the "blues". It is one of these things that just will sieze hold of a person, sometimes without any tangible cause whatever. Now, if you have the "blues", or if you feel them coming on, the best way to scare them away is to put on your best cloths and wear them until the spasm passes off. There have been many ways suggested to drive away the "blue devils", but there isn't anything to equal the best cloths method. You should dress your hair as becomingly as possible and put on the best everything that you possess. Rig yourself out in all your finery and then go out for a walk in the fresh air. You will feel your spirits rising as you proceed. The effect of good clothes on the self-respect cannot be overestimated. It has the same effect on the spirits. After all, "blues" are, for the most part, a sort of losing confidence in one's self and one's powers, and the knowledge that one is well-dressed brings back this confidence, somehow. Perhaps some psychologist will arise some day to tell us why these things are true. One can't explain them, exactly, but true they certainly are, and any woman can bear testimony that the effect of good clothes is more than an outward and visible one; it is far more—it is an inward and spiritually bolstering-up one.

COOKING ON THE FARM.

At this season of the year recipes for putting up pickles and preserves that will supply the table with delicacies during the long winter months are of greatest interest. It is more important that the farm cellar be provided with a goodly supply of such delicacies than that of the city housewife, as the latter has only to go to the corner grocery when her stock fails. Following are a few recipes that will be found good and economical:

SWEET CUCUMBER PICKLES

If you are where you can get the large yellow cucumbers, which are perfectly ripe, why not use them for sweet pickles? They can be served with so many different things in the winter.

They should be made by peeling and cutting into inch pieces. To each seven pounds of cucumbers allow four pounds of sugar, a pint of cider vinegar, a dozen whole cloves and a stick of cinnamon and two blades of mace.

Put vinegar, sugar and spices into the kettle, bring to a good scald, then add the cucumbers. Cover and cook gently until tender, but not mushy.

These should stand over night, and the next morning they should again be brought to the boiling point and put aside to cool. The third morning this should be repeated, then the cucumbers lifted out and packed in jars.

The syrup should boil down a little longer, then be poured over the pickles and the jars sealed.

PEAR JAM WITHOUT SUGAR

Take half a peck of ripe pears and another of ripe plums. Peal and stone them. Put the fruit into a preserving pan and add one cupful of water and a quarter of an ounce of powdered cloves. Let the mixture boil gently with constant stirring until it is thick and smooth. Be careful that it does not adhere to the pan and burn. Put in jars and cover.

WATERMELON RIND AND PICKLE

Pare off the green and remove all the red, then cut in strips two or three inches in length. Weigh, then place in brine, allowing a cup of salt to a gallon of water, and let stand for 24 hours. Drain. Make a syrup, allowing three pounds of sugar to a quart of vinegar. Add a teaspoonful of cassia buds, a stick of cinnamon, a teaspoonful of cloves and a little ginger root. Cook the rinds in this spiced vinegar until transparent and tender. Take out and pack in jars, cook the syrup a little longer, and pour over the rinds and seal.

WATERMELON PRESERVES

A tasteless half-ripe melon will make an excellent preserve. Cut the red or pinkish interior into small cubes, removing every seed or particles of the white rind. Measure, and take two-thirds as much sugar, adding to every five or six pounds of the melon, the grated yellow rind and juice of four lemons. Cook very slowly in a preserving kettle until quite thick. At first, it will seem rather watery and thin, but it soon becomes quite rich. Turn into small glasses and seal with parafine.

16 Piece Music Folio Free!

Patriotic
Sentimental
Classical
Minstrel
Popular
And
Love Songs
For
Home and Fireside

If you have a piano or organ in your home you certainly should have at least one of these folios. If anyone in your family sings, that is another reason why you need one of these folios. Possibly no one in your home plays or sings—wouldn't it be nice to be able to have a folio with fifteen or twenty popular pieces of music for friends who visit you?

THESE CONTAIN THE POPULAR SONGS OF TODAY—the songs that were popular when we were children—and that will never grow old. Songs for the little tots—songs for patriotic men and women.

Any folio sent free of all charges for one new or renewal subscription to UP-TO-DATE FARMING. If you can't use it yourself, surely some one in your home would be made happy by getting such a present.

COONER & FORTUNE CO., - - - INDIANAPOLIS, IND

According to a leading coffee trade journal, the world's consumption of coffee in 1907 was 16,825,000 sacks, of which the United States took 6,980,000 sacks, Germany, 3,050,000 sacks, France 1,625,000 sacks, leaving the rest of the world 5,170,000 sacks.

I WONDER

I wonder why the happy days
Are never half so long
As rainy days, or other days
When everything goes wrong?

I wonder why the naughty things
Are what I like to do?
While good things often seem so hard:
I think it queer, don't you?

I wonder why I don't like work,
But always do like fun?
I wonder why my dog beats me
In every race we run?

I wonder why grown folks get tired
Of answering questions so?
When I get big, I'll tell the girls,
'Bout everything I know.

A little help on the part of our subscribers will help UP-TO-DATE FARMING in its fight to secure good prices for its readers. Help along the good work by sending us a club of four new subscriptions for $1.00.

20 American Girls Free

This set of beautiful Souvenir Post Cards is considered the most popular set of post cards ever issued. BUSINESS EXCHANGE

This Department is Intended to Bring Buyers and Sellers Together at Moderate Cost

THE BUSINESS EXCHANGE can be made the most valuable department in UP-TO-DATE FARMING. It can be made the medium of sale for surplus crops and as valuable to buyers to supply their needs. It should be used to a much greater extent than it is and thus one of the missions of this paper will be accomplished.

RATES—The Cost for Advertising Under This Head is 4c a Word Each Insertion

Each initial and number counts as a word. No display, except the first word will be set in two-line black letter without extra charge. To bring sellers and buyers together there is no surer way than thru this BUSINESS EXCHANGE. Advertisements under this head are small and we cannot investigate every advertiser. Our "Guarantee of Advertisers" does not apply. Rogues shall not advertise here if we know it. Report any unsatisfactory transactions promptly. When writing please say: "I saw it advertised in UP-TO-DATE FARMING."

DRINK AND THE FARM HOME.

The farmer is not the greatest drinker. On the contrary, average him with his brothers of other callings, and he drinks much less than they. Nor does as much drink come into the farm home as comes into the other homes. And yet the farmer is the greatest sufferer from the saloon, if not from the drink habit. The ordinary laws for licensing saloons or the sale of intoxicants, authorize incorporated cities, towns and villages to grant such licenses under regulations of their own making. The officers empowered to do that are elected by the voters who reside within the corporate limits; and the fees for such licenses go into the corporation treasuries to be expended for the benefit of the city, town or village, by the authorities thereof. The farmers are not allowed to vote for said officers; nor are they allowed to share in the revenue arising from the licenses. But when crimes are committed within the town or village, even though the direct result of the liquors sold under the licenses, the case is a peoples case, goes to the county seat, and the farmers are taxed to pay the costs.

Local option gives the farmers a right to vote on the question as well as those who reside within the corporate limits of the town or village, and if they wish to do so, they may forbid the licensing of saloons therein. But whether or not this power is effective depends upon the size of the local option unit. If the unit is made the least sub-division, the farmers gain little or nothing by the right to vote on the question. If the county is made the unit, the vote of the farmers of the county balances against the vote of the saloon people in the town or village corporation, and they may thus forbid the saloons in the county if they do not desire them there.

This is a question that may well be studied and discussed in the homes on the farm, and when so studied, all who do not want saloons will be very apt to vote for county local option.

COUNTRY ENTERPRISE.

Country girls are sometimes thrown upon their own resources, as well as city girls, and they are often at a loss what to do to make a living. They may, perhaps, have a few accomplishments, but not sufficient education or talent in any one of them to support themselves thereby. But the country girl, or the girl in the small village has a knowledge born of the experience of her country l. and training which will avail her much if she will only put it to practical use.

For instance, she may start a venture in dealing in fresh eggs and butter, and she can make money at it, too. If her management is good, a few dollars capital is sufficient. She can rent a room in a town or somewhere convenient to a summer resort and let her farmer friends know that she is in the market for fresh eggs and butter, only the freshest and best. Then she can let the neighboring residents and visitors and hotel people know that she is dealing in these commodities. It would be a good idea to put out a sign to that effect. The market reports should be watched, so that she can keep in touch with the prices, and if her goods are first-class, she can get higher prices than the market quotations, for people will always be willing to pay a little more for reliable goods. A supply of poultry feeds and appliances can also be kept for sale. There will be a country market for these. They can be exchanged for butter and eggs, too. Then, as the business grows, other things can be added and quite a trade built up. The beginning may be small, but nearly all beginnings are small. Patience and endurance are necessary for all struggles, and the character is strengthened by overcoming difficulties.

"My dear, you ought to go to bed early; the little chickens always go to bed early."

"Yes, I know they do, mother, but the old hen always goes with them, don't she?"

In Lighter Vein

MUCH LIKE IT

The minister preached on the storm on Gallilee, and he grew eloquent in describing it—had the winds blowing fiercely, the waves climbing higher and higher and the noise worse than deafening. When it was over the deason congratulated him.

"That sermon of yours was magnificent, the description grand, everything superb. In fact it was just like the storm, an awful noisy wind."

THE REASON OF THE DIFFERENCE

A teacher in an east end school found great difficulty in getting any answers from an eleven year old member of his class.

"How is it," he asked, "that you never know your lessons. When I was your age I could answer any questions put to me," added the teacher.

"Yes," replied the urchin, "but you had a different teacher to what I have."—Tatler.

DOING THEIR BEST

Little Margie had not been to the country before, and, getting lonesome, she was told she might go to the barn and look for eggs. Presently she returned without any.

"Couldn't you find any eggs, dear?" asked her mother.

"No. The hens were scratching all around as hard as they could, but they hadn't found a single egg," was the rather doleful reply.

HOW SHE SAYS IT

"No matter what happens, my wife never says, 'I told you so.'"

"Remarkable woman! Happy husband!"

"She just looks contemptuous like, and says, 'Didn't I tell you so?'"

WHAT MADE HIM SICK

The following conversation is said to have taken place in a Boston elevator:

Old Lady—"Don't you ever feel sick going up and down in this elevator all day?"

Elevator Boy—"Yes'm."

Old Lady—Is it the motion of the going down?"

Elevator Boy—"No'm."

Old Lady—"The motion of going up?"

Elevator Boy—"No'm."

Old Lady—"The stopping?"

Elevator Boy—"No'm."

Old Lady—What is it, then?"

Elevator Boy—"The questions."

"Things seem to be coming my way," aid the young bird when the spider dropped into his beak.

AT THE DENTIST'S

"Do you give gas here?" asked a wild-looking man who rushed into a dentist's.

"We do," replied the dentist.

"Does it put a fellow to sleep?"

"It does."

"Sound asleep, so you can't wake him up?"

"Yes."

"Could you break his jaw or black his eye and he wouldn't feel it?"

"He wouldn't know nothing about it."

"How long does he sleep?"

"The physical insensibility produced by inhaling the gas lasts a minute, or probably a little less."

"I expect that's long nough. Got it all rady for a fellow to take?"

"Yes. Take a seat in this chair and show me you tooth."

"Tooth nothing," said the excited caller, beginning rapidly to remove his coat and vest. "I want you to pull a porous plaster off my back."

WHOLESALE AND RETAIL

"What business is Miss Tattle engaged in?"

"She's in everybody's business."

"So she's in the wholesale business."

"Yes, except when it comes to scandal. She retails that."

HE GOT A LIFT

"Hello, Turnips!" said an arrogant young man to a farmer driving along a country road. "Give a fellow a lift to Newton?" Without waiting for a reply, he jumped into the cart; "I might as well ride with you as walk."

After two or three miles hod been covered, the young man paused for a moment in his chatter, and remarked:

"It's more of a distance to Newton than I supposed."

"It is a good distance," answered the farmer.

Another twenty minutes passed, and then the young man inquired:

"About how far is it to Newton?"

"Well," replied the farmer, "keepin' straight on the way we're going now I'd sh'd say 'twould be a matter o' twenty-five thousand miles or so; but if you was favorable to gettin' out o' my cart and walkin' back, it isn't very much above eight miles."—"Pick-Me-Up".

GOT THE WRONG DEFINITION

An old lady congratulated a new wife on having a model husband. The first opportunity the new wife turned to the dictionary, where she read: "Model—a small imitation of the real thing."

F. S. of E. OFFICIAL DEPARTMENT

THE FARMERS SOCIETY OF EQUITY

Headquarters, Indianapolis, Ind.

As its name would indicate, this is a farmers' society. Its organized forms are a National Union, State Unions, County Unions and Local Unions. Also Department, Section and District Unions are provided for controlling and marketing the various crops. Particulars for organizing the various unions will be sent on request.

MEMBERSHIP. The membership of the Farmers' Society of Equity shall consist of farmers. By farmers we mean people who are engaged in the vocation of farming or who own land on which crops are produced. (To be *also* engaged in merchantile business, manufacturing or the professions does not disqualify a farmer, or one who owns land on which crops are produced, from joining the F. S. of E.)

SPECIAL MEMBERS. First, an exception to the rule regarding eligibility for membership may be made by any local union by a majority vote of its members at any regular meeting. It can in this way elect any one of good character, not a farmer, to *special* membership in the local union on payment of the regular fee, but such special members must never be elected or appointed as delegates to conventions of higher unions. The object of this is to always keep the management of the Society in the control of farmers themselves.

Second, wives of members and daughters of the same may be admitted to *special* membership without the payment of any fee, also male children between 14 and 21 years may become *special* members in the same way. These *special* members may retain membership without the payment of any dues, but on reaching his majority the male members can only retain membership by paying the regular fee.

MEMBERSHIP FEE. The fee to join the F. S. of E. is $2.00. This is divided as follows: The local union retains 25 cents. The balance is sent to headquarters and 50 cents is paid for the official paper one year to the member; $1.00 goes into the organization fund and 25 cents, or as much of it as is necessary, will go to pay the general expenses.

ANNUAL DUES. Each member must pay Annual Dues of $1.20. This is payable when a year has elapsed after first joining, and annually thereafter. It is apportioned as follows: The local union may retain 35 cents and send 85 cents to headquarters. This will be used, 50 cents for the official paper and 35 cents, or as much as necessary of it, to meeting general expenses and extending the Society.

AFFILIATION. Local, county and State unions, now organized, of societies under any other name will be chartered by the Farmers Society of Equity on resolutions passed by a majority of members or delegates. Unions thus affiliating will be chartered free on remittance of the dues as above. Provisions will be made for the support of State and county unions so affiliating and their activities defined. Supplies and a seal of the F. S. of E. will be furnished free on report of annual dues.

REMARKS. Ten (10) or more eligible people may organize a local union by electing a president, vice-president, secretary and treasurer, and reporting it to headquarters. Blanks will be furnished on request. Members will receive the official paper (UP-TO-DATE FARMING) one year from the time the report of their membership is received, or one year from the time their annual dues were payable. They are advised to watch the date on their subscription label and if there is any delay in receiving paper, or changing date in the case of paying dues, please report to headquarters. Promptness in reporting will be required from all secretaries and organizers. ¶ *Write Plainly.* If you cannot, then print names and addresses or get some person to write who can write plainly. We must *guard against errors* if every person is to be satisfactorily served and our Society is to quickly accomplish its great and good objects.

OBJECTS. The FIRST and chief object of the Farmers Society of Equity is *to obtain profitable prices for all the products of the farm, garden and orchard.*

The SECOND great object is *to have built and maintained granaries, elevators, warehouses and cold storage houses on the farms, in principle market cities and in all localities where surplus crops are raised, so that farm produce may be held and controlled for profitable prices, instead of being dumped to pass into the hands of middlemen and trusts.*

OTHER OBJECTS. The F. S. of E. also has many other objects, but they must all wait on the accomplishment of the first. Also all farmers may as well understand that the *first* object depends largely upon the accomplishment of the *second,* because crops must be controlled before equitable, and always profitable prices can be secured. To control the crops, the facilities to control—store—must be provided. Therefore it is important that *a granary be provided on every farm that produces a surplus of grain and an elevator or warehouse be built at every shipping point.*

OFFICERS

President—W. H. Mitchell, Hutchinson, Kan.
Vice President—J. A. Everitt, Indianapolis.
Secretary—I. C. Rous, Indianapolis.

Send all reports, and address all communications to

FARMERS SOCIETY OF EQUITY,
Headquarters, Indianapolis, Ind.

83

NOTICES

LOCAL UNIONS. The Farmers' Society of Equity has ready for delivery a complete assortment of blanks, forms and instructions for the use of local unions. If your union has not received them please apply to headquarters at once. Price 50 cents, postpaid.

ORGANIZERS. Send us the dates of your meetings at least 10 days before the date of the paper you want them to appear in. Also send for report blanks, etc.

ADDRESSING. Always address communications and make all remittances payable to the *Farmers' Society of Equity* and not to individuals.

If your business is with the Society, always make money orders or drafts *"to the order of Farmers' Society of Equity,"* and not to any individual. If with the publisher of this paper, make them *"to the order of Up-to-Date Farming"* and not to any individual.

Members' buttons for F. S. of E. cost secretaries and organizers 1 cent each. A supply should always be kept on hand for delivery to new members. The same way with members' cards and fee and dues stamps, which will be sent on request without advance payment.

Please read the supplement with this number with exceeding care.

As the Walrod Confession is given complete in the supplement, the third and last installment is not printed in the body of this paper.

SHALL THERE BE TWO CONVENTIONS?

On October 6th, 1908, at Milwaukee, Wis., may convene a convention of the American Society of Equity, called by the Barnett-Pauley faction of the society.

On October 27th, 1908, at Indianapolis, Ind., will convene the Sixth Annual Convention of the American Society of Equity of N. A.; also called the Farmers Society of Equity.

For a better understanding regarding these conventions, we refer the reader to the supplement with this number and particularly that part headed "The 1908 Convention." Read it with great care.

We now call upon all members who approved of the original plans and objects of the society, who remember how it rapidly rose to power and influence in the first five years of its existence, who have reaped the benefits in better prices, because of it and who have now so recently noted its disintegration while under the control of the present acting head, to meet in mass convention on the above date, October 27, 1908, and there reorganize and reestablish the society.

This is positively the most important call that has ever been made on the farmers of America. This society offered to farmers the only practical plan to gain their industrial freedom and independence. And such freedom and independence will only come through a strict adherence to the original plan and an inviolable adherence to its priciples. A year's departure from the original principles and plan should be enough for the most venturesome.

The plan of the society is the result of many months of thought and years of experiments. The plan, while comparatively simple, is one of the most comprehensive ever devised. And it must be so to meet the requirements of agriculture in America and for all the crops. The plan provides for bringing under control every crop for production and marketing; such contol as will insure an adequate supply without a dangerous surplus and a distribution that will supply all the demand as it appears but never a glut of a market.

These are some of the things the plan of the A. S. of E. was devised to accomplish and it will accomplish them, when properly applied.

We charge that the officers elected by the first, revolutionary convention were unacquainted with the society, did not understand its plan and were no more qualified to take charge of the society, build it up and work its plans successfully than they were to build a successful flying machine and operate it. (We are assuming that they never saw a flying machine.) And the same may be charged against the publishers and editor of the alleged official paper.

We might as well expect a raw man off of a farm to successfully manage a large manufacturing or mercantile business, or the section hand to successfully manage a great railroad system into which he was suddenly injected.

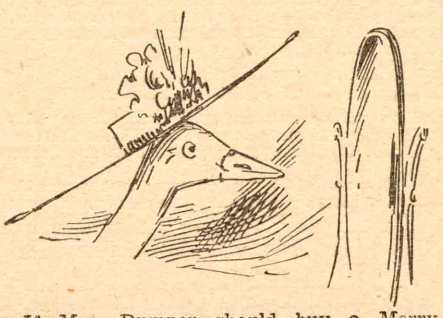
Such things never have been done and never will be done successfully.

Are not these facts? Can we afford to ignore the facts now, in view of the near approach of the next convention? It is important that these facts be kept in mind, as well as many others that have been given in this paper and in the supplement, by all the people who attend either convention.

Through a calm convention where Equity and Justice prevail and the highest regard is held for the farmers interests, good leaders can be found. The American Society of Equity of N. A.,—the orirnal one—will honor any man to be its leader. And there is no bid in this for leadership for the editor of this paper. Mr. Everitt believes he has done enough for the farmers in giving them the plan, then establishing the society and then rescuing it, as we believe it will be rescued, from the designing people who

And when rescued, there need be no fear of a repetition of the unpleasant experience of the past year. If any person in the future, for a moment, feels disposed to sidetrack a movement with the holy and noble mission ours has, all that will be necessary will be to refer him to some of the terribly disappointed people who entered into the conspiracy.

Reorganize and reestablish the society now and we believe it will live forever, giving blessings to all mankind through all future ages.



If Mrs. Dumper should buy a Merry Widow hat, how would the old man pay for it?

MICHIGAN LADIES' SOCIETY EQUITY

Golden Rod Local met with Mrs. Mayville, August 6th. Vice-President Mrs. Nettie Ross presided. Important business was considered at this meeting and. it is regretted that several members were absent.

At this meeting the local received its charter with 21 names.

Question discussed "What is meant by the initiative and referendum" and "What arguments are for and against". Result of vote was unanimous in favor of such a law.

A dainty lunch of raspberries and cream, sandwiches, cake and tea was served.

It is planned that one day of the Grand Traverse Region Fair, Sept. 29 to Oct. 2, be given to the Equity Society.

Wm. Palmer of Roseland, La., was a visitor to our section in the interest of helping the society people to dispose of their fruit advantageously.

Eggs are bought and sold by our society. We want to handle the eggs of members. Don't be a dumper.

The farmers are agitating the subject of a potato pool.

The ladies of Golden Rod Local have selected Miss Elsie Matthews director of discussions. Some very interesting subjects will be considered at our future meetings.

Ladies of Local No. 2 met with their secretary, Mrs. Mary Hawley and a full house greeted her. Equity songs were sung by Mrs. McMillan Augusta and Minnie Schroeder. Some large orders for eggs were received and it was voted to buy from non-members also. Honorary member, John Hawley, was present and gave us a good talk and particularly congratuated us on being such a live union. One new member, Mrs. Sadie Crowell, was admitted. A fine recitation was given by Augusta Schroeder. Next meeting to be held with Mrs. Ephriam Kidder. A friend sent this conundrum:

If the dumper that dumped the dump that he dumped got dumped for dumping his dump, the question is, who was the dumper who dumped the dumper for dumping his dump? Don't all speak at once.

Another riddle: In times of old, God created a thing that had no soul but without a soul it did not long remain and when it had a soul it did not know how to keep it.

MEETINGS AND CONVENTIONS

OCTOBER 27, 1908—Sixth Annual Convention of the American Society of Equity (F. S. of E. branch as representing the second convention), at Indianapolis, Ind. I C. Rous, Sec., Indianapolis, Ind.

LEELAWAN CO. MICH., County Union will meet Sept, 29th, at Cedar City for selecting delegates to the State and National conventions. All locals shall send delegates. —Frank J. Zeits, Sec., Provemont, Mcch.

HARRINGTON LOCAL UNION, Kent County, Delaware, will meet at Harrington, Thursday, Sept. 17, 1908. A full attendance is requested. Important business to transact, including selecting a delegate to the National Convention at Indianapolis, Oct. 27.—John M. Peckham, organizer.

NOVEMBER 16, 17, '08. Annual meeting of American Association of Farmers Institute Workers will be held at Washington, D. C. Program of the exercises will be mailed to applicants.

NOVEMBER 17, '08. Annual meeting of the Association of American Agricultural Colleges and Experiment Stations. A program of the exercises will be mailed to applicants.

DECEMBER 2 to 10. National Dairy Show at the Colisium, Chicago. One of the features of this Dairy Show is a contest and program for the managers and secretaries of local creameries and cheese factories. At the suggestion of the Dairy Division, Washington, D. C., the National Dairy Show Association has placed at its disposal the sum of $2,000 to be divided pro rata among local creamery and cheese factory managers and secretaries. The contest and program is under the supervision of Mr. B. D. White, Dairy Division, Washington, D. C.

Kansas State Annual Meeting American Society of Equity

The Third Annual Meeting of the Kansas State Union, of the American Society of Equity, will be held at Wichita, Kansas, beginning Wednesday, Oct. 14th, 1908.

Experience has demonstrated that the ob-

jects of the American Society of Equity are practical; the principles are correct, and the practice easily attainable. The idea is in the minds of all the people.

There is now, nothing lacking but united action on the part of producers. The society must be reorganized, nationally, on practical business lines. Can we depend on you to send a large delegation to the State Meeting to do your part toward the securing of profitable prices for farm products? Inasmuch as the society was demoralized by treasonable action at headquarters a year ago and in consequence many have not paid their dues, this will be a mass convention, and all are invited to attend and participate in one more effort to make the A. S. of E. what it was originally intended to be—a medium whereby the producer might name the price on his own products.

Do you want the organization to live?

Do not wait to see what will be done, but YOU come and help to do what SHOULD be done. State officers will be elected for the ensuing year and delegates chosen for the National Convention October 27th, at Indianapolis, Ind. The destiny of the organization is now in the hands of its friends. Each friend is urged and expected to secure a large attendance.

L. P. KING, President,
C. W. PECKHAM, Secretary.
Kansas State Union, A. S. of E.

Michigan Society of Equity

Owing o the fact that the convention called for the National Union is so near following the time set for our state meeting for the coming convention, it has been decided, after corresponding with some of the officers, to have the Michigan Union State Meeting at Traverse City, Mich., September 30th. The convention to be called at 1:30 p. m. The reason for this change is to give all members an opportunity to express themselves previous to the call of the National convention, and each local union is especially requested to send representatives to this meeting.

W. S. HOLDRIDGE, Pres.
E. N. BALL, Sec.

Michigan Ladies' Society of Equity

STATE MEETING CALLED

The Michigan Ladies' Society of Equity will hold their first annual meeting at Traverse City, on October 1, at 10:30 a. m.

All M. L. S of E. locals are requested to send delegates and all farmers' wives and daugters, loyal to the cause of Equity, and willing to help in this great work, are cordially invited to attend this meeting. Come and learn about the Michigan Ladies' Society of Equity. They stand for the advancement of the farmers' wives and daughters.

Election of officers and members of the board of directors will be in order at this meeting. Michigan farm women, this is your society, come and learn how it can and will benefit you.

MRS. JAMES HOWEY, Pres.
STATE MEETING MICHIGAN UNION

Resolutions of Sympathy and Respect

The sympathy of members is hereby expressed to the bereaved family of our beloved brother, Almon Pollard, who this day was called home by an all wise Father.

Mr. Pollard was an active, interested worker in the interests of The American Society of Equity, and in his death we lose a sympathetic, energetic worker for the best interests of all the members of said society.

We greatly deplore the death of our brother, friend, advisor and neighbor, and feel that time alone may heal the broken bond of our earthly friendship and brotherhood, and that in the great beyond there will be a meeting, a union that will never end, where friendship will be renewed and continue throughout an never ending eternity.

C. J. TEDMAN,
JOHN WILEY,
JOHN CARSON,
Committee.

SCRANTON (PA.) EQUITY EXCHANGE

Another of Tubbs, Drayton, Scott, Sharp's Exchanges Go to the Wall

The following is from the Scranton (Pa.) Times:

It is not improbable that some of the stockholders of the bankrupt Producers and Consumers Equity Exchange will demand a probe into the affairs of the company to determine how the money paid into the treasury of the Exchange was expended.

If a probe is conducted it will be in line with a suggestion of Judge Archbald, of the Federal court, to the attorneys for the bankrupt Exchange. It is wholly up to the stockholders, however.

As was stated in yesterday's Times, the Exchange was doomed yesterday when a bill of sale held by J. S. McDonald and others for a loan of $5600 advanced in the early days of the Exchange was knocked out by the court, and the property of the Exchange ordered sold next Saturday morning at 10 o'clock.

The bill of sale gave ownership of the Exchange to eleven men. It was negotiated fifteen days before the company actually did business according to the testimony of witness called in the case.

It was claimed by the attorney for the Exchange and the receiver that the bill of sale entitled the holders to the property. The farmers, through their attorney, contended that it was simply a security for the $5600, loaned by McDonald et al. Evidence indicated this to be the fact, and court so decided.

If the holders of the bill had been successful the farmers, who have something like $9,300 coming for milk, would not have gotten anything.

With the court's decision they come in as general creditors, for which they were fighting, and will get the same as any other creditors. The bill of sale holders will also come in as creditors and get their proportionate share.

The stockholders get nothing, and as something like $16,000 worth of stock was sold just that much of a loss will be suffered by them. There are about 500 stockholders and they hold all the way from one to one hundred shares each.

The property of the Exchange is appraised at $3600. This with about $4000 the promoter got accounts for $7600 of the $16,000 of the capital stock paid in. The company did not start business until November 1, but was out of funds October 15, or before it started, as the bill of sale was negotiated October 15, or fifteen days in advance of November 1.

Also the following from a Scranton paper:

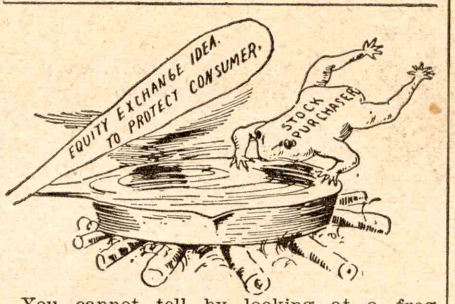
The creditors of the Equity Exchange, of Scranton, will get nothing. It would seem that the promoters arranged to get all the capital put into it before it got running. Big salaries were voted the managers and clerks, and in this way those who furnish them with milk got milked, but get no pay for it. The scheme to do away with the middle man looks nice on paper, but does not pan out as well in practice.

And still later, this:

The Producers' and Consumers' Equity Exchange, a milk concern that has been carrying on business in Scranton, against which claims aggregating $10,000 have been filed, has gone into the hands of a trustee in bankruptcy. The court recently ordered that the receiver be discharged as the concern is hopelessly bankrupt and will not pay more than five cents on the dollar.

In 1907 Tubbs went to Scranton at the expense of the A. S of E. to organize this Exchange. Also it was to establish such Exchanges in other cities that Secretary Tubbs and Directors Drayton, Scott and Sharp allowed the society's money and headquarter's efforts to be expended in 1907. It was because Mr. Everitt refused to sanction such unconstitutional acts that at the March (1907) meeting of the board they took from him the power delegated to him by the by-laws and placed it with the secretary. He would have then carried the matter into the courts, but thought to save a scandle and hoped the next convention would put things right.

But Tubbs and his co-workers in these wild-cat schemes frustrated his efforts to expose them before the convention. They even went so far as to undertake to destroy his business and discredit him before all the members so he could not expose them and vindicate himself in his course. With the Scranton Exchange gone to the wall, we believe the Chicago Exchange is the only one remaining of Tubbs' colossal scheme to handle all farm produce from producer to consumers by exchanges operated jointly by producers and consumers. And the Chicago one is bound to go the same way.



You cannot tell by looking at a frog which way he will jump, but all the frogs that took stock in Equity Exchanges jumped one way.

How Did You Get Your Farm?

WE want readers of UP-TO-DATE to write out their experiences in getting their farms and send to us. We will pay you, see below.

If you inherited the farm and there is an interesting story connected with it, we want it; if you carved and dug your farm out of a forest, or perchance removed layers of stone before you had the soil to plow and plant, tell us about your patient labor and trials endured; or if you have a prairie farm which, when you acquired it, was ready for the plow, or bought your farm ready made, we want to wnow how you got it.

Nearly every farm has an interestng story of its acquirement by the present owner; struggles of labor or litigation; difficulties to meet the payments, discouragements and triumphs.

Our object is to make UP-TO-DATE FARMING interesting and help others who may be paying for farms or want to buy farms.

For the best article on this subject before October 15 1908,
WE WILL GIVE $5.00.
SECOND BEST FIVE, $1.00 EACH.
NEXT BEST FIVE, ONE YEAR'S SUBSCRIPTION TO UP-TO-DATE FARMING.

We will not put a word limit on the letters, but letters carried out to unnecessary length will be scaled down in points on that account. Be brief, give us the story and we'll fix it for publication.

EDITOR UP-TO-DATE FARMING, Indianapolis, Indiana.

GRAIN PROOF AGAINST PANICS

We quote from a letter received from Mr. D. L. Broucher, Lincoln, Ill., as follows:

I note that the panic (manufactured to order by J. P. Morgan & Co.,) did not have the disastrous effect on the price of wheat, corn and oats that it did on the price of stocks, bonds, etc. While I may not know the reason, I am inclined to believe that farmers' co-operation in marketing, or control has crops, has had a great influence in that direction. Ordinarily, I would expect that grain would follow the lead of other commodities. Even steel was compelled to stoop to the powers of its own creature—the panic.

PLUCK WINS

"Pluck wins! It always wins. Though days be slow
And night be dark 'twixt days that come and go,
Still pluck will win. Its average is sure.
He gains the prize who can the most endure;
Who faces issues, he who never shirks;
Who waits and watches, and who always works."

WITH UP-TO-DATE'S PUBLISHER

I believe very few readers of UP-TO-DATE FARMING realize what they get in this paper in a year.

I never realized, myself, until a few days ago when I had before me the 1907 volume. Its greatness surprised me.

As the volume lay rested on my desk it was a great book, over two inches thick by eleven inches wide and fourteen and a half inches long. It contained 824 pages and about 8,000 articles, not counting the short paragraphs as articles.

Continuing the analyses, there are 329 columns, 618,000 lines and, we estimate, nearly 5,000,000 words. This volume of UP-TO-DATE equalled about twenty 200-page books of ordinary size.

And when the reading contents are considered, it is no less remarkable. It is the only paper that teaches the correct method of marketing farm crops. This one volume is a complete education on this neglected subject and as the marketing end of farming is fully half of successful, profitable agriculture, this education is surely worth as much as years of schooling or experience in the system and science of crop production.

This is what the 1907 volume of UP-TO-DATE FARMING was, and each volume is as valuable. Considering the small cost for a subscription—50 cents for a yearly subscription, or a club of four for $1.00, 25 cents each— can any farmer in the country have a good excuse for not becoming a constant reader of this paper?

Now, good readers, you who are acquainted with UP-TO-DATE, won't you make the publisher's heart glad by sending us some new subscribers?

J. A. EVERITT.
Publisher.

Horse Book Free

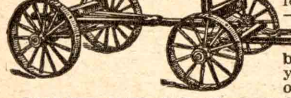
W. F. Young, P. D. F., 102 Monmouth St., Springfield, Mass., has recently issued a larger and more complete edition of his handy reference book "How to Remove Blemishes," which will be sent postpaid to any address upon request. This little book will be appreciated by any horse owner, as it is full of "horsey" pointers and information that can be used to advantage. Send a postal today addressed plainly as above and the book will be sent you by return mail free of all cost and postpaid.

Shoulder Galls Are Unnecessary

When horse collars are properly constructed and carefully fitted. Johnson-Slocum Company, 426 State Street, Caro, Mich., will be glad to send anyone particulars, on request, as to how to do this.

Farmers' Handy Wagon

Absolutely the best wagon built for every kind of farm work, and the cheapest you can buy. It is low down, has wide steel wheels and wide tires, and will last a lifetime without repairs. Can be depended upon to haul any kind of a load. Guaranteed in every respect.



STEEL WHEELS for farm wagons—any size to fit any axle. Send for our free booklet before you buy a wagon or a set of wheels.

Indianapolis, Ind.

Why Don't *YOU* Get This Phonograph On FREE TRIAL?

For almost three years I have been making the most liberal phonograph offer ever known! I have given hosts of people the opportunity of hearing the genuine Edison Phonograph right in their own homes without a cent of cost to them.

Think of it! Thousands and thousands and thousands of people have been given the opportunity to hear in their own parlors concerts and entertainments by world famous musicians just such entertainments as the greatest metropolitan theatres are producing.

So far you have missed all this. Why? Possibly you don't quite understand my offer yet. Listen—

MY OFFER:

I will send you this Genuine Edison Standard Outfit (the newest model), complete with one dozen Edison Gold Moulded Records, for an absolutely free trial. I don't ask any money down or in advance. There are no C. O. D. shipments; no leases or mortgages on the outfit; no papers of any sort to sign. Absolutely **nothing** but a plain out-and-out offer to ship you this phonograph together with a dozen records of your own selection on a free trial so that you can hear it and play it in your own home. I can't make this offer any plainer, any clearer, any better than it is. There is no catch about it anywhere. If you will stop and think just a moment, you will realize that the high standing of this concern would absolutely prohibit anything except a straightforward offer.

WHY I Want to Lend You this Phonograph:

I know that there are thousands and thousands of people who have never heard the Genuine **Edison** Phonograph. **Nearly everyone** is familiar with the screechy, unnatural sounds produced by the imitation machines (some of which though inferior are very expensive). After hearing the old style and imitation machines people become prejudiced against all kinds of "Talking Machines." Now there's only one way to convince these people that the Edison is superior and that is to let the people actually see and hear this remarkable instrument for themselves. **That is why I am making this offer.** I can't **tell** you one-twentieth of the wonders of the Edison, nothing I can say or write will make you actually **hear** the grand full beauty of its tones. No words can **begin** to describe the tender, delicate sweetness with which the genuine new style Edison reproduces the soft, pleading notes of the flute, or the thunderous, crashing harmony of a full brass band selection. The wonders of the new style Edison defy the power of any pen to describe. Neither will I try to tell you how, when you're tired, nervous and blue, the Edison will soothe you, comfort and rest you, and give you new strength to take up the burdens of life afresh. *The only way to make you actually realize these things for yourself is to loan you a Genuine Edison Phonograph free and let you try it.*

You Don't Have to Buy It:

All I ask you to do is to invite as many as possible of your friends to hear this wonderful new style Edison. You will want to do that anyway because you will be giving them genuine pleasure. I feel absolutely certain that out of the number of your friends who will hear your machine there will be at least one and probably more who will want an Edison of their own. If they don't, if not a single one of them orders a Phonograph (and this sometimes happens) I won't blame you in the slightest. I shall feel that you have done **your** part when you have given these free concerts. You won't be asked to act as our agent or even assist in the sale of a single instrument. In fact, we appoint no such agents and at the rock-bottom price on this wonderful new outfit we could not allow any commission to anyone.

If You Want to Keep

The Phonograph—that is if you wish to make the Phonograph your own, you may do so, but it is **not** compulsory. I am asking you merely to send for a free demonstration. I won't be surprised, however, if you wish to keep the machine after having it in your own home. If you do wish to keep it, either remit us the price in full, or if you prefer, we will allow you to pay for it on the easiest kind of payments.

Our Easy Payment Plan.

There are so many people who really want a phonograph but who do not have the ready cash to pay for it all at once that I have decided on an easy payment plan that gives you absolute use of the phonograph while paying for it. $2.00 a month pays for an outfit. There is absolutely no lease or mortgage of any kind, guarantee from a third party, no going before a notary public, in fact, no publicity of any kind, and the payments are so very small and our terms so liberal that you never notice the payments.

Get the Latest Edison Catalogs

Just sign your name and address on this coupon now and mail it to us. I will send you our superbly illustrated Edison Phonograph Catalog, the very latest list of Edison Gold Moulded Records (over 1,500 of them) and our Free Trial Certificate entitling you to this grand offer. Sign this coupon now, get these catalogs and select your records at once. Remember the free concerts. Sign this coupon right now or send a postal card or letter if you prefer. But do it now. HARVEST KING WHEAT

A REAL MONARCH of the WHEAT FIELD

THIS FAMOUS WHEAT HAS A RECORD OF UNPARALLELED SUCCESS, NORTH, SOUTH, EAST AND WEST.

Altho we have sold the Harvest King Wheat for several years, the demand continues to come each season in undiminished volume, and it continues to give the same satisfaction that was originally responsible for its great popularity. The Harvest King Wheat is one of the most reliable varieties of smooth headed wheats. In the past it has surprised growers by its hardiness, vigor and all-round reliability. The testimonials printed below will speak for the variety in this respect. It is one of the earliest varieties, hence one of the surest to mature sound, plump grain. The straw is strong, heads very long and filled with very large, red grains. Chaff red, heads beardless. The grain weighs very heavy and for milling it is all that millers desire.

It pays to change seed. It may pay you handsomely to sow a field of Harvest King Wheat if you are not already growing it. We have had thousands of reports for this fine variety speaking of its good qualities. We can print only a few of them here.

SUPERIOR TO ANY OTHER

The Harvest King wheat is superior to any other in this locality. The season was the worst in years, and the wheat is only half a crop or less. The H. K. has a plump, fine berry. I will try Fultzo-Mediterranean this year.

T. H. G. L., Jefferson Co., Mo.

AWAY BEYOND EXPECTATIONS

Last year we purchased two bushels of Harvest King and sowed it on 1½ acres, and threshed 38 bushels; and it weighed out to 40 bushels, 5 pounds. We will sow 33 acres of Harvest King this fall. In the spring this 1½ acres of H. K. looked as though there would be no wheat, as the ground looked bare as the floor, but oh! my! it began to grow and the result was away beyond my expectations. It is truly a remarkable wheat and a first-class yielder. We could have sold all of this H. K. for seed, as the people driving along the road to town kept watching it, and wondering what kind of wheat it was and where I got it.

M. P., Marshall Co., Ind.

A FIELD OF HARVEST KING WHEAT

A finer sight cannot be imagined than a good field of this noble Wheat, with its long, bright straw bending from the weight of the large heads loaded with golden grains. "As heavy as lead" is a common expression when referring to the heads.

THIRTY-SEVEN AND ONE-HALF BUSHELS PER ACRE

The wheat I purchased of you, 2½ bushels Harvest King, and 2½ bushels Fultzo-Mediterranean, I sowed 1¼ bushels to the acre, giving it a fair test with Fultz, all sowed the same day. Harvest King yielded 37½ bushels per acre, and Fultz 17½ bushels per acre.

S. P. M., Howard Co., Mo.

50 BUSHELS, OTHERS 10 TO 12 BUSHELS

Harvest King wheat was far ahead of all other kinds in the whole neighborhood in every way. It yielded 50 bushels per acre while other wheat by the side of it yielded 10 to 12 bushels per acre. My wheat this spring is the finest in the neighborhood. Harvest King pleases me better than any other wheat I ever raised.

Wm. M., Clarke Co., Ind.

WELL PLEASED

The Harvest King wheat is promising indeed. It stood the winter well, and I think it is the most thrifty lookng wheat I ever saw. I am well pleased.

E. R., Lawrence Co., Ind.

ALL WE CLAIMED

The Harvest King wheat is all you claim for it. I have it sown between other varieties. It is much stronger than either, and I have every reason to believe it will make a fine yield.

O. E. V., Holmes Co., O.

WHEN TO SOW WHEAT

The best results in the latitude of Indianapolis (Central Indiana) have been gotten for several years by sowing about October 10th. Our best crops and largest yields this year were from fields sown at this time. Farther north, in Michigan for instance, wheat should be sown a little earlier. In Kentucky, Missouri, West Virginia and Virginia wheat is usually sown later.

We advise sowing Harvest King according to the above dates.

WILL IT PAY? *Will it be a profitable investment* to secure new seed wheat? Suppose you want to sow 20 acres. If you sow your own wheat it will require 1½ bushels per acre, or 30 bushels. We will suppose that the market price of good wheat is $1.00 a bushel, and to clean your wheat and shrinkage, will represent, say, 15 cents a bushel. Or 30 bushels of your own wheat at $1.15, equals $34.50.

If you buy our hardy, vigorous seed wheat you should figure this way: 1¼ bushels per acre; 20 acres will require 25 bushels at $1.50 per bushel, equals $37.50. The bags will be worth $2.00, leaving $35.50 for the wheat. There will be something for freight, but it will not be very much. Outside the freight, the cost is only $1.00 more to seed with our fine, hardy, productive wheat, than to sow wheat that is probably run out and weakly—only 5 cents per acre.

Compare this with the extra yield that is certain to result; and the extra price you can probably get for the crop. Think about this matter and we believe you will conclude that it will be a good investment to change your seed and sow a good part of your crop with our justly famous Harvest King wheat. If you don't want to sow 20 acres, sow less.

CAN SELL 1,000 BUSHELS MORE

I sowed 15 bushels of your Harvest King wheat, and I cannot praise it high enough. It is the finest headed wheat I ever saw. There is not another field in my neighborhood that bears any favorable comparison to Harvest King. I sent to Ohio and got 40 bushels of Fultz, but is it not near as good as H. K. I can sell all I raise at a good price, and judging by the interest taken in it by my neighbors, can sell 1,000 bushels more.

Wm. W., Sangamon Co., Ill.

NATURAL TO THE SOIL

I write to inform you that the wheat you sent to this county is fine and everyone is well pleased, and your trade here will be large in the future. A remarkable thing about your wheat is, they don't need any acclimating, but succeed as though natural to this soil. Last year many bushels of a variety of wheat were sent here from Ohio, which was an entire failure. Quite different with yours. Every person I have seen praises them and say they are as fine as silk.

J. S. M., Christian Co., Ky.

64 POUNDS PER BUSHEL

The Harvest King wheat you sent me last year weighed 62 pounds per struck bushel, but I have beat you, as my wheat just threshed tests 64 pounds and a perfect sample. Yield very good—34 bushels per acre—which is 9 bushels more than our next best variety, the Early Red Clawson.

R. H. S., Calhoun Co., Mich.

2,083 BUSHELS ON 53 ACRES

J. A. W., of Rush County, Indiana, believes he has the largest yield of wheat so far reported. He planted 53 acres (Harvest King Variety), 25 in "fallow ground," which yielded 43 bushels per acre; 28 in "stock ground," which yielded 36 bushels per acre.

—Indianapolis News.

PRICE **Small introductory lots by mail, postpaid, 1 lb., 25c; 4 lbs., 75c. By freight or express, at purchaser's expense, ¼ bu., 65c; 1 bu., $2.00; 2½ bu., (1 bag for 2 acres), $4.50; 5 bu., (2 bags for 4 acres), $8.50; 10 bu., (4 bags for 8 acres), $16.50; 25 bu., (10 bags for 20 acres), at $1.50 per bushel. All bags furnished free. Since beginning of season, price of market wheat has advanced considerably, but our prices still hold good.**

HOW TO ORDER **Send remittance with order, or we will ship to responsible parties payable on arrival and subject to examination, if $1.00 is sent to guarantee good faith. Remit by money order or send cash in registered letter. Give full address including county and shipping station if different from postoffice.**

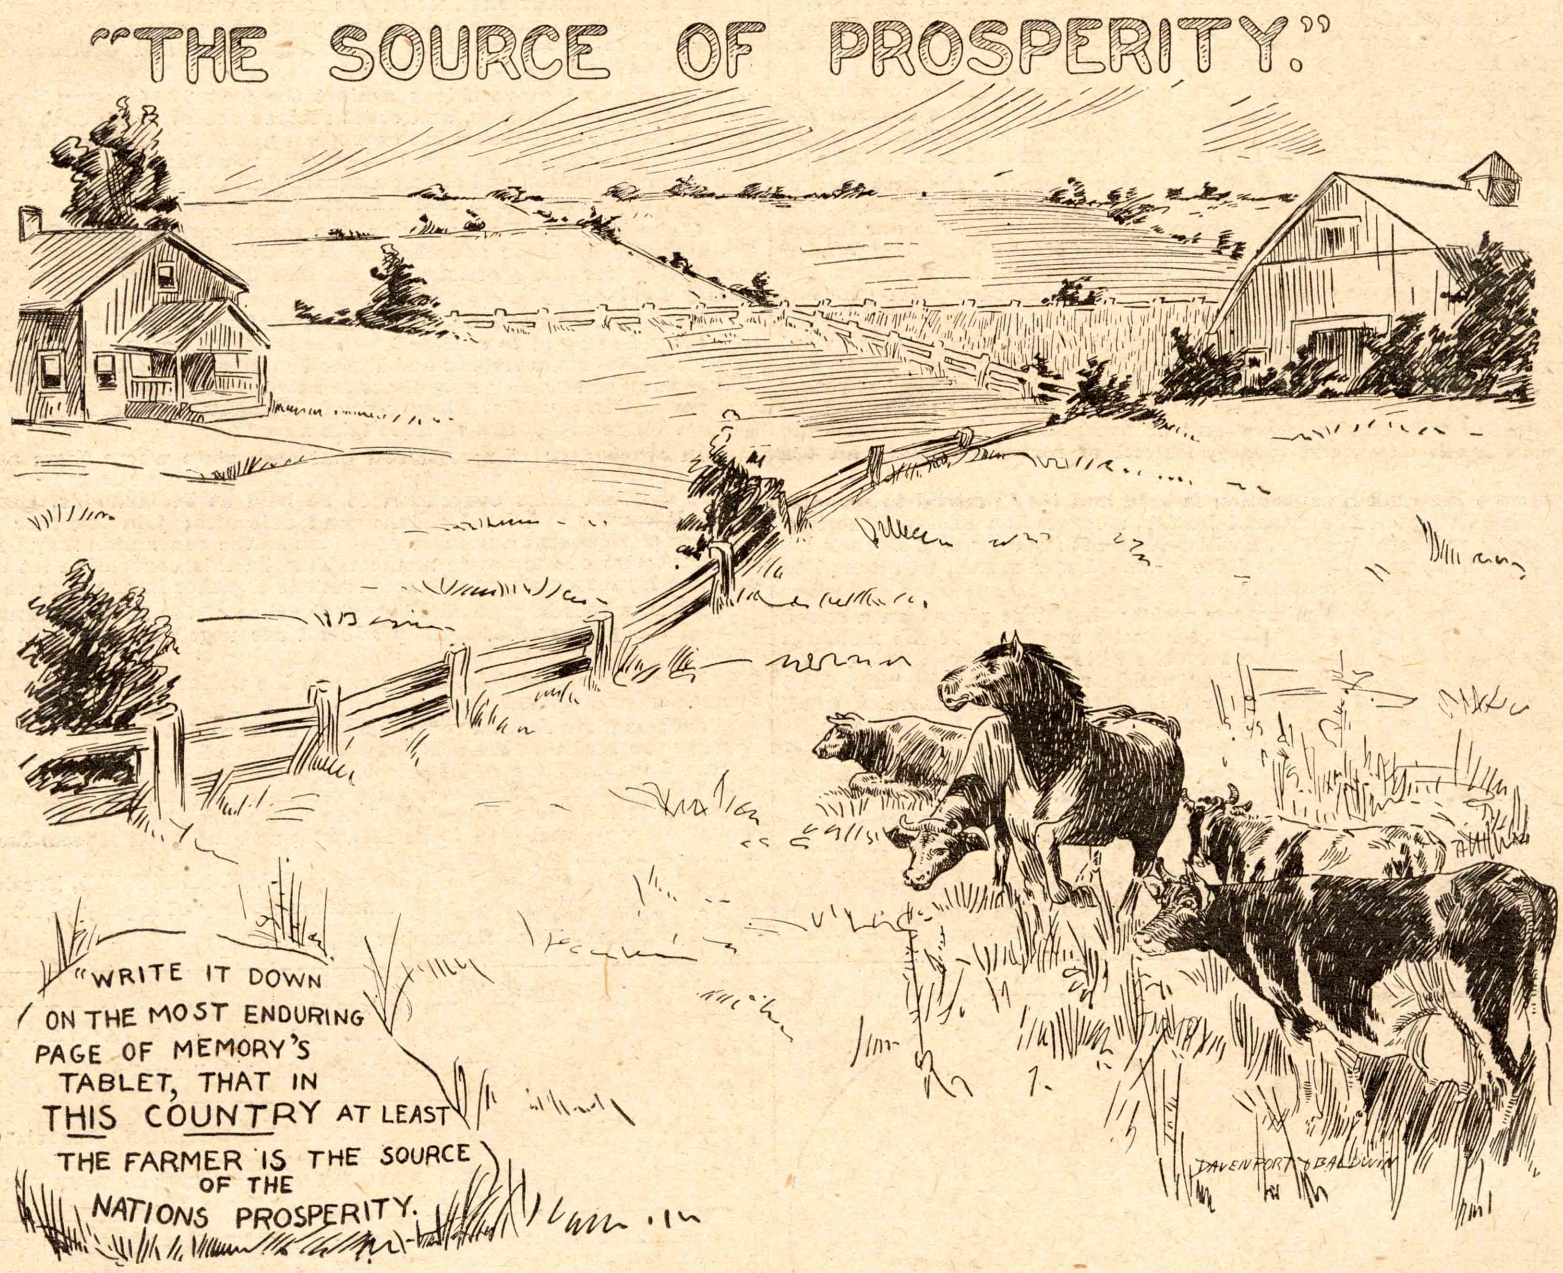
The O. K. Seed Store has been headquarters for best varieties of Winter Wheat for 25 years. We sell more Winter Seed Wheat than any other seed house or grower. Our choice varieties are limited this year. Order promptly. We should hate to disappoint our customers later, but from the present demand it looks as tho we will run short. If you want to increase your yield 10 to 20 bushels an acre, send for Harvest King. Every reader of this paper can, with care, and good seed, raise crops like those reported above. We refer to our thousands of customers over the country; also to any bank or business house in Indianapolis. Send us your order for wheat and harvest a big crop next year. Central location. Low freight rates. Prompt shipments. All wheat thoroughly cleaned and graded, ready to sow. Circulars free.

O. K. SEED STORE, Dept. A, Indianapolis

Up-To-Date Farming

OUR MOTTO:
FARMERS TO THE FRONT
OUR OBJECT:
EQUITABLE PRICES FOR ALL PRODUCTS
OUR PLAN:
CONTROLLED MARKETING

Volume XI | INDIANAPOLIS, INDIANA, OCTOBER 1, 1908 | Number 19



From that energetic and sterling little St. Louis publication, The Woman's National Daily, we clip the following:

Formerly prosperity was a political institution. Lately the crops have been conceded a place in the ranks. Part of the burden and the glory has slipped from the administration's shoulders onto the big, broad, willing back of the farmer. Both have been performing their parts commendably, as the figures show. Last year the value of farm products was seven and one-half billion dollars. This year the value will not be less than eight billions. The increase is five hundred million dollars.

In a large measure this five hundred million dollars represent the earnings on a small investment in science. It is earned in consequence of united endeavors on the part of the government and the farmers to produce better and larger crops. The weather has had something to do with it, but science is entitled to more credit than people generally realize. New crops have been introduced, old ones have been perfected, injurious insects have been destroyed

(Continued on page 4)

"FOR THE CO-OPERATING OR ORGANIZED FARMERS OF AMERICA"

To Whom Shall *the* Future be Entrusted?

To the Members of the American Society of Equity of North America:

GREETINGS:

Nearly one year ago our society, in convention at Indianapolis, Ind., hauled in its anchor, smashed its compass and threw overboard the pilots that had formerly guided it safely through many unknown seas and guarded it from the rocks that threatened it on many shores.

Since then it has been drifting without pilot, captain, or compass, and those in charge have persistently refused to cast anchor in any safe harbor, preferring to jeopardize the entire membership, and would see them perish rather than recede one jot from the false position they assumed.

A few others, with myself, realized these things in the 1907 convention and we did what we could to save the society by holding the second convention. Through the second convention the legal existence of the society has been preserved, because the first convention changed the name and adopted an unworkable constitution and by-laws.

I allowed my name to go before the second convention for the position of president because I loved our society, recognized the great power for good it might be and because I fully realized the great danger ahead of it.. I then believed I headed the true American Society of Equity or N. A., represented the only faction that had a legal existence and the only one entitled to operate under the charter. A more careful study of the situation and almost a year's developments, absolutely confirm my early convictions.

Knowing these things to be true, I would not be true to the members of the society, and would be derelict of duty if I did less now than contend for, and demand a return of the society to its true principles, its original plan and for the accomplishment of its good objects at the next annual convention.

It has come to my knowledge that the officers elected by the first convention will attempt to hold a convention in Milwaukee, Wis., October 6th, of the few members who were deceived into suporting that faction, while our faction will hold the regular Sixth Annual Convention of the society beginning October 27th next at Indianapolis, Ind., as a Mass convention of all the members who affiliated with either of the factions and those who remained neutral (the last being a large majority of the members.)

My recommendation under these circumstances is, that members who want to help save the society should go to the Milwaukee convention and try to prevent it from doing foolish and illegal things, but try to prevail on any true Equity people there to join in the Mass convention so we may start the next year with the full membership, the result of five years' hard work and the expenditure of much effort and money, instead of forfeiting nearly all the results of the work of the past.

In event the Milwaukee convention is held and they pretend to transact the business devolving on the Annual National convention of the American Society of Equity or North America, I will consider it my duty, and I speak for my co-officers and the members who have endorsed our course, to attempt to annul the work of such convention.

The time has surely come when our society should be placed on a sound basis, and when it should do equity—and not the opposite. If the members agree with me then they cannot trust to the Milwaukee convention or the people promoting it. For verification of this claim read the article, "The 1908 Conventions" in the "supplement" with this issue and then exercise good, common sense in forming your conclusions.

The members want to know the true condition of their society. There have been three factions since the last convention—the Barnett-Pauley faction, the Mitchell-Everitt faction and the neutral faction.

The Barnett-Pauley faction were in charge of the society headquarters and have failed absolutely to display even a small degree of executive ability in the development of the society or the administration of its affairs. They have failed to gain or retain the confidence of the members and as a consequence the society is completely disrupted... Witness the condition of Local, County, State, Department and District Unions. Even the Tobacco Department, which was the best organized industry, has practically divorced itself from the national society, while the Grain Growers' Department and the Fruit and Produce Departments must be reorganized before they can perform their functions..

Their campaign against Mr. Everitt and UP-TO-DATE FARMING has done great harm and resulted in the head of the society, publishers and editor of their paper and some of the employees being arrested and far as the trials could be had they have resulted in convictions. The Equity Exchanges, unconstitutionally promoted through all of 1907 and which were so prominent in the 1907 convention, have one after another failed, and the much boasted official paper—Equity Farm Journal—has proved a grievous disappointment to its most sanguine supporters. There are feuds and quarrels among this faction and the publishers and editor of the paper, and I am credibly informed the officers are quarreling among themselves as to who shall pay the debts of their defunct official organ.

Instead of the membership of the society being increased as in former years, it is only a small fraction of its former number and those members who affiliated with this faction become disgruntled as they realize how they have been deceived. Another year with such mal-administration may put the society past redemption.

The Mitchell-Everitt faction has been a guarding or precautionary body. Its object was to preserve the true plan and principles of the society and eventually to rescue it from the revolutionary and destructive gang—the Barnett-Pauley faction.

We charged grave things against the first 1907 convention. Time has proven every charge true, and court records are evidence that we were right. Our faction charged that a base conspiracy existed before and in the first convention among certain officers and attaches; that instead of the society doing Equity, being honest, and giving a square deal it was subverted to base ends of iniquity, by these pirates and traitors.

Claire R. Walrod's confession, the court records of the Chicago trial and the attempts by other apprehended libelers and slanderers to evade the responsibility for their actions, all confirm our charges against the Barnett-Pauley faction.

Now, brother members, I appeal to your honest convictions and in the name of Equity I ask you to answer how the Barnett-Pauley gang are going to get away from the court records and Walrod's confession? I ask you in all candor, is that gang or any they may select to succeed them, worthy of your confidence and support in a national convention? Can you place confidence in any convention where any of these people take a part?

In conclusion: I recommend that each state where there are organized unions, hold its state meetings and see that you have a good representation at the national mass convention to be held at Indianapolis, Oct. 27, 1908. Also all county and local unions send delegates; join together and send a delegate to represent a number of unions so the convention may be thoroughly representative of the entire membership. In this convention let us bring the true and loyal member of all three factions together in one harmonious society.

All members in good standing at the time of the 1907 convention are considered the present membership and all are urged to take part in this convention.

I have no personal ambitions except the welfare of the farmers and to see our society triumphant.

On this Sixth Annual convention, to convene October 27th, at Indianapolis, depends the future of the society, and, I believe I may truly say, more of weal or woe for the future of American agriculture than any former event in the country's history. Therefore, let there be a general attendance of all loyal members of the society who want the true principles of the society to again prevail, the original plan to be followed, and the good objects for farmers to be accomplished.

W. H. MITCHELL, President,
American Society of Equity of North America.

Hutchinson, Kan., September 20, 1908.

With Up-to-Date's Subscription Manager.

We can show no better evidence of the manner in which our friends are helping us than by referring to our daily mail. It took our cashier, with the assistance of one of our clerks, over four hours last Monday morning to open and sort the letters, and over 80 per cent of these letters contained new lists of subscriptions. This looks as though our effortts to give our readers the best farm paper printed in the U. S. was being appreciated in a very substantial manner. Have *you* sent in a list of subscriptions from your community? Won't you give us a push forward by getting all your friends to subscribe to UP-TO-DATE FARMING for at least three months? *We pay liberally for your assistance!* Write me personally for particulars.

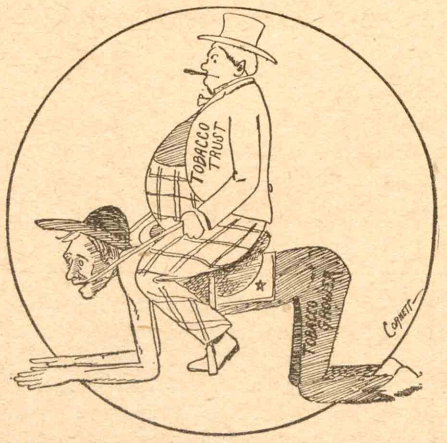
Have you renewed your subscription to UP-TO-DATE FARMING? Many subscriptions expire about now, and I trust it will be unnecessary to remind you of the matter if *yours* is included in the number. Why not renew now for four years for only $1.00, or, better still, get three of your friends to subscribe when you renew your subscription, and we will accept the entire four subscriptions for $1.00.

We still have room on our staff for more agents—no previous experience necessary. If you can devote all or part of your time to UP-TO-DATE FARMING, write me at once for our special agent's proposition.

GARRETT WALL.

Office of UP-TO-DATE FARMING, Indianapolis, Ind.

THE FIRST "RIDER"



One of our readers claims to have discovered the first "rider", and he pictures him as the tobacco trust. Our readers must remember, however, that they have nobody to blame but themselves when prices were low. They raised the stuff TO SELL, and as long as they could not, or would not control production voluntarily but raised all they could, the very great amount of products forced the prices down. Stating it in another way: If the buyers would have always paid profitable prices for all the tobacco the farmers could raise, they would have had to destroy large quantities of it or been bankrupt.

UP-TO-DATE FARMING

227 West Washington Street, Indianapolis

J. A. EVERITT, Editor JOHN P. STELLE, Associate Editor

SUBSCRIPTION PRICE 50c PER YEAR A CLUB OF FOUR FOR $1.00
Foreign Subscriptions, including Canada, 75c a Year

Clubs. Four subscriptions for $1.00; Always state if a renewal or a new subscriber. *DON'T NEGLECT THIS.*

Your Address should always be written very plainly, including *COUNTY*. Do not give street or box number when not necessary to facilitate delivery of your mail. If on a rural route use the letters R. R. before the number.

Renewals and Change of Address. Give the same name as before. If a change from one member of the family to another, so state. If you change your post office give old office as well as new.

Imperative Order. When writing about your subscription, requesting a change of address, renewing or ordering cancellation, do not fail to send your printed address as on the wrapper along. Failure to observe this order may cause us much unnecessary work.

The Latest Date shown with your address is the date to which your subscription is paid. Subscribers are urged to keep their time paid *IN ADVANCE*.

Members of Equity will find the date on their wrapper to which subscription has been paid.

Responsibility Disclaimer The editor assumes no responsibility for correctness of signed letters and articles, nor for matter in departments conducted by others whose names appear in the head.

Agents Wanted. If you want to engage in a profitable business all your time or part time, write to us.

Only Reliable Advertisers are admitted to our columns and we guarantee that they will deal honestly with subscribers. Should they not, we will make good any loss to paid in advance subscribers. It is understood that this guarantee is not binding on the publisher unless you mention UP-TO-DATE FARMING when you write and you report any dissatisfaction within a month of the date of the paper.

UP-TO-DATE FARMING

Representing the Organized or Co-operating Farmers of America

PUBLISHED TWICE A MONTH
At 227 W. Washington Street

Re-entered as a Semi-Monthly publication as second-class matter, January 20, 1908, at the Post-office at Indianapolis, Ind., under the act of Congress of March 3, 1879.

Volume XI | INDIANAPOLIS, INDIANA, OCTOBER 1, 1908 | Number 19

EDITORIAL

THE THEORETICAL TEACHER

Such are Most of Farmers Teachers

The Theoretical teacher may have his place in the educational world, for without him education might become so practical as to forget to inquire the reason why, and might drift into the traditional way of doing things simply because they had been done so before. But the theorectical teacher left to himself may live among figures and diagrams and theories that in practice may develop weaknesses that impede rather than promote progress.

This is especially true as applied to teachers of agriculture. The distinguished professor may have to a nice point the theory of when to plow, when to plant, how to cultivate and when to harvest; or how to groom, what to feed, when to breed, and all things connected with domestic animals; but set him to doing these things, and he may come in contact with conditions "not dreamed of in his philosophy."

Particularly applicable is this to papers which assume to teach farmers how to farm. They may be, and are, splendid vehicles for teaching approved theories, and those theories may serve a useful purpose in giving the wherefore of things done in practice, and even in adding charms and efficiency to the practical, but they too often come without the test of application, and when the practical farmer finds them impractical, the whole idea of theoretical knowledge and professional or educational farming is liable to come into disrepute.

The true teaching, that which is to make farming what it ought to be, is a harmonious blending of the theoretical and the practical, or combination of the known with the believed, a comparison of the reasoned with the thing actually done, science taking hold of the results to which the application of science should lead. Such teaching will never stop when the work is half done. The human world and that of domestic animals cannot be sustained without a transfer of productions from the producer to the consumer. No matter how much the farms produce; every acre might be loaded with the best that earth gives to industry, if those acres were so walled in that the good things there in such abundance could not get beyond the borders of the fields, nor could those outside get in, there would be as sore a famine outside of the farms, as though the earth had been swept with the parching winds of the desert, and not a thing had been produced.

There must be a transfer, a selling and a buying, a marketing, before the farmers' work is done and a dependent world is fed and clothed. Why do agricultural teachers, the agricultural press, and the agricultural side of the national government, with their persistent teaching of theory, too often without practice, stop short of the farmer's completed work? The farmer must sell as well as produce, and if he prosper he must sell well. For his own good, and for the certainty that he will support the rest of the world in abundance and affluence, it is more important that he sell well than that he produce well. The farmer himself should take note of this and draw more deeply from the sources that follow the entire line of his completed work, and teach him how to sell that he may enjoy the equitable profits to which he is entitled because of the part he plays in the world's great industries.

THE LOCAL MERCHANT THE FARMERS FRIEND

Neither can Possibly do Without the Other

It seems that people are prone to misunderstand one another. Most of the contentions and strifes among men, and many of the tragedies, are entirely without cause save in misunderstandings. UP-TO-DATE FARMING wishes people to get closer together in their better natures; to understand one another better, to better appreciate the good there is in everybody, to be less disturbed by the unpleasant things that may occur, to be freer from prejudices, and in a position to get more out of life than the average human does. This almost all depends upon a better understanding of one another.

The two classes of all others that have least ground for prejudices against each other, but who too often possess most of it, are business men and farmers. The relations of these two classes are such that neither could do without the other. The business of one would be ruined and that of the other seriously crippled without the support of the other. What would the local merchant's trade be worth in an agricultural country like this, without the patronage of the farmer? And to what inconvenience would the farmer be put without the opportunities given him by the local merchant?

These two people should be the closest friends; their mutual needs and mutual dependence should make them so. But too often they are not. The misdirected efforts of mistaken people sometimes create prejudices that have no cause, and that should not exist. Once in a while a merchant may so far forget his obligation to his fellows as to be what the world calls extortionate in his charges, and occasionally a farmer may seek various unfair means to get the best bargain, and these cases contribute to the prejudices of which we have spoken. But the ideal transactions between people whose relations bring them so close together, are truly based on equity—"equity in all the business relations of life."

The local merchant is the farmer's friend, and the farmer is the merchant's main suport. Whatever or whoever contributes to any other sentiment between them is the friend of neither.

Both must remember, however, that fairness and equity in their mutual dealings must be the basis of their friendship. Neither can be unjust to the other and expect the kindly relations that make for mutual helpfulness and permanent friendship.

WHEAT SUPPLY AND PRICE

A Startling Shortage with Undiminished Demand

If supply and demand really make prices, wheat growers should expect good prices until the next harvest at least, and those who refuse to sell at present prices will make no mistake. Broomhall's Corn Trade News declares the wheat crop of the northern hemisphere is 24,000,000 bushels short of that of last year. True tht seems like no very great shortage, but Broomhall says, considering the present deficiency in reserves carried over, the actual shortage is 256,000,000 bushels.

"This," continues Broomhall, "is a deficiency so large as to be startling," and he believes when the figures are in for September, (the figures quoted are for August), there will be abundant proof that the shortage reported is below rather than above the facts.

Such a shortage with the demand undiminished, must affect the price, and the only question is, who will get the benefit of the rise? Of course it belongs to the growers, who have lost in quantity, and they will get it if they did not, or do not, sell too soon. Those who have already sold have given their share of the gain to the speculators; those who still have their wheat will get the gain for themselves. That is the difference. What a pity it is that farmers are not so organized that they can protect their own interests in all such emergencies.

THE 1908 CROPS

Our Farms must be Built up in Fertility and Irrigated to Guarantee an Adequate Food Supply.

Heavy depreciations have occurred in the prospects of all growing crops during August and September on account of the very general drought. It is evident now, that this year will not repeat the performances of the past six or seven years of raising bumper crops. In fact the shortage of some crops will be very great and since our country, and the world, have become lavish in the consumption of food crops the large shortages this year may prove to be calamitous to some classes before another crop year comes around.

The world is illy prepared to have its food supply cut down at this time and, from the farmers' view point, the short crops will not serve the good purpose they often did in former years, that is, to afford an opportunity to consume the accumulated surplus. Now there is no great accumulated surplus of any important crop. The result will be that prices will range high, giving to the producer who markets wisely, as much money return as a larger crop would bring.

And this is as it should be. The farmer is entitled to his wages and a good profit for a year's labor just as much as the laborer in factory or store, or the office holder and others. But we fear for the consumers, and we regret if farmers ever fail to produce such a supply as will guarantee food to all humans and domestic animals at moderate prices.

We believe American agriculture is approaching a time when there must be more uniformity in production and our farms will be nearer proof against the effects of droughts.

There are two ways to secure partial or complete immunity from droughts. The one is to enrich the soil with plant food and supply it with humus. This calls for an annual appropriation from the farm income for restoring and maintaining fertility. With the good prices now prevailing every farmer, whose land shows evidence of exhaustion of any of the necessary elements to produce good crops should strive to restore the fertility. The investments in this direction should, and if wisely made, will prove very profitable.

The other way is through irrigation. If the extremely expensive irrigation in the far west semi-arid regions is justified, then why will it not be profitable to irrigate the farms lying right at the doors of the great eastern markets? Since all the staple crops that our farms could possibly produce

under the favorable natural conditions that prevailed for a few years were consumed, how are we going to produce enough when nature refuses to smile on our farms as has often been the case in the past, was for part of this year and often will be in the future?

But can eastern farmers afford to irrigate their farms , you ask? Perhaps not all of them now. But many of them would doubtless be abundantly justified now, and, we believe it must come generally later as the demand for food doubles, tripples and quadruples. In the past, partial failures of crops were not serious, but when the United States has twice its present population and foreign countries look to us for multiplied supply, a shortage any year may mean in this country what it has meant in Russia, China and some other foreign countries.

If the demand needed what we call bumper crops from our farms this year, and would have taken them at good prices, but must put up with crops 20 per cent less, may we not legitimately figure the 20 per cent lost? Or, may we not figure that it would be a profitable investment to put 20 per cent of the value of this year's crops, in irrigation to prevent short crops in the future?

There are hundreds or thousands of districts where, we believe, irrigation projects could be profitably undertaken now and it is not too early to agitate this matter. If wheat sells for $1.25 or more, corn at $1.00, potatoes at $1.50, oats at 75 cents, etc., before the next crops come, the force of our argument must be admitted. And if such prices, or appromixately these, prevail for part of the year, would not the consumer be justified in demanding of our government that it give aid to irrigate the eastern and western central farms to insure an adequate supply of the necessaries of life at moderate prices?

MONEY IN CIRCULATION

If anything were needed to prove that the panic of October, 1907, just before the assembling of Congress, and from which the business and industries of the country are so slowly recovering, had no justifiable cause, it is abundantly afforded in the government official reports for September 1. The amount of money shown to be in circulation at that time was $288,000,000 more than it was a year ago. Of this increase $234,000,000 is in gold coin and gold certificates, considered the very best money provided or authorized by the government. During the month of August the circulation increased $31,500,000, but $26,000,000 of that was not an actual increase of money, but a transfer of that sum from the treasury vaults to the money supposed to be in business.

The total circulation, or, rather, the total available money supply, is put at $3,077,000,000, which, on the basis of the September government estimate of population, 87,733,000, would make a per capita circulation of $35.07. In addition to the money estimated as in circulation, there is in the United States treasury $312,000,000 as assets of the government.

The total supply of gold in the United States is given at $1,641,500,000, of which $620,000,000 are marked as circulation, and $806,000,000 are represented by gold certificates, which are also in general use the same as gold coin. To show more fully the money of the country that ought to be available for the transaction of business, we append the following table, given out by the government September 1:

Gold Coin	$ 619,990,263
Gold Certificates	806,653,109
Silver Dollars	74,891,095
Silver Certificates	475,083,723
Subsidary Silver	124,005,574
Treasury Notes of 1890	4,837,418
United States Notes	341,311,926
National Bank Notes	630,633,800
Total	$3,077,406,908

The same total a year ago was $2,789,201,620. With this showing of the country's money one must seek long and far for a legitimate reason for the panic of last fall, or for the need of authorizing the banks to create as their own a half a billion more dollars.

OUTLOOK FOR CORN IN MISSOURI

The associate editor of UP-TO-DATE FARMING had occasion recently to cross the great corn state of Missouri, and was surprised at what seemed to him the unfavorable promise of the corn crop. He was, therefore, entirely prepared for the state report for September 1, which appeared a few days ago, and places the condition of corn in the state thirteen points below that of a year ago. The report referred to indicates a crop of 185,000,000 bushels instead of 232,000,000 bushels, the crop of last year. The government estimate of the corn crop of last year was 270,000,000 bushels, but as the government is so apt to be on the "bear" side with its reports, we prefer to take for comparison, the more conservative state estimate. That shows a shortage in Missouri of 47,000,000 bushels. Our own observation shows the crop short in Illinois, especially in the southern part, as well as in Southern Indiana, and in some other states in the corn belt. However good it may be, therefore, in some places, as is reported from Kansas, it is quite apparent that the corn crop of 1908, will not be equal to that of 1907. The crop of 1907 was a large one, but it was not excessive as the small reserves and the high prices for which it is sold are abundant proof. It ought to be clear, then, that the crop of 1908 should commond good prices, and farmers should have the courage to hold to a good thing.

THE COURSE OF PROSPERITY

(Continued from page 1)

and the soil has been more intelligently cultivated than ever before in the history of American agriculture.

The figures, of course, were taken from official sources, and we have learned to know that these are generally painted with rainbow hues. But all the same they make "pretty reading." We do not know on what price basis the totals were reached. price seems to be quite ignored in determining the value of crops, and yet it is the most important factor in the computation. If the prices of farm products were always the same, knowing the quantity the estimation of their value would be but a simple matter of multification. But everybody whose knowledge is worth anything, knows that nothing is more unstable or uncertain than the prices of farm products. This is not because of a variation in the value of farm crops; it is because the prices are made from day to day in accordance with the varying results of a most demoralizing system of gambling.

But for all that, the quotation above gets very near the truth. Part (may we not with very good reason say all?) of the burden and the glory of prosperity rests upon "the big, broad, willing back of the farmer." The above stone which for so long the political builders have rejected, except about election times, has became the head of the corner.

It remains now for the farmers themselves to see to it that the element of price, the one of greatest importance to them, shall no longer be ignored, either by the scientists or the rulers. With the gains that have been made by science, and the aids to production the government has extended, if we had a system of price-making truly based on supply and demand, and this coupled with a knowledge of demand and the power to regulate the supply to meet it, the business world might well depend upon "the big, broad, willing back of the farmer" to maintain prosperity in spite of the schemes of speculation and gambling.

Write it down on the most enduring page of memory's tablet that in this country, at least, the farmer is the source of the nation's prosperity, and see to it that the value of that prosperity, the price of the products which bring it, shall not depend upon a demoralizing game of chance, or the schemes of unprincipled and greedy men.

TIME TO INCREASE PRODUCTION

Six years ago this paper began the contest for good prices for large crops at a time when the largest crops invariable sold for the least money. At that time we predicted the time would come when larger crops must be raised to meet the rapidly increasing demand. We also predicted, that unless farmers would get profitable prices for their crops before that time arrived their farms would not be in condition to respond to the increased demand.

We appear to have entered on that period now, that no matter how large the crops that are raised, the demand is equal to the supply and anything less than a bumper crop leaves a decided deficiency that results in abnormally high prices and works distinct hardships to the consuming classes.

We may claim that the movement to teach farmers how to get good prices for good crops was well timed as the crops during the past six years were the largest the country ever produced and they have sold for the highest prices ever known for crops of the same size. As a consequence farmers, as a class, are now in better financial condition than ever before.

With controlled marketing generally practiced, with a demand sure to always equal the supply, with good prices practically assured for all that can be raised of staple crops on American farms and with a possible shortage of crops to supply the increasing demand iminent, it behooves the farmers to now prepare to increase their production.

This cannot be done by putting more acres under cultivation, as land is practically all cropped now, but it must come from increased yields per acre. Part of the money received for the crops must be put in fertilizers to restore or increase the fertility of the soil. Instead of being content with average yields as follows: (1907 crop) corn, 24.8 bu.; wheat 15.3 bu.; oats, 28.4 bu.; barley, 8.93 bu.; potatoes, 75.2 bu.; etc., an effort should be begun to double these averages.

This can be done and must be done. Of course it cannot be done suddenly. If a general effort is made now the best that can be done will be gradual elevation of the average yields to keep pace with the increasing demand and we hope will keep prices at moderate levels. It should be the ambition of every farmer to produce all the consumers want and let them have it at fair prices rather than short crops at fancy prices.

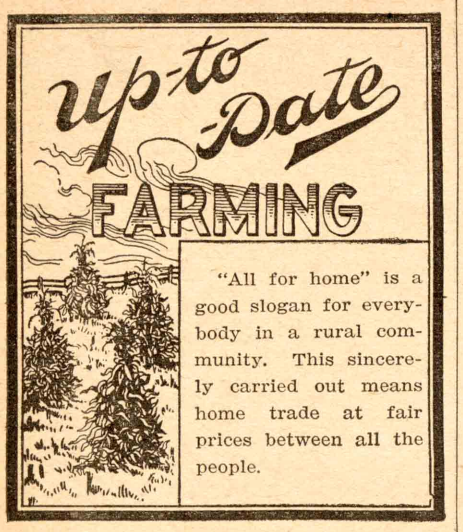
UP-TO-DATE FARMING believes that commercial fertilizers must be resorted to, to supply the deficency in fertilizing material that positively exists on many farms, when it comes to the building up process. Grain farms, where the grain is sold and not fed on the farms, are drained rapidly of the elements that go to make the grain. Such farms may be manured and clovered as much as you like; the growth of straw and fodder may be satisfactory, but the yield of grain is often unsatisfactory in quantity and quality. What such farms need is a fertilizer rich in soluble phosphoric acid. This can best be obtained in the commercial fertilizers. And stock farms, where the grain is fed and the stock is sold off have also become deficient in the grain forming elements. The bones of the animals transfer the phosphorus from the soil to the slaughter houses from whence it should come back in the form of fertilizers.

We believe a general application of 200 pounds of fertilizer analyzing 12 to 14 per cent of soluble phosphoric acid per acre on the western grain farms would increase the yields of grain 25 per cent or more. Commercial fertilizers are now generally used on the eastern farms.

A QUITTER NEVER GETS ANYWHERE

EVERY man who ever did anything really great, did it by himself, writes Herber Kaufman in the Chicago Tribune. Success can't be obtained without confidence. Half the fibre of achievement is egotism. It is the force that carries the struggler to his goal. He must believe in his ability—he must posesss so much tenacity and courage that others become infected with his assurance. When he meets with disbelief and discouragement, his own faith has to support and sustain him. And such faith is only to be arrived at by the training, just as the athlete's stride is the result of months of effort and the hammer-thrower's form

Farmer—This club shall always be my defense.



Corn

Akin by blood to high and low,
Fitly thou playest on the poet's part;
Richly expending thy much bruised heart
In equal care to nourish lord in hall
Or beast in stall;
Thou took from all that thou might'st give to all.

—Sidney Lanier.

MERE OBSERVATION

The weak place in the pasture fence is the measure of its strength.

"That will do for this time," is not good enough. When a job is done so that it will do, it is not much nearer completion than when it is all to do over again, saying nothing of the mischief that may result from its being left unfinished.

Do not get discouraged. With some men every day is "blue Monday." If things do not go just right, never let them know it. Take a new turn and slip them into the proper groove.

Be observant of your bank account. If your checks are larger and more frequent than your deposits, the time is coming when you will have to quit making checks. And do not forget that your soil is your best bank, and it is sure to play the game of give and take —if you don't give you can't take.

Uncle Threadbare makes mistakes, and they are not worth a cent to him, for they never teach him anything. What are your mistakes worth to you?

Here is a mighty good maxim, even for a farmer. "Take things as they come, but make them pay a profit as they go."

Walking over the farm at this time of the year, how much lazy land do you find? You'll have to pay taxes on every inch of it. Put it to work at something next year.

Don't you hate to go into the store and find everything "rough and tumble?" What do you suppose the merchant thinks when he finds your farm "rough and tumble?" You are just as good a man as the merchant, and you have just as interesting a family. And order is as important in your business as in his.

The colt was injured on a barb wire? Are you sure the fence was in good repair, and the wires all tightly drawn and firmly nailed to the posts?

If those troublesome weeds are to not make trouble next year, better see that they do not go to seed. Future trouble is wrapped up in the seeds.

Did you ever notice a productive field on one side of a fence and an unproductive one on the other, the land originally being the same? It is the fault of the farmers not of the fence. We know on which side to find Our Up-to-Date People.

Farmers have stopped many leaks during the educational years of the last decade, but there is still a big one in the barn lot. Wealth is flowing from the barn lot that ought to go into the pocket book.

Never compare best and second best seed, and never inquire the price of the second best. When the farmer sets out to buy seeds is the time of all others to pray "Lead us not into temptation." Ask for the best, pay the price, and count the incident closed. A few cents difference in the price of seed if you get the best, is not to be considered.

Both nitrogen and humus are secured by turning under the leguminous crops, and with these two elements abundant in the soil it is quite safe to trust nature for the rest. There may be a deficiency of phosphorus and potash, but not very likely.

FARM WASTES

The great manufacturing concerns, and even the packing houses, allow nothing to go to waste. Many of the profits depend upon what they realize from the so-called wastes. But on the farms the wastes are almost beyond estimation. Some of them are reckless and inexcusable, and may be turned to account without additional devices; but much of them there is yet no means of saving. Genius here has a fine field for work. If the congressional speeches of a few years ago had meant anything, the problem would have been solved ere now in the manufacture of denatured alcohol. But one seldom hears anything more about that. Our readers remember it was to convert into value rotten potatoes, apples and almost everything that nobody else wanted, and the farmers were to put the Standard Oil out of business with their own products made from what had been reckoned as of no value. About the only effect seems to have been an additional waste—congressional speeches.

But there sure is room for discovery and invention here. There is too much waste on the farm. If the farm wastes could be converted into by-products, as are the wastes of other industries, farm incomes would grow, and we hope the farmer would be wise enough to keep the increase.

THE PASSING OF BUCKWHEAT

Less than 50 years ago the buckwheat crop of the United States covered 1,045,000 acres, and the crop produced was 22,791,000 bushels, the farm value being placed at $15,413,000. Pennsylvania led in production with a crop of 500,000 acres, new York followed with 250,000 acres. But Pennsylvania now has only 250,000 acres, though New York has grown to 325,000. The total acreage now is only about 750,000 acres, and the total yield is 14,500,000, with a farm value of only $8,000,000. The yield has fallen from 22 bushels per acre to 18, and the average price has dropped from about 70 cents per bushel to about 60. It is thought the many invented prepared foods have driven out the use of the more wholesome buckwheat cakes.

CLOVER SEED

For several years the price of clover seed has been high, a fact that has materially reduced the clover acreage to the loss of an opportunity for increased fertility and productiveness of the soil.

But why do not farmers grow clover more extensively for the seed? We are told the seed does not mature sufficiently to make the seed crop pay. That is the growers own fault. The seed crop is sacrificed to the first or hay crops. The farmer cannot find courage to cut the hay crop until is has done its best. That makes the seed crop late, and it has not time to do its best. Subordinate the hay crop to the seed crop; that is, cut the hay crop early so as to give the seed crop time to fully make itself, and then a profitable hay crop may be got, and such a seed crop as will give no cause for complaint.

CONCENTRATED EFFORT

Intensive farming is coming in the wake of our rapidly increasing population, but it is not our present purpose to write on that. But we believe if fewer acres were cultivated greater yields could be made with less labor. It is a waste of time and opportunity to attempt to grow a crop on land that will not produce it, as it is also to spread one's labor over more acres than he can properly handle.

The first thing is to be sure of the productivity of the land. To secure that it may be necessary to do some valuable fall work — to haul out every bit of available manure, even if you may have to go away from home to get it; spread it as evenly as possible on the land. If you have a modern spreader the task is an easy one. Then break deeply in the fall covering the manure well. If a crop of clover or peas be covered with it, all the better. During the winter this will all become incorporated with the soil.

After all this is done do not be sparing of work on the seed bed in the spring. It may not be best to turn it again, for that might bring too much of the manure to the surface, but do not be afraid of the use of the dic, the harrow and the roller.

Some may say this amounts to too much work, but not so. The object is to grow as much corn, or other crop, on the few acres as would ordinarily be grown on more acres. Besides this thorough working and fertilizing puts the soil in such condition that it will not need so much work during cultivation. The corn, if that be the crop, will grow so rapidly as to earlier get beyond the reach of cultivation. This plan may mean more work, acre for acre, but not by the bushel, and the acres left out may afford profitable employment for somebody else. It may have been well for the traditional hen to "spread herself," but the average farmers may profitably take in sail.

FROM ESSAY ON "WEALTH"

ALL food or subsistence for mankind arises from the earth and waters.

Manufactures are only another shape in which so much provisions and subsistence are turned as were in value equal to the manufacture produced.

The produce of the earth thus converted into manufactures may be more easily carried into distant markets.

There seem to be but three ways for a nation to acquire wealth. The first is by war, as the Romans did, in plundering their conquered neighbors; this is robbery. The second by commerce, which is generally cheating. The third by agriculture, the only honest way, wherein a man receives a real increase of the seed thrown into the ground in a kind of continued miracle, wrought by the hand of God in his favour, as a reward for his innocent life and virtuous industry.

They're for Bill

The Gooselot glee club is made up of republicans and democrats, and they never could sing in campaigns before, because they could not agree. This time they are perfectly united, and recently unanimously adopted the following resolution, and announced their readiness to sing at any rally.

Resolved, that we are for Bill for president, and will at every opportunity both shout and sing for that matchless statesman, and will do everything in our power to secure his election. As a beginning, without a dissenting voice, we hereby Hurrah for Bill.

"The Separator News," published by The Sharples Separator Company, West Chester, Pa., is being sent out to readers—the Autumn edition is 900,0000 copies.

In this issue of "The Separator News" is more than the usual variety of sound dairy counsel, from many differnet sources.

Farm separating, of course, occupies a prominent place in the discussion, because farm separating is the policy which is most promising and most helpful towards farm improvement everywhere, and practically brings more money regularly into dairymen's hands than any other branch of agricultural industry.

What forehanded and enterprising dairymen are doing is told in many ways.

The possibilities for enlarged money-making in the dairy are presented in facts and figures.

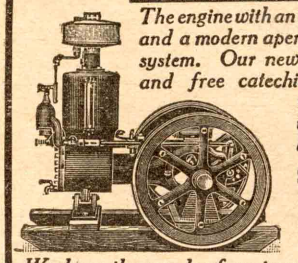
A new bird's eye view of the office and factory at West Chester is shown for the first time.

Offers of souvenirs, including a new book just being published, the words and music of over forty favorite songs, will appeal to every music lover.

Another piano offer, for purchasers of Tubulars, during the year July, 1908, to July, 1909, is made and a brief narration of the awarding of the first piano, in January last, is printed.

"The Separator News" will be mailed, prepaid, to those who ask for it. Write to The Sharples Separator Company, West Chester, Pa., and mention UP-TO-DATE FARMING.

Stickney Gasoline Engines
ARE THE BEST



The engine with an outside igniter and a modern apen tank cooling system. Our new free catalog and free catechism tells 57 reasons why we have the best engine.

Stationary and Portable
1½ to 16 H.P.

We have thousands of engines in successful operation because of years of experience in making engines of the best material and most accurate workmanship. **Send for free Catalog**

Improvements In Corn Breeding

By A. E. Blount, Wellesley, Mass.

A casual review of what has been done by way of improving corn for the past forty years, may be interesting and valuable, not only to all producers, but to dealers in it commercially.

Before the civil war, in 1860, the total output in this country was 500,000,000 bushels. The year after the close of the war, the total output fell off a half million, owing principally to the absent soldier farmers. The total for 1870 was 750,000,000 bushels with no signs of corn-improvement by any one anywhere, either by selection of the best or by making any kind pedigreed. The year 1880 brought the total up to an even billion bushels. From that date on corn-production has steadily increased, the last year, 1907, making the grand total some over three billion bushels.

During the last score of years great advances have been made, not only in the making of corn more prolific, but, by a few more progressive scientists, in the making it of better quality by breeding the best on the best.

Before the war all the country over, corn was in no way improved—in fact no producer ever thought it could be made better. .Even the best and most progressive farmers of that day persisted in the old way of taking their seed from the pile in the crib regardless of the defects such seed possesses, such as infertile ears, half-vital and especially ears that had been fertilized by the pollen of the barren stalks; which, by the way, damages all crops intended for the grain-product, more and more every year.

It is a fact, that not a single pedigreed corn or improved variety was ever known or heard of until late in the 60's.

It was years after the war before the most progressive farmers caught on to the fact that corn could be improved by any "experimentation or original research." But after the close of the war the times necessitated the most rigid economy and skill to not only improve corn, but to conserve its grain, by-product and every vestige of the stalk, which was done and which is being done now by many—the making of pedigreed varieties being left to the experimental, skilled scientists.

Plants of the cereal kinds, fruits and vegetables we make use of daily to support our physical existence, are all alike so common and matter-of-fact affairs with the producers, that hardly one in a hundred knows or even cares whether or not he is able to make them better in quality and more prolific; or, even to make this, that or the other pay. Whereas, if only a fourth of the farmers in any state or section would apply the teachings and laws set forth in Nature's own handwriting about the possibilities man could accomplish with his plants, what a change for the better would follow, as it has followed in the past score of years, especially under the supervision and instruction of the scientists in more than 50 Agricultural Colleges of our country.

Considering the ways, means and methods adopted and employed by the few, some years ago, to the making of everything that grows out of the ground for economic purposes, better; I will mention a few facts, heretofore known and put in force only by the few scientists who possessed the skill and knowledge and desire to do such work, pertaining to two of the greatest, most important and valuable cereals of the world. Wheat and corn overtop and exceed all other foods and foodstuffs in the realm of the vegetable kingdom. Comparing the methods and slipshod ways of raising, years ago, 20 to 30 bushels of the most inferior mixed varieties of corn to the acre, and 6 to 15 bushels of degenerated bearded, short-headed wheat with the much more prolific and nutritious few varieties pedigreed of the former, at this day, yielding 40, 50 and even 80 bushels; and comparing the latter with the many varieties of known improved and well-cultivated wheat all through the wheat belt of the west; no one can fail to discover even in the bread and other foods of his table, the great advance, the great improvement of the desirable qualities that have been made in these grains—all due to the exercise of the common-sense teachings and the scientific application of old mother Nature.

To enable the pure-seed breeder to produce more and better cereals—the best in both quality and quantity—he must know, in the first place, many things not only about the plants he wishes to improve, but the soil in which he intends to grow them.

Take corn for instance. It is the greatest and most extensively grown cereal in the world, the most useful plant for man and domestic animals to be found anywhere. To make it better and more prolific, to improve it so that the seed-breeder may develop every extreme possibility within the reach of human power, he will have to study the habits and characters of the corn plant--the grain to be planted, its power of germination, its growth to be nurtured, the heat and moisture necessary to its rapid and healthy well being, and above all, he must put in force skill and science to the complete making of a pure and genuine pedigreed variety, free every season from all foreign mixing.

He must post himself upon the physiology of t heplant in its many functions and offices that he may know and treat them as scientifically as the stock-breeder treats his finest trotter or Jersey cow, to develop fully the best points, to the end that every demand the plant makes upon him to fulfill the requirements of Nature, is to be met at the right time and in the right way.

There are many interesting things to notice when he begins to improve the corn plant—more about the ways and means to make better grain, better stover, to double its yield and make it first-class in every respect.

To begin with, then, so far as making his chosen variety pedigreed, the seed-breeder must use and should know that the tassel of the corn plant on the top of every normal stalk contains the pollen—the staminate essential element to fructification without which no grain on the cob can become vital or even develop; and that the silks of the ear—2 to every grain on the cob—are the pistils or pistillate essentials to reproduction.

Corn is monoecious, having both

How Did You Get Your Farm?

WE want readers of UP-TO-DATE to write out their experiences in getting their farms and send to us. We will pay you, see below.

If you inherited the farm and there is an interesting story connected with it, we want it; if you carved and dug your farm out of a forest, or perchance removed layers of stone before you had the soil to plow and plant, tell us about your patient labor and trials endured; or if you have a prairie farm which, when you acquired it, was ready for the plow, or bought your farm ready made, we want to wnow how you got it.

Nearly every farm has an interestng story of its acquirement by the present owner; struggles of labor or litigation; difficulties to meet the payments, discouragements and triumphs.

Our object is to make UP-TO-DATE FARMING interesting and help others who may be paying for farms or want to buy farms.

For the best article on this subject before October 15 1908,
WE WILL GIVE $5.00.
SECOND BEST FIVE, $1.00 EACH.
NEXT BEST FIVE, ONE YEAR'S SUBSCRIPTION TO UP-TO-DATE FARMING.

We will not put a word limit on the letters, but letters carried out to unnecessary length will be scaled down in points on that account. Be brief, give us the story and we'll fix it for publication.

EDITOR UP-TO-DATE FARMING, Indianapolis, Indiana.

A SURETY BOND WITH EVERY ROLL OF CONGO ROOFING *NEVER LEAK*

Congo is the only ready roofing on the market *backed by a Surety Bond.* We can afford to make our guarantee so strong because Congo itself is as strong as the guarantee.

Our ambition has been right from the start not only to make Congo the best all-round practicable and serviceable Ready Roofing, but to back it up by a guarantee so *sure* and *complete* that it will be the aim of every owner of a building to use Congo when needing roofing.

This bond covers a period of 10 years and gives to the user of 3-ply Congo the most reliable guarantee. It is issued by the National Surety Company of New York, one of the largest and most substantial companies in the country.

Congo doesn't cost much. It is extremely waterproof and *always stays so,* and it's very easy to lay. The new galvanized caps (a new feature with Congo) do not rust and cause leaks like tin caps or nails.

Write for a Sample to-day and further information.

SPECIAL NOTICE—If any Congo rolls that you purchase do **not** contain Guarantee Bonds, write us at once, telling us where and from whom they were purchased, and we will at once mail you the missing bonds.

stamens and pistils on the same plant, but unlike the other five cereals and most of the grasses, **it does not generally self-fertilize.** When it does self-fertilize—if it ever does at all—the self-fertilized will not be fully vital, but will produce weak and sickly stalks—offspring much like animals that have been too closely in-and-in bred.

Darwin says: "Nature allows self-fertilization in and among other plants designed by her to cross fertilize."

Wheat, oats, barley, rye, rice and most of the grasses, are strictly self-fertilizing, having both essential organs of fruiting in the same flower. Within each flower Nature does her work of fertilization of each embryo before the stamens come out of the glumes. In every spikelet of the wheat head there are two tree-like pistils between which the embryo grain is located. Around this circular mass, three stamens spring up, and, when pushing up and trying to get out, are ruptured, letting fall their pollen upon the aforesaid pistils — hence self-fertilization takes place.

All our six standard fruit trees contain these two essential elements of fruiting in the same flower, but observation and the experience of expert scientists teach the fact that they **do not generally,** if at all **self-fertilize**—a fact plainly illustrated in the fruits borne upon the seedling tree when brought into bearing—always different from the parent in some one or more characteristics or features.

For instance, no one knows the parentage of the Baldwin apple, the Concord grape, the Elberta peach, the Dawson plum or the Tartarian cherry—all were seedling fruits of seedling trees and vine accidently discovered in somebody's garden. As John Barroughs says: "Who knows from whence they came?"

Another and a much more important fact for the pure-seed breeder to know and to do. That is, how to protect and prevent from outside influence and impregnation any ear of corn intended for his pedigreed variety for the next year.

It is a fact, too often lost sight of by quite a number of distinguished corn breeders, that no single variety of corn can safely be raised on a farm where there are other varieties near by without deleterious mixing of the grain. The mixing of two or more varieties is always deliterious and damaging to the beter sort—the one under improvement or fully pedigreed. I have known corn to mix in the grain a mile away—a yellow on a white. One of my correspondents several years ago stated the fact that his crop of corn was badly mixed by the pollen that the wind or insects brought from a field six miles away."

I know it from more than twenty years' experience in raising and making an 8-rowed white dent corn, that where the tassels of any variety are ripe and the silks of another are receptive, mixing of grain is sure to follow—more so when the winds are blowing hard and the insects are more numerous. It is impossible to keep any one kind pure when it is thus exposed.

What shall the breeder do then, you will ask, to protect and keep pure the variety he is and has been for years growing for pedigreed seed?

To insure his own seed from year to year, he must resort to an artificial covering for every ear—100 or more as the farm requires—in his general crop, intended for seed the next year.. This can be done cheaply and effectively by tying a thin paper bag over each ear—the best top ear of the best normal stalks, and those that are bearing the largest number—just before the silks come out.

The tassel of all kinds of corn are developed and ripe before the silks appear; hence, the necessity of being expeditious and watchful that the time of the impregnation be not overlooked.

When the silks of each ear are fully developed under the bag remove it and into the silk cluster pour all the pollen you have before gathered on a sheet of paper, found in the tassel of the best normal stalk of the same variety or species. After this operation, replace the bag to prevent the ingress of all foreign pollen. If perfect fertilization takes place, every silk will die and turn brown within 24 hours.

Corn everywhere is so badly selected, bred-up, planted and cultivated, that at harvest it is almost impossible to select 50 per cent of the best ears that are perfect in all respects. On many ears will be found missing kernels and even rows of kernels—all owing to their not being fertilized as to their two silks that failed to get out and receive their part of the pollen.

For the same reason do hundreds of your best apples, when about the size of a small marble, drop off—they were not fertilized by the bee family. It is a fact worthy of notice by all who raise fruits in New England and elsewhere—that every orchard should have one or two hives of bees in it.

To ripen his seed corn as early as possible in the fall, is another important fact the corn breeder should not overlook, from the fact that it places his crop after a few years, beyond the reach of pollen of all scrub sorts that may be growing nearby. By way of hastening the maturity of his general crop, I shall have to give an outline of my own experience and experiments with a single variety of corn for a period of ten years.

Right after the close of the civil war, I began a series of experiments in view of improving an 8-rowed white dent corn I found growing in the general crops. It appeared so promising in many ways, I considered it worth while to make it not only an earlier ripening sort, but better in other ways.

I begun to improve it by selecting only the best top ear on the best stalks that were bearing the greatest number of ears and nubbins—this to make it, if possible, more prolific each year. I also selected those ears only that ripened earliest to shorten the period of maturity, which it did in ten years, making that period in the tenth year, 90 days long, which was 31 days earlier than that of my best crop. The selection of the top ear of the most prolific and best stalks in the field that bore the greatest number of ears and nubbins, increased every year, the yield and on the tenth the whole crop on the seed corn plat made stalks that produced 4, 5, and even 6 good 10-ounce ears as well as many smaller well-formed ears and nubbins on every joint clear to the ground; hence I name it the White Prolific, which was well illustrated in the Rural New Yorker and by J. M. Thorburn & Co., of New York City, as far back as 1873.

Unless corn is bred up carefully every season by an annual selection of the seed ears and more complete protection to keep them from the damaging influence of baser sorts, it is impossible at the present day, to find a single pound of pure seed on any farm or in any of the seed houses of this country.

Dheat does not mix in the field as corn does. Any breeder may raise a dozen or more varieties on his farm, and unless it is done in the threshing, his improved selected varieties will keep free from all mixing.

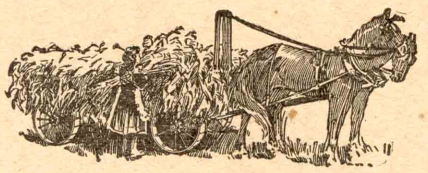
Averaging Up

Impatient Friend.—"What on earth are you doing in bed this time of day? It is almost nine o'clock."

Sluggard, with a yawn.—"Sleeping I believe. I was up till 12 last night."

Impatient Friend.—"But I tell you you are shortening your days by keeping such hours."

Sluggard.—"Maybe I am, but you see I am lengthening my nights."

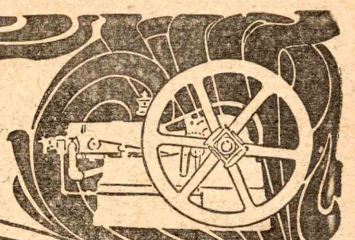


The above illustration shows Miss Phillis Hunt, of Iowa, engaged in loading corn fodder on an Electric Handy Wagon made by The Electric Wheel Co., Box 170, Quincy, Ill.

This young lady, according to reports, likes nothing better than loading and hauling corn fodder on these low wagons. She is about 16 years old and weighs 110 pounds and thinks she is able to haul as much corn fodder on a Handy Wagon in one day, as a full grown man can haul on the ordinary high wagon in the same length of time.

Miss Hunt, however, according to her letter, is not willing to undertake to haul all the corn fodder and it would be useless for any of our young farmer readers to imagine that they could avoid all this work, by contracting a matrimonial alliance with Miss Hunt.

LET AN I. H. C. GASOLINE ENGINE BE YOUR HIRED MAN



FREQUENTLY jobs around the farm which require the labor of two men can be done by one I. H. C. engine in half the time at one-fifth the cost.

I. H. C. gasoline engines are dependable, reliable and efficient—they never quit unexpectedly—they cost nothing to keep when not working—they never shirk nor complain. Progressive farmers all over the land are finding in the ownership of an I. H. C. engine the solution of their labor troubles. Why not you?

An I. H. C. engine will operate the churn, grindstone, fanning mill, separator, bone cutter, wood saw, pump, sheller, grinder, fodder cutter, etc.

No extra help is required. You, or your boy, can run the engine and operate the machine at the same time.

Weather does not affect the I. H. C. engine. It is a faithful servant that is always absolutely under your control in the matter of power, expense and efficiency.

There is an engine adapted to every purpose—Note the complete line.

Vertical Engines made in 2, 3 and 25-Horse Power.
Horizontal Engines (Portable and Stationary) made in 4, 6, 8, 10, 12, 15 and 20-Horse Power.
Air Cooled Engines, 1 and 2-Horse Power.
Traction Engines, 10, 12, 15 and 20-Horse Power.
Also sawing, spraying and pumping outfits.

Call on the International local agent for catalogs, and inspect these engines. Write for colored hanger and booklet on "Development of Power."

International Harvester Company of America, Chicago, U. S. A.

A CART LOAD OF FUN

This is the name of our book that should be in every home. More fun to the square inch than a cage of monkeys. A "cart-load" indeed. Space will not permit of our telling much about this book. Take our word for it, that it is worth many times our price. If you are not satisfied we return your money on request. Among the titles of the anecdotes and stories contained in "A CART LOAD OF FUN" are the following: "A Man with a Liver," "Pumpkin Pie," "Potts and the Lightning-Rod Man," "How to Go-a-Courting," "Baumgartner's Dog," "Stowe's Elephant Story," "Marriage a Scheme to Manufacture Happiness," "Mrs. Jones' Burglar," "Deacon Amos Tenderloin Discusses Dudes," "The Sad Case of Fillay du Biff," "A Primeval Scrap," "A One-Horse Hotel," "He Concluded not to Commit Suicide," "Queerly Married," "Hannah was Aroused," "How the Tired Patient Man had His Feelings Upset," "Jone's Baby," "Breaking up a Cat Concert," and 148 others. "A CART LOAD OF FUN" is a book of 64 large double column pages, neatly bound in attractive colored paper covers, price 10c each, 3 for 25c; postpaid. COONER & FORTUNE CO., Indianapolis FOR 10 cts.

Try the "Feel"

of the Handle of a SHARPLES TUBULAR SEPARATOR

Turn it a few minutes.

Then try the handle of another separator.

Less weight, fewer parts, one bearing—a ball bearing—and suspended bowl in the Tubular.

More weight, more parts, more than one bearing, a top-heavy, supported bowl in other separators.

Of course the "feel" is different—as different as the separators.

And the grip of your hand on the handle is a good guide to a fair judgment of the difference between the Tubular and "bucket bowls."

Our Catalogue No.136 tells the scientific and mechanical reasons how the Tubular is different and why it is better than other separators—better in clean skimming, easier running, less repair bills, more economical oiling. Free for the asking. Write today for it.

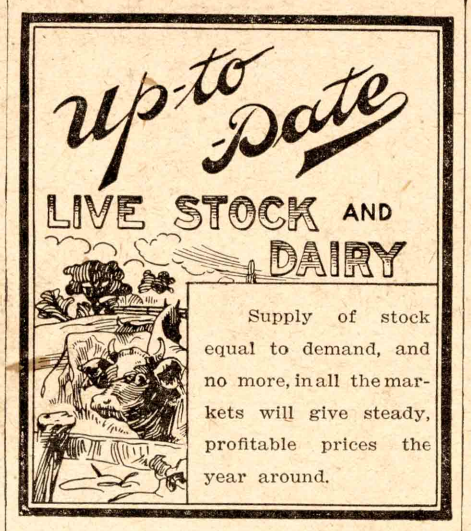
FLOWER-LANGUAGE POST CARDS, A SET OF 12 FREE

Do you know the "Language of the Flowers?" If you will send 10c for a six months' trial subscription to our large paper, The Epitomist, we will send to you, free, a set of twelve beautiful flower post cards. Each is different and represents the natural colors of the flowers and every card has the language of the flowers, portrayed in verse. These cards are strictly HIGH-CLASS and are not like any you have seen, for they are entirely new.

Write today and we will lose no time in sending them to you. Ask about the surprise which we are sure will interest you. We have only a limited supply of these beautiful cards, so send today if you want them. Address The Epitomist, 44 Main St., Spencer, Ind.



LIVE STOCK SUGGESTIONS

It is seldom necessary to keep farm horses shod all the time. Indeed we have known horses go through lives of great usefulness without ever a shoe to their feet. Besides, the horse-shoer has spoiled many a good horse.

Sloppy feeds are not good for any stock unless we may except swine. For horses and cattle even bran mashes should not be wet up too thin.

Oats is a good feed for horses, but that grain is not always and everywhere readily obtained. Corn and good timothy hay, or nicely cured timothy and clover mixed cannot well be beaten.

Time spent in currying the horse after the animal has done a hard day's work, is well spent. It is an actual benefit to the horse, and contributes no little to his comfort.

Don't presume too much on the gentleness of your team. Many disasters have resulted from over confidence in this respect. To leave the team unsecured is to court trouble.

Those who have no thought or care about the sleeping places of their horses, might get a lesson by sleeping a few nights on bare slats, or in a bed where a bucket of water had been spilt.

Watch the short pasture. It is much easier to keep stock in good flesh than to bring them back to it after they have begun to fall off.

If the colt has been well treated throughout the entire summer, and is weaned without suffering, is much more easily kept through the winter, and has a greater promise of making his best as a horse.

We have thought sometimes it is better not to have a pasture than to have one devoid of shade. With no refuge from the hot sun of noon, the animal will lose all it gained during the early morning and late evening. The shadeless pasture is fit for nothing in summer but night grazing.

When going to milk the cows it is better to leave the milk pail behind than your patience.

What do you think? The kicking man is most apt to have a kicking cow. In many respects it is like milker like cow.

Don't expect too much of the cow. If she has no place to shade in the heat of the day, or to hide herself from the cruel flies, she must devote to fighting the flies much of the time when she ought to be making milk. Even a cow can't do well more than onething at a time.

THE KIND OF COW

Few men would care to admit that their success depends upon a dumb beast more than upon anything they themselves may do. But that is true of dairymen. As is truthfully said by a contemporary, a man may have the best of machinery, the best stables, the best feed, the best of everything that will produce dairy results, if he have not the right kind of cows, profit making cows, he cannot succeed.

And this is true of the farmer as well. The wrong kind of cow is an absorber of profits, and profits so absorbed never return. Opportunities for the profitable disposition of unprofitable cows are too close at hand to justify a farmer in keeping a cow that does not meet his purposes and yield profits. The butcher's block is always ready, and the unprofitable cow should go there without compunction. Have the best, measured from the profit standpoint, and then success lies along the way.

Domestic animals are not often fed too much, but they can be; and when they are it is not only a waste but an actual injury to the animals. More than an animal can digest and assimilate is harmful. A pretty good guide if the animal is in health and has not an abnormal appetite, is that the feed is well cleaned up. Find the right proportion by adding a little until some feed be left; then a slight reduction will bring to the proper quantity.

Many wonder that stock fed exclusively on grain do not do well. The animal stomach requires bulk to assist in digestion, and that is one of the values of rough or coarse feed. It enables the stomach and alimentary canal to beter get the nutrition from the grain, even though the coarse feed have no nutrimnet itself. But the coarse feed generally given, hay, fodder, etc., furnishes nutriment as well as bulk, and may permit a reduction of the grain feed.

Most people have learned that all good articles are worth a good fair price. Something cheap is oftentimes dear as a gift. This is especially true with machines. Cream separators are not an exception. Suppose you only lose 1 per cent or 2 per cent of the butter-fat because of a poor machine. What does it mean in a year? But the loss is likely to be 5 per cent or more. Moral: Get a good separator like the De Laval, Sharples, or U. S. These three are standard.

PREPARING FOR BREEDING

Sheep breeders especially should never let the matter of breeding their ewes go without due consideration. They should decide when it is best for them that the lambs should come, and mate their ewes accordingly. But a most important thing is to take the ewes in hand long enough in advance to be sure that they are gaining in flesh, that they are thriving, as the saying is, before the time of mating. To mate ewes that are running on a lean pasture, and that are falling off, is to invite indifferent results. Ewes mated in a thriving condition will be much more prolific, and we believe their lambs will be more vigorous, have greater vitality, and make finer specimens of their kind. Hence we regard it very important to feed up the ewes preparatory to mating. We believe it is equally so regarding brood sows, but we have not so thoroughly tested it with them.

BOTH IN IT

"We have three cows, and I have been selling $4.00 worth of butter every week this summer," said a farmer's wife.

"We have 100 hens, and I have been selling $5 worth of eggs every week since the first of March," said another.

THE WEED PASTURE

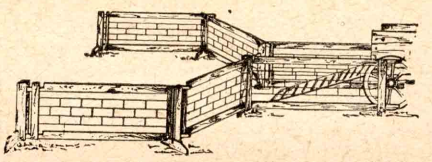
There are many weed fields on farms where pastures are running short, but no attention is paid to them because "there is nothing in them but weeds. The Minnesota experiment station has done the country a valuable service by the analysis of a number of our commonest weeds, and it will be seen they show up favorably with our best forage plants. Lambs-quarter shows—protein, 25.06; carbohydrates, 54.64; fat, 1.96. Purslane—protein, 26.13; carbohydrates, 53.70; fat, 2.90. Pigweed—protein, 26.54; carbohydrates, 62.86; fat, 1.36. Dandelion—protein, 24.64; carbohydrates, 58.95; fat, 2.70. Goldenrod—protein, 11.63; carbohydrates, 76.63; fat, 4.85. Clover—protein, 13.35; carbohydrates, 52.28; fat, 3.65. Timothy hay—protein, 8.75; carbohydrates, 41.76; fat, 2.16.

It is unfortunate that other and more abundant weeds, such as ragweed, were not analyzed, but we have enough here to show that the weed field should never be allowed to grow up and make seed when there is stock to pasture it down. Besides we have known stock to suffer on short pasturage when just across the fence was a rich weed field that would have helped nicely over the shortage, especially with cattle, sheep and hogs.

INFERIOR QUALITY

Market people complain more than usual this year of the inferior quality of the stock marketed, especially in the sheep and lamb department. One writer says not ten per cent of the native lambs could be marketed as choice, and not a great many as prime, the bulk being of the grade usually considered of the scallawag order.

It is a loss to market anything when it is not fitted for market—a voluntary surrender of profits, for it would seem that no one is compelled to turn off his stock in that condition. A builder would be considered very unwise who made a practice of selling unfinished houses after the frame had been erected and the finishing material was on the bround. The case of the farmer who sells unfinished stock is very much like it. He either surrenders the profits he might have to the man who does the finishing, or he imposes a bad quality of meat on the consumer at a low price, and loses his profits in the reduction of price. The man who has the frame erected should not only put on the weatherboarding, but get a price that puts the profits in his own pocket.



One of the ways in which Up-to-Date Movable Fencing can be used. People who have used Up-to-Date Movable Fencing say that no handier farm appliance has ever been provided for the farmer. A movable fence that will hold hogs, sheep or calves and can be set at the rate of one rod in one minute is of practical value on every farm. Write Mad River Fence Co., West Liberty, O., who guarantee satisfaction to every purchaser.

The Sarcastic Victim

The Barber—Your hair is coming out on top, sir.

The Crank—Good! I knew it was in me. Now, for goodness' sake, don't talk to it or it will crawl back again.—St. Louis Republic.

Any man who raises quantities of hay and will read over the Ertel catalog and booklets without being convinced of the value of a hay baler—well, we don't think there is such a man. The reasons why you should bale your hay are so many and so good you should send for the books. Address Geo. Ertel Co., Quincy, Ill., and tell them you read UP-TO-DATE FARMING.

"Absorbine is All You Claim for It"

Mr. Own Mohler, Thornville, Ohio, writes under date of May 11th, 1908: I used your Absorbine on a horse that had a sore shoulder that had left a bunch and it entirely removed the bunch. It is all you claim for it. I would not do without it." ABSORBINE stops lameness, kills pain, removes Bog Spavins, Thoroughpins, Splints, Wind Puffs, Shoe Boils, Enlarged Glands, and similar bunches without blistering or removing the hair and horse can be used. $2.00 per bottle express prepaid upon receipt of price. W. F. Young, P. D. F., 102 Monmouth St., Springfield, Mass.

No Doubt of It

"You wear overall," shouted the lawyer to the witness he was cross-examining, and whom he sought to confuse, "how how much are you paid for telling lies?"

"Not so much as you are," calmly replied the witness, "or you would be wearing overalls too."

Had Part of It

"So you are really going to fly in an air ship?"

"Sure."

"Have you got your air ship yet?"

"No; but I've got the air."

PRESS BULLETIN No. 166

Agricultural Experiment Station Kansas State Agricultural College

Hog Cholera, and Vaccination as a Preventative Treatment

Reports from various parts of the state indicate the great prevalence of the disease of hog cholera in Kansas at the present time. This Expermient Station is daily receiving letters of inquiry relative to the prevention of this disease.

Probable Cause of Prevalence at This Time

Hundreds of farms in Kansas have become infected with this disease during the last few months. Increased prevalence of the disease during the present season may be attributed to the excessive rainfall during the past spring and summer. Under such conditions the hog cholera virus has been washed from infected pens and farms into rivers and small streams, these tributaries having emptied into larger streams and flooded districts, thus sweeping the infection over large areas. Other means of dissemination such as dogs, birds and the boots of stock buyers have doubtless contributed their share toward the wide distribution of the disease.

Precautions Against the Disease

The greatest care should be exercised to keep the infection from entering healthy herds. If the disease is in the immediate locality stray dogs should not be allowed in the hog lots or pastures. To eliminate as much as possible, infection from birds, the hogs should be fed in covered enclosures. Stockmen and buyers should not be allowed to enter the premises without thoroughly disinfecting the shoes with some such germicidal solution as carbolic acid. The hogs should, under no consideration, have access to a stream which is fed from water running through other farms. No newly purchased hogs should be placed with the general herd until they have been kept in quarantine for two or three weeks. Plenty of air-slaked lime should be used about the hog houses and feeding places.

Vaccination

The Bureau of Animal Industry, U. S. Department of Agriculture, has recently perfected a vaccine known as "Dorset's Hog Cholera Vaccine." It consists of (1) immune serum (blood serum from a hog which is immune to the disease) and (2) hog cholera virus (blood serum from a hog suffering from the disease). The two substances are injected simultaneously into the healthy hog. Experimental evidence shows that this method of vaccination is efficient.

"Dorset's Hog Cholera Vaccine" has some disadvantages. (1) These serums, both the immune and the hog cholera serum, are expensive because they are obtained from hogs which, in comparison with other domesticated animals, yield only a small amount of blood serum. Under these conditions this process involving the killing of hogs to save hogs, when put into practice, is very expensive. (2) The danger that might follow the broadcast distribution of hog cholera virus, in some instances among careless veterinarians and uninformed farmers, cannot be ignored.

Kansas Experiment Station Work

The Bacteriological Department of the Kansas Station has, during the past year, conducted a line of experimental work in an attempt to produce a practical hog cholera vaccine. The general scheme of the work has been to attenuate or so modify the hog cholera virus by passing it through a horse that it will successfully vaccinate a healthy hog against the disease but will not produce infection. Three horses and some twenty hogs are at present under observation, and during the fall months some field work will be undertaken. The following conclusions have been suggested by the results so far obtained:

1. Hog cholera serum exerts a toxic influence upon a healthy horse when injected intravenously.

2. The blood serum from a horse, drawn a few hours (3-6) after the animal has received in the veins 75 to 150 cc of hog cholera serum, is as virulent as the original hog cholera serum, producing typical symptoms of cholera and death when injected into healthy hogs. In some cases horse serum, drawn 3-6 hrs. after the animal has received intravenously a dose of hog cholera virus, produces in healthy hogs a more acute form of the disease than does the original serum.

3. The blood serum of a horse, drawn 24-72 hours after the animal receives an injection of hog cholera virus intravenously, shows attenuated properties and does not produce disease when injected into healthy hogs. It also, however, in most cases, produces a reaction in the temperature of the healthy hog five to twelve days after the inoculation.

4. Twenty-four-hour horse serum (drawn from the horse 24 hours after the animal was injected intravenously with hog cholera serum) when injected into healthy hogs exhibits protective properties against the disease.

A bulletin is in process of preparation which will explain the above experiments in detail.

WALTER E. KING,
Bacteriologist.

Manhattan, Kan., Sept. 15, 1908.

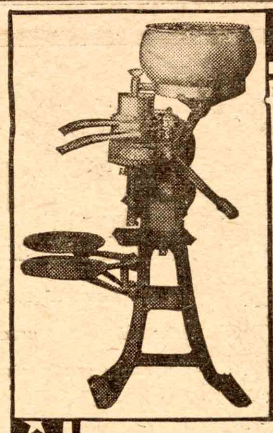
(We print this to encourage experiments along this line in the hope that a preventative may finally be found for the dread disease.—Ed.)

That Will Do

"Doctor, my hair is falling out; can't you tell me something to keep it in?"

"You might get a box."

Certainly the popularity of the Phonograph has been well earned. It is the greatest entertainer in the world. The wizard Edison is known for many hundreds of wonderful inventions, but he will be loved by future generations more for the "talking machine" than for any other. You can never lack enjoyment no matter how long the evening if you have a Phonograph. It never grows old. Anybody can operate it—a six year old child as well as any adult. Send to F. K. Babson, Edison Phonograph Distributor, Dept. 3656, Edison Bldg., Chicago, for free trial offer.



TIME TO BUY CREAM SEPARATORS NOW

There never was a better time to buy the best of Cream Separators than right now.

The advantages derived from the use of the good Cream Separator are greater in the fall and winter than at any other time,—when the cows are old in lactation, the loss of butter-fat is otherwise greatest, and butter prices are of butter-fat is otherwise greatest, and butter prices are highest.

Likewise are the advantages of the superior DE LAVAL separators greatest over imitating separators when the milk is hard to separate and the weather cold and variable.

In every case a DE LAVAL separator, of suitable size, will surely at least save its cost between now and July 1st next, and go on returning 100 per cent per year on the investment for twenty years to come.

The agricultural and particularly the dairying outlook was never brighter and more promising.

WHY NOT BUY NOW?

Tell them You Saw the "ad" in Up-to-Date Farming

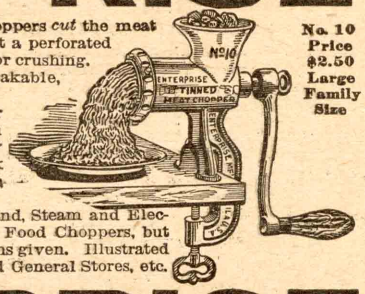
ENTERPRISE

Meat and Food Chopper

"Enterprise" Meat and Food Choppers *cut* the meat with a revolving steel knife against a perforated steel cutting plate without tearing or crushing. Easily cleaned. Practically unbreakable, and will last for years.

The No. 5 "Enterprise" Chopper costs only $1.75. No, 10. shown in cut, $2.50. They are standard family sizes, and not only save half the work at butchering time, but are useful in the kitchen every day in the year.

Made in 45 sizes and styles for Hand, Steam and Electric Power. We also make cheaper Food Choppers, but recommend the above for the reasons given. Illustrated catalog free. Sold at Hardware and General Stores, etc.



No. 10 Price $2.50 Large Family Size

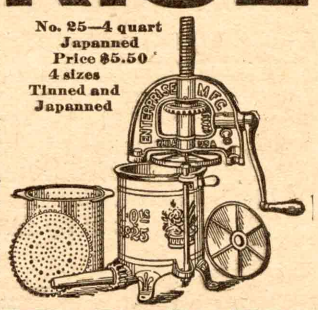
ENTERPRISE

Sausage Stuffer and Lard Press

Lessens the labor at butchering time. Two machines in one. Well made and does its work quickly and surely. Cylinder is bored true and plate fits accurately. Pressure cannot cause meat to rise above the plate. The Patented Corrugated spout prevents air from entering casing, ensuring perfect filling and preservation of sausage.

Machine can be changed into a *Lard Press* in a minute's time. Can also be used as a Fruit Press.

Your dealer should be able to supply you with the "Enterprise" Sausage Stuffer and Lard Press. If not, order direct of makers.



No. 25—4 quart Japanned Price $5.50 4 sizes Tinned and Japanned

ENTERPRISE

Bone, Shell and Corn Mill

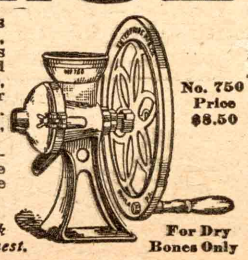
The **"Enterprise"** Bone, Shell and Corn Mill is a good, general mill for farmers, poultrymen, etc., and for compactness, strength and durability is unexcelled. Handy for grinding poultry food and making bone meal fertilizer. Mill shown in cut $8.50, weight 60 lbs., grinds 1¼ bu. corn per hour. Look for the name **"Enterprise"** on the machine you buy.

Grind up dry bones, oyster and other shells, corn, etc., for your hens and watch results.

Other famous **"Enterprise"** household specialties are: Coffee Mills; Raisin Seeders; Fruit, Wine and Jelly Presses; Cherry Stoners; Cold Handle Sad Irons, Etc., Etc.

Sold at Hardware and General Stores, etc.

Write for "The Enterprising Housekeeper," a book of 200 choice recipes and kitchen helps. Free on request.



No. 750 Price $8.50

For Dry Bones Only

THE ENTERPRISE MFG. CO. of PA., 218 Dauphin St., Philadelphia, Pa.

Keep the Wheels Turning

One of the little economies that help toward a substantial saving is the use of a good axle grease. A grease without proper "body" runs off. One too heavy stiffens on the axle and adds to the pull.

MICA AXLE GREASE

is *right*—won't run, won't stiffen, won't wear out as soon as other grease will.

Covers the axle with an almost frictionless coating of powdered mica and keeps *your* wheels turning when the other fellow, who uses poor grease, is stuck.

Nothing like Mica Axle Grease for a tired wagon. Ask the dealer for it.

STANDARD OIL COMPANY

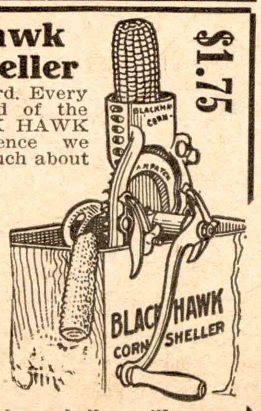
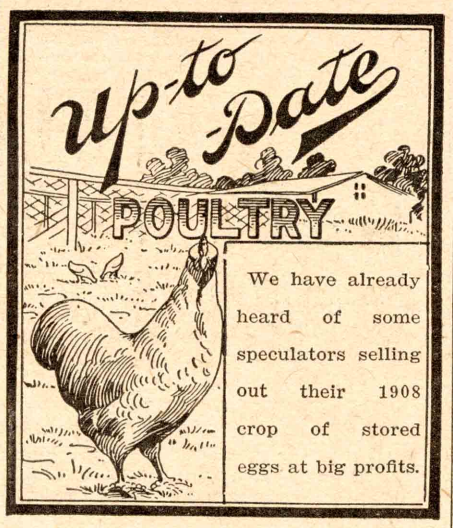
Black Hawk Corn Sheller

It is the standard. Everybody has heard of the famous BLACK HAWK SHELLER, hence we need not say much about them. This is absolutely the highest grade sheller on the market. Made of best material. Separates cobs from corn. Runs easy. Practically indestructable. Our *Special Price* only **$1.75**



A good first-class sheller will save its cost in a week's use.

O. I. SEED STORE, Indianapolis



We have already heard of some speculators selling out their 1908 crop of stored eggs at big profits.

Can't Make It

Man may imitate the bee,
An' make honey good as he;
'Dulterate most everything
Found in bottle, can or keg,
But, I care not what they sing,
Man has never made an egg.
—Adapted.

LITTLE EXPERIENCES

Best results are not obtainable by keeping chickens, turkeys, geese, ducks ets., in the same yard. But where all have free range, as on farms, it does not matter, for each will find the place best adapted for it. Never try to keep all in the same house or shed.

Poultry must have pure air where they spend their nights. Fine, dry earth and coal ashes or lime is a splendid mixture to spread under the roosts.

High grass or tall weeds are bad in the poultry yard. Such environment gives them the nest-hiding habit, and is otherwise bad. The fowls need shade, but it should be different from that afforded by weeds, and the grounds should be kept smooth as a lawn.

Ducks to be marketed young do better if they have not access to a pond or stream. Freedom in water seems to toughen them and bring them back toward the wild duck nature. Keep them in a nice, green grass plot, with plenty of fresh water to drink, but not enough to play in, and never allow them to want for suitable feed.

The eyes of poultry sometimes become affected, but that is not necessarily an indication of roup; it is more like pink eye in horses, and will run its course in a few days. If valuable specimens are affected any cooling, soothing wash for the eyes is good. Be sure that the quarters are clean and the feed wholesome.

There is a disease known as contagious catarrh, which is really a form of roup, is persistent, difficult to treat, dangerous and liable to run through the flock. The eyes are affected, as are the mouth and throat. The affected birds should be promptly removed from the flock, and the dead ones deeply burried or burned. Wash the head and mouth with coal oil, and thoroughly clean and disinfect the house and quarters. When this disease apepars prompt action is necessary.

The authorities are getting on to the eggs, and say that those sold as fresh or strictly fresh must be what is claimed for them. Storage eggs must be sold as such, or under the pure food law the dealer is liable to a fine of $500, or imprisonment, or both. This makes it all the better for the honest hen and her honest keeper. The surplus eggs of years ago cannot come in competition with the honest fresh ones of today.

Don't crowd the poultry house. To that bit of false economy may be traced many if not most of the poultry diseases and losses. Fowls need room, but they will crowd if they find it necessary, and when crowded they are neither comfortable nor satisfied, and it is almost impossible under such conditions to keep their quarters sanitary. Disease is the almost certain result.

We have found the free use of lime in the poultry house and about the yard one of the best practices that can be indulged. Lime is one of the things much needed by the fowls, especially laying hens, that they are least liable to find in nature. Besides it is destructive of so many harmful things, and contributes so much to the sanitary conditions of the surroundings.

We have perhaps said it before, but at this time of the year there is nothing more interesting on the poultry farm than a nice flock of early pullets. They are the principle source of the winter egg supply, and, consequently, of the year's poultry profits. Look well to the early pullets, and see to it that they "have a chance."

If your flock is not already well graded up, resolve now that it shall be, and begin at once to look about you for good males to mate with your hens next year. It is not necessary to pay extra fancy prices for show birds, for after all they are not always the best; but get good specimens, and you will be surprised at the improvement that will be seen in your flock.

CHICKEN HATCHERIES

It may be news to most of our readers that there are large establishments devoted to the hatching of chickens. A. I. Root, the Bee Man, visited some of these establishments, and tells about them in Gleanings in Bee Culture. The chicks are sold at one or two days old, and are shipped long distances with scarcely more loss than is incurred in the shipment of eggs. They generally go in paper boxes containing 25 chicks each, and usually arrive at their destination in good condition, though they may be on their journey two or three days. One shipment is mentioned from Ohio to Florida, the chicks being out four days without food or water, and were received at Tampa apparently none the worse for their fast. Chicks do not need feed so young as it is usually given them.

This is evidently a growing business. It is a pretty big business now. One establishment shipped 6,000 day-old chicks the day Mr. Root visited it. They sell at from seven to fifteen cents each, and a constantly increasing number prefer to buy the chicks already hatched to buying the eggs, and taking the risk of infertile eggs, accidents, time and trouble of hatching.

SALT AND POULTRY

Most animals even in the wild state, seem to need salt occasionally. This is proven by the fact that when the country was new, hundreds of wild animals resorted to salt springs to satisfy this longing. It is not so with fowls. Salt poisons poultry. We have known many valuable birds killed by pouring meat pickle or brine where the fowls could get it, or by emptying vessels containing salt in the poultry yard. Chickens may eat a small quantity of salt without any apparent injury, but care should be exercised in allowing salt to be left where fowls can get to it.

BEE SUPERSTITIOUS

Not many people who live in the country and watch the little busy bee are acquainted with some of the superstitions in regard to bees. At one time it was considered unlucky to give coin of any kind in payment for bees, one party to bargain being sure to meet with misfortune. Another old notion was that if any member of a swarm should alight on a dry stick or dead tree, the bees would not long survive, and this is quite generally believed today. Again, according to English tradition, if the owner of a hive dies, or any of his relatives, the bees must be told of the sad event, or they will certainly desert the hive.

Help along the good work by sending us a club of four new one-year subscriptions for $1.00. Co-operate to place UP-TO-DATE FARMING in the million subscriber class.

CLARK'S CUTAWAY TOOLS

CLARK'S DOUBLE ACTION "CUTAWAY" HARROW

WITH EXTENSION HEAD is made especially for Orchard work. It will INCREASE your crops 25 to 50 per cent. This machine will cut from 28 to 30 acres, or will double-cut 15 acres in a day. It is drawn by two medium horses. It will move 15,000 tons of earth one foot in a day, and can be set to move the earth but little, or at so great an angle as to move all the earth one foot. Runs true in line of draft and keeps the surface true.

All disk harrows have to run in half lap.

THE JOINTED POLE TAKES ALL THE WEIGHT OFF THE HORSES' NECKS, and keeps their heels a way from the disks.

BIG CROPS

DOUBLE ACTION HARROW

We make 120 sizes and styles of Disk Harrows. Every machine fully warranted. Entire satisfaction guaranteed.

WHENCE THE FRUIT

With Apologies to Hiawatha.

Should you ask me whence these stories,
Whence these legends and traditions,
With the odor of the roses,
With the brightest of the sunshine,
With the rushing of the rivers,
Leaping headlong from the mountains?
I should answer, I should tell you,
From the richest lands 'neath heaven,
From the snow-capped hills of purple,
From the broad and fertile valleys
Where the peach and pear and apple
Grow in magnitude and plenty.
This they say—the happy dwellers,
In that land of fruit and flowers,
That the apple is the symbol
Of their health and wealth and wisdom.
All the brightness of the sunshine,
All the sweetness of the flowers,
All the glow of hidden gold fields,
All the dew of blooming meadows,
Are by cunning nature blended
In this fruit of many a hue.
If long life you would be having,
Knowing naught of human ills,
Daily eat at least one apple.

—*Green's Fruit Grower.*

STORAGE OF APPLES

Often the difference between profit and loss is in the storage of the fruit. Purdue university has issued a timely bulletin on that subject. Of course, in order to keep well, apples must be picked at the proper time. Care must be exercised in handling to prevent bruises, carefully assorting the ripe from the unripe, the perfect from the imperfect, and storing in a cool place, with plenty of pure air free from all odors of decaying vegetables or other substances. The average fruit-grower does not exercise enough caution in handling and assorting his fruit. The degree of maturity will have much to do with the keeping qualities. A late fall or winter apple should be mature, but not ripe, when it is picked, if it is expected to be kept for any considerable time. The process of ripening is only the first stage of decay, and if this is allowed to continue before picking, this breaking down process has proceeded so far that it is a difficult matter to arrest it. As soon, therefore, as the stem will separate freely from its uion with the branch, the apple is sufficiently mature for storing.

The proper temperature for keeping apples is as nearly thirty-five degrees as it is possible to keep it, and in order to maintain this it will often be necessary in this climate to provide a separate place for storing the fruit, as the average cellar under the dwelling house is wholly unfit for this purpose. If the cellar consists of several compartments, so that one can be shut off completely from the others, and the temparature in this kept below forty degrees, it will answer the purpose very well. If this cannot be done, a cheap storage house may be built in conection with the ice-house, by building a room underneath, having it surrounded with ice on the sides and overhead, with facilities for drainage underdneath, keeping the air dry by means of chloride of calcium placed on the floor in an open water-tight vessel, such as a large milk crock or pan. In this way the temperature may be kept very near the freezing point the year round.

THERE is nothing in which people deceive themselves so much as in the pursuit of happiness. There is only one way to find it. That is, by obeying the laws upon which we are built. We are constructed along the lines of truth and justice, and we cannot reach felicity by disobeying these, the very laws of our nature.—Orison Sweet Marden.

THE APPLE AND THE ORCHARD

J. H. Hale, South Glastonbury,Connecticut, gave a very able address upon the subject of "Handling the Apple Orchard." Mr. Hale said the apple was the standard of all fruit. The early planting of apples was for drink and not for food, but today the apple is grown principally for its food value. The American people are fast coming to appreciate its value for food, and to-day fifty times more fruit is consumed than in former years. The market to-day is demanding the highest quality of fruit, and is willing to pay a premium for choice goods. Size, uniformity and color are three essential requisites in high quality fruit. Mr. Hale does not think that the old orchards found upon the farms to-day can from any method of pruning or tillage be made to produce a high quality of fruit. The tree must be trained for its special purpose in order to get best results. "I think," said Mr. Hale, "a far larger portion of old orchards could be made to produce far better fruit were they given proper care and cultivation. Low down trees are very desirable; with them expense is reduced and cultivation can be better conducted. In selecting a site for a fruit orchard, select rolling land and not low, cold soil. Tillage should ever be the watchword of the orchardist. Begin as early in the spring as possible, and continue for at least three months. Have the ground covered with something at harvesting time. A good cover crop is clover, but anything will do providing it furnishes a covering to the soil".

INSPIRED BY THE DEALERS

It is a significant fact that almost all the market reports and reports of crop supplies at marketing time, are inspired by dealers. In a market letter from Rochester, New York, about the opening of the apple trade, we find such expressions as these: "The buyers are almost a unit in saying they will not pay more than $1.50 per barrel, while the growers want $2." "The growers can't understand why a barrel of the finest apples grown is this section in years should not bring at least $2 at loading stations." "Many of the growers don't take into consideration that the crop in the United States is large." "Some of the dealers lost money last year, and will not be able to get money from the banks as freely and on as favorable terms as they did last year." And so on.

In these few selected sentences from a single letter, fruit growers ought to find an important lesson. 1. The buyers are determined to hold down the price. 2. The growers in that particular section around Rochester have extra good apples, and ask for them only a moderate price. 3. The buyers would mislead the growers into the belief that there is a large apple crop in the United States, whereas the international apple growers' congress in session not long ago in St. Louis, found that this year's crop is the smallest one for years, and that, in the main, the apples are of the poorest quality, which means that good quality apples should command a price above the normal. 4. That the dealers are not buying with their own money, but with money obtained from the banks.

Consider the last proposition first. Indeed it is about the only one that need be considered. If dealers can buy, store and speculate on fruit with borrowed money, why cannot the growers, who already own the fruit, store it and hold it themselves to meet the demand which brings the speculators profits over all these extra expenses? If they must have money before that time arrives, growers with their farms and orchards behind them, and who still own their apples, could certainly borrow money as well as the dealers. In many instances they could borrow it on much better terms without going to the banks.

But the storage? The growers can store fruit the same as speculators. Indeed they could build and provide their own storage, and in one act make themselves masters of the whole situation. Only one thing is needed that is not already at their hand, and that is organization for co-operation. One grower by himself cannot meet the conditions, but the growers of a community that supplies the speculator, acting together, could do so, with as much ease as they can barrel and deliver their fruit to the shipping station of the early purchaser. And if the purchaser can hope for profits, and he is in business for nothing else, the growers would be more certain of much greater profits.

UNTIL Amatite was put on the market a few years ago, practically everybody who used ready roofings had to paint them regularly. Some of the roofings required a coat every year; others every two or three years.

In all cases a good deal of expense and trouble was involved.

The popularity of Amatite is largely owing to the fact that its use does away with all such trouble and expense. This is due to its **real mineral surface** which is far more durable than any paint made. It is not affected by weather and will last indefinitely.

All that is necessary after laying an Amatite roof is to leave it alone. Leaks and dissatisfaction are left behind.

Every practical man will doubly appreciate the "no-paint" idea when we add to that statement the fact that Amatite is lower in price than most of the "paint-me-every-two-years-or-leak" roofings.

In addition, Amatite with its smooth lap edge, is easy to lay, and the necessary nails and liquid cement for laps are supplied free, packed conveniently in each roll.

Can any reasonable man ask more?

A Sample Free. Write to-doy

Illustrations at top, from left to right, show: Chas. Johnson's Residence, Atlantic City, East Machias Lumber Co., East Machias, Me., A. J. Priebe's Barn, Petoskey, Mich. All covered with Amatite.

Only Exchange

Straight to my heart this fact to-day,
By truth's own hand is driven;
"God never takes one thing away
But something else is given."

I thought it only happened so:
But time this truth has taught me;
"No cherished thing from life can go
But something else is brought me."
—Ella Wheeler Wilcox.

LITTLE THINGS

As we read of the achievements of great men and women we all wish we had some great thing to do. How often do we sit and wonder, and sigh and dream for something to do that will show the greatness that we feel is in us? At the same time all around us are little things that call us all the time—things we could do and be the happier for it; possibly making others happier by the same small act. Small? Do we know it is small? The acorn was small, but the tree that grew from it overtopped the forest. Have we a right to call small anything that God places in our path and invites us to do? Do we not know that the greatest things of earth, and possibly of heaven, are made of things very small—the high mountain of the sand, the great ocean of the drops of water, the longest life of the most fleeting moments?

It's just the little things of life—the little things of life,
That make the tears and sunshine of this earthly strife;
Little satisfactions, little words of cheer,
Little deeds of kindness make life worth living here.
Though the clouds above are big and drear and black,
Just one little ray of sun will turn the darkness back.
Let us, then, remember as we toil along the way,
'Tis not the big things of tomorrow. but the small things of today.

Whoever takes care of the small things is on the way to the great ones; and it is not sure that after all the greatest things may not be found in the home, the place upon which the happiness of mortal lives depends, and possibly that of what we call eternity. The maker of a home may be the maker of a heaven or a hell. Our work is, therefore, nearer like the Divine than we are inclined to think. Dare we call it small? Says Cora A. Dolson:

This is the home I fain would build:
A house where riches might abide,
Hope weave what tapestry I willed,
And joy and wealth sit side by side.

And these the riches be of home:
Fulfillment of each glad desire,
Strong, helpful hands, a sheltering dome,
And plentitude of food and fire.

But be the doorway high or low,
Whether of silk or crash I wear,
Deep in my heart this truth I know—
I have them all if love be there.

The one that can make the ideal home, the "home where love is," in country or in city, need not envy the great names of history, nor wait for greater things to do.

Speaking of home in country or in city, we are compelled to declare that the home of homes is the home in the country, the quiet home, let those who have gone from the farm to the city settle the question. Oh, the longing in the city home for the old home back in the country! Can it be better expressed than in the following verses?

I am longing for the country,
For the fields of wondrous green,
For the hills that rise in beauty,
For the lake with silver sheen,
For the gentle kine that follow
Lowing to the pasture bars,
For the boundless skies that glisten
With their never falling stars.

I am longing for the country
And its good old-fashioned ways,
For the kindly hands and helpful
Making bright the saddest days.
Lo, amid the city's splendor
No familiar voice I hear,
Not one smiling face to greet me
'Mid the many passing here.

To this din and strife and traffic
I am as a stranger lone;
Oh! for something true and steadfast,
O! for someone all my own;
Yes, I'm longing for the country
With its good old-fashioned ways,
For the country folks whose friendship
Brighten e'en the saddest days.

But still we must awake to the fact that this is not all a world of sentiment but of reality, a world of business, of hard knocks and strenuous activity. Whether in city or country there is work to do, responsibilities to bear, tasks to finish and victories to achieve. Wherever God has placed us we owe Him and humanity our very best.

DRESS FOR FARMERS

We already concede that the clothes do not make the man, but they do add much to the man's appearance; and it must be confessed that appearance goes a long way with the popular estimation of men. There is no more reason that farmers should appear in uncouth dress than that any other person should. People, it is true, should wear work clothing suitable to what they are doing, clothing that will stand what it must come in contact with, and, if injured, that the damage cannot be great. This very properly induces the miner when at work to wear clothing that need not shrink from the coal dust and slush of the mine, the blacksmith to wear clothing that will not be ruined by the soot and grim of the forge, etc. And the farmer when at work may wear clothing that he need not dread to bring in contact with his stock, his teams, his machinery, and the dust of his fields. But when he lays aside the garments of his toil, he should put on clothing suitable to the important place he occupies among the useful vocations of life.

It must be acknowledged that farmers cling more tenaciously to their every day clothing, to the habiliments of their work-a-day life, than do those of any other calling. In the town gathering, at the picnic, or in the church congregation, one can scarcely distinguish from one another by their dress, the miner, the carpenter, the mercahnts and the professional man, but the farmer, as a rule, may be easily so distinguished. We do not advocate extravagance in dress, but the farmer and his family, those who make is possible for others to dress at all, are entitled to appear as well in public as do those of any other calling, and they do themselves and their business an injustice when they fail to do so.

Can't afford it? Then there is something wrong in economic conditions. But for the work done by the farmers there would be very little clothing for any one to wear, and if the people that produce the material for everybody's clothing, must themselves be content with the coarsest and cheapest, they are not getting their share of what they produce.

Thousands of men and women from eight years old to forty years and older are studying at home to fit themselves for higher and more remunerative work. The International Correspondence Schools Box 1131, Scranton, Pa., teach you in your own home about any subject. There are many government positions open to ambitious folks. They will tell you how to qualify if you write them.

Mrs. WINSLOW'S SOOTHING SYRUP should always be used for children teething. It soothes the child, softens the gums and allays all pain, cures wind colic and is the best remedy for diarrhoea. Twenty-five cts.

AN AUGUST LAKE TRIP

Elizabeth C. Everitt

We went to Chicago to take the boat Are you afraid of water travel? Well, I had always been too, until I saw that immense floating hotel, so graceful, so manageable-looking, loaded with laughing, chattering people, who were thinking all about tickets, baggage, friends ashore and abroad, and afraid rather of being left behind in the hustle and bustle than of going aboard.

Just a few minutes after we had gone on, tinkling bells sounded, whistles blew with a deafening sound that made me close my eyes and imagine we were in a dense fog—a watery, warning. I opened them, leaned far over the railing to see the gang plank pulled in and to wave good-bye to the fluttering handkerchiefs, hatless heads, frantic arms and smiling faces grouped on the wharf. We were moving! I did not feel the motion, but the wharf was receding, faces blurred into each other, the handkerchiefs seemed to stand still, we passed an open brigde and were out on the lake. The shore stretched north and south in a smoky, broken line. This, then, was the contour of Chicago. How alike are all cities and yet how individual each is! There is something about this individuality that, when we see New York's ocean front we know it, and when we see Chicago's grey sky line there is no other like it, and each is dear to us.

As soon as we left shore a breeze sprung up, cool and invigorating. It made me want to pace the deck, as I have see office men on ferries when crossing to and from work, pacing like caged wild animals. We could have none of that feeling on that boat; all was freedom, space, leisure. To stand at one end of the main deck salon, looking down the rows of state room doors, it seemed a block away where the brass knobs formed a solid curving line and it was hard to distinguish the red carpet from the red ceiling. Outside, however, there was all sky, all water, all air, all out-of-doors with which to compare so that the vessel seemed a dot in the expanse and yet it took brisk walking to make a promenade around in six or seven minutes.

We had only part of a day, the first day out, plowing up Lake Michigan. After super in the large brightly lighted dining salon below, we put into Milwaukee for a half hour's stop. We left passengers and took on passengers; the vessel kept full, swarming with people, all bent on leisure, rest, recreation.

Compare a night's rest on board steamer with that in a Pullman car. I should call the former, as I have, rest, but the latter, unrest. So it was that night and the two succeeding ones, plenty of fresh air from the port hole, and a sound sleep, undisturbed.

It was the second day, nearly noon when we landed at Harbor Springs,that lake port for the almost innumerable resorts near by, and it was afternoon when we reached Mackinac Island, a picture white and blue, sparkling in its purity as it lay before us. On this place, it seems that the sun must always shine, that clouds could not dim the reflection from so clean a spot.

The third morning brought us into the St. Clair flats, above Detroit, where we could almost reach out and touch the charming little cottages with bridges for porches, a boat landing for door step and a watery front yard. We could almost shake hands with the people who rushed out to greet us. We dropped slowly down past this panorama of houses set on stilts, trees supported by a border of rocks, rustic benches, romantic isles and bridges, forming the foreground of a picture that stretched out flat as far as the eye could see, streakes of water and land intermixed and scattered trees. We had no sun that morning; everything seemed of one color.

Nearing Detroit we began to encounter ferries plying between the Canadian and American shores, and small boats bobbing in and out of our way.

The weather grew more threatening of a rain storm every minute until, as we passed the iron manufacturories below Detroit, it began to rain, and when well out into Lake Erie the storm was upon us. The one best place to enjoy a storm—for I was by this time prepared to enjoy everything and fear nothing—is the top deck. I hurried up there, only to find others all hurrying down and a seaman, the only remaining occupant, busily removing the awning, rolling rugs, pulling plants and chairs to places of shelter. I found a place behind the captain's cabin where I could watch the lightning, hear the thunder and feel just the spray of the rain on my face as an occosional sharp gust whisked 'round the corner. It was glorious! How I wished the boat would rock. The white caps came rolling toward us, but she plowed right along as tho the sun were shining and only a gentle breeze blowing. How safe one can feel, out in the open, close to the elements and can really enjoy the excitement of it all with confidence in a strong protector in this case, a strong boat. The storm was over all too soon, leaving behind its trail a damp grey day, making you wish for the return of the boisterous storm.

There came still another surprise which I saw from my favorite "loft", It was after night as we were leaving Cleveland somewhere in the dark expanse back of us where rows of electric lights defined only the shore line. The tracery of wheels, towers and watery scenic slides of a shore resort was just fading in a hazy glow when a cloud overhead grew thin and a faint light shimmered thru the pillowy spots. It grew brighter, then was lost, then came again until finally a sharp curve was marked against a patch of clear night sky and the moon came slowly out. The clouds followed along with us overhead; the moon moved away to the west in a setting of stars. We left the clearness somewhere out on the lake during the night, but we had the quiet memory of it still with us at Buffalo in the morning where we left the boat and its happy associations.

This ended our trip, our three days and nights of life in the open, hand in hand with the sky, the air, the water, all cleanliness, coolness and rest. I wish every reader of UP-TO-DATE FARMING could take such a trip. My advice is, plan for it some time.

Do Things

"The man who simply sits and waits
Fur good to come along,
Ain't worth the breath that one would take
To tell him he is wrong.
Fur good ain't flowin' round this world
Fur ev'ry fool to sup;
You've got to put your see-ers on,
And go and hunt it up."

Ladies who would like a 112 piece Dinner Set free of all cost—and what lady does not want one—should write to the Pure Food Co., 850 W. Pearl St., Cincinnati, O., for their great proposition. They have an offer that will interest every lady. This means *every* lady. Write them today.

Already Caught

"George, before we were married you were always giving me presents, but you never give me a thing now." And she pouted a little.

"My dear, did you ever see any one give bait to a fish he had already caught?" And then a sound floated out on the dreary air.

Different Time to Worry

He.—"When a woman reaches 30 she begins to worry for fear she will not get married."

She.—"How about a man at that age?"

He.—"O, by the time a man is 30 he begins to worry for fear he will."

Personal to Rheumatics

I want to get a personal letter from every man and woman in America afflicted with Rheumatism, Lumbago or Neuralgia, giving me their full name and postoffice address, so I can send them ***Free*** a full-sized, ***One Dollar Bottle*** of my Rheumatic Remedy. I want to convince every Rheumatic sufferer at my expense that my Rheumatic Remedy does what thousands of so-called remedies have failed to accomplish—***Actually and Permanently Cures Rheumatism.*** I know it does, I am sure of it and I want every Rheumatic sufferer to know it and be sure of it, before giving me a penny profit. You cannot ***coax*** Rheumatism out through the feet or skin with plasters or cunning metal contrivances. You cannot ***tease*** it out with liniments, electricity or magnetism. You cannot ***imagine*** it out with mental science. ***You Must Drive It Out.*** It is in the blood and you must ***Go After It and Get It.*** This is just what Kuhn's Rheumatic Remedy does and that's why it cures Rheumatism. Rheumatism is Uric Acid and Uric Acid and Kuhn's Rheumatic Remedy cannot live together in the same blood. The Rheumatism has to go and it ***does go for good.*** My Remedy cures the sharp, shooting pains, the dull, aching muscles, the hot, throbbing, swollen limbs, and cramped, stiffened, useless joints and cures them to stay cured.

I Can Prove It All To You

If you will only let me do it. I will prove much ***In One Week's Time*** if you will let me do it at my expense, if you will only sit down and write my Company to send you a dollar bottle ***Free Of Charge.*** I don't care what form of Rheumatism you have or how long you have had it. I don't care what other remedies you have used. If you have not used mine you don't know what a ***real*** Rheumatic Remedy will do. Read our offer and write to us immediately.

A.D. Kuhn

A FULL-SIZED $1.00 BOTTLE SENT FREE

We want you to try Kuhn's Rheumatic Remedy, to learn for yourself that Rheumatism can be cured and we want no profit on the trial. A fair test and a just verdict is all we ask. If you like it and find it is curing your Rheumatism or Neuralgia, order more to complete your permanent cure and thereby give us our chance for profit. If it does not help you, no harm is done. We know what Rheumatism is, we know our treatment, know just how it works, and will take this chance. We do not send a small sample vial, containing about a thimbleful and of no practical value, but a full-sized bottle, selling regularly at drug-stores for ***One Dollar Each.*** This bottle is heavy and we must pay Uncle Sam to carry it to your door. We ask you to send us 25 cents to pay cost of packing and mailing case and postage and this full-sized One Dollar Bottle will be promptly sent you free, everything prepaid. There will be ***nothing to pay*** on receipt or later. No other Rheumatic Remedy has been or can be so offered. Don't wait until the valves of your heart are injured by Rheumatic Poison, but send today for this one dollar bottle free on trial. Only one bottle sent free to a family and only to those who have never before used this remedy. Address, immediately.

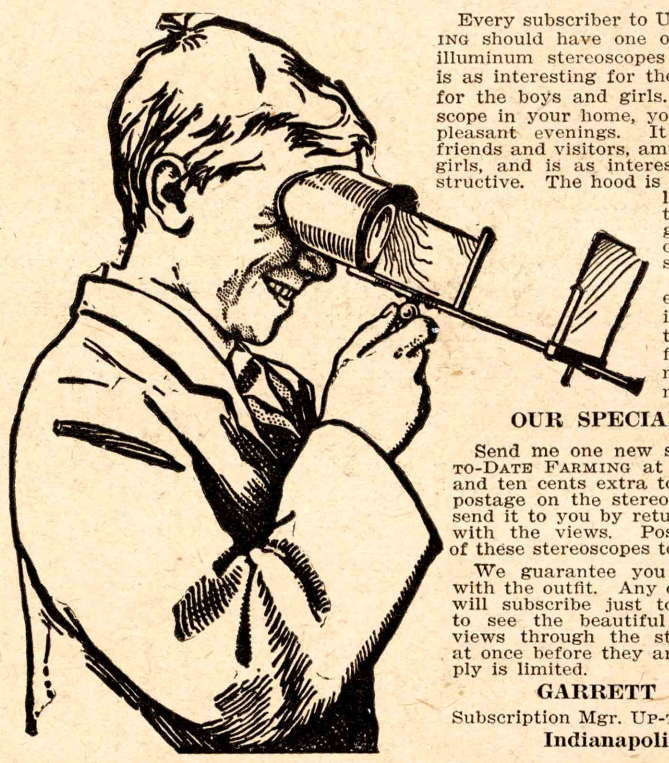
STEREOSCOPES FOR OUR READERS FREE!



Every subscriber to UP-TO-DATE FARMING should have one of these beautiful illuminum stereoscopes in his home. It is as interesting for the "grown-ups" as for the boys and girls. With a stereoscope in your home, you can pass many pleasant evenings. It entertains your friends and visitors, amuses the boys and girls, and is as interesting as it is instructive. The hood is made to fit closely to the face and the stereoscope is guaranteed first-class in every respect.

With each stereoscope we will include a collection of 25 of the finest views, in natural colors, all new.

OUR SPECIAL OFFER

Send me one new subscriber to UP-TO-DATE FARMING at 50 cents a year, and ten cents extra to pay part of the postage on the stereoscope, and I will send it to you by return mail, together with the views. Positively only one of these stereoscopes to each subscriber.

We guarantee you will be pleased with the outfit. Any of your neighbors will subscribe just to have a chance to see the beautiful natural colored views through the stereoscope. Write at once before they are gone—the supply is limited.

Price complete. only **20 cents** by mail, postpaid, or given for one yearly subscription at 25 cents. Address **THE WELCOME GUEST, Dept. 200 PORTLAND, ME.**

MOVE TO ARIZONA FARMERS GROW RICH

Don't be misled by private advertisements offering land for sale in out-of-the-way places. Write to the Board of Trade, Phoenix, Arizona, and learn the truth about the greatest farming opportunities since the discovery of America. Farmers, fruit-growers, stock-raisers, are getting rich in the wonderful Salt River Valley.

DON'T TRY TO FIGHT NATURE BUT LET NATURE WORK FOR YOU IN ARIZONA.

No greater endorsement is possible than the building of the $5,000,000 Roosevelt dam by the U. S. government, which will provide unfailing water supply for over 200,000 acres.

Farmers in the East and Middle West cannot appreciate the ease with which vast crops are produced in this prolific section.

No fertilizers to buy, no frost to fight. Agriculture is not a gamble, but a sure, safe and immensely profitable business.

Arizona climate is the most healthful in America, best schools, highest type of citizenship. For free literature address

Up-to-Date Farming Pattern Dep't.

Any of these paterns may be obtained from UP-TO-DATE FARMING for 10 cents, or by renewing your subscription within 30 days.

LADIES' WORK APRON

Dotted or plain percale, linen, cham-bray, or plain, figured or checkered gingham, is adaptable for this little work apron, which is a slight variation of the usual model, being cut in one piece. Brown Holland is also much used for garments of this character and natural colored and tan linen are also serviceable. A ruffle of the material

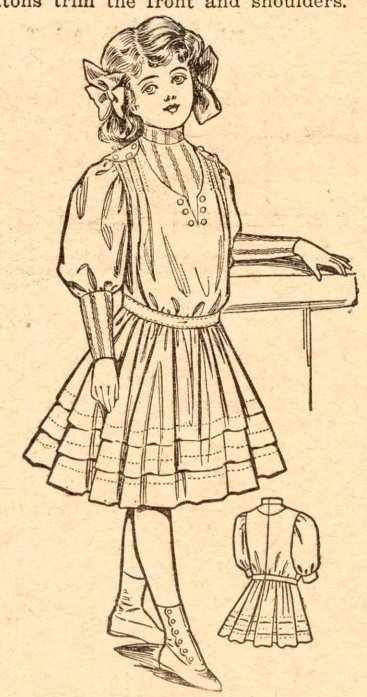
No. 2571

trims the lower edge, but if desired this may be omitted. A square pocket ornaments either side of the front, and the apron closes on the shoulders with button and buttonholes.

The pattern is in 3 sizes—32, 36 and 40 inches bust measure. For 36 bust the apron requires 4¾ yards of material 27 inches wide, or 3⅞ yards 36 inches wide.

GIRLS' DRESS

Made up in nut-brown Henrietta, with a fancy yoke and deep cuffs of brown-and-green striped silk, this frock is pretty and appropriate for both everyday and best wear. Three wide tucks on each side of the front, stitched to nearly the bust-line give the fullness required, and small flat brass buttons trim the front and shoulders. The



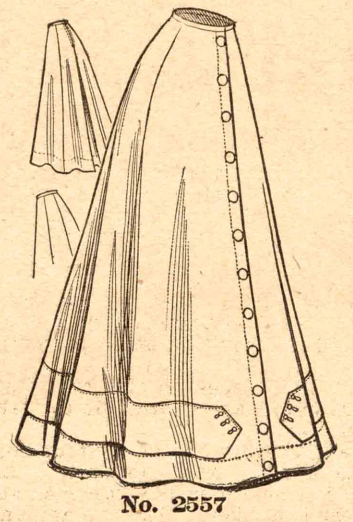
No. 2552

full skirt is gathered and attached to the waist under a belt of the material, two tucks being stitched just above the wide hem.

The pattern is in 5 sizes—6 to 14 years. For a girl of 10 years the dress, as illustrated, requires 3½ yards of plain material 36 inches wide, with ⅜ yard of striped material 36 inches wide; or, of one material, it needs 5⅛ yards 27 inches wide, 3¾ yards 36 inches wide, or 3⅜ yards 42 inches wide.

LADIES' SIX-GORED SKIRT

One of the fashionable model skirts, buttoning down the centre-front is here illustrated. It is adaptable to serge, panama cloth, tweed, cheviot, mohair, or in fact any material, and is made with an inverted box-plait or in habit style in the back. A wide



No. 2557

bias band of the material is set on as a trimming just above the hem, and this is trimmed with small buttons and loops of soutache braid.

The pattern is in 7 sizes—22 to 34 inches, waist measure. For 26 waist the skirt, made of material with nap, requires 8¾ yards 20 inches wide, 5 yards 36 inches wide, 4¼ yards 42 inches wide, or 3½ yards 54 inches wide; without nap, it needs 8 yards 20 inches wide, 4⅝ yards 36 inches wide, 4 yards 42 inches wide, or 3¼ yards 54 inches wide. Width of lower edge about 3¾ yards.

CHILD'S APRON

If made up in heavy tan linen, this little apron is very serviceable for school wear, and it is so simply constructed that the woman with only a slight knowledge of sewing will have no trouble in putting it together. The sleeves are cut in one with the front and back; the only seams being along the shoulders and at the under-arms. The wide sash ends, which extend from the under-arm seams are of the material. The square neck and lower edge of the sleeves

No. 2550

are scalloped and hand-embroidered with red embroidery cotton. The model may be developed to advantage in Persian lawn or nainsook.

The pattern is in 5 sizes—1 to 9 years. For a child of 5 years the apron requires 2½ yards of material 27 inches wide, or 1⅝ yards 36 inches wide.

Catarrh Medicine Free
Write To-day

Send your name and address and say you have Catarrh. I will gladly explain my new system of treatment and tell you how to cure yourself quickly at your own home. In addition I will send a months medicine free of charge to demonstrate that Catarrh of the Head, Nose or Throat or Constitutional Catarrh in any form can be cured. Thousands have already been cured. Many in one month. Others who have been afflicted 15 and 20 years were cured in two and three months. I want to cure you to introduce my new system of treatment in your neighborhood.
Send No Money This offer is fair and square; the acceptance of it places you under no obligation to me whatever. I simply want to show one sufferer in every community that I have the greatest treatment in the world for catarrh. If interested write to
DR. T. F. WILLIAMS.

FLOWER POST CARDS
Free to You
In order to introduce our large illustrated monthly, The Epitomist, which is of interest to every member of the family, we make this big offer to you.
Send 10c for a six months' trial subscription and we will send you, prepaid, twelve beautiful flower post cards absolutely FREE. These cards are strictly high-class and are something entirely new. Each card represents a scenic view and has THE LANGUAGE OF THE FLOWERS worked out most beautifully in mottoes in flower designs. For instance, in this series the violets spell out the words "Faithfulness;" the sweet peas, "Wish You Joy;" Chrysanthemums, "I Love You;" roses, "Love," etc. You won't be disappointed, for these cards are not like any you ever saw, and REMEMBER, we have a surprise for everyone that sends for these cards. There are only a limited number, so send today if you want them. THE EPITOMIST, 55 Main St., Spencer, Indiana.

"GRANDPA" SMITH TALKS ABOUT THE JOYS OF THE COUNTRY

"I know of a case of courtship-by-correspondence. Matrimony-by-mail you know.

"The woman thought the man had money. But after the honeymoon, she found that the dollars were about as rare as June Days in January.

"So, one morning she snapped, 'I thought you were well off, before I married you.' He said, 'I was, but I didn't know it.'

"I guess it's that way with a good many boys who want to leave the farm. They don't know when they're well off.

"I'm nearly sixty. Seen a good bit of life. In a good many different places. Went to college. And I've been around the country some. So my horizon is a little wider than this tawnship. I don't believe I'm 'provincial' in my way of looking at things. Just got back from six weeks in the city. Staid with my married daughter. And I say, the only place to have plumb good fun is out in the country.

"Take a city fellow. Slaves away fifty weeks in the year so he can have two little weeks in the country. But just the same, a red-blooded city man, if he can get out in the country along in the fall of the year, and get in a couple of weeks good shooting, he thinks it's mighty well worth working fifty weeks for. And, I guess 'tis, too. I guess these are the only two weeks he ever really enjoys himself.

"If you give a boy all the shooting he wants, I guess he'll never want to leave the farm.

"I used to have to work pretty hard when I was a boy, but by Jacks, the shooting I got along in the fall and winter was worth it all.

"Along after harvest, we used to have lots of quail and prairie chickens, They're scarce in some parts now—and the 'open season' ain't quite so long—but there's plenty of small game birds of other kinds.

"The first gun I had was a Stevens Rifle. And every gun I've had since has been a Stevens. They're the best guns I ever pulled trigger on. And I've handled a good many.

"With that little Stevens Rifle I used to fetch down a good many partridges, quail and such. I had a dog that was a dandy. And I tell you, we had to be mighty cunning and quiet, to steal up on 'em within rifle range. But getting within gunshot was all there was to it—that Stevens would sure shoot straight and far. And 'twas hard-hitting.

"I used to plug lots of rabbits, too. And chicken-stealing hawks. And crows that pestered the corn fields. Got a good many squirrels, too. My, but they were fine eating. I got a red fox now and then. And once a timber-wolf that had been marauding around eating young pigs.

"Then, when I was pretty well along in my 'teens, I got a Stevens Shotgun. Got it yet—hanging there on the dining-room wall. Used to wing lots of wild duck with that, along in the spring. Then in the winter I'd go up in the woods for a few weeks bigger-game hunting.

"I've got a keen shooting eye yet. Can bring down my bird with the best of 'em. Got one of the newest models Stevens Shotguns. I'm as hale and strong yet as a four-year-old colt. Never sick more'n a day at a time in my life. And I believe it's all because of that healthy tramping through woods and fields that I got with my gun and my dog when I was a youngster.

"Yes-siree-Bob. Let a boy have plenty of fun, with a good gun of his own, and he won't want to leave the farm.

"And if he goes to the city, he'll be more of a man—more able to make his own way.

"I taught every one of my four boys how to shoot. And there ain't any stronger or healthier or better men any place than my sons. They've amounted to something.

"And I'm teaching my grandchildren how to shoot, too. Boys and girls both. I sent and got a Stevens catalog—all about all Stevens guns. It tells you how to choose and care for a gun. 'Course I knew, but I wanted the kids to learn, too. I picked out a Stevens Favorite Rifle for one of the boys. It's a dandy—got a telescope sight. And I got a 'Crack Shot' for my other grandson.

"Then I got 'em both a copy of Dan Beard's book, 'Guns and Gunning.' It tells about everything you could want to know about guns, and about shooting and hunting. About woodcraft, about camping, about small game, and all that. And it costs only 20 cents for paper cover, or 30 cents for board cover. Any boy or any man can get a lot of good from it. I learned a good deal myself—and I've been a hunter all my life.

"I'd advise any farmer or any farmer's boy to send for the Stevens catalog. Just send 5 cents for postage to the J. Stevens Arms & Tool Co., 225 Grove St., Chicopee Falls, Mass. And it'll do you good to get and read Dan Beard's book, 'Guns and Gunning.'"

A HALLOWE'EN PARTY

When the end of October comes, the witch o' Hallowe'en is supposed to go sailing above your house, unseen in the sky above. Hanging is the fate that best befits this witch, instead of burning at the stake. Swing her up by a ribbon from your chandelier and invite in your friends to witness the execution.

But it is best to save this feature of the Hallowe'en party for the climax. Black cats and Jack-o-'lanterns go before as a sort of preparation. The rooms should be adorned with carved pumpkins placed on every convenient shelf. Let a black cat move about among the guests. Anything that will help to increase the wierd effect will add success to the party.

Keep the supper-room carefully closed until the proper moment, then throw open the door upon a wierd scene. The room should be darkened save for the candles burning upon the table. Above, in the flickering light, the witch is seen riding on her broomstick, her hair floating, her face wickedly grinning.

She is the simplest matter in the world if you look at her by daylight. You can buy at any toy-store what is known as an old-woman doll. They don't cost more than 50 cents. Then you can change the old-woman doll into a witch doll very easily. Loosen the gray hair so that it has the effect of floating in the wind. A pointed hat must be set rakishly on top of the gray hair, then pin a floating robe of black cheese-cloth about her. Of course, there must be a small broom projecting from the robe, which is the witch's inevitable horse. A black cat is perched upon her shoulder.

At the end of the supper, after she has served for decoration and merriment, strip the witch of her possessions and give your company a new surprise. First her cap comes off. It is a penwiper, and a useful one at that. A round piece of red velvet makes the brim. Sewed to this is a peaked crown of red velvet stuffed with cotton, the stitches covered with a band of ribbon. Two or three leaves of notched flannel are tacked upon the wrong side of the brim, and the penwiper is ready to stand upon a desk.

If the robe has been nicely hemmed, it can be taken by one of the guests as a dust cloth. The black cat which has perched on the witch's shoulder turns out to be a needle-cushion which can be used in any work-basket.

The witch's robe should cover as many souvenirs as there are guests at the party. One small pumpkin can turn out to be the cover of a stamp book. A pocket-mirror case is made of two pieces of pastboard like pumpkins tacked together at three sides. Slip the mirror between, first attaching a ribbon to pull it out. A bit of sandpaper pasted on the back of a black pastboard cat makes a handy match-scratcher.

The miniature broom is really a stick of sealing wax with a paper brush bound to it. This is made by cutting strips of brown paper to represent the old-fashioned hickory splits of the early-day broom.

If the main feature of your party is a card game, you can use the accessories of the witch as prizes. The old lady herself can serve as booby prize.

The Story of Bill Cheney

Is an interesting little narative in booklet form into which there is woven some real good horse sense about horse collars. A copy will be mailed any horse owner on request. Write Johnson-Slocum Co., 426 State St., Caro, Mich.

Minstrel
Popular
And
Love Songs
For
Home and Fireside

If you have a piano or organ in your home you certainly should have at least one of these folios. If anyone in your family sings, that is another reason why you need one of these folios. Possibly no one in your home plays or sings—wouldn't it be nice to be able to have a folio with fifteen or twenty popular pieces of music for friends who visit you?

THESE CONTAIN THE POPULAR SONGS OF TODAY—the songs that were popular when we were children—and that will never grow old. Songs for the little tots—songs for patriotic men and women.

Any folio sent free of all charges for one new or renewal subscription to UP-TO-DATE FARMING. If you can't use it yourself, surely some one in your home would be made happy by getting such a present.

THE TRUE HOME SPIRIT

System in housework depends upon promptness in doing that which is to be done. Like the tangled web of the careless knitter the work will go hopelessly awry if any stitch is dropped. Home work, the task of sewing and the various things to be done to serve those we love should not be despised by women. Some of the wisest and best women have delighted in these homely tasks.

* * *

This home work is made of small details, trivial in themselves, something which frivolous persons are apt to sneer at, but which the wise women respect, as stitches in the great web of home life and happiness. These home tasks are the highest of all, because wholesome, healthful existence depends upon them and all able work, of whatever kind, depends upon a healthful existence.

* * *

How many people are almost something, but not quite. Whatever is attempted, take no chances. Let us not drop a single stitch. Do not presume upon a single moment. Nothing is good enough that can be made better. No lesson is learned that has a single point not understood. Men hesitate to declare imperfection in any work, but so long as there is a known defect it is not ready to be laid aside. Almost is not near enough. Success turns upon other words. Life's issues are too great for almost. True it has stood between man and calamities, but it has intervened between him and so many victories, that we should never be content to stop at almost.

* * *

Did you ever visit an old house where old people live, where little work is done, where closets and rooms are seldom open, where the sunlight is shut out because the "carpet will fade"? Did you ever venture into those closets or rooms and move things about a little? If so, you have seen the animal life—tiny creatures start from papers, books, corners, old cloths and furniture. These are unclean, the result of shutting out the sunlight; the great natural disinfectant, the exclusion of fresh air, lack of cleaning. If a determined woman could throw open the window, and then use plenty of hot water and soap, or amonia, she would change conditions, but not at once and not entirely, for those close rooms breed disease conditions. We need, first of all, pure air, and plenty of it. Let it pour through your house. Screen the windows and doors, but do not shut out the air and the light. Let the soft warm air come in, laden with the perfume of the fields and the flowers. Let the beautiful sunshine fall across the carpet. Many country houses have a damp, cool, musty atmosphere. This is because the windows are kept closed. This is one of the queer things about a great many country people. They have all out-of-doors at their disposal, all the delicious, fresh, life-giving air, and they shut it out of their houses. It's just like everything else—we don't appreciate what is ours for the asking or the taking.

If you are going to get a new piano or organ this fall be sure to write to Lyon & Healey, 80 Adams St., Chicago, for their prices. This is the largest music house in the world.

Friendship

True friends can never alter,
True friends never die;
The false alone can falter,
The false alone can fly.

True friendship is the jewel
Upon the hand of love;
The unconsuming fuel
That feeds the fires above.

It burns but leaves no ashes,
Weaves rainbows through our tears,
And flings a flame that flashes
Across eternal years.

Indianapolis

20 American Girls Free

This set of beautiful Souvenir Post Cards is considered the most popular set of post cards ever issued. They represent, in color, the most beautiful type of womanhood—the American Girl. *Twenty different views of her, each fit for framing.* Some of the types are: The Country Girl (alone worth the entire set), the City Girl, Western, Southern and Eastern Girl, and other types.

If you collect post cards, your collection is sadly incomplete without this great set. Send them to your friends.

My Special Offer

Send me one new 3-months' subscription and I will send you *one complete set of American Girl Souvenir Post Cards.* If you take advantage of this offer within ten days, I will also include your name as a member of the Post Card Exchange, and send you a list of collectors from all over the United States who want to exchange cards.

Remember, twenty Souvenir Post Cards, (American Girl Series), a membership to the Post Card Evchange, for one new three-months' subscription to UP-TO-DATE FARMING at 10 cents (stamps or silver).

GARRETT WALL
Subscription Mgr. UP-TO-DATE FARMING
Indianapolis, Ind.

F. S. of E. OFFICIAL DEPARTMENT

THE FARMERS SOCIETY OF EQUITY

Headquarters, Indianapolis, Ind.

As its name would indicate, this is a farmers' society. Its organized forms are a National Union, State Unions, County Unions and Local Unions. Also Department, Section and District Unions are provided for controlling and marketing the various crops. Particulars for organizing the various unions will be sent on request.

MEMBERSHIP. The membership of the Farmers' Society of Equity shall consist of farmers. By farmers we mean people who are engaged in the vocation of farming or who own land on which crops are produced. (To be *also* engaged in merchantile business, manufacturing or the professions does not disqualify a farmer, or one who owns land on which crops are produced, from joining the F. S. of E.)

SPECIAL MEMBERS. First, an exception to the rule regarding eligibility for membership may be made by any local union by a majority vote of its members at any regular meeting. It can in this way elect any one of good character, not a farmer, to *special* membership in the local union on payment of the regular fee, but such special members must never be elected or appointed as delegates to conventions of higher unions. The object of this is to always keep the management of the Society in the control of farmers themselves.

Second, wives of members and daughters of the same may be admitted to *special* membership without the payment of any fee, also male children between 14 and 21 years may become *special* members in the same way. These *special* members may retain membership without the payment of any dues, but on reaching his majority the male members can only retain membership by paying the regular fee.

MEMBERSHIP FEE. The fee to join the F. S. of E. is $2.00. This is divided as follows: The local union retains 25 cents. The balance is sent to headquarters and 50 cents is paid for the official paper one year to the member; $1.00 goes into the organization fund and 25 cents, or as much of it as is necessary, will go to pay the general expenses.

ANNUAL DUES. Each member must pay Annual Dues of $1.20. This is payable when a year has elapsed after first joining, and annually thereafter. It is apportioned as follows: The local union may retain 35 cents and send 85 cents to headquarters. This will be used, 50 cents for the official paper and 35 cents, or as much as necessary of it, to meeting general expenses and extending the Society.

AFFILIATION. Local, county and State unions, now organized, of societies under any other name will be chartered by the Farmers Society of Equity on resolutions passed by a majority of members or delegates. Unions thus affiliating will be chartered free on remittance of the dues as above. Provisions will be made for the support of State and county unions so affiliating and their activities defined. Supplies and a seal of the F. S. of E. will be furnished free on report of annual dues.

REMARKS. Ten (10) or more eligible people may organize a local union by electing a president, vice-president, secretary and treasurer, and reporting it to headquarters. Blanks will be furnished on request. Members will receive the official paper (UP-TO-DATE FARMING) one year from the time the report of their membership is received, or one year from the time their annual dues were payable. They are advised to watch the date on their subscription label and if there is any delay in receiving paper, or changing date in the case of paying dues, please report to headquarters. Promptness in reporting will be required from all secretaries and organizers. ¶ *Write Plainly.* If you cannot, then print names and addresses or get some person to write who can write plainly. We must *guard against errors* if every person is to be satisfactorily served and our Society is to quickly accomplish its great and good objects.

OBJECTS. The FIRST and chief object of the Farmers Society of Equity is *to obtain profitable prices for all the products of the farm, garden and orchard.*

The SECOND great object is *to have built and maintained granaries, elevators, warehouses and cold storage houses on the farms, in principle market cities and in all localities where surplus crops are raised, so that farm produce may be held and controlled for profitable prices, instead of being dumped to pass into the hands of middlemen and trusts.*

OTHER OBJECTS. The F. S. of E. also has many other objects, but they must all wait on the accomplishment of the first. Also all farmers may as well understand that the *first* object depends largely upon the accomplishment of the *second*, because crops must be controlled before equitable, and always profitable prices can be secured. To control the crops, the facilities to control—store—must be provided. Therefore it is important that *a granary be provided on every farm that produces a surplus of grain and an elevator or warehouse be built at every shipping point.*

OFFICERS

President—W. H. Mitchell, Hutchinson, Kan.
Vice President—J. A. Everitt, Indianapolis.
Secretary—I. C. Rous, Indianapolis.

Send all reports, and address all communications to

FARMERS SOCIETY OF EQUITY,
Headquarters, Indianapolis, Ind.

LABEL TRADES UNION COUNCIL 33

NOTICES

LOCAL UNIONS. The Farmers' Society of Equity has ready for delivery a complete assortment of blanks, forms and instructions for the use of local unions. If your union has not received them please apply to headquarters at once. Price 50 cents, postpaid.

ORGANIZERS. Send us the dates of your meetings at least 10 days before the date of the paper you want them to appear in. Also send for report blanks, etc.

ADDRESSING. Always address communications and make all remittances payable to the *Farmers' Society of Equity* and not to individuals.

If your business is with the Society, always make money orders or drafts *"to the order of Farmers' Society of Equity,"* and not to any individual. If with the publisher of this paper, make them *"to the order of Up-to-Date Farming"* and not to any individual.

Members' buttons for F. S. of E. cost secretaries and organizers 1 cent each. A supply should always be kept on hand for delivery to new members. The same way with members' cards and fee and dues stamps, which will be sent on request without advance payment.

For Equity Stand

Mrs. S. E. Sowers, Henryetta, Okla.

Loyal to our society, we must stand
Heart to heart and hand to hand.
A band of brothers, brave and true,
Converted to Equity, through and through.

Proof we have had and abundance at that,
That we should stand for Equity, frat.
A bomb was thrown but missed its aim,
To destroy the farmers' friend was the game.

Thank God truth will rise in spite of all,
"And the sheep knoweth the master's call"
Come all ye wanderers back to the fold,
And your efforts will be crowned with gold.

You have toiled and toiled in sorrow and pain,
And too long your masters have reaped your gain.
Tired, tired you must be and surely can see,
You are bound in shackles and no longer free.

You drive your products to town and are dumb,
While the exploiter prices your goods and steals the last crumb.
Arise, awake and be no longer a slave
"In the land of the free, the home of the brave."
God keep our society in the hollow of His hand,
Help us carry out its objects, and for Equity stand.

In the September 15th number we referred to a "Supplement". It was not ready to mail with that number, but is mailed with this.

Every subscriber should read the supplement carefully. It IS THE TRUTH. Read particularly the article, "The 1908 Convention," and if you know of any delegate going to the Milwaukee convention, see that he gets this supplement with that article marked.

* * *

The report from the Illinois State Convention in this number clearly shows that an attempt is being made to have a made to order convention at Milwaukee as was at Indianapolis last year. This is the only way Drayton and his crowd can hope to continue in control of the society. They know they must pick their delegates, man by man, and pledge them to carry out their plans.

We don't like to refer to the unfortunate troubles in the society dating back more than a year, and we know our readers are tired of them also. The near approach, however, of the Barnett-Pauley convention and the fact that many of the delegates to that convention are being selected from amongst the members who have not had an opportunity to learn the true state of affairs, is our excuse.

We don't like to see the people deceived and then used to defeat what should be their dearest objects. And this is exactly what will be the result if the designs of Drayton, Pauley, Emmerton, Jones, et al., are accomplished. These people have demonstrated their absolute incompency, as managers of the society, besides they have engaged in practices that should forever forfeit to them the respect and confidence of honorable people.

In the Milwaukee convention they think they see an opportunity to have their course endorsed and thus give them another year to carry out their conspiracy. Or, it is possible, these people will retire. In that case the plan is to continue the campaign through their successors.

This latter theory will probably prove correct. We know of some new talent in training now. Delegates need not be surprised to find the slate ready made when they reach Milwaukee and all they will be expected to do will be to vote for what the leaders put up.

We have a practical illustration of their tactics in the report from the Illinois State convention. Think of President Drayton nominating two of the delegates and three of them being chosen from his county and two from the county of the secretary out of a total of six selected. Do you think all the other counties would have been ignored if there had not been a scheme to carry out? One of the delegates said, "Drayton was mighty cute."

And these six delegates is all Illinois will have in the national convention. Seven county unions without direct representation. But this beautiful scheme will be understood better from reading "The 1908 Convention" in the "supplement."

The question naturally arises whether the 1907 by-laws defining representation was the result of stupidity or a deliberate act. Referring to February number of their paper—Equity Farm Journal—on page 5, the editor wants the members to believe it was a stupid error. We quote as follows

REVISED CONSTITUTION

Much literature has been circulated among the members pertaining to the revised constitution. Many insinuating inferences have been drawn. All that has been said is wholly lacking in foundation. The sole purpose probably is to confuse and misinform the members in order that the publisher of UP-TO-DATE FARMING might procure a few additional subscribers.

It is well known that in all deliberate bodies when weighty things are discussed, they not only move slowly, but sometimes work inaccurately. This was particularly the case at our recent Convention, where there was so much to be considered. The Committee on Constitution, of which Mr. Peckham of Kansas, was chairman, consisted of one delegate from each state, and they did as well as could have been expected under existing conditions. Of course the revision should have been turned over to some competent person to see that is was consistent in every particular. This the said committee evidently failed to do, and when it was read before the convention no one thought there was anything wrong with it—not even the author of the misleading circular entitled "A Review of the New Constitution."

To say that the constitution was tampered with is emphatically denied. It would have been much wiser for one or two of the men of that committee to have seen to this matter before it was brought before the Convention rather than try to make capital of it at this late day.

If the reader will take the trouble to write to Mr. Peckham at Haven, Kan., he will tell you that the committee did not report the revisions as later published. Is it not more reasonable to conclude, in view of all the developments, that the by-laws were manipulated by somebody who wanted to prevent a general representation at the 1908 convention so the convention could be positively controlled by a few leaders?

Will the delegates be their dupes?

* * *

Something was said in the Illinois convention about the official paper, and it was given out that there would be no official paper for five or six years. This is a great flop in a year, as twelve months ago these same people risked the very existence of the society on the official paper. But what do they care for the society except as they hope it will serve their purposes?

A year ago they told the convention that the society would go to the dogs unless UP-TO-DATE FARMING was turned down and a new paper started. Many of the delegates took their word for it and the program was put through. Ever resourceful, the same crowd will go to the Milwaukee convention and claim that the society does not need an official paper, or, possibly will advocate making any paper an official organ that asks for such an honor. (?) Either proposition is a departure from the original plan, and it's difficult to tell which one would prove fatal the quickest.

* * *

Many things said by these people and printed in their official paper are amusing, viewed from the present standpoint. For instance in their February number was this:

UP-TO-DATE requires ten days after the forms close to get out and mail its issue. We are guaranteed by our printerc that within three days after we hand the the last copy every paper will be in the mails.

So much for their theory. In practice, as the readers know, they rarely got a number out until the last of the month of issue or in the next month.

Notwithstanding nothing would satisfy the Drayton crowd but publishing a paper, it has not been a month since they offered to sell their paper to the publisher of UP-TO-DATE. This was a desperate move by desperate people to raise money to pay their indebtedness and save them from exposure to the members of the society. We declined to consider their offer, prefering to let them drink the cup of their own filling to the bitter dregs.

Delegates will probably hear about the debt of the official paper at the convention.

* * *

We have left nothing undone to prevent two conventions, or a convention representing only a part of the original membership, but without avail. We suppose the Milwaukee convention will be held and we should not care much, as, we consider that nothing they can do can be of any force or binding. But we do regret the complications it will add to an already complex problem. We yet appeal to the delegates to that convention to consider carefully if it will not be for the best to refuse to participate in that convention and join in the mass convention for ALL THE MEMBERS.

This is a serious matter. At the very best it means the full original membership through the mass convention, or about one third of the membership through the Milwaukee convention. But this third cannot be held. Illinois has now almost unanimously repudiated Drayton and his followers and the same thing is bound to occur in every one of the states that were counted on their side.

And it will be the same if the present leaders retire and are succeeded by officers of their selection.

* * *

The only practical solution of this problem must come through a positive repudiation of all the people who were connected with the conspiracy, and a mass convention for reorganization. So we might put the broad question: Do you want the American Society of Equity and all that it means when established throughout the country? The answer to this question will be given in your attitude toward the two conventions.

* * *

In conclusion we will say again, if you know a delegate to the Milwaukee convention, put this matter squarely before him so he may be in a position to work and vote intelligently.

And may a wise Providence guard and watch over our society and bring it to a full fruition in his own good time.

SAVE YOUR BRAIN $1.00
An Adding Machine for

A MODERN BUSINESS NECESSITY 98765

A practical, simple, rapid, accurate, handy and durable machine that makes adding a pleasure instead of an exhausting mental strain, a time and labor saver. When you get to the bottom of a column of figures you will know they are added correctly. Why ponder over figures? Let steel brains do your work. A triumph in mechanical construction and simplicity, a little machine that nearly everyone needs and is in the reach of all. It will pay for itself six times a week for every week it is in use. Farmers, Merchants, Mechanics, everyone who has adding to do wants them. Avoid errors usually made by a tired brain. Try a column of figures like the following, in the old way, and then try a $1.00 adder and see the difference in time and labor. 56789 54324 43245 98765 34567 45678

They are gotten up in good style, being nickl finish with solid steel wheels put together with eight heavy brass rivets, show good value for the money, and will do all that we claim for them, two years guarantee with each machine and positively as represented or money refunded 56789

MEETINGS AND CONVENTIONS

OCTOBER 27, 1908—Sixth Annual Convention of the American Society of Equity (F. S. of E. branch as representing the second convention), at Indianapolis, Ind. I C. Rous, Sec., Indianapolis, Ind.

Kansas State Annual Meeting American Society of Equity

The Third Annual Meeting of the Kansas State Union, of the American Society of Equity, will be held at Wichita, Kansas, beginning Wednesday, Oct. 14th, 1908.

Experience has demonstrated that the objects of the American Society of Equity are practical; the principles are correct, and the practice easily attainable. The idea is in the minds of all the people.

There is now, nothing lacking but united action on the part of producers. The society must be reorganized, nationally, on practical business lines. Can we depend on you to send a large delegation to the State Meeting to do your part toward the securing of profitable prices for farm products? Inasmuch as the society was demoralized by treasonable action at headquarters a year ago and in consequence many have not paid their dues, this will be a mass convention, and all are invited to attend and participate in one more effort to make the A. S. of E. what it was originally intended to be—a medium whereby the producer might name the price on his own products.

Do you want the organization to live?

Do not wait to see what will be done, but YOU come and help to do what SHOULD be done. State officers will be elected for the ensuing year and delegates chosen for the National Convention October 27th, at Indianapolis, Ind. The destiny of the organization is now in the hands of its friends. Each friend is urged and expected to secure a large attendance.

L. P. KING, President,
C. W. PECKHAM, Secretary.
Kansas State Union, A. S. of E.

Michigan Ladies' Society of Equity

STATE MEETING CALLED

The Michigan Ladies' Society of Equity will hold their first annual meeting at Traverse City, on October 1, at 10:30 a. m.

All M. L. S of E. locals are requested to send delegates and all farmers' wives and daugters, loyal to the cause of Equity, and willing to help in this great work, are cordially invited to attend this meeting. Come and learn about the Michigan Ladies' Society of Equity. They stand for the advancement of the farmers' wives and daughters.

Election of officers and members of the board of directors will be in order at this meeting. Michigan farm women, this is your society, come and learn how it can and will benefit you.

MRS. JAMES HOWEY, Pres.

STATE MEETING MICHIGAN UNION

ILLINOIS STATE FAIR, September 25 to October 2, at Springfield, Ill. It may be superfluous to urge our readers in Illinois to attend this great fair, as it is so good and popular as to attract all the best and up-to-date farmers and has come to be a *habit* with them to "go to the State Fair." We, however, feel under special obligations to the liberal and broad people constituting the Illinois State Board of Agriculture under whose auspices the fair is held, and we take pleasure in aiding in any way we can to make their fair the greatest possible success.

When you arrive on the ground seek out our representatives; Mr. Frank J. Markert, from Chandlerville, Cass County, and Wm. Estill, Fancy Prairie. They can be located through the secretary.

The Coshocton, Ohio, County Agricultural Society will hold its 27th Annual Exhibition from October 6th to October 9th.

Any of our readers who expect to attend the Exhibition will do well to look up our personal representative, Mr. Geo. B. Dickert, whom you will be able to easily recognize by the UP-TO-DATE FARMING ribbon badge attached to his coat.

OUR strength grows out of our weakness. A great man is always willing to be little. Whilst he sits on the cushion of advantages, he goes to sleep. When he is pushed, tormented, defeated, he has a chance to learn something; he has been put on his wits, on his manhood; he has gained facts; learns his ignorance; is cured of the insanity of conceit; has got moderation and real skill. The wise man throws himself on the side of his assailants. It is more his interest than it is theirs to find his weak point.—Emerson.

A little help on the part of our subscribers will help UP-TO-DATE FARMING in its fight to secure good prices for its readers. Help along the good work by sending us a club of four new subscriptions for $1.00.

MICHIGAN LADIES SOCIETY OF EQUITY

Officers—President, Mrs. James Howey, E. Jordon; vice-president, Mrs. C. A. Masten, Sherwood; secretary, Miss Julia Ball, Hamburg; treasurer, Mrs. Matthew Hamilton, Williamsburg.

NOTES OF THE ORDER

Michigan Rose Local No. 3, met Sept. 8 with Mrs. F. Kidder, president, in the chair. Officers all present and one visitor—Mrs. Rosa Enns of Finkton. Song—Equity for All. Mrs. Frank Kidder was selected to represent the local in the State convention at Traverse City, Sept 30th. Also it was agreed to visit Local No. 2. Next meeting to be with Mrs. John Craners.

Forget-me-not Local met August 20 with Sister Crowell. A number of aprons are to be made by the members and sold. The proceeds to go to the local. Four visitors were present. Following the meeting a fine lunch was served.

Forget-me-not Local also met on Sept. 9 with Sister Balser. Among those present were the State and County presidents. Delegates were elected to attend the State convention at Traverse City. Three visitors present. Adjourned with prayer to meet in two weeks with Mrs. Batterbee. A fine supper was served after the meeting.

Not a False Alarm

The mischevous boy of the family had taught his gray Parrot to repeat many short but startling phrases, among the rest to holler "Fire! Help!" when the boy played with his toy fire-engine indoors.

Late one afternoon the silence was broken by shrill cries of "Fire! Help!", etc., but the members of the household supposing the noise came from "that parrot broke loose again", paid no attention to the outcries until the alarm was rung in and the engines came and flooded the basement, from which smoke was pouring, and two plucky firemen rescued the gasping cook, who was nearly suffocated in her vain efforts to put out the fire, while calilng for help.

When the family tried to explain that they thought the cries came from the parrot, and the cook had owned up that she was polishing the stove with a fluid stove blacking, the man of the house remarked vigorously: "Hereafter, either kill that parrot, or use X-Ray Stove Polish—the best and safest fireproof stove polish ever made."

What He Said

Attorney—I insist on an answer to my question. You have not told me all the conversation. I want to know everything that passed between you and Mr. Gibson on the occasion to which you refer.

Reluctant witness—I've told you everything of any consequence.

"You have told me what you aid to him: "Gibson, this case will get into the courts some day.' Now I want to know what he said in reply."

"Well, he said: 'Chumley, there isn't anything in this business that I'm ashamed of, and if any snoopin, little hee-hawin', four-by-six, gimlet-eyed lawyer, with half a pound of brains and sixteen pounds of jaw, ever wants to know what I've been talking to you about, you can tell him the whole story.' "—Tit-Bits.

Wheels for Farm Wagons

Farmers whose wagons are in good condition, with the exception of the wheels, can, at very small expense, make them better than new. All that is required is to remove the old wooden wheels and put on a set of steel wheels. No warping, cracking or dropping of tires. Sun and stormproof, they will last a lifetime.

Every farmer is interested in this subject. To find out what a set of steel wheels will cost, and to learn all about Farmers' Handy Wagons, write to The Empire Manufacturing Co., Box 68AH, Quincy, Illinois, for a copy of their booklet on wheels and wagons. This booklet is a veritable encyclopedia of information on this subjects, and will prove of interest to every reader of this paper. It is mailed free.

Hernia

One of the most distressing complaints that afflicts mankind is Hernia, commonly called rupture. Hernia is not a breaking open of the abdominal walls as might be supposed from the name, but it is a tsretching or pushing out of their natural place of the intestines at or near a natural opening. It is said that about one-fourth of the men in this country are suffering from this complaint, besides many women. Trusses are commonly used for Hernia, most of them consisting of a pad with leather straps, or strong springs, to hold the pad in place. This presses on the ruptured part, holding the intestine back in its place. They are always uncomfortable, and in many cases the pressure is so great that they are extremely fatiguing and even painful.

Not long ago a German specialist invented a new device which seems to be a marked improvement over the old truss. It is a plaster pad which is not held in place by the machinery of straps or springs, but is made to adhere to the body closely by an adhesive substance and keeps closely to its place. In the pad itself is a curative preparation, which is absorbed through the skin to the ruptured parts. It is well known among physicians that medicines may thus be imbibed and it is used in many diseases. But this combination of the plaster pad with imbibition of curatives from the pad is comparatively new, and it is undoubtedly a long advance over the old methods.

Woman's Companion Coupon

This coupon is good for

One Woman's Companion Outfit

containing 266 everyday articles, including a full variety of high-grade needles—darning, wool, yarn, carpet, button, etc.—all silver steel, will not bend. Also hairpins, best quality, and a large assortment of toilet articles.

To secure this splendid outfit *send me this coupon* together with one new yearly subscription to UP-TO-DATE FARMING at 50 cents, or, better still, three new three-months subscriptions at 10 cents each.

Garrett Wall

UP-TO-DATE FARMING
Indianapolis, Ind.

Many farmers would no more try to get along without their gas engine than they would without a cream separator. It is just as great a money-maker—and that is saying a great deal. The Charles A. Stickney Co., St. Paul, Minn., make all kinds of engines. Write for free catalog.

Don't fail to send for the catalog of the DeLoach Mill Mfg. Co., Box 850, Bridgeport, Ala., if you want a saw mill or wood working machinery. They are right in the lumber district and have made standard mills for years.

Your Subscription Has Expired

If the square to the left is marked with a "X," it is to inform the subscriber that his subscription expired with the last issue before this and should be renewed at once to insure receiving this paper without interruption. The renewal price is 50 cents, which pays for one year. We will gladly accept $1.00 for four subscriptions of which yours may be one, the other three new ones. A renewal blank is sent in this paper.

If the square to the right is marked with an "X", it is to remind you that your subscription has expired and remains unrenewed although you have been already notified. We don't want to lose a single subscriber, hence this second notice, and hope now to receive your renewal at once. See terms for a club in notice above.

If your renewal is not received in ten days we will assume that this mark escaped your notice and we will then send you a *personal* letter. We hope now to receive your renewal and make the letter unnecessary. A renewal blank is sent in this paper.

I WANT MY SCALE ON EVERY FARM

And I want to tell you why you should own a scale and do no more guessing, I want you to feed your stock by weight. I want you to buy and sell and loan everything by weight. I also want you to have my offer before buying. For 43 years I have been fighting the scale trust. I was the first man to **sell to the farmer on trial,** and to ask no pay until my scale was tested. I was the first man to sell on easy payments. I was the first to **pay the freight.** I am today the only man who makes a **reliable,** high grade, warranted Pitless Wagon Scale, sold at a low price, **on free trial** and **easy terms.** Write me for my **"Reasons Why I Should Buy a 'JONES' Scale."** I will send it free.

"JONES, He Pays the Freight"
Box 1531 Binghamton, N. Y.

Don't fail to take advantage of this greatest of great offers. SEND 25c FOR THREE POSTPAID. Our big list of books sent free with every order.

COONER & FORTUNE CO., - - - INDIANAPOLIS, IND

ILLINOIS STATE CONVENTION

The following report was made by Mr. Jesse T. Groves,, Secretary, P. O., Barnett, Ill., of the Illinois State convention meeting at East St. Louis, Ill., September 12, 1908:

MR. J. A. EVERITT,
Indianapolis, Ind.

Dear Sir:

I have just reached home from the Illinois State convention held at East St. Louis, Sept. 12, 1908.

I was a delegate to that convention from Pleasant Point Local Union. I have been the secretary since our local was organized on Dec. 26, 1906.

When the present acting officers of the American Society of Equity were elected last fall, we were instructed to stay with them and to my regret we did.

You may think I am a long time finding this out, but I saw enough at that convention last Saturday to turn any man that wishes to do right, and who desires to stand by the farmer's friends and for the farmer's interests.

The State convention was my first real opportunity to closely examine both sides of the great question before us, and I was not the only one there displeased. The convention was a fixed (Staats-Drayton) affair in my opinion.

I for one am done with the acting A. S. of E. officers, and the society under the present controlling powers. There will be a called meeting of our local union to-night and I will make my report to it. Also there will be a called meeting of the Macoupin county unian September 19th, at Carlinville, to take up the proceedings of the State convention. I will report to the County and I look for a red hot convention at that time.

What are your terms to take our members into your faction of the organization?

There has not been a local organized in this county since J. A. Everitt was removed from the direction of the society, but the society has been slowly dying out.

From notes I made at the State convention, I send you the following report:

Meeting called to order by C. O. Drayton, State President, L. N. Staats, State Secretary, acting as secretary. Mr. Staats read the proceedings of the preceding meeting.

From Mr. Staats' report it is learned that the number of members in the State is 1213, locals in the State 56, county unions in the State 10, largest local union in the State, Bond County Local, No. 2013, at Greenville; number of members in this local, 108.

There was a $10.00 banner to be presented to the local having the largest paid-up membership. Of course, Drayton wanted the banner and so he combined all the locals in Bond County into one local at his home town, with the exception of three, and that's how he got the banner. Madison County delegates reported, after they were on to the trick, that is they had known that would be allowed, they would have done the same and get it themselves, or Macoupin County would have had a good chance to win it, but we did not feel that it would be an equitable transaction and fair to our neighboring counties.

Before bringing up the matter of the official paper, I spoke to Mr. Drayton and Mr. Staats, and they both advised me not to go back to my county and report anything that would injure our society, but I told them emphatically that I was a delegate from my county and that it was my duty to report everything that took place at the meeting, that concerned the society, and that was exactly what I would do.

When the matter of official paper came up in the convention, Mr, Staats declared before the convention, that we *might* get the September and October issues of the Equity Farm Journal, but after that we would not get any more. I asked for information—what will be done with the money we sent in through our dues to pay for a year's subscription to the paper.

Mr. Staats said that it was retained at headquarters till the end of the year.

A delegate from St. Clair County arose and said that if we were promised the paper, it was ours, and as it was going to quit coming, he was afraid that our society would not stay together very long. He also said that they had the second largest county membership in the State; that they had been patient with the publishers of the Equity Farm Journal and thought that when it started coming with the last of the month, that as it got older it would be issued more promptly and would come nearer the first of the month, but instead of that, it got worse and now we are told that we will get no official paper at all, and furthermore, we are now told by our officers that they think we will not own an official paper of our own for four or five years. I have worked hard for our society until we have the second largest number of members of any county in the State, but I have quit trying to get new members altogether.

Mr. Coleman, of "Coleman's Journal" was called on to address the meeting and responded. He said:

"Mr. Drayton and Mr. Staats have been over to see me, but I was out, so I came over to this meeting." Continuing, he invited all the A. S. of E. members to subscribe for his paper at 50 cents a year, which he represented would only pay for the paper itself. If we would do this, he would then donate a page or two in the paper to society matters.

Mr. Drayton said, that as far as he was concerned, he would just as soon take Coleman's paper as any one, and this, I believe, was all the expression that was procured on the paper proposition.

When it came to selecting delegates to the National convention at Milwaukee, Mr. Drayton himself made two nominations while acting as president. The delegates selected were three from Bond County, (Drayton's county), two from St. Clair County, (Staats' county), and one from Macoupin County. All the other counties were left out.

I know that it would have been impossible for every county to be represented on account of the national by-laws which provide, according to the Director's interpretation, for one delegate for each two hundred members in the State, and our membership is down to about 1200, it leaves us only six delegates when there are ten organized counties, but what we cannot understand is, why Bond and St. Clair Counties should take five of the delegates, unless the Milwaukee convention is to be a repetition of the first 1907 convention at Indianapolis. Madison County, especially, should have had a delegate, but they were not even considered. This county is on the verge of dissolution, and why not, when they were third largest in the State and no representation. You may wonder why Macoupin got a representative, but Staats and Drayton knew beforehand that it would not do to send all the delegates from their counties, so before we balloted, we made a little talk, asking them to please remember Mr. George Rhoads of Carlinville.

I will relate an incident of the meeting as follows:

When the convention was in session, a newsboy came in and gave the delegates a paper, which proved to be the "Supplement" to UP-TO-DATE FARMING. As soon as Drayton realized what it was, he said: "Let's get these out of here and order them burned." But some one said: "Let's read them and see what they contain."

I arose and addressed the chair and made a motion that all who did not want the paper should hold them up and let a man collect them, which was passed. Most of the papers went into the coat pockets of the delegates.

Some discussion was had regarding the 1907 convention, and the new law regarding representation in the national convention, and a motion was passed, "that our State delegates try and change this law so that all counties may be represented in the national convention." Another resolution adopted was to the effect that the members want a weekly paper after the next national convention to reach the members promptly.

The following is the financial statement:

Money in treasury Oct. 11, 1907...$	328.79
Money received from Oct. 11th, 1907 to Sept. 11th, 1908.....	1406.60
Total .....$	1776.39
Expenditures for the year.....	1634.72
Balance on hand Sept. 11, 1908....$	101.66

Expense of the State meeting being deducted leaves a balance in the treasury of $71.36.

This report is necessarily incomplete as I could not record all of the proceedings.

JESSE T. GROVES.

(A year ago Secretary Tubbs reported members in good standing in Illinois, 3,244, and local unions 156. The reported statement by Staats that the money for the official paper is being retained at headquarters is probably not correct, because Secretary Pauley testified under oath a few weeks ago that there was only $60 to $75 in the treasury.—Ed.)

What is "Soil Culture"?

What is The New System of "Scientific Agriculture"?

Nothing more than judgment and common sense shown in handling the soils of our western tracts so that the rainfall may be held for immediate absorption by the root fibers of growing crops. It's a system that every farmer—East, West, North or South—can profitably follow. It is the very essence of practical agriculture. It is a distinct revelation to Eastern and Central State farmers who have been depending on 24 to 30 inches of rainfall yearly. They wonder how our Colorado "Scientific" farmers can gather such remarkable crops on lands once called "half deserts."

Happy Prospects. Denver is rubbing its eyes, stirring itself in wonder, gazing in admiration at the great tracts bursting into green and growing crops of alfalfa, corn, wheat and fruits, etc. (*Explanation of cuts below.*) White-faced farm houses, broad-gabled barns, bowing maples, pink-blossomed orchards, dairy farms, wheat and corn fields greet gladdened eyes at every angle. Campbell's "Soil Culture" is making wealth for Colorado farmer and manufacturer, for merchant and implement maker, for mail order concern and local merchant.

"Young Man! Go West," said Horace Greeley. Within a decade or two there will be little "West" left. Hundreds of thousands have heeded the call of the early fifties. Thousands now are heeding our call.

"Hurry to Colorado" Now

Buy with a few hundred dollars one of the cheap tracts now so generously offered. Start to be independent. Have a home of your own. Come! Breathe the lung-invigorating, health-giving ozone of Colorado. Enjoy the gladdening sunshine. Get more gladness out of life next to the soil. Plant trees, orchards, lawns, watch them grow as you nurse and tend them. Be free!

Start Small. You can start on a small acreage—40 to 80—at prices running from $8.50 to $16 per acre. We don't insist on all cash. A fifth or smaller part is sufficient if you are a settler.

Location. The Bijou Ranch is only 42 miles from Colorado Springs, 65 miles from Denver, 5 miles from two easily reached railroads—the Union Pacific and Rock Island. A new branch of the Rock Island has recently been surveyed straight thro' the property.

Crops. Alfalfa roots and grows rapidly, sucking up through its great "root pipes" the "sheet water" which underlies the Bijou Ranch. 35,000 acres overlay this great supply of moisture that comes as near as 6 feet to the surface. This is not a lake or open cave, but is the under-soaking of the melting snows from the "earth ridge" formed by the Eastern slopes of the Rockies. This water is easily, in most places, reached by the average hand pump. Corn, wheat, sugar-beets, oats, speltz, rye, potatoes, barley, fruits of all kinds, vegetables, grow readily under this system of Scientific Agriculture.

Book Free. Our new free book fresh from the press is described below and tells why you'll be glad after you "Hurry to Colorado." Send for it now.

Explanation of Cuts Below.

Photo at left. These are stacks of Alfalfa on the farm of D. J. Shearer. Photo at right. An enormous potato field—40 acres—harvesting over 8000 lbs. to acre—320,000 lbs. in all and sold on the ground for $3200 00.

"Hurry to Colorado" Now

Here's a fast passing opportunity. Here are cheap lands, fertile soil, railroads, possibilities for great increase in land values, healthful climate, schools, etc. Embrace this chance. Do it now. Get in line with hundreds of others. Send for our new book—free, yet valuable—"The New Colorado." It's a question-answerer. Shows ten-inch map of location of lands, distance from great centers, markets, shipping points, schools, churches, etc. It tells how much money you'll need to get started; how to figure profits; describes the glorious climate with its sunshiny days and life-renewing nights. This book explains what "Soil Culture" is and why it is forcing Colorado to the front as a wealth-producing state far ahead of its gold and silver mines. You learn in this book about soil, water, markets, schools, profits, crops; how to plan, what to buy, how to reach the ranch and its free board and lodging, etc., etc. Send now for it, to Dept. 39

The Farmers Land & Loan Co.,
145 LaSalle Street,
Chicago, Ill.

HOLD ON TO YOUR MONEY

Don't Spend a Penny

until you are certain you are getting GOOD VALUE for it. In these times every man and woman must be careful of their money, must hold on to it and NOT WASTE A CENT. Sick people should BUY NO MEDICINE unless they feel sure it will give them more than their money's worth in benefit and health. We want our pay for our medicine, but NOT UNTIL YOU SAY "Here is the dollar; you deserve it," not until we HAVE EARNED IT, not until you are WILLING to send it to us. HOLD ON TO YOUR MONEY until you are SATISFIED to pay it, until we HAVE PROVEN TO YOU that we have what we claim, until VITAE-ORE HAS DONE FOR YOU WHAT YOU WANT IT TO DO. Until then, pay us NOTHING. After that, you will be willing to pay, GLAD TO PAY, as hundreds of the readers of this paper have been glad to pay. YOU ARE TO BE THE JUDGE! We leave it to you entirely for you to decide.

We want your money only when you can say that we and Vitae-Ore have earned the dollar.

How can you refuse to give this remedy, which has won an international reputation by the cures it has made, a trial on the terms of such a LIBERAL OFFER? If you need medicinal treatment of any kind, if you are sick and ailing, if anyone in your family is ailing, worn-out, sickly, you do yourself an injustice if you do not send for Vitæ-Ore upon the terms of this thirty-day trial offer. Read the offer! Send for this medicine! Do it today! Each day lost makes a case older, more obstinate, harder, and pains you more. YOU DON'T PAY A CENT UNLESS IT BENEFITS YOU.

Read This 30-Day Trial Offer!

If You Are Sick we want to send you a full sized $1.00 package of Vitæ-Ore, enough for 30 days' continuous treatment, by mail, postpaid, and we want to send it to you on 30 days' trial. We don't want a penny—we just want you to try it, just want a letter from you asking for it, and will be glad to send it to you. We take absolutely all the risk—we take all chances. You don't risk a penny! All we ask is that you use V.-O. for 30 days and pay us $1.00 if? has helped you, if you are satisfied that it has done you more than $1.00 worth of positive, actual, visible good. Otherwise you pay nothing, we ask nothing, we want nothing. Can you not spare 100 minutes during the next 30 days to try it? Can you not give 5 minutes to write for it, 5 minutes to properly prepare it upon its arrival, and 3 minutes each day for 30 days to use it. That is all it takes. Cannot you give 100 minutes time if it means new health, new strength, new blood, new force, new energy vigor, life and happiness? You are to be the judge. We are satisfied with your decision, are perfectly willing to trust to your honor, to your judgment, as to whether or not V.-O. has benefited you. Read what V.-O. is, and write today for a dollar package on trial. Address as below:

What Vitæ-Ore Is

(For Both Internal and External Use)

Vitæ-Ore is a mineral remedy, a combination of substances from which many world's noted curative springs derive medicinal power and healing virtue. These properties of the springs come from the natural deposits of mineral in the earth through which water forces its way, only a very small proportion of the medicinal substances in these mineral deposits being thus taken up by the liquid. Vitæ-Ore consists of compounds of Iron, Sulphur and Magnesium, elements which are among the chief curative agents in nearly every healing mineral spring, and are necessary for the creation and retention of health. One package of this mineral-substance, mixed with a quart of water, equals in medicinal strength and curative, healing value, many gallons of the world's powerful mineral waters, drunk fresh at the springs.

ITS PURITY IS GUARANTEED

Vitæ-Ore contains no alcohol or any injurious or poisonous drug. It is absolutely guaranteed to be pure and wholesome, under all Pure Food and Drug Laws, both State and National. It consists of substances that the body needs and thrives upon, that all of the family may safely use, old and young, children or grandmother. It is a clean remedy, sold by clean people, through clean methods.

HELP A FRIEND!

If you have a friend or neighbor who is sick or ailing, show him this offer and tell him to write to this Company for a 30-day trial treatment. It is a little thing for you to do, but it may mean big things for him, and if so, he will bless you for it.

Made a New Woman After Months of Misery.

BELLEVIEW, TENN.—I have been suffering a long time from Female Weakness and Bladder Trouble. My Kidneys ached continually day and night and my periods were so bad that I could not sit up, but was in bed half of the time. They usually lasted for three weeks at a time. I had doctors attending me, but they did me no good. Then I saw the advertisement of Vitæ-Ore and concluded to try it for a month. I sent for a trial package and began using it as per directions. I can now testify that this one trial package has almost entirely cured me. I feel like a new woman. I can do all my housework with pleasure. I am only sorry that I did not see your trial offer long ago and thus save months of misery. MRS. M. A. CUMINGS.

She Is Perfectly Cured.

TONY, WIS.—I have been using Vitæ-Ore for two months. Before using it, no food would agree with me whatever. Now I can eat almost anything. I must say that I am perfectly cured. I cannot praise this medicine enough and will recommend it to every one. MRS. LENDEBT BOS.

Permanent Benefit in a Serious Complication.

SUMNER, ILL.—I have been using Vitæ-Ore for five years. After having used local doctors' medicines which did me no permanent good, I found permanent relief in Vitæ-Ore. I find it a great remedy for the Stomach, Liver and Kidneys. It is a great relief for Rheumatism which I formerly had so often, particularly in Winter and Spring. My trouble was a serious complication of diseases and Vitæ-Ore is the only remedy which ever gave me any permanent benefit. It saved me many doctor bills. MRS. R. M. HARDACRE.

CURED HIS SCIATIC RHEUMATISM.

Left Leg Was Altogether Numb—Spent $280 for Treatment at One Time.

DES MOINES, IOWA—I am a brick-mason and have suffered with Sciatic Rheumatism for nigh on to three years. At one time I was in bed for ten months. The doctors first said that I had Lumbago and then others pronounced my condition Sciatica or Sciatic Rheumatism. I spent $280.00 for treatment at one time and received no benefit. At last I read an advertisement for Vitæ-Ore in my Lodge paper and sent for a dollar package on thirty days trial. I found it so beneficial that I sent for more. Before using Vitæ-Ore my left leg was numb; it had no feeling whatever. Vitæ-Ore fixed me up all right. It placed me on a solid foundation and I can use both my limbs now, the left as good as the right. I have no more pain, feel better in every way and have a splendid appetite. I suffered so badly that many a time I said to my wife that had I a dog that suffered as I did, I would shoot him to get him out of his misery, no matter how I loved him. I feel so good over my cure that I want to give every sufferer the benefit of my experience. FRED KOMEROWSE, 514 E. 16th St.

RESTORED TO PERFECT HEALTH.

Had Kidney Trouble and What the Doctors Called "Rose Cancer."

ERIE, PA.—Some time ago I was afflicted with Kidney trouble, and was all run down. I could not pick up a ten pound weight; none of my friends expected me to live. I procured a package of Vitæ-Ore and in three weeks from the day I began to use it I went to work. I continued the use of Vitæ-Ore and was restored to perfect health. I also had what the doctors called Rose Cancer, and I cured it by keeping Vitæ-Ore bound on the sore for six weeks. It has never bothered me since. I shall never cease to recommend Vitæ-Ore while I live. I am seventy years old, and strong and healthy. A. MYERS.

USE THIS COUPON

If You Don't Wish To Write a Letter.

THEO. NOEL COMPANY., Vitae-Ore Bldg., Chicago, Ill.

Gentlemen:—I have read your advertisement in Up-to-Date Farming and want you to send me a full-sized ONE DOLLAR PACKAGE of Vitae-Ore for me to try. I agree to pay $1.00 if it benefits me, but will not pay a penny if it does not. I am to be the judge. The following is my address, to which the trial treatment is to be sent:

NAME_____

TOWN_____

Street or R. F. D. Route_____ STATE_____

IF YOU SUFFER from Rheumatism, or any Kidney, Bladder, or Liver Disease, Dropsy, a Stomach Disorder, La Grippe, Female Ailments, Functional Heart Trouble, Catarrh of Any Part, Nervous Prostration, Anaemia, Sores and Ulcers, Constipation or Other Bowel Trouble, Impure Blood, or are just Worn-Out, send for a 30-day trial treatment of Vitae-Ore right away and see what it will do for you. It strikes at the root of disease, eradicating deep-seated lesions and cures where other remedies failed to benefit.

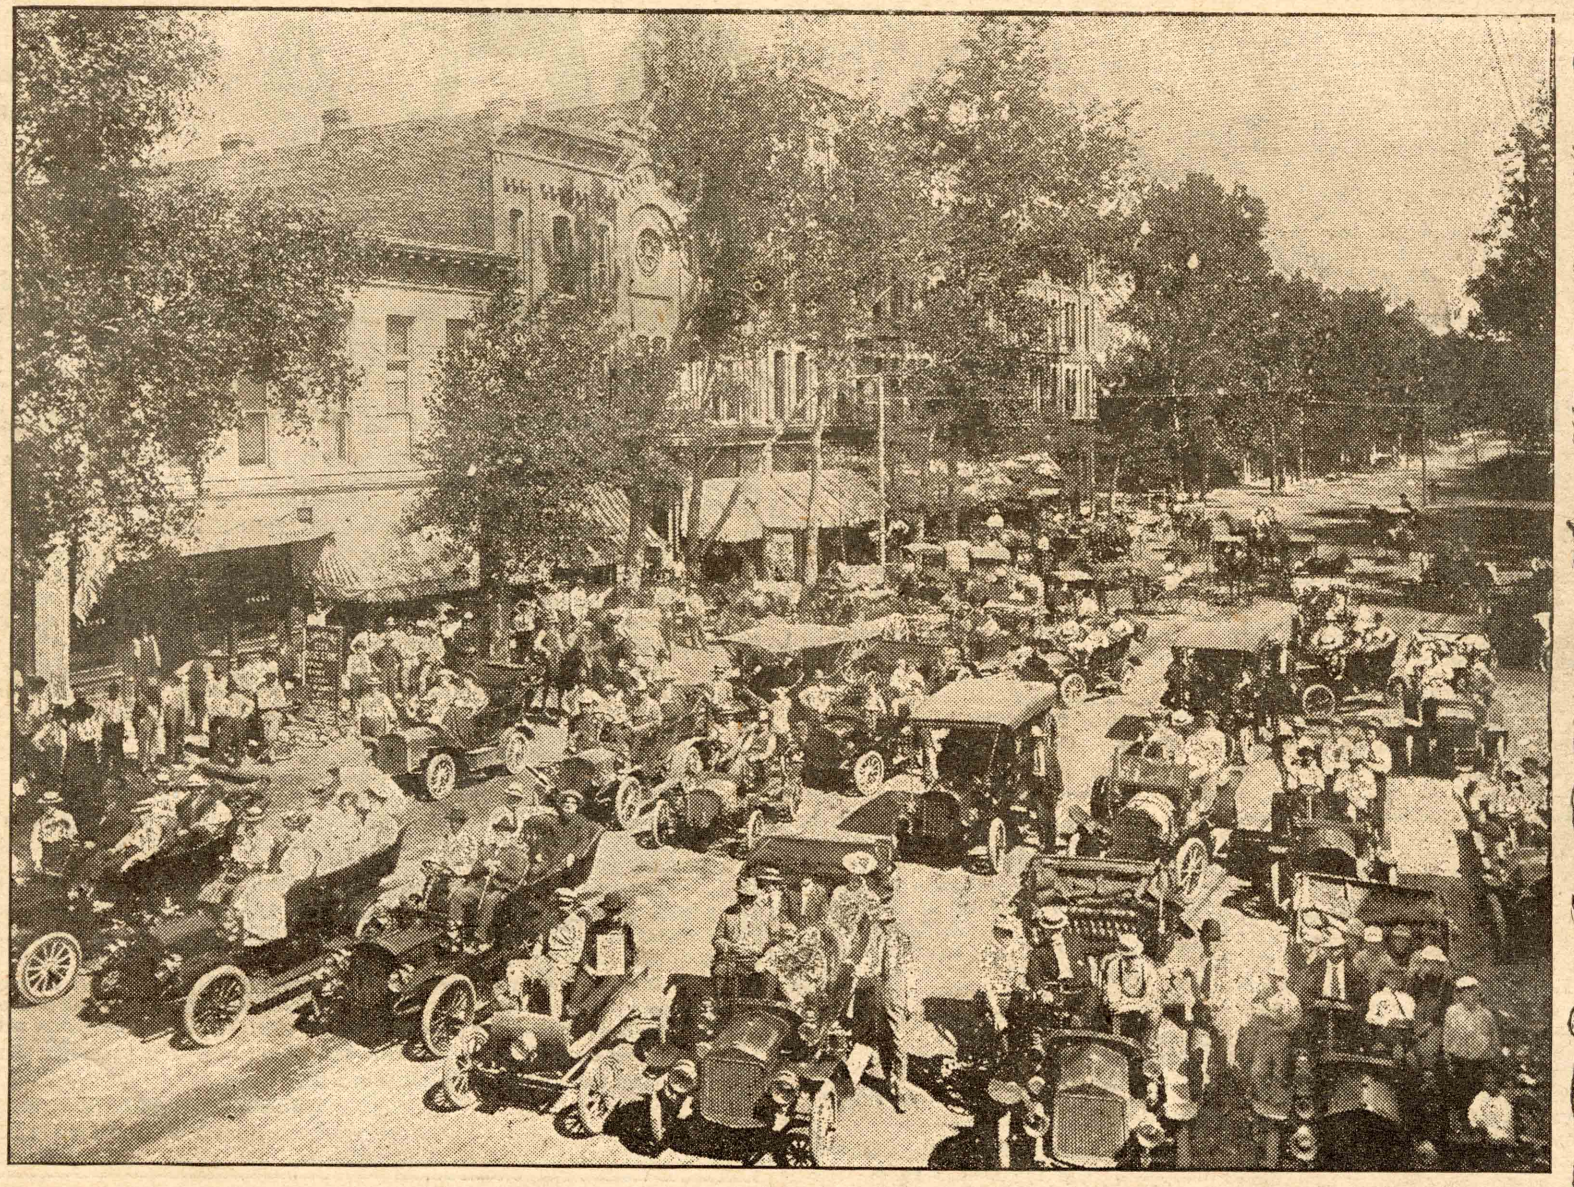
Volume XI | INDIANAPOLIS, INDIANA, OCTOBER 15, 1908 | Number 20

FINNEY COUNTY (KANSAS) BEET GROWERS IN GARDEN CITY



The accompanying picture is quite remarkable, especially when it is considered that the automobiles shown all belong to farmers of one county and in the country surrounding Garden City, Kas. We doubt whether a picture like this could be duplicated anywhere else in the country. Automobiles from the cities are not seen exclusively in rural districts now, but up-to-date farmers are acquiring them all over the country. The good crops of the past half dozen years and the good prices they sold for make it possible for many farmers to gratify their desires for the necessities and many of the luxuries as their city brothers did before them. And we do not class the automobile entirely a luxury and for pleasure. With the farmer it may and does, serve a purpose of utility similar to the many labor saving and profit increasing machines that are necessary on modern farms.

Every step of this kind is working out the evolution predicted by UP-TO-DATE FARMING when agriculture will be the preferred profession, farming the best business and farmers the most respected people in the country.

"FOR THE CO-OPERATING OR ORGANIZED FARMERS OF AMERICA"

A FARCE CONVENTION

The Milwaukee Convention Declared Illegal—The Barnett-Pauley Administration has been a Continuous Comedy of Errors

REPORT OF THE CONVENTION

(We sent Mr. Geo. B. Briggs, of Chicago, western representative of UP-TO-DATE FARMING in the advertising department, to Milwaukee to report the convention for this paper. But we must report with deep sorrow that Mr. Briggs died suddenly about noon of the third day, Thursday. We are therefore obliged to depend on the newspaper reports of the convention. The excitement of the convention probably contributed to Mr. Briggs' sudden death.)

Extracts from Milwaukee daily papers

TUESDAY

"At the opening session of the convention of the American Society of Equity there were between 150 and 160 delegates present. The convention was called to order by President Barnett. Committees on credentials, rules and order of business, constitution and by-laws, the official organ, minimum prices and finance were decided to be appointed.

"President Barnett delivered a short address in which he stated that the society was in a most healthy and prosperous condition; that its principles had been diffused among the farmers throughout the country who were discovering the advantages of the organization and becoming members thereof. He declared that the American Society of Equity was the only farmers' organization in the country that the trusts feared. He also declared that the outlook for the society was flattering. He recommended that an effort be made to place the official paper of the society on a sound financial basis and that the finances of the society receive more attention.

"The afternoon was taken up with reports of the committee on credentials and routine business.

WEDNESDAY

"The national convention of the American Society of Equity was declared illegal last night by the society's attorney, Oliver H. Carson.

"Mr. Carson sprung his unexpected quietus last night, following the report of the committee on credentials. Secretary Woodward of the committee had read the certificates received from the Wisconsin Federation of Labor, the Federated Trades Council of Milwaukee, and the American Federation of Labor asking for the admission of Ald. T. Melms, Frank J. Weber, Fred Brockhousen and W. H. Wisner, social democrat organizers who applied for membership. After a brief debate the report was adopted, when Mr. Carson spoke as follows:

" 'Gentlemen, as your legal counsel, I must ask you to refrain from taking action at this convention which will not stand as legal in case enemies of the society care to question it. This convention is illegal and its actions must stand in that light.'

"Attorney Carson then introduced a resolution, which was adopted, providing that the society at this meeting appoint one or more delegates from each state to meet in Indianapolis during December for the purpose of ratifying action taken in Milwaukee.

"Yesterday's session was notable for the socialistic sentiment expressed in a reply to the welcoming address of Mayor David S. Rose, made by J. Weller Long of Chippewa Falls.

"The convention went on record as favoring an amendment to the Sherman anti-trust act, excluding the American Society of Equity from its jurisdiction.

"Mr. Burney of Kentucky supported the night riders by his statement that they support a just cause and are asserting their American manhood. The atrocities and crimes charged to them in newspapers he brands as exaggerations and lies.

"President Barnett called for subscriptions from members toward a guarantee fund whereby all obligations and bills now before the organization could be paid.

THURSDAY

"An effort was made to increase the annual dues from $1.50 to $5.00, but it was voted down.

"The postal savings bank and parcels post were endorsed.

"To guarantee working capital for the society during 1908 the convention pledged a loan of $50 to the society from each member. A life membership will be given in return.

"Among the resolutions offered this

UP-TO-DATE FARMING

227 West Washington Street, Indianapolis

J. A. EVERITT, Editor JOHN P. STELLE, Associate Editor

SUBSCRIPTION PRICE 50c PER YEAR A CLUB OF FOUR FOR $1.00
Foreign Subscriptions, including Canada, 75c a Year

Clubs. Four subscriptions for $1.00; Always state if a renewal or a new subscriber. *DON'T NEGLECT THIS.*

Your Address should always be written very plainly, including *COUNTY.* Do not give street or box number when not necessary to facilitate delivery of your mail. If on a rural route use the letters R. R. before the number.

enewals and Change of Address. Give the same name as before. If a change from one member of the family to another, so state. If you change your post office give old office as well as new.

Imperative Order. When writing about your subscription, requesting a change of address, renewing or ordering cancellation, do not fail to send your printed address as on the wrapper along. Failure to observe this order may cause us much unnecessary work.

The Latest Date shown with your address is the date to which your subscription is paid. Subscribers are urged to keep their time paid *IN ADVANCE.*

Members of Equity will find the date on their wrapper to which subscription has been paid.

Responsibility Disclaimer The editor assumes no responsibility for correctness of signed letters and articles, nor for matter in departments conducted by others whose names appear in the head.

Agents Wanted. If you want to engage in a profitable business all your time or part time, write to us.

Only Reliable Advertisers are admitted to our columns and we guarantee that they will deal honestly with subscribers. Should they not, we will make good any loss to paid in advance subscribers. It is understood that this guarantee is not binding on the publisher unless you mention UP-TO-DATE FARMING when you write and you report any dissatisfaction within a month of the date of the paper.

25c A Year

IN CLUBS of FOUR

for the farm paper that has brought farmers to the front and the only one that will keep them there

THIS IS A PERSONAL APPEAL

To Every Reader of UP-TO-DATE FARMING

Before Christmas I want to add 100,000 more new subscribers to our subscription list. Every reader of this announcement who helps us obtain these 100,000 new subscribers will be liberally rewarded.

READ CAREFULLY—IT'S IMPORTANT TO YOU

I want each present reader to appoint himself a committee of one to get every farmer, farmer's wife, or friend and neighbor in his community to subscribe to UP-TO-DATE FARMING. For every four new subscriptions at 50 cents a year, you may remit us $1.00, and keep the other $1.00 for your kindly assistance.

It's easy to get your friends to subscribe. Tell them that UP-TO-DATE FARMING is the only agricultural paper printed in the United States that is devoted to the MARKETING END OF FARMING. UP-TO-DATE FARMING instructs its readers how to secure the best prices for what they produce.—Tell your friends that UP-TO-DATE FARMING is also going to see that every community of farmers is organized. If your district is not already thoroughly organized, that is all the more reason why UP-TO-DATE FARMING should be in every farmer's home, for IT WILL TEACH HOW TO ORGANIZE, and what to do then for the greatest good.

FRIENDS, WE DEPEND ON YOU TO GET EVERY FARMER IN YOUR DISTRICT AS A READER OF UP-TO-DATE FARMING. YOU KNOW ITS TEACHINGS—AND YOU KNOW IT IS A PAPER WITH A GOOD MISSION.

If your own subscription has expired, send in $1.00 to pay for its renewal and also for three others who should be on our list for one year. This will be better for you and for us than 50 cents for yours alone.

Send us a Big Club.—You can do so and at a profit to yourself.

Will you help? I think you will.

GARRETT WALL, Sub. Mgr.
UP-TO-DATE FARMING.

With Up-to-Date's Subscription Manager.

PERSONAL

I want to thank the readers of UP-TO-DATE FARMING for their hearty response to our request for clubs of four subscriptions for $1.00. September subscription receipts showed a gain of **over 600 per cent.** as compared with August, which was also a record month. But we are not satisfied for only a very small proportion of you sent us clubs —now won't the rest of you get four friends to subscribe. Either get them to subscribe at the regular price of 50 cents each—in which case you can retain 25 cents on each subscription for your kind assistance—or else get four of your neighbors to subscribe at our special clubbing rate of four new subscriptions for $1.00—25 cents each.

We have two objects in asking for your help. First, the more readers we get for UP-TO-DATE FARMING the more powerful its influence becomes; second, we can increase the number of our pages and make UP-TO-DATE FARMING better in every way.

We have always believed that the subscribers of UP-TO-DATE FARMING are willing to help us as much as possible. I believe that this personal appeal to YOU will bring in clubs from every state in the Union. Give us the support and co-operation our efforts merit. Help us to broaden the influences and power of the only agricultural paper in the country that has fearlessly stood for equity for the farmers when all others were willing to leave them in the grasp of the gamblers, speculators and monopolists. Get your friends and neighbors to subscribe now—get all of them. Don't be satisfied until YOU have a nice encouraging club of new subscribers to send in.

I think YOU will help now if you did not before.

GARRETT WALL.

Your Subscription Has Expired

If the square to the left is marked with a "X," it is to inform the subscriber that his subscription expired with the last issue before this and should be renewed at once to insure receiving this paper without interruption. The renewal price is 50 cents, which pays for one year. We will gladly accept $1.00 for four subscriptions of which yours may be one, the other three new ones. A renewal blank is sent in this paper.

If the square to the right is marked with an "X", it is to remind you that your subscription has expired and remains unrenewed although you have been already notified. We don't want to lose a single subscriber, hence this second notice, and hope now to receive your renewal at once. See terms for a club in notice above.

If your renewal is not received in ten days we will assume that this mark escaped your notice and we will then send you a *personal* letter. We hope now to receive your renewal and make the letter unnecessary. A renewal blank is sent in this paper.

UP-TO-DATE FARMING

Representing the Organized or Co-operating Farmers of America

PUBLISHED TWICE A MONTH
At 227 W. Washington Street

Re-entered as a Semi-Monthly publication as second-class matter, January 20, 1908, at the Post-office at Indianapolis, Ind., under the act of Congress of March 3, 1879.

Volume XI | INDIANAPOLIS, INDIANA, OCTOBER 15, 1908 | Number 20

EDITORIAL

CAN STARVE THE WORLD

But there is no Menace Because *of* this Fact

As the channels of trade now run, and it is no fault of the producers unless passive acquiescence is a fault, the producers of foodstuffs could starve the world. If the farmers of America or even a considerable majority of them, were to refuse for a single year to produce more than enough to supply their own bare necessities, there would be a famine among all classes outside of farming. This fact, however, and it is an undeniable fact, is no menace to the rest of the world. Farmers can never be induced to adopt and follow such a course; for in doing so they would be the victims of their own folly, almost as much so as anybody else. "No man lives to himself alone." Farmers, it is true, produce their own food supplies, and to that extent they are independent of everybody else, but it requires the labor of others to prepare for their tables and other necessary uses, the material they produce. Besides, farmers must have things they do not produce, and those things must be purchased with money. Their only means of obtaining money is the sale of surplus products, and while they may and should control those products to the extent of compelling remunerative prices, that is, prices in proportion to the general level of values, they cannot be induced, and they ought not to be induced, to deny the world a surplus abundant for its needs. In the natural or artificial (whatever it may be called) division of labor, that is the farmer's part, and he is responsible to society for its performance, coupled always with equitable remuneration. To say that he must do so for less reward than others receive for similar service, is to say that he must occupy a position below his fellows and be to that extent a slave—unremunerated for his work.

But there is a menace to the world's food supply of which the world itself takes little notice. After all, the world receives its supply of food through very few well guarded channels. Were those channels closed but for a fortnight hunger would stalk abroad in insufferable power. Does any one doubt it? A moment's consideration of the supply on hand is enough to dispel every doubt; we mean the supply in the hands of the consumers. Should the retailers find it impossible to add to their stocks, every store would be stripped in a week, or little more. Supplies have been so regular and so certain that people have learned to lay in no surplusses, but to look to each day for its own supply. Of late years this has become almost as true of farmers as of the purely consuming classes, and that condition places in the hands of a very few the power to starve the world at pleasure, or to exact from consumers the acceptance of whatever terms they may choose to decree. The great packing and milling combines absolutely control the food supply, not only the bread and meat, but the so-called side dishes or luxuries, now the by-products of the two great essentials. Concerted action on the part of these could as effectually deprive the people of their daily food as could universal blight or mildew, drought or storm, or fire and devastation on every farm.

The power of concerted action on the part of great combinations was clearly manifested a little less than a year ago, when, in the midst of unusual business activity, with every condition favorable to the most remarkable prosperity, the banks, in control of the country's money supply, decided to call in their loans, lock up their hoards, and withhold their deposits. In a single day prosperity lay quivering at the idle feet of industry, business was paralyzed, and, with a shudder, enterprise retired to the seclusion of its broken dreams.

The general effect of that action and the losses which followed, need not be recounted. They are matters of history. Enterprise and industry have not yet recovered from it, and thousands of hungry people, at work and well fed before, are still out of employment.

The powerful combinations that control the meat and bread supply could take the same concerted action, and with the same disastrous result, far more disastrous than that taken by the leading financial institutions in the control of the money supply. They could create a food panic and a famine as easily as the banks created a money panic. And the facilities for storage, cold or otherwise, are even now so perfect that the markets could be closed almost indefinitely without loss to the storers other than the profits on the daily sales, and these losses could be more than made up later in high prices and larger sales forced upon distressed people. The possibilities of such a thing are appalling, and it is not the immaterial dream of a prophet of evil. Could it be done? Is it possible? is the only question whose affirmative answer wisdom and prudence should require; and a view of so much of the breadstuffs flowing in a steady stream to the great milling centers, and the long droves of meat producing animals headed to half a dozen packing centers, prove that these centers have the power to supply or withhold, to feed the world or to starve it, as they may see in such action their own greatest gain. Indeed, it is in evidence that such a thing has been thought of if not actually contemplated. Letters have been received by retailers in certain sections, we do not know to how great an extent, to the effect that supplies might be shut off for a time, supposedly to work a readjustment of prices—to increase the surplus in the hands of producers to lower the prices of livestock, and to withhold the supply to consumers, thus creating an artificial scarcity to advance the prices of the finished product. However that may be, we are only arguing from the possibilities, from what the intelligent world knows could be done.

What precautionary measures can be taken? Remedial legislation is a farce. It has been proven so in the past. Laws restricting or curbing powers greater than themselves are not enforced. The imperceptible effects of the vigorous blows of the "Big Stick" at Washington are abundant proof. And the power to create hunger is greater than the power to fine or imprison. Protection from the above mentioned possible danger must come from behind the dangerous power. It abides with those who own the supplies before the combines own them, and that is the farmers. In their hands, the application of the remedy is in no sense revolutionary, nor does it require any restrictive laws. Let the mills continue to grind and the packing houses to buy and butcher, preserve, store and sell meats. But retain a safe reserve in the hands of the original owners, with ready avenues from them to the consumers; a storehouse from which the world may draw at its pleasure and in emergencies—rather to prevent emergencies. That involves controlled marketing; country storage, and the balance of power widely distributed in original hands. Whatever is required to accomplish that should meet the prompt support and aid of all classes. The first necessity is organization—organization that shall bring together the parties most immediately concerned, and who most certainly have the power behind the dangerous combinations, and that is the farmers and the merchants, the producers and the retailers. It requires local storage; the above elements, acting in concert, can provide it. It may demand home packing houses, and they can be erected. If capital prove to be needed, merchants and farmers can command it. Enterprise, industry and business ability? Where could more be found than among merchants and farmers? These classes, in harmonious action, possess every element of success in any undertaking; and whatever else there may be, let there be safety for the people, and "equity in all the business relations of life."

A POTATO DEAL WITH $80,000 PROFITS.

In order to know what can be done it is well to study what has been done. Theories may look well and plans seem fallible, but when the actual test comes, some unseen detail may prevent results. When we urge farmers to different methods of marketing and assure them that so long as production alone satisfies their ambition and absorbs their attention, they will not receive their reasonable share of the wealth they produce, we wish to know we are right.

An unmistakable object lesson is afforded in a single potato deal of the present year, which is said to have netted a single firm $80,000 of profits. We refer to what is called the Virginia potato deal of Albert Miller & Co., of Chicago, as reported recently in the Fruit Trade Journal and Produce Record. We have not a word of condemnation or censure for the firm in question. We admire the enterprise that built up such a business, and we have nothing but praise for the skill and ability that results. But what has been done by one firm may be done by others, and the lesson taught is that profits have not been equitably divided. The producers of those potatoes may have received more than $80,000 for them, but none will be so reckless as to say they received that much of profits over and above the cost of production. Before dealers count profits they very properly deduct all costs and expenses, and before farmers can claim to be business men they must do the same thing. Unfortunately it is their way, however, to accept in bulk the proceeds of their sales and count it all as gains without ever considering costs or profits. It is that habit we are trying to argue them out of.

The potato deal referred to is said to have involved 800 car loads of Virginia potatoes, and that the firm bought 40,000 barrels of potatoes in a single day. But the question is not how many potatoes were involved, nor how much business was done in a day, but did the farmers get their share of the gains? We are told that, during the life of the contract the firm never received less profit than 50 cents a barrel, and part of the time profits ran over $1.00 a barrel. One thing is sure, if 50 cents was fair profit for buyer and producer, that is, if the producer had a profit of 50 cents per barrel while the buyer had that profit, the producer could not have had a fair profit when the buyer's profit rose to $1.00, because the producer's profit was fixed once for all when the contract was made. And it is very questionable indeed if the producer received at any time a profit of 50 cents per barrel. Does the Virginia potato grower know what profit he did receive? Does he know that he received any profit at all? Can he foot up what the crop cost him in seed, labor and rents, and subtract that from what he received so as to determine his profits? Of course he can't, not one in a thousand, perhaps, but it takes that to constitute business farming.

But let us get back to the lesson. If a single firm, by buying, storing and selling according to primary business principles, a single crop of potatoes in a single state, can clear $80,000, what ought the farmers of the entire country save by applying like business principles in handling and marketing all the crops of all the states during all the years? We would not put Albert Miller & Co. out of business, nor any other dealers, but we would make their business more certain and less speculative by meeting their approved business methods, and thus secure an equitable division of profits.

Farmers could do that, and ought to do it. They owe it not only to themselves and their families, but to their localities, which it is their patriotic duty to improve and make prosperous. To accomplish it requires a business uplift, the study of marketing as well as production, provision for storage and and holding, and co-operative action. No one will presume to say that any of these propositions are beyond the powers of farmers. Indeed they all belong to farming, are essential elements of successful farming, and we appeal to farmers in every organized capacity to take them up and give them most earnest consideration. Oh, that farmers would "pool their issues," organize, and co-operate together as others do!

DEPARTURE FROM EQUITY IN KENTUCKY

We don ot mean by the above heading that the tobacco growers of Kentucky have abandoned their effort to manage their own business and secure fair and just prices for their product. There are too many noble men and women in that state to permit us to think of such a thing. The excellent work done in the earlier years of their organization proves them not only honest and earnest, but able and willing to confront opposition and win victories where others would have scored only defeats.

But during the past year it must be confessed that things may not have gone so well. Methods never contemplated by the Society of Equity, and never approved by it, seem to have been employed, to the chagrin and embarrassment of many, and the discouragement of all. Even as early as last August the head of one of the most prominent committees issued an appeal to his people, in which appeared these words:

> During the past four years we have maintained a partial organization of the tobacco growers of this District the benefits of which are too well understood to need comment. That organization now seems to be in a distressing state of decay, which means that the farmers will again assume that independent and self reliant attitude of selling single handed by which they became the sharpest possible competitors of each other, the result of which we do not have to guess at.

That is rather a cry of despair than an appeal, and we heartily sympathize with the writer, who, a little further on declares: "It would certainly be a grave mistake and an unwise step to disband at this critical moment." We earnestly join in that sentiment, and urge the good people of Kentucky to never falter in working out the true principles of Equity by methods that were so creditable, so honorable, and so successful until unfortunate, not to say unwise, counsels prevailed in the directing power of the organization. Had all the leaders stood by the society as it was originally planned and organized, met selfishness and unjustice with equity and right, the sun looking down upon Kentucky today would shine upon a people freed from a great wrong, with no shadow of any other wrong brought in some way upon themselves.

Equity must deal justly with all. It means peace and not war; right and not wrong; equitable prices, but not exorbitant; fair remuneration for those who serve, but not extortion; persistence in the right, with pity, perhaps contempt, for the foolishly stubborn; but always adherence to law and maintenance of honor.

Equity must know those with whom it deals, and it must meet them on equitable grounds, showing neither false nor unwise, unreasonable antagonism. It is so much to be regretted that these cardinal principles have been forgotten even for the briefest season, but such seems to mark the course of many out-of-place leaders, not only in Kentucky but elsewhere, during the past twelve months, and it is hoped that at the general meeting in Indianapolis, October 27, the true and faithful who love equity better than selfish interests or selfish friends, will bring order out of chaos, and give the public every required guarantee that the future will bring the success for which good people have so earnestly toiled and prayed.

TO BE SCARCITY OF MEAT

The London Meat Trades Journal is of the opinion that the world's meat supply is rapidly decreasing, while the demand if normal conditions continue, must necessarily increase with the increase of population. The world is eating up its sheep, says the Journal, and the number on foot is steadily being diminished. As this view applies to the former great herds of Australia and all the other sheep breeding parts of the world, it means more than such statements usually do; and if true it affects not only the supply of food, but the supply of clothing also. With the reduction of mutton must come a correspondingly reduction of wool.

The important British authority above referred to, declares further that available statistics show that the number of cattle, hogs and poultry is also diminishing as such a rate that should there be no increase all would be consumed within three years. In other words, the world now has on hand but three years' supply of meat, and unless the increase exceeds the consumption, which it is not doing now, the time cannot be distant when meat will be more and more of a luxury.

This statement has in it a great lesson for America. We still have many acres available for pasturage on which the number of cattle and sheep may be greatly increased. It is a fact, though, as shown by a recent trip through the West by one of our editorial staff, that the increasing demand and better prices for hay, is actually diminishing the pasture acreage and consequently reducing the western herds of cattle. Another fact was also noted, that a few cullings of the natural meadows of the West and approximately close pasturing thereafter, brings weeds in the fields much the same as in the older states, and forces the land into cultivation. It is only a question of a few years, therefore, when the natural meadows and pastures of the West, which have cut so prominent a figure in the meat and feed supply of the world, will be no more. This not only opens up an opportunity for the farmers of the older states, but it makes it obligatory on them to utilize every acre, or every rod, of their holdings to increase their number of cattle and sheep. It is the bounden duty of farmers to feed the world, but not at other than remunerative prices. If the London Meats Trade Journal tells the truth, and our own information corroborates it, the American farmer's opportunity is here. There cannot but be a demand for greatly increased supplies at good prices, and the established farms of the country must be looked to for the increase. But one spector is in the way, and that is monopoly buying and arbitrary fixing of prices, forcing them low in spite of the relations of supply and demand. But this the farmers may control if they will. If they will co-operate with each other as others do, they are masters of the situation, and a successful future awaits them if they properly work out their opportunities. It is the mission of UP-TO-DATE FARMING to aid them in every way.

LACK OF CONTROL BRINGS LOSS IN WHEAT

There is seldom a day without market lessons, but as a rule the public must look to the daily papers for them. Once in a while, however, so sharp a one develops, that papers published less frequently may well take them up. Such was the case not long ago in the grain market. Bradstreet's reported an increase of 8,224,000 bushels in the visible wheat supply, and of course there was a tumble in the price, though all other advices were of a character to indicate higher prices. At the same time the Illinois Grain Dealers Association reported that the corn crop of Illinois this year would not exceed 221,500,000 bushels, against 342,756,000 bushels last year, showing a deficit of 121,256,000 bushels, and the price of corn advanced. As a rule these two grains advance and recede together, but in this case the astounding increase in the visible supply of wheat reversed the rule. Who was responsible for the increase, and who was benefited by it? The increased visible did not indicate that there was a grain more of wheat in existence than there was the day before; it only showed that much more was on the market. Had the growers been prepared to store and hold their crops so as to keep the grain out of the visible, the increase would not have appeared and the speculative price would not have fallen. But as the wheat rushes upon the market in advance of the need for it and the elevators fill up, a reduction of price is sure to follow, and the growers themselves are responsible. They cannot be the beneficiaries, for a drop in price is always a loss to them, or that part of them who have not yet sold. But this is no argument for selling early, because if the supply were properly controlled there would be no such flurries, and marketing and price would be steady and remunerative throughout the year.

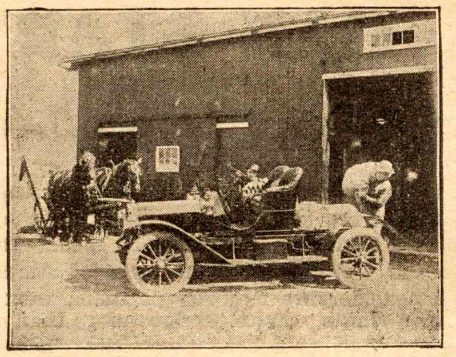
On the other hand, the consumers are not benefited, because these spasmodic reductions in price, however marked, are seldom, if ever, followed by a reduction in the price of flour or bread. Indeed, they cannot be, for such prices are so uncertain; they may be down today and up tomorrow; that correlated prices cannot be adjusted to meet them. The only beneficiaries, therefore, are whichever side of the speculative market they may happen to fit.

Our plea is for farmers to prepare to store their crops so as to market to meet demand, and thus supply every need of consumption, but yet maintain equitable and steady prices—prices producers may depend upon and that consumers may know and prepare to meet. We insist that the necessities of life be taken from the control of those whose aim is to increase their profits at no matter whose cost.

Automobiles *and* Motor Traction on Farms

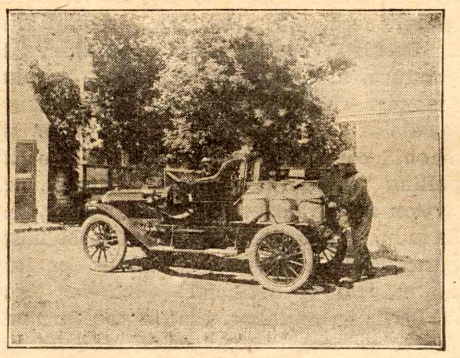
It is in consonance with the progressive spirit of the American people, as well as it is gratifying to the friends of agricultural advancement, to those who desire to see and are laboring to place farmers on a level with those of any other calling, that the automobile is winning its way to the farm. The accompanying illustrations are from real life, and show the part the auto is actually playing in farm transportation, saying nothing of what it is doing to make country travel as enjoyable, and even more so, than travel in the cities.

UP-TO-DATE FARMING does not expect the auto to put the faithful horse out of business, nor to very greatly limit his usefulness. We do not believe it is desirable that it should. But the auto is no longer a plaything of the rich, nor is its use an evidence of great wealth. It has become a practical utility, business structure; and, like a great many machines whose advent marked a revolution in the manner of doing things, the auto brings with its pleasures, conveniences and power the horse, however faithful, has never been able to render.



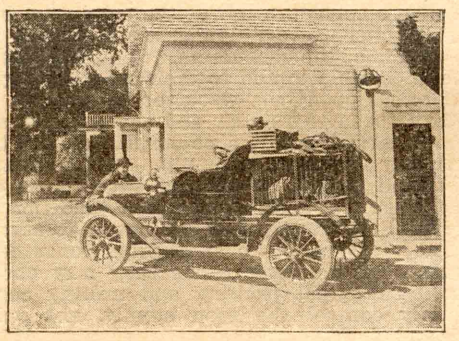
The horse has his duties, but the auto does the errand to town

Machines are now made for their sterling usefulness—comparatively light, but strong; ready to meet emergencies, but easily managed; simple in construction, but powerful in performance; economic in use, easy to manage and operate, seldom out of repair and not difficult to keep in order. They are so constructed that comparatively rough roads do not seriously interfere with them, and they



The auto makes a quick trip to the creamery

go up and down hills as safely as does the vehicle drawn by horses. And, like all other things that have ceased to be a fad, the purchase price is within the reach of moderate means; is, in fact, not so much in excess of the ordinary means of transportation when the cost of a good team and the usual vehicles is considered. Then there is the distinct advantage that the auto has neither to be fed nor pastured when not in use.



Ready for every need

We advise Our Up-to-Date People to take the automobile into consideration. There is now manufactured an almost endless variety of machines—machines adapted to almost every purpose, and singles machines that adapt themselves to nearly every need on the farm—and that may be had at greatly varying prices. Take this matter up with the manufacturers, some of whom are enterprising enough to seek your trade through our advertising columns. Much may be learned by correspondence with them, and we get not at all beyond our sphere nor outside of our mission, when we advise our farmer readers to do that. Keep abreast of the most advanced. There is where the progressive farmer deserves to be and where the up-to-date farmer is found.

THE MOTOR BUGGY

The Result of a Natural Evolution to Meet a General Demand

By Chas. E. Duryea, Reading Pa.

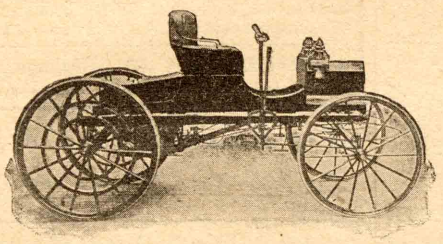
Fifty years ago our fathers and mothers did their riding about the country in farm wagons and without the luxury of even a spring seat in many cases. Twenty or thirty miles to make a visit was a day's hard drive which made itself felt both by the passengers and the team.

Then as prices lowered and money became more plentiful, the democrat spring wagon or heavy surry came into use and added comfort as well as increased distance to the few drives enjoyed by those hard working pioneers.

By the time their sons and daughters were grown, the light cheap buggy had become common and every man had one. While this did not increase the distance materially because of the limitations of the horse, it did add much to the comfort and pleasure of driving and brought the roads into much more common use. It met the needs of the people and so is destined in some form to remain with us. Its weight makes it easy to handle both when the horse is attached and when not. Its neat body is easily cleaned. Its light gear and flexible springs suit it to the many rough roads which still abound. And the many years of use which it has given since its advent are ample proof that it meets the needs of the public beter than any previous vehicle.

But it was limited by the capabilities of the horse. The farmer's business demanded draft animals but the buggy needed trotters. And trotters were grown. Every advertisement of the annual county fair gave great prominence to the races; while pulling contests were scarcely mentioned if held at all. This seems foolish but it is a fact that attests the people's desire for a fast means of travel which the light buggy and fast trotter was then best able to fill.

But a new era is at hand. For fifteen years the inventive talent of the land has had in mind this



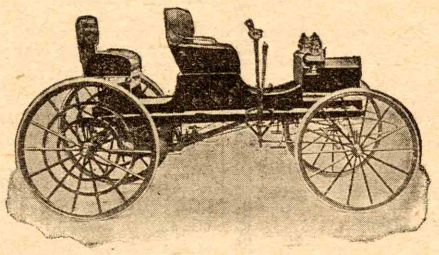
Four passenger motor buggy with rear seat folded

need and has striven to fill it. The auto, as we best know it today, is the development of the buggy fitted with power. The power, at first too heavy to be fitted to a light buggy, compelled the building of a heavier vehicle, which in turn needed more power till the original idea can no longer be seen. But it has been the active principle all this time and now that motors able to develop a horse-power for each three pounds of weight are on the market, there is no need for such monster creations. As a result of this development, the motor buggy has been produced and will rapidly supplant its elder brother in the daily life of those classes who need a means for getting about for business or pleasure.

Every engineer knows that it costs money to move weight while it is self-evident that the buggy which has for years best served the needs of the public over the roads that exist need not be greatly changed to allow the substitution of a mechanical motor for a muscular one. These two facts definitely indicate that the popular vehicle is to be a light affair much resembling the buggies of the present day. The habits of the people and the condition of the roads change so slowly that no radical differences can be introduced and successfully meet the conditions that have brought forth the present buggy. The one item of cost alone which has permitted the universal adoption of the light buggy will strongly operate to cause the adoption of its rightful successor.

The masses need a vehicle for short trips daily or many times per day, to the village, the neighbors, or to school. On business errands or short pleasure drives. To do the work the buggy has been and is doing. Plainly the motor buggy is the vehicle to do this and not the touring car which is clumsy, costly to buy and more costly to operate, complicated in both mechanism and manipulation and not well adapted to the needs of people who seldom get a week once a year to go touring. Developed for the good roads of Europe and by the sightseers who needed a touring vehicle, it does not meet the needs of the American family on American roads as does the motor buggy. Driven by hired mechanics whose sole business was to keep it in order, it is far from being the simple, troubleless rig that the horse buggy is and the motor buggy can be.

It is true that many of the motor buggies have thus far been open to the charge of needless complication and trouble but the simple, practically troublesome rig can be built. Like its predecessor, the buggy, it will be of greatest simplicity. It will have identical seats and tops. The body will be slightly longer and heavier to be symetric with the slightly heavier frame and wheels. The wheels will be slightly smaller because the speeds are higher and the roads some better than when buggies came into use. And to these, the simplest form of steering will be applied. This will be a lever, for



Four passenger motor buggy with rear seat unfolded

it is both lighter and cheaper than the wheel needed for the heavy vehicle and it is much quicker and handier in operation as well as less in the way in mounting.

The power will consist of a little else besides the motor, for busy people have no time to become mechanics and the ladies do not desire complication with its many possibilities of trouble. The motor must be of the internal combust variety for this has proven simplest and most satisfactory for daily and intermittent use. Air cooling and the two cycle principle will doubtless win out because of the greater certainty and simplicity. The battle of chains vs. gears will finally be solved by omitting both. A simple roller friction drive can do the work without clutches, gears, cams, chains, ropes, belts and similar parts with their numerous bearings and oilers, just as the locomotive pulls the heavy train with no more positive drive than the friction of its wheels on the rails.

Solid rubber tires will serve on the wheels as they have done so well on horse buggies, only being slightly larger in size. Ball bearings will save fuel and avoid need for frequent attention to the wheels. The motor will be self oiling and since there need be no counter shafts or other revolving parts, the vehicle will need practically no care. Give it its ration of mixed fuel and oil every two or three hundred miles and it will be ready for service day and night., winter and summer, to any and every member of the family.

THE MOTOR CYCLE

Increasing Popularity of this Modern Mechanical Means of Transportation

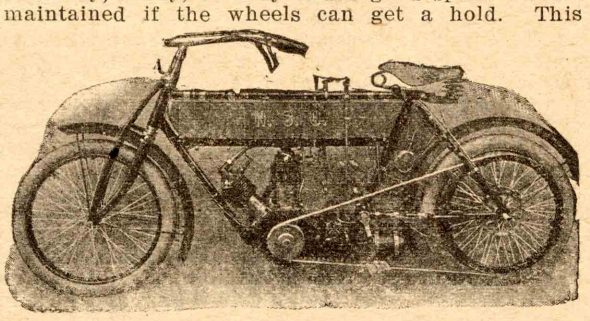
By Alfred Bartsch.

The wonderful improvements, ease and certainty of operation and economy of operation of the down-to-date motor cycle is bringing it more and more in favor with residents of both city and country every year.

Motor cycles have now attained a degree approaching perfection that they are reliable in the hands of any man or woman possessing ordinary mechanical aptitude. There is, of course, still a difference in the reliability of different brands and we refer to those of standard makes which can be selected by the cautious buyer.

This mode of travel or transportation is the cheapest of mechanical kinds known. The motor cycle places the horse and the automobile in the shade for economy and up-keep, and is faster than either under all conditions. Another advantage is, it occupies little storage room.

Mounted on a good motor cycle, the road may be sandy, rocky, or hilly and a good speed will be maintained if the wheels can get a hold. This



claim has been proven by the wonderful records motor cycles have made in endurance and reliability contests.

To the prospective purchaser I recommend that he give more attention to reports of every day performances, rather than to speed tests. The professional rider is the only one who makes speed the prime consideration, while others look to the general utility of the machine. Having selected an honestly made machine embodying the tried and proven principles, then joy and recreation undreamed of may be realized and opportunities in many lines of business will be multiplied.

The accompanying illustration is of a motor cycle made by the W. S. W. Motor Co., 206 W. 76th St., New York City. Their factory covers over 14 acres of ground, and employes 1200 men. They make a great variety of motor cycles besides bicycles, automobiles and parts. It is one of the oldest concerns in this line of manufacturers.

Motor Notes

Electric public service vehicles are being introduced in a number of cities in the country. They are intended to cover about all classes of passenger service.

The clouded business atmosphere in cities which resulted in diminishing the demand for luxuries, has caused the manufacturers of automobiles to look to the country, where the financial stress has not been felt to any great degree, for trade.

The machines that will find the readiest sale in the country are such as will give the pleasures attending automobiling and at the same time earn their cost and keep by being serviceable as carriers of commodities to market.

Motor wagons are being introduced in the army equipment of several nations.

Motor sprinkling carts are superceding animal drawn carts in many cities. Also motor street cleaning, of dust and snow, is taking the place of all other methods in the most up-to-date cities. The new method is claimed to be more economical as well as more efficient and rapid.

Probably in no department of city service will the motor power be more valuable that in the fire department. Time is a determining factor in most fires. With the motor fire engine the speed is greatly increased over horses and a long run cannot exhaust the motor as it did the horses.

A company is being formed to operate motor busses between Hope and Columbus, Ind.

It is reported that a Dakota farm hand invented a motor thresher and was offered $100,000 for the exclusive right, which he refused.

That there is an especially rapid and growing tendency today among the most far-sighted of American farmers to so systematize their farm business as to effect the greatest saving in time, labor and expense, is aptly demonstrated by the general adoption of what is known as the utility or practical automobile on thousands of the best managed farms.

While time and labor-saving machinery have marvelously widened the range of his productive capacity, the means by which the farmer himself was to keep pace with this progress has been a longer time in coming. The average farmer spends too much time getting from place to place. He works his horses almost as hard whether he is taking a load of produce to the city or just going on business. The care and attention required by horses incident to a pleasure drive, a trip to church or to town, is just as great as the task of preparing them for work in the field. But the most discouraging fact of all is this—the farmer himself and his family rarely can give any time to recreation.

If the practical automobile accomplished no more than to save a farmer's time, to provide pleasure and health to his family and to leave his horses for that work for which they are better fitted, it would certainly be a good investment. The fact seems to have been amply provided that the dependable utility car actually costs less to keep, can do ten times as much of different classes of work, is always ready for service and is much less troublesome to care for than the horse.

Ten years ago the automobile was an experiment. With the reckless rich it is still a fad. But today some types of automobiles are so designed that they have become a practical success and recognized necessity. Now that strong, durable, common-sense machines that use very little fuel can be had at a reasonable price, we find country peoplpe in many localities enjoying the comfort, convenience and economy of good autos.

There are some striking differences in automobiles. The car that would give satisfactory service on the city pavement and in level country, might be a failure on the farm. Given a machine that hills cannot feaze nor muddy roads balk, and important requirements of the farmer have been met. That gasoline is the cheapest motive power known has been amply proved. It has been definitely shown that in the most dependable care the average cost of fuel and lubricating oil would not exceed one cent per mile, and this for a car capable of carrying five passengers.

A driving horse ordinarily cannot travel more than 50,000 miles during his life-time even though he does not go lame. Many automobiles cover a great part of this distance in one or two seasons. That the horse has his rightful place on the farm is not yet to be denied; there is certain work which he can do which the automobile cannot; but consider the convenience to be enjoyed if in thirty minutes a man living fifteen miles from town can, should occasion require, make the trip to the city, transact his business, and run back, spending but one hour on the road. Horses for certain kinds of service, including work horses, and thoroughbreds, will always be in demand, but today the farmer cannot allow sentiment to stand in the way of his own comfort, his own profit and his own business progress.

Like the telephone, the trolley car and the rural free delivery, the automobile has naturally come to weld a firmer link between the business men of the country and of the city. Farms in Texas which could not be sold, in spite of their greater fertility, before the arrival of the practical automobile, are now greatly increased in value and brought within what is considered easy distance of the market, although this distance is often between thirty and forty miles.

When it is considered that the utility automobile possesses such power equipment that it can travel the worst roads in any season of the year, can negotiate any hills which could be climbed with a horse and wagon, and requires but the simplest attention, it seems to be pretty well adapted to the uses of the farm.

The expense of up-keep in some cars has been reduced until today a man can operate a car, spending less for oil and gasoline than the cost of feeding a horse. It is worthy of note that the car is a matter of expense only when in actual operation, and that while in operation its road capacity is at least four times that of a horse-driven vehicle. As for repairs, if the car is given reasonable care and attention, they should be little in excess of the cost of shoeing and repairs on harness, etc.

FLOWER POST CARDS
Free to You

In order to introduce our large illustrated monthly, The Epitomist, which is of interest to every member of the family, we make this big offer to you.

Send 10c for a six months' trial subscription and we will send you, prepaid, twelve beautiful flower post cards absolutely FREE. These cards are strictly high-class and are something entirely new. Each card represents a scenic view and has THE LANGUAGE OF THE FLOWERS worked out most beautifully in mottoes in flower designs. For instance, in this series the violets spell out the words "Faithfulness;" the sweet peas, "Wish You Joy;" Chrysanthemums, "I Love You;" roses, "Love," etc. You won't be disappointed, for these cards are not like any you ever saw, and REMEMBER, we have a surprise for everyone that sends for these cards. There are only a limited number, so send today if you want them. THE EPITOMIST, 55 Main St., Spencer, Indiana.

Up-to-Date FARMING

The mass convention October 27, at Indianapolis, to reorganize, is as important as that event December 24, 1902, when the society of Equity was given to farmers.

Keep-a-Goin'.

When the weather kills your crops,
Keep-a-goin'.
When you tumble from the top,
Keep-a-goin'.
S'pose you're out o' every dime,
Gittin' broke ain't any crime,
Tell the world you're pullin' fine,
Keep-a-goin'.
—Frank L. Stanton.

POTATOES TO BE HIGH

In its advocacy of equitable prices UP-TO-DATE FARMING has never favored exorbitant prices. What we desire is steady prices that will always remunerate the producers, but that will never extortion upon consumers. When farmers take advantage of circumstances to make prices inordinately high they get as much away from the lines of Equity as do the monopolistic combines that force prices to farmers too low. Our theory is that marketing should be so controlled that a bumper crop would not materially depress prices, or a small crop or temporary shortage need not prohibitively advance prices. We believe this is entirely practical, and one at least of its benefits would be to remove the element of uncertainty from the cost of living and the rewards of labor. The farmer would know practically what to expect for his products, and the consumer would all the time know practically what his supplies are to cost him.

The present season is likely to be one which shall put this theory to the test so far as potatoes are concerned. The crop of 1908 is an unusually light one. The excessive dry weather throughout almost the entire potato belt has seriously reduced the yield, and a premature frost in Michigan further interfered with the crop in that state of usually heavy production. What is said of Michigan is said also of Wisconsin and Ohio, except as to the frost, while in Illinois the shortage is even greater. Maine, we believe, is the only state credited with a normal crop.

Prices are already high, dealers confessing that they do not expect the main crop to be below a dollar in the winter market. Eighty to 85 cents was paid some weeks ago for shipping stock in Michigan. This is one of the times when farmers must show their sincerity by not demanding exorbitant prices. When they are offered prices that pay them well for their labor is the time to sell, whether crops are large or meager. But even in seasons like this storage and holding is as necessary as in seasons of large crops. What avails when farmers must show their sincerulators buy up the crops at harvest time and then advance the price to extortionate figures in order to more thickly feather their own nests? The speculating buyers will do that as certain as fate, and where such is sure to be the result, the farmers would just as well do the "feathering" themselves. To secure equity to both producers and consumers the surplus, whether large or small, the necessity being all the greater when the surplus is small, must be kept largely in first hands, prices being kept equitable and the profits of storage retained by the producers.

THE BEAN INDUSTRY.

Few people have greater need of organization and co-operative effort than the producers of beans. It is much to be regretted that this branch of the Society of Equity got into such inefficient hands—mere adventures as it afterwards proved. At one time there was a sincere effort among the bean growers to organize for the more successful management of the selling side of their business, and for some time good results were indicated, but later weakness in management discouraged them and prevented necessary development.

The Michigan bean jobbers held a convention not long since, and seem to have come to the conclusion from information at hand, that, for the present season at least, Michigan must be looked to for the main supply. The Pacific coast states will have a good crop, but taken all together, the condition of the crop throughout the country indicates no more than 59 per cent of a normal yield. It is believed that foreign production seriously menaces the bean growers of this country. During the past year 2,239,880 bushels were entered at the ports of New York and Boston. The European acreage, it seems, has increased 25 per cent this year, and the cheap labor abroad makes it impossible for American farmers to compete with it. Canada has an acreage this year of some 50,000, with a reported yield of 18 bushels per acre. This is liable to give bean growers another subject for serious consideration and another necessity for their organization. There is a strong sentiment throughout the country and in all parties, for tariff revision; and there is no doubt but the scale adopted in 1897 needs to be changed in many particulars to make it better conform to present conditions, but various farm crops need protection, among them being the bean crop. When revision is undertaken, bean growers should be in a position to guard their interests, and nothing short of organization can place them in that position.

NATURAL AND ARTIFICIAL WASTE

The human family is a family of waste. It has been so ever since the world was inhabited. Races have followed each other, we cannot say in how rapid succession, but exhaustion marked the course of each, and hurried away to give place to another to waste that which was essential to its own existence.

Even in America whose resources were thought immeasurable and inexhaustible, the ravages of waste are beginning to appear lige wrinkles on the face of age. The fertility of our soil is being exhausted, our forests are disappearing, moisture or water supply is irregular, nature has withdrawn the wild animals as a meat supply, and exhaustive treatment is bringing weeds into the vast natural meadows of the middle west as it did in the prairies of the Mississippi Valley. How near we may be approaching the end of our mineral supply is not known.

It was a happy thought that suggested a consideration of these wastes of our resources with a view to their preservation, or, rather conservation. The inquiry concerning lands asks about the waste of soil by erosion or washing away; its waste through bad or exhaustive agricultural methods, etc. Regarding water we are asked how much is being wasted that might be profitably used in irrigation; how much is being wasted that might be used for carrying purposes and how much power is lost by not more fully employing our water powers. The wood using industries are also asked to report on the wastes accompanying wooden manufactures, especially in the cooperage lines. If these inquiries and investigations result in practical savings as they certainly must, it will be a benefit not only to the people of today, but a lasting benefit to the race. in spite of evils that may have crept into their methods, taught the world a valuable lesson in saving and turning to good account, what formerly went to waste. If like care should be taken of the universal wastes there is no telling what might be added to the present and future wealth of the country.

EIGHT MILLION BUSHELS A DAY

A New York financial paper declares as a fact that, during the eighty days of wheat harvest and threshing in this country, eighty million bushels of wheat are turned into the storage houses of the country every day. If this is true, and there is little room to dispute it, it means that in 80 days is marketed the bread supply of a year. Could greater insanity develop in any line of human action than this indicates in the matter of marketing? The farmer does the work upon which he depends for a living and an income, in approximately four months. The result of that work is to satisfy the hunger of the people for a whole year, and the prayer of those people is to "Give us this day our daily bread." They do not on any one day ask for bread for a year, or a month, and not often for a week. But those who produce it and own it can scarcely wait until it is cleaned from the chaff to throw it upon the market when they know it is not needed, and when glutted markets and low prices are inevitable. Even then it is not bought by those who need it for their daily bread, but by those who have appointed themselves guardian agents of the farmers to take charge of and hold the annual assets of the farm, rendering to the farmer what reward a glutted market may give, and then from the accumulated store perform the farmer's legitimate work of giving the people their daily bread, but at whatever price cupidity may suggest.

Whatever changes or reforms may be needed in the ways of the world, there should be a new deal in the time and method of marketing. Farmers who make the stuff should have what it is worth to the users, paying of course the costs of delivery. To them belong the profits now reaped by their self-appointed conservators, but which they cannot have so long as they dump on markets glutted by themselves. Farmers must prepare storage so they can sell on legitimate demand at prices which bring equitable profits.

LESSONS IN GRADING GRAIN

We are told that a feature of the National Corn Exposition to be held at Omaha next December, will be practical lessons in judging the different grades of grain. These lessons will be given by experts who will lecture before those taking part in the contests. Representatives from the large milling interests will lecture upon the use of the surplus millions of bushels that annually leave the farm, and they will demonstrate the several grades of grain. This will be important to the grain grower as well as to the dealer. It is an educational opportunity that can but result in good. We want farmers to know all there is to know about their business.

SAVE THE FEED WASTES

In a few of the states of the middle west excessive rains have greatly interferred with crops and much reduced the normal output—have specially cut down the finishing material of the live stock sections. In a very broad area an excessive drought through the summer months has produced much the same effect, though in a different way and different, perhaps, in kind. But in either case is indicated a scarcity of corn and high prices. The natural result of that condition is an early rush of stock to market, and a glut of inferior stuff, with consequent low prices. On this account it may be better in many cases to hold over stock that was intended for the market, and wherever that is done there will be a call for more winter feed than had been planned for. Don't lose an opportunity to save feed. If there is inferior hay which can be sold at a low price, keep it. You or some one else will have greater need for it a little later.

It always pays to save the corn fodder. Whether the corn be heavy or light, the fodder makes good feed, and the acreage yield is large. If you do not propose to cut the corn, gather as early as possible, and get the cattle into the fields. It will give them a boost and possibly get them into a profitable market even after you have lost hope. At all events,, save every bite of feed, and keep the cattle over rather than sacrifice them.

WHEN TO SELL WHEAT

We sincerely respect the opinions of others, and we like to act on the assumption that the opinion of the many is more likely to be correct than the opinion of the one. But it must not be forgotten that the many form their opinion from conditions as they exist, assuming that the same conditions will continue to prevail. In that way we look upon an article which recently appeared in the Twentieth Century Farmers discussing the time to sell wheat from the standpoint of the producer. The argument is based entirely on present marketing conditions and speculative control of prices. Cost of storage and shrinkage are taken into account, and the conclusion is almost reached that the best time to sell is as son as the grain can be got to market.

We do not think so; but we argue from changed market conditions. We hold that the time to sell is when the grain is needed for use, not when some one may desire it for storage to resell at a profit when it is needed. We concede the cost of storage and shrinkage, but these are not greater in the hands of farmers than in the hands of those who store for speculation, and those people make profits or they would go out of the business. And the profits made by those whose only work with the wheat is to store it, legitimately belong to those who produce it; and such profits would come to them if they sold only to meet the needs of consumption. This is the change we wish to see effected. When it is secured, prices will not be up one day and down the next, low on glutted markets after harvest, and doubtful in competition with "wind" all the rest of the year; but they will open steady at harvest to meet the demand, and remain as steady as the demand all the time. This steady price will naturally include shrinkage and cost of storage just as the irregular price does now in the hands of speculation. Demand is no more insistent at harvest time than at any other. Then where is the philosophy of piling the whole crop onto the market at that time? In fact, the first few deliveries supply the demand at harvest time, and all subsequent deliveries are absolutely without demand and at the mercy of those who buy to sell again. This is no bit of obstruse philosophy; it is but a plain recital of well known facts. Our theory, therefore, is to sell only to meet actual demand, and rearrange marketing methods to meet that kind of selling, and secure prices as steady from harvest to harvest as demand is to current supply.

A WHOLE YEAR FREE

Here's a Splendid Chance to Get a Big Farm Paper Easily.

We will send you our great farm paper absolutely free one year, if you do us a small favor. Just send names and addresses of 10 good farmers and enclose 2-cent stamp. Address Valley Farmer, 515 Jackson St., Topeka, Kan.

Amatite ROOFING

IF you had a sample of Amatite in your hand you would see in an instant why it needs no painting or coating to keep it waterproof.

It has a rough surface or *real mineral matter* on the weather side. It is evident to anyone that it is no more necessary to paint such a surface than it is necessary to paint a stone wall. Stone needs no paint; neither does Amatite. It is strong enough in itself to bear the brunt of rain and wind and sun without a protective coat of paint.

To paint Amatite would be a waste of time and trouble.

Amatite will last for many years without any care whatever. It is made to be *trouble proof* as well as *weather proof.*

A roofing that consists of smooth materials, made to receive a heavy coating of paint, is not a roofing at all—the paint is the real roof.

If you are told that certain roofings don't need painting when first laid, don't be deceived into thinking that they are like Amatite. The first coat of paint has been applied at the factory—that's all, and it will wear off in a little while and require renewal.

No paint is good enough to make a durable roof; a thick layer of pitch, faced with a real mineral surface, is far better—*and that means Amatite.*

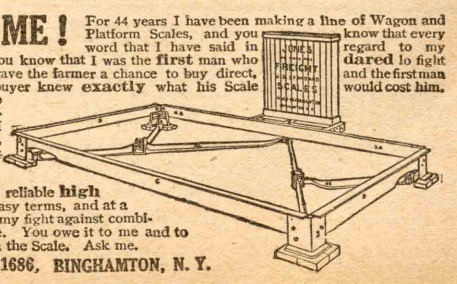
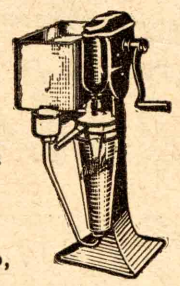
Scales has been the **exact truth.** You know that I was the **first** man who the **Scale Trust;** the first man who gave the farmer a chance to buy direct, to **"pay the freight,"** so that the buyer knew **exactly** what his Scale You know that I am still **fighting the trust,** and am controlled by **no combination.** You also know that when I say I have invented a new **Pitless, Steel Frame Stock Scale** that is absolutely accurate under all conditions, perfectly **simple** in construction, built on scientific principles, and **guaranteed** to be the only reliable **high grade Scale** of this kind that is sold on **free trial,** easy terms, and at a fair profit, that I am telling the truth, because I, **alone,** in my fight against combinations made it possible for you to buy a Scale at a fair price. You owe it to me and to yourself to get the introductory discount that I am making on the Scale. Ask me.



JONES, "HE PAYS THE FREIGHT," Box 1686, BINGHAMTON, N. Y.

A Small Leak Will Sink a Ship



To save the ship, stop the leak.

The same applies to your dairy, don't think because you are employing the pan setting methods or gravity systems, that you are getting all the cream; because you are not—in reality, you are losing from 9 to 40 pounds of butter per cow in one year.

Stop the leak by using a **separator,** but stop it **well** and **for all time** by using a

Tubular Separator

because it gets all the cream and delivers it in a smooth and gentle manner, as well as saving labor, time, attention and paying for itself within a year.

A trial convinces—Catalog 136 tells why. Write for it.

THOUGHTS EXPRESSED

Some old mares are good breeders. The writer once owned one that raised fine colts up to 20 years of age. But that is an exception. Expect the best results from young mares or those in the prime of life.

Irregular feeding, allowing horses to get inordinately hungry, leads to what is called "bolting the feed," eating too rapidly, and that is liable to lead to any number of bad results.

There is such a thing as feeding too much. Feed left in the box or manger is proof that too much has been given, but sometimes stock will eat too much if it is given them. Such is worse than waste, for it is actually injurious to the stock. At almost every turn in life there is an opportunity for thought and the exercise of common sense.

If the spring colts are being kept over, the approaching winter is the worst one they will experience, and they deserve extra care.

GARRETT WALL
Indianapolis, Ind.

The horse is a sensitive animal, and he should always be treated with care. Take no chances. A scarcely noticed incident may almost destroy his usefulness. An unexpected fright and a first runaway may make the gentlest horse unreliable all the rest of his life. We once had a fine driving mare, kind, gentle and safe, proved so in many trying situations; but after a single experience in a bumble bee's nest, she was never again worth anything in harness; in fact, harness could not be kept on her.

Neglecting the cows often results in inferior calves. It is as unreasonable to expect a hungry cow to become the mother of a well nourished calf, as it is to expect such a one to give an abundant flow of milk.

It is said to be worth ten or twelve dollars to raise a good calf with the cow, giving it enough milk to secure that result. Of course that depends upon the market there is for the milk or the butter that may be made from it; but there is little doubt that on the farm the calves are not taught to eat soon enough. A calf may be taught to eat grain and hay or grass at a few weeks old, and may then be made better calves on less milk, and they may be weaned earlier. The cheapest way to raise calves is on skim milk, but that does not much appeal to the ordinary farmer, who has no constant market for cream or milk.

The dairy or milk cow should be a pet—pets of the whole family if but one or two are kept. The shy cow is not a desirable one, and the wild or vicious cow is a nuisance, fitted only for the block, no matter what her other qualities may be. And the disposition of the cow depends very much upon the disposition of those who milk and care for her. Gentle treatment makes gentle cows, and kindness and fondling makes the cow a pet. Everybody knows what rough treatment and abuse makes.

The farm that has been abused until it is worn out, makes a better bid for live stock and dairying than for any other line of farming perhaps. We do not mean it is the best place for that business. The richest farm for any farming; but live stock and dairying will come nearer paying something while building up the old farm and we presume of live stock we may put sheep at the head, if the farm is up land.

It is not always the cow's fault if she fail in her milk during the hot, dry summer months. The most costly flouring mill will cease to put out flour if no grain be put in the hopper.

Regularity in feeding is an important element in the care of stock. Living bodies are much alike whether it is to miss a meal, or to have to wait for one. The object in feeding stock is to get the very best results from the feed given, and to get such results stock should suffer the least possible sensation of hunger, and the system should be kept in regularity of action. That means regular feeding and watering at the same time.

For feeding stock, especially milch cows, it is claimed that pea hay is in every respect equal to alfalfa. This is disputed, we know, but farmers who live where the cow pea flourishes should give it a thorough test, before worrying too much to make alfalfe grow in soil where it is a stranger.

Spring calves is an old fashion which grew out of the free open range. Modern methods, including the housing and feeding of cattle during the winter, makes the cow fresh in the fall more valuable both for milk and butter than the one fresh in the spring. And if the calf is to be vealed, it will find a better market in the fall than in the spring. If it is to be kept, it may very soon be taught to eat, and if fed properly, makes a better calf and cheaper, quality considered than the neglected summer calf.

THE MILK PROBLEM

The attention given it almost everywhere certainly indicates that there is a milk problem. In fact, there always has been, but previous to the discovery of the germ theory of disease the greatest problem was to increase the supply—to get enough of it. For years and years milk was used indiscriminately wherever it could be obtained, and there was never a thought that there was danger in it. Now everybody trembles at its dangers as a vehicle for carrying and transmitting disease to those who use it. Those who know, or think they know, declare that epidemic outbreaks are often traceable to the milk used by the people; that typhoid, scarlet fever and diphtheria are frequently spread in this way, as is also Asiatic cholera, dysentery, and that most common and dreadest of all plagues, consumption. We are glad that people grow wiser, and we rejoice at every discovery that may lead to better things, but the fact remains that all these diseases have preyed upon the human family for ages, and it may not be asking too much to request our scientific friends to explain why these diseases do not disappear or become less prevalent as their principal vehicle is so treated that it will no longer carry their germs? We do not make these remarks to discourage research, or to make the test and application of precautionary measures more difficult, but we write from the standpoint of the common people, and it cannot but be noticed that the milk-conveyed diseases are as prevalent and fated now as they were when milk was used indiscriminately, if not universally, with no thought of germs or pasteurization.

But let it be understood that we endorse and join with all these efforts to secure purer milk. Safeguards are doubly needed in the cities where the supply comes from large dairies upon which the owners and managers depend for an income and ultimate wealth. Cupidity, the seed of which seems to have been planted in almost every human breast prompts to careless, uncleanly and unsanitary methods, to a recklessness of public health and welfare, if expense may be saved and greater profits accumulated. Milk coming from such sources needs inspection, and the power of society whose heatlh is involved, may well be exerted to keep away from its mem-

A SURETY BOND WITH EVERY ROLL OF CONGO ROOFING

NEVER LEAK

Congo is the only ready roofing on the market *backed by a Surety Bond.* We can afford to make our guarantee so strong because Congo itself is as strong as the guarantee.

Our ambition has been right from the start not only to make Congo the best all-round practicable and serviceable Ready Roofing, but to back it up by a guarantee so *sure* and *complete* that it will be the aim of every owner of a building to use Congo when needing roofing.

This bond covers a period of 10 years and gives to the user of 3-ply Congo the most reliable guarantee. It is issued by the National Surety Company of New York, one of the largest and most substantial companies in the country.

Congo doesn't cost much. It is extremely waterproof and *always stays so,* and it's very easy to lay. The new galvanized caps (a new feature with Congo) do not rust and cause leaks like tin caps or nails.

Write for a Sample to-day and further information.

SPECIAL NOTICE—If any Congo rolls that you purchase do **not** contain Guarantee Bonds, write us at once, telling us where and from whom they were purchased, and we will at once mail you the missing bonds.

bers that which may endanger their health and usefulness.

And farmers are not without the need of precautions. Milk is a part of the living body from which it is drawn, and if that body is not healthy, the milk canont be healthy, and unhealthy milk cannot be healthful food. Besides, the risk that introducing the disease that affects the cow, whatever it is, into the human system may communicate it to the human, especially if that human be a tender babe or possobly a child predisposed to disease, is too great to be taken. It is also true, as has been in many ways proven without the aid of scientific tests, that the milk will partake of the nature of the food and drink consumed by the cows. The cows whose milk is to be used by the family, should never be allowed to partake of unwholesome feed, or to drink of impure water. Nothing in nature, perhaps, is more disease laden than stagnant water, the water found in drying marshes, stagnant pools and scum covered ponds. Cows drinking such water cannot produce healthy milk, or milks that it is safe to take into the human system. For similar reasons, milk cows should not be pastured on low, wet, marshy lands. Such lands are malaria ridden and nurseries of biliousness, and persons using milk from cows so pastured are almost certain to need treatment for bilious ailments.

We mention these things not to discredit the use of milk, for it is an important part of the food of children if not adults, on the farm, but we wish to urge necessary caution. If the milk is at all suspected, heat it. It need not necessarily be brought to a boil, but boiling will do no harm. It need not be taken warm, though children soon learn to relish it as well warm as cool, and we believe it is more healthful so taken, especially for children passing their first summer.

But farmers who put up ice, and all in higher tatitudes might do that, and have ice boxes or refrigerators, could easily have for use as cold milk as they wish even after it had been heated or boiled. We believe such precautions as here outlined would materially add to the healthiness of milk users.

CORN IN KANSAS

Much has been said of an immense corn crop in Kansas this year. We have more confidence in the reports of F. D. Coburn than in those of any other person connected with the agricultural service, state or national, and Mr. Coburn reports on Kansas corn as follows:

Despite the superabundant rainfall throughout much of the state's principal corn-growing territory that seriously interfered with preparations for corn and its planting the area is greater than that of 1907 by 243,403 acres, and aggregates 7,052,415 acres. The general average condition on this area is 68.7, 100 representing a good average stand and satisfactory growth. This is 5.3 points lower than the condition last year at about the same time and 19.3 points less than in 1906.

This report shows that the only factor of increase in the Kansas corn crop this year is acreage. The promised yield is less than 69 per cent of a good average crop; more than 5 points below that of last year, and more than 19 points below that of the year before. So Kansas is really to have less corn this year than for the rather short crop of 1907, and much less than the crop of 1906.

THE NEW FARMER

Arthur J. Bell thus outlines the work and habits of what he calls the new farmer:

The new farmer lives the new country life. The new farmer builds for his wife and chidren a modern, sanitary, attractive home. The new farmer makes hard roads, he installs a telephone, receives his mail by free delivery and encourages interurban service, supports a thriving rural church and demands an efficient consolidated school with high school course for his sons and daughters at home. The new farmer reads and thinks, he studies his own environment, sees his opportunity and limitations; improves the one and removes the other. The new farmer is not only a scientist, but a sociologist. He works in harmony with his neighbors for the general good and uplift of his immediate community, and above all else he realizes the dignity and importance of his own profession and individuality in the permanent and national welfare.

Several other things might have been added. The new farmer studies the selling side of his business as well as the producing side, and he is willing to stand by his neighbors in a united effort to secure reasonably profitable prices for his products. He believes the farmers have as good a right to control their business, either as to output or selling price, as have those of any other calling. He regards trade, merchandising, as helps to agriculture, and he stands by his local merchants who are willing to stand with him in equity, and he will patronize no other, either in buying or selling, so long as he is dealt with on the above fair and equitable basis. The new farmer and the new merchant thus acting together in home loving fairness, will make a new country.

BAD FEED

It is not good economy to feed a horse on bad feed. There is always some damaged stuff on every farm, stuff that is still more or less nutritious, but that is no longer marketable. Such stuff, if not too bad, may be made to yield some value by feeding it to cattle, but it should never be fed to horses. Mouldy hay or fodder of any kind is injurious to the horse. Clover got into disrepute as a horse feed, because people a few years ago did not so well understand curing clover hay, and it became mouldy and musty. It was the mustiness that injured the horses and not any quality of the hay. There is no better horse feed than properly cured clover hay that is free from must or mould, except that, if given him, the horse will eat too much of it, just as the child will eat too much cake or candy if given all it will take.

We urge that, however other animals be treated, the horse should have good, clean feed and pure water. His digestive organs are very delicate, and he is highly organized, quite susceptible to unfavorable conditions and impurities in feed, and his value, if nothing else, should secure to him the best. At least nothing should be given him that would endanger his health and usefulness.

Milk Goats are very profitable animals to raise. The goats are very hardy, not subject to tuberculosis and other diseases. Therefore the milk is healthy. If you want to know more about the industry, write to Haynes Bros., Haynes, New Mexico, for full particulars. They have a special proposition so you can get stock cheap.

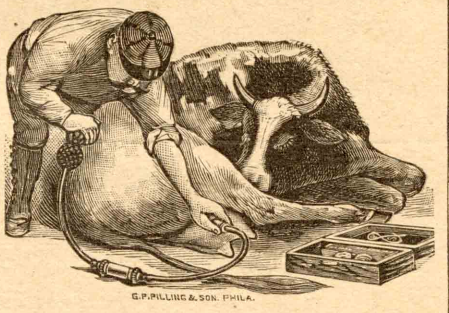
Scriptural

According to Scripture, summer is the pride of the year."

"How do you make that out?"

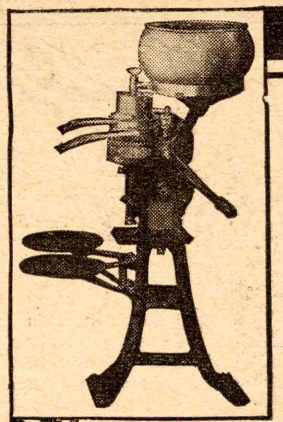
"Don't a summer always go before a fall?"

Reliable Milk Fever Remedy



Did you ever lose a good cow with Milk Fever because you had no home treatment and could not get a doctor in time? It is not necessary for you to lose a single cow. Send to G. P. Pilling & Son Co., 2256 Arch St., Philadelphia, Pa., $3.00 and get their "Easy to Use" apparatus. They will send it by prepaid mail or express on reecipt of remittance.

The Pilling Milk Fever apparatus is "Easy to Use," it requires no Veterinary knowledge and any cow owner can use it successfully. This is for the Air Treatment as recommended by the U. S. Department of Agriculture, and if taken in time 97 out of every 100 cows have been saved. You should have this "Easy to Use" apparatus always on hand. This firm publishes a very interesting pamphlet describing many other "Easy to Use" Cattle Instruments; it will be sent free upon request. Ask for booklet Q.



TIME TO BUY CREAM SEPARATORS NOW

There never was a better time to buy the best of Cream Separators than right now.

The advantages derived from the use of the good Cream Separator are greater in the fall and winter than at any other time,—when the cows are old in lactation, the loss of butter-fat is otherwise greatest, and butter prices are highest.

Likewise are the advantages of the superior DE LAVAL separators greatest over imitating separators when the milk is hard to separate and the weather cold and variable,

In every case a DE LAVAL separator, of suitable size, will surely at least save its cost between now and July 1st next, and go on returning 100 per cent per year on the investment for twenty years to come.

The agricultural and particularly the dairying outlook was never brighter and more promising.

WHY NOT BUY NOW?

Poultrymen should see the item in this issue how the price of eggs is higher since the controlled marketing doctrine was taught. Come to the mass convention.

THOUGHTFUL SUGGESTIONS

Of all the farm investments, which yields the greatest incom eto the amount of capital invested? The poultry. Which has the least care, the poorest shelter and the worst treatment? The poultry. The most neglected building on the farm is the hen house. That is not right, nor is it good farming. Winter is coming on. Put the hen house in good order.

Alum in the drinking water is good for poultry when there are symptoms of cholera.

The bees get rid of the drones. Men and women ought to be as wise. The roosters that are not needed and the hens that don't lay, cost as much to keep as the most profitable ones in the yard, get rid of them.

Wheat, quantity for quantity and price for price, is better and cheaper poultry feed than corn.

When feed is left in the poultry yard, the pig pen, the cow shed or the horse stall, too much was given. Such is a special warning in the poultry yard. Give only what will be cleaned up. The fowls do better.

A dozen eggs sell for more than a pound of butter. Which cost the more in work and feed to produce?

The incubator is coming more and more into use. It is said 150,000 incubators were sold during last year.

Thoughts now turn to winter eggs. The nearest the hens can be kept to spring and summer conditions the more they will produce. Reasonable warmth and protection from storms, dust to "flutter" in, gravel or grit at pleasure, clean water, plenty (but not too much) of good grain feed, opportunity to scratch, some kind of vegetable matter, green if possible, cabbage, turnips, etc., or clover, pea, or millet hay, meat scraps and ground bone, or plaster, lime or crushed shells. Work as nearly as possible to that formula, and you will "have eggs to sell and to keep."

Keep things clean about the poultry yard. That is said so much that about as little attention is paid to it as is paid to cleanliness of the yard and hen house, but it is important all the same—nearly as important in winter as in summer.

Hens that are well treated and don't lay may be too fat. Reduce the grain feed, and give a little more meat and vegetable feed.

"It takes too much work and care to get winter eggs? Who said that? Not the progressive farmer who seeks to "make every edge cut." Lambs require work and care. So do pigs, colts and calves. What is the farmer for any way? If he is to make money he must give work and care for it, and we do not know anything that will pay better for it than hens in winter if they are properly treated.

Be sure that the sunshine has a chance to get into the poultry house—morning, noon and afternoon, summer and winter. This is much neglected. Even when there are windows, the glass becomes coated so as to almost exclude the sun. Keep the glass clean. If instead of glass there are open windows, close them in cold weather, but do not fail to open them at least for a short time when the sun is shining opposite them.

UP-TO-DATE FARMING
Indianapolis, Ind.

A CHANGE IN POULTRY SHOWS

Poultry shows have usually devoted their principal attention to individual specimens, and when groups have been considered, it has generally been groups of birds that have already been shown and scored high as individuals. This method has appealed to professional breeders of high class poultry, who have paid fancy prices for choice specimens to play a prominent part in or to head their flocks. To this there can be no objection, and it has done great things in the improvement of poultry, but it has not so well met the farmer's case whose business is entirely with flocks.

In this regard the American Royal live Stock Show of Kansas City, Mo., has decided upon a departure more in line with that universal poultry producer, the farmer. In their coming show poultry will be exhibited as breeding pens only, comprised of a male and four females. These fowls as a group will be judged according to the New Standard of Perfection, and such a pen will form a superior basis for a farm flock. One other step might have been taken of great benefit to farm breeding—the mating by an expert of larger pens with a special view to best results. On the farm eggs and early maturing, well developed fowls are the most important qualities, and large breeding pens carefully and skilfully mated to these ends would result in great and immediate improvement.

POULTRY VALUES INCREASING

This is an expanding age, and we are glad to note that the poultry interest is growing as rapidly as any other. The following figures are taken from one of our most reliable exchanges:

The prices of both fowls and eggs have advanced rapidly and appear to be going higher in sympathy with the advances in other products. The following figures show the enhancement in price: The farm price of eggs in 1899 was 11.55 cents per dozen as an average for the United States. In 1903, 12.37 cents per dozen; in 1904, 17.20 cents; in 1905, 18.70 cents; in 1906, 17 cents, and in 1907, 18.20 cents. Dressed poultry sold in New York in 1899 for 10.78 cents per pound wholesale, 12.97 cents in 1903, for 12.57 cents in 1904, for 13.36 cents in 1905, for 13.20 cents in 1906 and for 14.90 cents in 1907.

THE BEST LAYERS

All farm poultry raisers envy those who get the most eggs in proportion to the hens kept. It is agreed that some cows give more milk than others, and the inferior milkers are disposed of. It is agreed, too, that some hens lay more eggs than others; but is any effort made to thin out the less fruitful hens? Not by one in a hundred, perhaps.

If each flock of poultry were carefully watched, and the best layers noted and kept, and the light layers culled out and sent to market, there is no doubt but a flock of great layers could be produced. And not only so. A strain could be produced of special value as breeders. Take pains to cull and thin out the flock, always keeping the best layers.

GET A FREE SAMPLE OF "AMATITE"

Even if you are not going to do any roofing this season, it is worth while to inform yourself regarding Amatite Roofing. This material is an advance upon previous kinds of roofings, inasmuch as it requires no painting to keep it leak-proof.

Practical men will recognize that the constant painting ordinary ready roofings require is a source of endless trouble and expense.

Amatite has a real mineral surface which requires no painting. Every up-to-date user of ready roofings should know all about Amatite.

Free samples can be obtained by simply asking for it from the nearest office of the Barrett Manufacturing Company, New York, Chicago, Philadelphia, Boston, St. Louis, Cleveland Pittsburg, Cincinnati, Kansas City Minneapolis, New Orleans.

Wooden posts rot, they are expensive and often require attention. Cement posts improve with age. Their first cost is little and they are a source of delight and profit. Cement posts are easily made with Champion Post Machines. Write to the Champion Post Machine Co., 30 State St., Mendon Mich., for full particulars.

It Was In Boston

They met in the suburbs. One was a highwayman, the other simply a citizen. "If you move you are a dead man!" hissed the highwayman. "You are mistaken, my dear sir," said the Bostonian, "if I move it is the very best proof that I am alive."

Fruit and vegetable growers are expected to come to the mass convention to reorganize the Fruit and Produce Department.

APPLE LOSSES

Much is said this fall about the losses suffered by the apple trade last year, and as a result only very low prices are offered this season. But if there were losses last year it was not because of high prices paid the producers. The crop of 1907 was a small one, reported at only 80 per cent of a normal crop; and orchardists remember that in spite of that fact low prices prevailed. The cause of the losses, therefore, was not that too much had been paid or that the supply was excessive, but it was because the demand was virtually destroyed just at the time when it should have been most active. The apple is the luxury of the working man and his family. Just at the time the cream of the crop began to flow into the centers of consumption, the inexcusable panic of last October threw millions of working men out of employment and compelled the most rigid retrenchment of family expenses. This cut down the consumption of apples and made the market seem over supplied. It was not the fault of the crop or of the buyers or sellers, but of the panic which compelled those who had been accustomed to use apples freely to forego their use.

But the influence of that disastrous season follows into the present. The crop of 1908 is perhaps the smallest ever known. It is reported by the government at no more than 52 per cent of a normal crop, and even that report we believe to be excessive. And yet prices drag even below what was paid last year. These prices, so ruinous to the orchardists, are also chargeable to the panic of last fall whose effects are still dragging their slow lengths along. The losses of last year made the buyers extra cautious, and well they may be, for millions of apple users are still unable to buy them or have learned to do without. Growers therefore, who are unprepared to store, must patiently bear their losses, and try to benefit by every available lesson the peculiar situation contains. We feel it our duty to give to both growers and buyers the true cause of their losses in the hope that the truth may help to clear the atmosphere.

NEW YORK'S FRUIT PACKING LAW

The state of New York has adopted a rigid law governing the size of package of fruits. As other states will no doubt soon do the same, we will give the requirements as to barrels for apples, pears and quinces:

The head diameter of barrels must be 17⅛ inches; length of stave, 28½ inches; bulge no less than 64 inches, outside measurement, but if the barrel be made straight these dimensions must be altered as may be necessary to still provide the same capacity.

Any person who makes or causes to be made barrels for use in the purchase or sale of apples, pears or quinces, or any person who packs apples, pears or quinces in barrels for sale, or sells apples pears or quinces in barrels which contain a less quantity than the barrel above described, shall brand said barrels upon each end and upon the outside conspicuously in letters 1½ inches in length with the words "short barrel."

Section 37 of the agricultural law provides: Every person violating any of the provisions of the agricultural law shall forfeit to the people of the State of New York the sum of not less than $50 nor more than $100 for the first violation, and not less than $100 nor more than $200 for the second and each subsequent violation.

THOUGHTS ABOUT THE ORCHARD

The orchard must do better than they have done in very large areas for the last two years, or fruit growing will come into disrepute. The excessive crop of three years ago, and the number of apples that were allowed to rot in the orchards, may have given insect pests such an unusual opportunity for increase that their multiplied abundance may, at least in a measure, be responsible for the failures and bad fruit of the last two seasons. If so, a general cleaning up is indicated, and thorough spraying next spring. Let everything burnable about the orchards be thus destroyed during the winter months, that the insect crop may be reduced; then follow this with spraying.

Old and neglected orchards call for severe pruning. Don't neglect that this season. It may be done any time between the fall of the leaves and the rise of the sap next spring. Trees that have not borne for the last two years should be well opened up from top to bottom. Exercise judgment, of course, but do not hesitate to take off large branches where you think the tree would be improved by it.

After pruning don't leave the brush scattered around the trees. Pile it where it may be burned without injury to a tree, or haul it out of the orchard and burn it. Leave nothing about the orchard that will afford a home for an animal or insect pest.

We favor setting orchard trees in the fall; many good orchardists do not. Set in the fall, the trees must bear some rough treatment and many vicisitudes winter may bring, but there are advantages we think over-balance these. The soil gets firmly settled to the roots before feeding time, and a mulch will prevent freezing out. Wrapping with paper extending into the ground and to the height of two feet above it, will protect the trees from rabbits and mice.

PREPARE FOR STORAGE

The ripening of every perishable product and the prices accompanying the harvest time, is an eloquent sermon in favor of preparing to store such crops where produced, or by the producers at the near by shipping points. Producers must have profits from their crops or they must cease to produce them. Farming is governed by the same laws of compensation as every other business. When a business brings no profits it cannot but languish, go into disrepute, and ultimately perish.

Every experience teaches that to sell at harvest time, for all to sell at harvest time, is to sell at low prices and small profits, or at actual losses. In the matter of perishable crops this can be prevented in but one way, and that is in safe storage of the crops. All who buy such crops in quantities, buy to store, so as to sell as demand develops at higher prices. These prices bring the profits, and the growers are the ones entitled to them. If those who buy these crops con provide storage, those who produce them can do so too. To provide such facilities involves co-operation, and co-operation requires organization. These are all within the reach of the growers. We believe they have the pluck, energy and business ability to do it. We are sure also that, by co-operating, they have the capital. It only remains to do it.

Special Rates South

There will be a special Homeseekers Excursion from Ohio River Gateways, as well as Washington, D. C., on October 27th, and November 24th. Tickets will be sold on the basis of eighty percent of the one way rate for the round trip. This makes a very low rate and everyone interested in our southern territory should take advantage of it. Investigate those places on the line of The Atlantic Coast Line Ry. Write Wilbur McCoy, of Jacksonville, Fla., for full particulars.

WANTED

To Hear From Owner Having a

Good Farm

For sale. Not particular about location. Give price and description and reason for selling. State when possession can be had. Will deal with owners only. By my unique plan of selling properties you pay not a cent of commission to any one. Write to-day for full particulars. Right now I have more customers for farms than I have farms for sale. If you want a quick sale, let me hear from you immediately and I know you will be pleased and surprised with my new methods of bringing buyer and seller together.

What "Soil Cultivation" is doing for Colorado

Just These:

It is reclaiming without the enormous expense of irrigation some of the richest farm lands on the earth—the mellow, sandy loams of Eastern Colorado, on the great Bijou Ranch in Elbert County. It is making Denver and other near by cities sit up with wonderment at the rapid progress made by Colorado farmers who are following the system of "Soil Culture" taught by Mr. Campbell. It is making poor men wealthy. It is putting on the market at a low figure—$8.50 to $16.00 per acre—that rich and fertile Bijou Ranch—only 65 miles from Denver, 42 miles from Colorado Springs, and only 5 miles from Union Pacific or Rock Island Railroads. Here you can buy virgin soil, mellow and deep, which raises cereals, fruits, alfalfa, vegetables, sugar beets, melons, etc., etc. (*See 90 inch corn in cut at right.*) Here with 2 horses, 10 cows, 5 brood sows you can clear $1000 a year on an 80-acre tract.

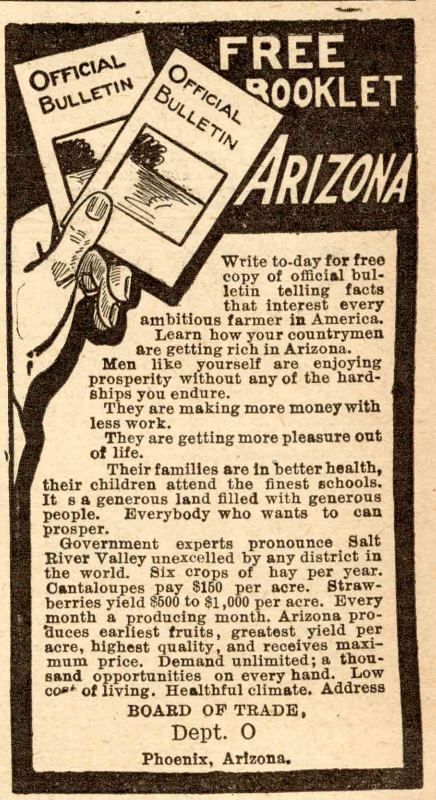
A New Book Free

Don't make a move buying real estate near or far till you get our brand-new illustrated book—warm from the press—entitled, "The New Colorado." It answers the majority of your questions such as: How much money you'll need to have to get a start; what the climate is, the rainfall, the soil; how near water is to the surface; how long you'll need to wait for profits; cost of coal, wood; nearness of schools, churches, etc., etc.

This book is not old, rehashed information, but is compiled from fresh, live facts recently obtained from new settlers and old timers on this ranch.

"Hurry to Colorado" and get a good choice of the fertile lands. Now's your opportunity. Don't treat it lightly. Send for the free book now and decide. Address, Dept. 39.

The Farmers Land & Loan Co., 145 LaSalle St., Chicago, Ill.



Write to-day for free copy of official bulletin telling facts that interest every ambitious farmer in America.

Learn how your countrymen are getting rich in Arizona.

Men like yourself are enjoying prosperity without any of the hardships you endure.

They are making more money with less work.

They are getting more pleasure out of life.

Their families are in better health, their children attend the finest schools. It s a generous land filled with generous people. Everybody who wants to can prosper.

Government experts pronounce Salt River Valley unexcelled by any district in the world. Six crops of hay per year. Cantaloupes pay $150 per acre. Strawberries yield $500 to $1,000 per acre. Every month a producing month. Arizona produces earliest fruits, greatest yield per acre, highest quality, and receives maximum price. Demand unlimited; a thousand opportunities on every hand. Low cost of living. Healthful climate. Address

BOARD OF TRADE,
Dept. O
Phoenix, Arizona.

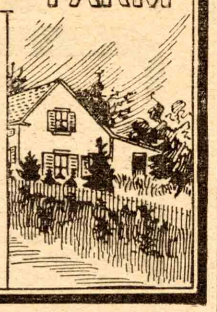
Up-to-Date HOME ON THE FARM

The woman of the farm home will be welcome at the mass convention October 27, 1908, at Indianapolis.



A GOOD MOTTO

It is said that Edward Everett Hale wrote the following, and that it was adopted as the motto of the Harry Wadsworth club in "Ten Times One is Ten":

To look up and not down,
To look forward and not back,
To look out and not in and
To lend a hand.

THE EMOTIONAL SAFETY-VALVE

There is no reason why women should not keep wrinkles and gray hairs at a distance longer than most of them do. The principal reason women age more rapidly than men is that they will not give a natural vent to their feelings. Over some slight trouble, which perhaps is inevitable, they will go into hysterics, to the ruin of their nervous systems; but for the most part they cultivate a habit of concealing their feelings, which ages them more than anything.

It is this self-repression that plays havoc with complexions and makes age creep over the face, because there is an inward fretting which has no escape valve. Some women will make martyrs of themselves and hide their feelings, whether of love or hate, sorrow or joy, because women have been taught it isn't "ladylike" to show their feelings. A man has the wisdom to shake off these feelings, even if he has to resort to a great deal of unorthodox language to do so.

Man has always been the privileged side of the house in the matter of showing his feelings. Nine out of ten of them will swear roundly when they are displeased, and they thus get it out of their systems and give a chance to good-nature to again enter in; but a woman bottles up her displeasure and carries it around with her for an indefinite length of time. Thus it rankles and grows, and she gets a sour visage and cruel little lines come stealing into her face. She ought to give vent to her feelings in some sudden gust and get it over with at once and have done with it. Not that swearing is advocated for women, by any means, but feelings can be expressed without profanity. This repression of feelings by women during the early and middle parts of their lives generally makes naggers of them in their old age, and there is nothing on earth as thoroughly disagreeable as a nagger.

Letting out one's feelings doesn't mean nagging. It means "blowing off steam" when the pressure gets too great and letting out the pent-up emotions so that one can go on in a normal condition. One can't very well be calm and normal as long as repressed feeling is raging within.

Now, there is a vast difference between the emotional safety-valve and nagging. The woman who says her say, then stops and lets it go at that, is wise. But the woman who keeps on growling and harping on her grievances (there are always plenty of these grievances) is a nagger and a pest to all who come in contact with her.

"Children Teething"

Mrs. WINSLOW'S SOOTHING SYRUP should always be used for children teething. It soothes the child, softens the gums and allays all pain, cures wind colic and is the best remedy for diarrhoea. Twenty-five cts.

One can't help thinking that Rip Van Winkle would voluntarily have chosen his twenty years sleep in preference to spending those twenty years in the society of his scolding wife.

The trouble with most women is that they can't strike the happy medium between entire repression and eternal nagging. Until they learn to do that, women will continue to be nervous wrecks and grow old before their time.

ABUSE OF COUNTRY HOSPITALITY

Most city folks have friends or acquaintances who live in the country, "down on the farm," where there is plenty of fresh air, plenty to eat and above all, plenty of hospitality. Hospitality is placed above all because if that were left out it wouldn't be quite so nice, would it? sally forth to the county to spend the day. But country people are almost invariably hospitable. One often wonders why it is city folks are more inclined to the other way. It must be on account of the out-of-doors life they lead that country people are so good-natured. It is such a pity that this good-natured hospitality is sometimes so shamefully abused by city folks.

Sunday is generally the day of days chosen by folks in the city to swoop down on their country friends to "spend the day." They hitch up their family horse early Sunday morning, pile all the children into the carriage and hie themselves away for a day in the country.

One often wonders what the farmer's wife thinks and feels as she sees that carriage turn in at the gate which is always open. What she thinks or feels doesn't matter, however, as long as she gives a welcoming smile and a cheery greeting to the visitors. She has worked hard all week until she is ready to drop Saturday night. She goes to bed that night with the blessed thought that tomorrow is Sunday and she can rest up for the next week's toil.

Garrett Wall
UP-TO-DATE FARMING
Indianapolis, Ind.

Sunday morning comes and with it a troop of visitors. So she has to "buckle on her armour" once more and go to work, getting dinned for the city folks. It must be an extra fine dinner, too, for the city folks are fine in their Sunday clothes. They sit around and watch the farmer's wife bustling here and there, cooking and skirmishing around getting out her best dishes and table linen. They can not give her any help, because they might spoil their good clothes. Finally, the dinner is all on the table and the city children are hunted up from the barn, the chicken house and the orchard, where they have been tormenting the animals, scaring the chickens and pulling the fruit, and the principal event of the day is in full swing. The fresh air has given the city folks voracious appetites and at the end of the dinner, the table presents an array of empty dishes in a state of confusion which must bring despair to the heart of the tired woman whose task it is to bring order out of that chaos. The dishes are carried to the kitchen and left to be washed up by the farmer's wife after the visitors have departed, and the next day the best table linen has to be laundered.

The Sunday afternoon is spent by the hostess in an effort to be interested in the conversation of the city folks—conversation which generally relates to the ailments of the children and the awful servant question. This to a woman who is tired to death waiting on those same city folks and is moreover expected to feel the honor conferred upon her by their condescension in visiting her. She might have had a nice restful nap that Sunday afternoon, but a farmer's wife isn't expected to prefer a nap, however restful, to a visit from fine folks from the city.

Now, take the other side—what if that farmer's wife with a wagon load of children should descend, some Sunday morning, on the home of those same city folks. Wouldn't there be immediate consternation in that household? And wouldn't the lady from the country instinctively feel the chill in the atmosphere? Well, I guess so. City hospitality isn't the same as country hospitality. That's why the latter is so much abused.

A real example will effectively illustrate the point in question. Once there was a widow with two children. They lived in Indianapolis and the widow had rather a hard time of it, not many helping hands being stretched to her. Well, one spring she had a chance to rent a small farm and she concluded that this was the opportunity of her life. She rented the farm, got some chickens and had the coops put in. She worked like a slave getting things in shape. But just as soon as the fine summer weather set in, the people who had known her in the city, suddenly discovered that they were good friends of hers and they'd go out and have Sunday dinner with her. As an actual fact, there wasn't a Sunday that summer that there wasn't half a dozen people out at that little woman's house for dinner. They never realized what they were doing to her, because she was a good-natured, hospitable soul, who couldn't be rude to anyone. The upshot was that she had to give up the farm because she never

got any rest and visitors were literally eating her out of house and home.

It's inconceivable how city folks, with all the advantages they have for gaining knowledge, have not yet learned how selfish and inconsiderate some of them are toward their country friends.

THE FUTURE MAN AND WOMAN

What do the parents think of the little boy or girl that pays no attention to what they say? How many times have they told the children to do something, or not to do it, and then paid no attention to it, never knowing whether the request had been granted? The child is such a dear little thing you do not wish to contrary it, and it is so small no one need pay any attention to it. But it is innocent and good now; are you making it otherwise? Are you teaching it that you, its father and mother, don't mean what you say? Are you leading it to become indifferent to your wishes, and teaching it to become a rude, inconsiderate person? It is a fearful responsibility when parents realize that a child is never bad until it has learned to be so. It was given as an angel, innocent and pure. What is it now, and who has been its teachers? What is bad for the grown-up is bad for the child. If it is bad to deceive or lie to the grown-up, it is bad to deceive or lie to the child. It is no wonder the school has such a task to discipline and educate the children, or that the church seems to make such slow progress in evangelizing the world or inducing the people to be good. Pass a few days in the average home, and see how the small children are managed. It is a wonder that men and women are as good as they are.

I DO the very best I know how—the very best I can; and I mean to keep doing so until the end. If the end brings me out all right, what is said against me won't amount to anything. If the end brings me out wrong, ten angels swearing I was right would make no difference.

—Abraham Lincoln.

UNKIND SPEECH

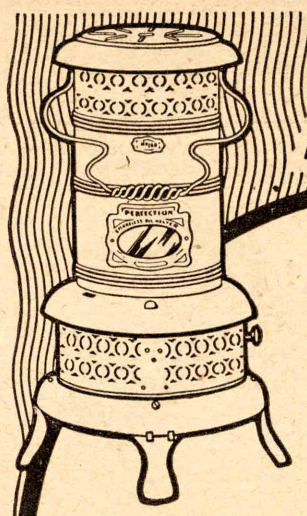
"Behold, what a great matter a little fire kindleth. And the tongue is a fire, a world of iniquity." Strong words of the Apostle. But they are no stronger than is warranted. Words cut like a knife. Many a heart has been made to bleed when no wound was intended. Good people sometimes say unkind words when no unkindness was meant. They didn't think—didn't properly consider the words they were using. Were everybody so it would make a dull world. But whatever is said, think if it would pain or injure some one else. It is a good rule to say nothing of any one which you would not say if the person spoken of were present. That rule would work a great revolution in conversation.

A SCRAP BOOK

Every home reader should make a scrap book. Papers will not be preserved. They may be saved for a while, but soon the reason for keeping them will be forgotten, and they will be destroyed. Yet scarcely one but has something in it the reader would like to save. The only way is to have scissors handy and clip it out. If you don't get time to paste the clippings in a book, preserve them in a strong envelop or pocket. The older they are the more valuable they will become, and many a time in after years you may spend pleasant hours looking over them. Aside from their value, the clippings are a correct index to what you fancied at various times in life.

GEARHART'S 1908 FAMILY KNITTER

is a vast improvement over anything heretofore manufactured for family knitting. It will not only knit hosiery, mittens, leggins, etc., from the coarser, heavier, woolen yarns, but it will also knit with cotton, Saxony floss, silk, and the finer wool yarns, something heretofore impossible with family knitting machines. These improvements make Gearhart's Family Knitter as essential to any household as a sewing machine. For full particulars address J. E. Gearhart, Box 84, Clearfield, Pa.



Heat

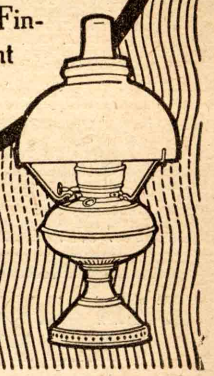
Where you want it—
When you want it—
No smoke—no smell—no trouble.

Often you want heat in a hurry in some room in the house the furnace does not reach. It's so easy to pick up and carry a

PERFECTION Oil Heater

(Equipped with Smokeless Device)

to the room you want to heat—suitable for any room in the house. It has a real smokeless device absolutely preventing smoke or smell—turn the wick as high as you can or as low as you like—brass font holds 4 quarts of oil that gives out glowing heat for 9 hours. Finished in japan and nickel—an ornament anywhere. Every heater warranted.

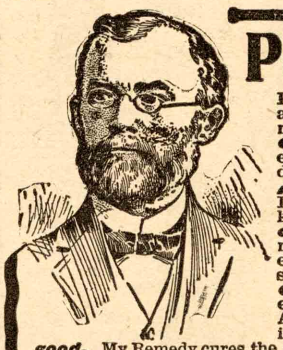


The Rayo Lamp

is the lamp for the student or reader. It gives a brilliant, steady light that makes study a pleasure. Made of brass, nickel plated and equipped with the latest improved central draft burner. Every lamp warranted.

If you cannot obtain the Perfection Oil Heater or Rayo Lamp from your dealer write to our nearest agency for descriptive circular,

STANDARD OIL COMPANY
(Incorporated)



Personal to Rheumatics

I want to get a personal letter from every man and woman in America afflicted with Rheumatism, Lumbago or Neuralgia, giving me their full name and postoffice address, so I can send them ***Free*** a full-sized, ***One Dollar Bottle*** of my Rheumatic Remedy. I want to convince every Rheumatic sufferer at my expense that my Rheumatic Remedy does what thousands of so-called remedies have failed to accomplish—***Actually and Permanently Cures Rheumatism.*** I know it does, I am sure of it and I want every Rheumatic sufferer to know it and be sure of it, before giving me a penny profit. You cannot ***coax*** Rheumatism out through the feet or skin with plasters or cunning metal contrivances. You cannot ***tease*** it out with liniments, electricity or magnetism. You cannot ***imagine*** it out with mental science. ***You Must Drive It Out.*** ***Go After It and Get It.*** This is just what Kuhn's Rheumatic Remedy does and that's why it cures Rheumatism. Rheumatism is Uric Acid and Uric Acid and Kuhn's Rheumatic Remedy cannot live together in the same blood. The Rheumatism has to go and it ***does go for good.*** My Remedy cures the sharp, shooting pains, the dull, aching muscles, the hot, throbbing, swollen limbs, and cramped, stiffened, useless joints and cures them to stay cured.

I Can Prove It All To You

If you will only let me do it. I will prove much ***In One Week's Time*** if you will let me do it at my expense, if you will only sit down and write my Company to send you a dollar bottle ***Free Of Charge.*** I don't care what form of Rheumatism you have or how long you have had it. I don't care what other remedies you have used. If you have not used mine you don't know what a ***real*** Rheumatic Remedy will do. Read our offer and write to us immediately.

A. D. Kuhn

A FULL-SIZED $1.00 BOTTLE SENT FREE

We want you to try Kuhn's Rheumatic Remedy, to learn for yourself that Rheumatism can be cured and we want no profit on the trial. A fair test and a just verdict is all we ask. If you like it and find it is curing your Rheumatism or Neuralgia, order more to complete your permanent cure and thereby give us our chance for profit. If it does not help you, no harm is done. We know what Rheumatism is, we know our treatment, know just how it works, and will take this chance. We do not send a small sample vial, containing about a thimbleful and of no practical value, but a full-sized bottle, selling regularly at drug-stores for ***One Dollar Each.*** This bottle is heavy and we must pay Uncle Sam to carry it to your door. We ask you to send us 25 cents to pay cost of packing and mailing case and postage and this full-sized One Dollar Bottle will be promptly sent you free, everything prepaid. There will be ***nothing to pay*** on receipt or later. No other Rheumatic Remedy has been or can be so offered. Don't wait until the valves of your heart are injured by Rheumatic Poison, but send today for this one dollar bottle free on trial. Only one bottle sent free to a family and only to those who have never before used this remedy. Address, immediately.

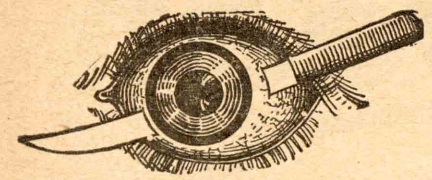
Eyes Cured



Without the Knife

Grateful Patrons Tell of Almost Miraculous Cures of Cataracts, Granulated Lids, Wild Hairs, Ulcers, Weak, Watery Eyes and All Eye Diseases–Send Your Name and Address with Two-Cent Stamp for free Trial Bottle

The cures being made by this magic lotion every day are truly remarkable. I have repeatedly restored to sight persons nearly blind for years.

Ulcers, wild hairs, granulated lids disappear almost instantly with the use of this magic remedy. Weak, watery eyes are cleared in a single night and quickly restored to perfect health. It has repeatedly cured where all other remedies and all doctors had failed. It is indeed a magic remedy and I am glad to give this free trial to any sufferer from sore eyes or any eye trouble.

Many have thrown away their glasses after using it a week. Preachers, teachers, doctors, lawyers, engineers, students, dressmakers and all who use their eyes under strain find this Magic Lotion a safe, sure and quick relief. If you have sore eyes or any eye trouble write me to-day. I am in earnest in making my offer of a free trial bottle of this lotion. I am glad to furnish proof in many well-proven and authentic cases where it has cured cataract after the doctors said that only a dangerous and expensive operation would save the sight. If you have eye trouble of any kind you will make a serious mistake if you do not send for my great free offer of this Magic Eye Lotion. Address with full description of your trouble and a two-cent stamp, H. T. Schlegel Co., 2493 Home Bank Bldg., Peoria, Ill., and you will receive by return mail, prepaid, a trial bottle of this magic remedy that has restored many almost blind to sight.

2600

LADIES' TUCKED SHIRT-WAIST

Made up in cashmere, French flannel, silk or cotton crepe, heavy linen or Indian-head cotton, this is a simple and becoming model for every day wear. The two wide tucks over the shoulders stitched as far as the bust-line, and the wide tuck either side of the center-front, stitched from neck to waist, give the long lines which are such a feature of this season's costumes. The fullness of the back is tucked in box-plait effect and the long sleeves are finished with simple cuffs of the material, held together by links. The pattern is in 7 sizes—32 to 44 inches, bust measure. For 36 bust the waist requires 4½ yards of material 20 inches wide, 3½ yards 27 inches wide, 2½ yards 36 inches wide, or 2¼ yards 42 inches wide.

2460.—Girls' Dress, with Dutch neck and elbow sleeves. A pretty frock adaptable to almost any material—4 sizes—6 to 12 years.

2466.—Child's Empire Dress, with high or Dutch neck. Plain or flowered Challis, Cashmere or Landsdown develop well in this style. 5 sizes—1 to 9 years.

2458.—Child's One-Piece Tucked Dress, with yoke, collar, Dutch neck and short sleeves. Serge, Mohair or Henrietta are suitable materials for this gown. 4 sizes—1 to 7 years.

2476.—Girl's One-Piece Dress with yoke, Bertha high or low neck and long or cap sleeves. A suitable frock for every-day or school wear. 4 sizes—6 to 12 years.

2376.—Girl's Dress, with separate Guimpe, having high or low neck and long or three-quarter length sleeves. Scotch plaid, or any of the plain colored Challies or Mohairs, with a White Lawn Guimpe, make this an appropriate costume for autumn and winter wear. 4 sizes—6 to 12 years.

2589

MISSES' SHIRT-WAIST SUIT

Nothing is more serviceable for the every-day attire of the young girl than one of these jaunty little shirt-waist suits, developed in serge, Panama cloth, mohair, cotton voile, or canvas-cloth. The fullness in the front of the waist is distributed in narrow backward-turning tucks stitched to nearly the bust-line, those in the back being stitched in box-plait effect. The nine-gored plaited skirt may be made separate or attached to the waist along one side; the joining being hidden under a belt of the material, or of ribbon, passed through a buckle. The sleeves are in full or elbow length; the former finished with straight cuffs held in place by buttons and button-holes; the latter having turn-back cuffs of the same or a contrasting material. The pattern is in 3 sizes—13 to 17 years. For a Miss of 15 years the suit requires 10¾ yards of material 20 inches wide, 8 yards 27 inches wide, 5⅝ yards 36 inches wide or 5 yards 42 inches diwe.

Catarrh Medicine Free

Write To-day

Send your name and address and say you have Catarrh. I will gladly explain my new system of treatment and tell you how to cure yourself quickly at your own home. In addition I will send a months medicine free of charge to demonstrate that Catarrh of the Head, Nose or Throat or Constitutional Catarrh in any form can be cured. Thousands have already been cured. $800 PROFIT FROM AN ACRE

Of Shade Grown Tobacco in Baldwin County, Alabama

$800 Profit the First Year, After Paying for Shading Etc.
Future Years will Make Much More per Acre.
Land Now Selling at $25.00 an Acre. $100 first payment on 40 Acres.

We have actually proven beyond doubt that Baldwin County, Alabama, is the greatest money-making section in the United States for farmers. And there is still time for the ambitious man with only moderate means to get in on the ground floor. We have land that actually produced $1500 worth of tobacco to the acre this season. The profit was $800, after paying for shading, etc. This was the first year we grew shade tobacco. It was planted late and several other causes did not give us a maximum crop. Next year we expect to grow $2500 worth of tobacco per acre and make at least $2000 profit. But cut it in two! Cut in quarters, or a tenth of this sum, or a twentieth—$100 per acre. Did you ever make that clear in your life on one crop from one acre? But $1000 can be expected from every acre. Just think of it!—ten times $100.

What is your land worth now, Brother Northern Farmer? Probably $75 to $150 an acre. We have thousands of acres like that acre on which we grew $1500 worth of shade grown tobacco this year. The price until January 1st is only $25 an acre. We will also sell on monthly payments if desired. Only a small sum needed to start on our property. Health, Wealth and Happiness await you here. Truly Baldwin County is a land of opportunity.

Are you growing tobacco now?
If so, what kind?
What does it bring you per acre?
By December 1 our land will advance in price to probably $50.00 per acre, and by March following our land will bring much more.
At present our land is selling at $25.00 per acre. Yours is probably worth $100.00 to $150.00 per acre.
Ours brings a $1500.00 crop. What does yours bring?
Will these conditions continue?
How will they harmonize themselves?
Will your land fall in price to ours, or will ours raise to yours?
If our land really brings a crop worth $1500.00 or more per acre, where will the price go to? Ask yourself that question, record the answer, and we believe you will realize that in justice to yourself and family you must investigate the truthfulness of our statements.

Some will read this advertisement and think our claims cannot possibly be true. All we ask is for these people to investigate. Go right onto the ground and see for yourself. Join our excursions on the first and third Tuesdays of each month. We refund railroad fare to all who purchase 40 acres or more.

Water is on three sides of our land. Cooling breezes make summer days more pleasant than hot days in the north. The warm Gulf of Mexico breezes make winters a delight. Work can be done out of doors the year around. Nature co-operates with man to make his lot a happy one and to make him prosperous.

Our land, centrally located on the back bone of Baldwin County, between the cities of New Orleans and Montgomery, Mobile and Pensacola, has thereby the benefit of the finest markets in the South, where cheap labor is abundant, where dairy products are always in demand at good prices. Dairying can be carried on profitably in connection with the tobacco farm, thereby furnishing, virtually free of cost, the manure necessary in growing tobacco.

GOOD HEALTH IS THE FIRST REQUISITE OF SUCCESS AND ENJOYMENT IN ANYTHING. That ones health in Baldwin County must be good goes without saying. The climate is so perfect, the water so pure that malaria and fevers are unknown. The winters do not produce any colds, catarrhal or bronchial troubles, neuralgia or rheumatism like our northern winters. Good health is almost invariably the lot of the northern settler in Baldwin County. This coupled with the opportunities for general farming, stock raising, truck and fruit growing, to say nothing of the tobacco we have now demonstrated can be grown there, combine so many advantages that we doubt if it all can be duplicated on the face of the earth...

Showing Tobacco on Our Ground 45 Days After Planting

You may wonder why land which produces so enormously and has such delightful climate and so many advantages should sell at a price so low. This is why: The country is new. We want more settlers and then prices will advance to four or more times the present price. Get in now and reap the profit sure to come in a few months.

Every reader of "UP-TO-DATE FARMING" who can possibly spare the time should go down this fall and select a farm, if not for the immediate present let him secure it for the future. Baldwin County is rapidly being taken up by northern farmers. The land is bound to greatly advance in price. It has already begun to do so, and those who have already bought will reap the benefit. You can start on a small capital and accomplish more in one year in Alabama than in several years in the north. You plant and harvest something every month in the year.

The buildings necessary to improve your property can be erected for one-half what they would cost you in the north. Bees, poultry and live stock thrive and are money-makers there. Living is far better, yet less expensive. You can grow for the market Irish potatoes, sweet potatoes, tomatoes, peas, cucumbers, radishes, onions, wax and snap beans, egg plant, lettuce, spinach, cabbage, cauliflower, celery, sweet corn, mint, cantaloupes, olives, Spanish onions, watermelons, lemons, Japanese persimmon, fig, pear, apricot, plum, quince, peach, all kinds of berries and nuts, and general farm crops give abundant yields.

Many fields of corn will yield 40 to 60 bushels to the acre this year. The budded pa-

SEEING IS BELIEVING

We have the tobacco. We have the man who grew it.
We have the land it was grown on. We have thousands of acres more just like it. We will gladly show you all this and CONVINCE YOU OF ITS TRUTH.
We have demonstrated that $1500.00 worth of Cuban and Sumatra wrappers can be grown on one acre.
We believe that $2500.00 worth can be raised—because
We have the soil.
We have the climate.
We have cheap lumber and abundant labor.
We have the pure salt sea air from three directions.
We are close to dairy markets.
Our rainfall is regular and abundant.
Our water is soft and pure as snow.
Our crop this year was late in planting and the farm poorly selected.
We had a minimum, not a maximum result, and WE CAN BEAT FLORIDA IN YIELD AND QUALITY, yet $2500.00 per acre has been made there.

per shell pecan and satsuma orange are both proving lucrative and attractive as tree crops. All in all, there certainly can be no location that offers so very ATTRACTIVE, SATISFYING, HEALTHFUL AND PROFITABLE OPPORTUNITIES as does this land of ours in Baldwin County, Ala.

How can you refuse to at least go on a tour of investigation? It costs but little. Our excursions run twice a month. You would be in good company; be one of a party, all of whom are going with the same purpose as yourself. It is a satisfying and profitable trip and if it does nothing more, will educate you to the fact that this great country of ours contains far more and greater opportunities than you ever dreamed of from any circumstance emanating from your own immedate locality.

Learn what a great country this is and what wonderful lands and climates it contains. From the many inquiries coming from various localities where tobacco is grown, this land will be rapidly taken up, and a year hence will offer no such selection of farms as it now does. The price will no doubt be $100 per acre. Be prompt, therefore, in making up your mind to go down with us during the next few weeks.

MAIL ORDERS will receive best attention. If you desire to purchase 40 acres or more for a home or investment and cannot select the farm personally, our experts will choose it for you. Can be exchanged later for any unsold farm if desired.

If you want a home or an investment that will keep doubling in value there is no better opportunity than the Southern Plantation Development Co.'s lands in Baldwin County, Ala. Our booklets, maps, and literature free.

C. H. LEE, Mgr. Sales Dept. Southern Plantation Development Co., 719 East St. Clair St., Indianapolis, Ind.

BUSINESS EXCHANGE

This Department is Intended to Bring Buyers and Sellers Together at Moderate Cost

THE BUSINESS EXCHANGE can be made the most valuable department in UP-TO-DATE FARMING. It can be made the medium of sale for surplus crops and as valuable to buyers to supply their needs. It should be used to a much greater extent than it is and thus one of the missions of this paper will be accomplished.

RATES—The Cost for Advertising Under This Head is 4c a Word Each Insertion

Each initial and number counts as a word. No display, except the first word will be set in two-line black letter without extra charge. To bring sellers and buyers together there is no surer way than thru this BUSINESS EXCHANGE. Advertisements under this head are small and we cannot investigate every advertiser. Our "Guarantee of Advertisers" does not apply. Rogues shall not advertise here if we know it. Report any unsatisfactory transactions promptly. When writing please say: "I saw it advertised in UP-TO-DATE FARMING."

DO YOUR BEST

This is not a bad world. It has rocks and hills and mountains, but they are grand and inspriing. It has marshes, bogs and quagmires, but it has placid rivers gliding on to the sea. It grows thorns, briers and thistles, but it has more of sweet and pretty flowers. It has ugly worms and reptiles, but it has also beautiful butterflies and birds, It has clouds and gloomy shadows, but it has bright sunshine and sparkling dews. It has sickness and sorrow, pain and death, but it has life and love and gladness. If there is a thorn for every rose, there is also a rose for every thorn, and the rose may be enjoyed and even plucked without touching the thorn, or without realizing it is there. It all depends upon how we grasp it.

It is much so in life. We see the world through our own eyes and we feel it through our own senses. If we are hunting for thorns we shall find them; if for unpleasant things they will come. If the world seems bad to us it is because the artist of our own soul is painting it so. Cooper puts it thus:

When all within is peace,
How nature seems to smile;
Delights that never cease,
The live-long day beguile.
From morn till dewy eve,
With open hand she showers
Fresh blessings to deceive
And soothe the silent hours.

It is content of heart
Gives nature power to please;
The mind that feels no smart,
Enlivens all it sees;
Can make a wint'ry sky
Seem bright as smiling May,
And evening's closing eye
As peep of early day.

But to thus see nature's brightness through the brightness of our own eyes, requires more than imagination. We must do something, and we must do our best. Much of the world's troubles come from human imperfections. "What thou doest, do quickly," said the Savior to the betrayer, but we may say "What thou doest, do well." "What is worth doing at all, is worth doing well," said another. And yet so much of the work of human hands is imperfectly done! The world would suddenly form a new and brighter picture, vexation and worry and loss would drop to the minimum, the human race would climb higher than it even stood before, if everybody would at once do his best in everything.

We concede the busy housewife's cares, the multiplied duties calling to her at once. We acknowledge the farmer's almost ceaseless toil, the work calling almost incessantly from this field to that. We have experienced the merchant's countless steps and his ceaseless vigils, and the tradesman's wearing labors. All have their merciless struggles to meet, and the temptation to gain time by incompleteness and imperfect work, comes with almost irresistable force. Still we whisper, do your best. The job well done is put to rest. Its voice will not call so soon again; and by and by, who knows? a wall of well done work may surround you to shut out the grievances, annoyances and failures that follow work imperfectly and incompletely done, and you may have the rest, the repose, cought in vain through haste and imperfection.

"Serene will be our days and bright,
And happy will our nature be,
When love is an unerring light,
And joy its own security."
And we shall do for God and man,
The best our faithful efforts can.

WEDDING DAYS

In our boyhood days, the following jingle was on all the young people's lips, and we now find it going the round of the press again:

Monday for health,
Tuesday for wealth,
Wednesday the best day of all,
Thursday for losses,
Friday for crosses,
Saturday no day at all.

A Hame Fastener Made of Metal

Nothing connected with hitching up a work horse is so bothersome as *fastening the hames.* You know this. And it's been that way *for years.* Tug and pull and stretch—and after awhile you have it.

Now this can be done *as easy as anything* with Ferry's Handy Hame Fasteners. Just slip the tongue in the proper hole, press up—*and its done. "Fastened in a twinkle."* It *automatically locks* so the more the *hames* pull the tighter *it* holds. But when *you* want to take it off a very little *pull does the trick.*

Nothing like them. Can be fastened to hames in a couple minutes. Last longer than the harness and *can be attached to a new set.* No straps—made entirely of malleable iron. Don't need to remove gloves to use. Fits any collar.

Read these letters:

SOLD GROSS IN THREE DAYS

Will you please send me another gross of Hame Fasteners. I can sell these I have inside of three days. OTTO DOMM.
R. R. 2, Pigeon, Mich.

GIVING ENTIRE SATISFACTION

The Hame Fasteners are at hand. They are all right and are giving entire satisfaction. SAMUEL J. HELLER.
R. R. 1, Wind Gap, Pa.

JUST WHAT YOU SAID

I received my Hame Fastener today. It is what you said and does fine. SOLON R. HOFFMAN.
Clemmons, S. C.

We could print *hundreds more*—send for circulars containing testimonials.

The price of Ferry's Fasteners is *only* 25c each post-paid. A dozen for $2.25 by express at purchaser's expense.

We Want Agents who can push the sale of a *splendid article* like this. Show one and sell it. Every farmer and teamster uses from four to twenty pairs. Make 200 per cent profit. *Send for sample today.* Don't let someone get ahead of *you.*

THE EDWARDS MANUFACTURING CO.

466-486 Lock St. - Cincinnati, Ohio

F. S. of E. OFFICIAL DEPARTMENT

The Milwaukee convention is past.

We might say, "We told you so," as regards the legality of that convention.

President Barnett said, "The society is in the most healthy and prosperous condition," and "the outlook for the society is most flattering."

We wonder why Barnett made such statements when every member knows they are not true. Does he think that any of the members can be fooled all the time?

Attorney Carson said in his opinion on the legality of the convention, "Your by-laws name Indianapolis as the meeting place of the society, and, unless they are amended, that city must remain your assembly city."

We fail to find any such provision in the by-laws, but they do say under Article IX, section 4, MEETINGS: "The national union shall meet once each year, beginning the first Monday in December, the place of meeting to be determined by the board of directors."

Why did Carson make such a statement? Was it to shield the participants in the 1907 convention from reflections on changing the name of the society and bequeathing it a foolish and unworkable by-laws which prevented them from getting together a legal convention? And will the conference meeting at Milwaukee and a few people meeting in Indianapolis in December remedy such fatal defects? Is there any way outside of a MASS CONVENTION that can establish the society again and give it a legal and workable constitution and by-laws?

Does Attorney Carson think he can fool some of the members all the time?

By their by-laws the Barnett-Pauley faction's annual convention was to come in December. When the Mitchell faction called a mass convention in October, which is the proper time for the convention, they called their meeting ahead of ours, thinking to gain an advantage. When they found what a mess they made of it, they began to scheme to prevent our convention from being held and it is reported as follows:

Then resolutions were adopted demanding that an injunction be secured at once to prevent J. A. Everitt from issuing his call for a convention of the American Society of Equity in Indianapolis.

Can it be possible that they did not know that our call for a mass convention of members of the American Society of Equity had gone out two months ago? They'll have a mighty hard job of it to stop the call that is out. We don't care much whether the mass convention meets as the American Society of Equity or not, only so it is an Equity convention. It is doubtful whether the mass convention will care to assume the old name with all the disgrace its guardians for a year have allowed to come to it, and the debts they have piled on the society.

There is no court in the land can or will attempt to enjoin members of the society from meeting when and where they please as long as they assemble peaceable and for good lawful objects, and the leaders in the convention desired to appeal to the passions and prejudices of the uninformed delegates.

Michigan sent two delegates to the convention who were in favor of the old plans of the society and UP-TO-DATE FARMING as the official paper. As might be expected, their right to take part in the convention was questioned. What does Michigan think of that?

This incident recalls the insurgent meeting in the Linden Hotel during the 1907 convention in Indianapolis, when Chas. A. Speer offered a resolution that if there was a friend of Mr. Everitt's in the room, he should be ejected.

The convention was by the Barnett-Pauley faction, of that faction and for that faction. The delegates were picked and selected and it was known what they would do before they went to the convention. In this respect it was a twin brother to the 1907 convention.

How do the farmers like this style of convention? Could they have held such a convention if they had not throttled the members at the 1907 convention by refusing representation from local and county unions and making all representation through the state unions?

The president, C. O. Drayton, and the vice-president, M. F. Sharp, readers of UP-TO-DATE FARMING will remember were directors in 1907, and supported Secretary Tubbs in promoting his wildcat schemes of Equity Exchanges; while Chas. A. Speer, elected a director, was director of organization in 1907. He started then with several hundred organizers and wound up with not a dozen working.

Rather poor encouragement for members, we imagine, by the Drayton-Sharp-Speer route. But, you know the workers should be rewarded and no people have done more to kill the society than these three men.

They did everything possible to kill it in 1907, elected their lieutenants who continued the process in 1908 and now they take charge again.

But a better day is coming, and it will dawn through the mass convention.

The Milwaukee conference improved the conditions for the mass convention and the acts of that conference and the officers elected must convince every member that the mass convention is absolutely necessary to continue the plan of the original society and accomplish its objects.

But if any further evidence is wanted of C. O. Drayton's unfitness as a leader of the society, review his connection with the Fruit and Produce Department. He was president of this promising department two years and accomplished nothing. We don't see even mention of this department or the Grain Growers Department, or the Tobacco Growers Department in the report of their proceedings, nor that officers were elected for any of them which act devolves on the National Convention. The by-laws says, Article VIII, section 3:

"Its (meaning the department unions) regular annual meeting shall be held with the National Union meeting, unless express permission is obtained of the National Union of the American Society of Equity to the contrary."

It is quite probable that the Milwaukee convention forgot that department unions were among the organized form of the society, and as essential to carrying out the plan as are local or county unions. Also that there were any department unions.

Come to the mass convention and help to reorganize and reestablish a society that will be an equity society in work as in name.

BEGINNING OCTOBER 27, AT INDIANAPOLIS, INDIANA.

* * *

As this movement is for all farmers and as none can escape receiving benefits, in fact **all have received many benefits already through better prices for their crops,** all should now help to reorganize. We appeal to you as a duty you owe yourself, your family and your brother farmers.

Those who come for the interest of all, should be paid their railroad fare at least and we are going to ask you to contribute a small sum to this end. Please fill out the blank with this and mail it to either W. H. Mitchell, President, Hutchinson, Kan., or I. C. Rous, Secretary, Indianapolis, Ind. One hundred delegates with an average railroad fare of $10.00 will amount to $1,000. There are many public-spirited people who will work for others and pay their own expenses, but is it right? Is this the way you expect to get your work done? Remember, this movement is for every man who raises crops to sell.

Cut this out and mail to W. H. Mitchell, Pres., Hutchinson, Kansas; or I. C. Rous, Sec., Indianapolis, Ind.

Write your name and address here:

.....

.....

Were you a member of the A. S. of E. in good standing in October, 1907? - - - - - .....

Will you attend the mass convention at Indianapolis, Ind., as a delegate? - - - - .....

As there may be more volunteers than will be necessary for a good convention, please say here if you would like to be excused if enough without you - - - - - - - - .....

I will contribute $..... toward meeting the railroad expenses only, of delegates. (Don't understand that only delegates are to contribute. Everybody ought to contribute something even as little as 10 cents, and particularly those who stay at home. All remittances will be acknowledged and statement made to the convention.)

THE ideal life is in our blood and never will be still. Sad will be the day for any man when he becomes contented with the thoughts he is thinking and the deeds he is doing,—where there is not forever beating at the doors of his soul some great desire to do something larger, which he knows that he was meant and made to do. —Phillips Brooks.

GEORGE B. BRIGGS

Died October Eight, Nineteen Hundred Eight

We have seldom written words that were associated with grief as poignant as these announcing the sudden death of Mr. Briggs.

Mr. Briggs was Western Representative of UP-TO-DATE FARMING in the advertising department, with headquarters at Chicago, Ill. Since his connection with this paper, he became thoroughly imbued with the righteousness of the mission of the paper and gave no small mead of assistance, even beyond his particular field.

Many years' active work at his profession gave him a knowledge of the intricacies of the advertising business possessed by few. The loss the advertising and publishing fraternities suffered through his death will be felt far beyond the zone of his particular work.

Mr. Briggs' mission to Milwaukee was to send us a report of the convention. We have not at this writing received particulars of his death except that it was sudden, having been ill only a few hours. We believe the excitement incident to the convention contributed to the fatality.

We esteemed him as a true friend, a valued business associate and a trusted advisor. We will miss him and his place will be difficult, if not impossible, to fill completely.

MICHIGAN STATE MEETING

The Michigan State Union, A. S. of E., and the Michigan State Union, Ladies' Society of Equity, met at Traverse City, September 30.

The men's meeting was called to order at 2:30 p. m., by President Holdridge. Committees on credentials, and auditing were appointed. Addresses were then made and reports submitted when adjournment was taken until 8 a. m., October 1.

At the second day's session the following officers were elected for the next year:

President, Walter E. Grelick, Traverse City; vice-president, James Howey, East Jordan; secretary, Chas. Emerson, Traverse City; treasurer, E. L. Dufer, Sherwood; organizer, Geo. Soper, Stanwood; directors, W. H. Beeman, Empire; C. A. Maston, Sherwood; M. N. Drake, Trufant.

The Ladies' Society elected the following officers:

President, Mrs. James Howey, East Jordan; vice-president, Mrs. M. N. Drake, Trufant; secretary, Mrs. Bertha Hammond, Traverse City; treasurer, Mrs. Della Thompson, East Jordan; directors, Mrs. Frank Kidder, East Jordan; Mrs. Martha Meyers, Evart; Mrs. Sadie Crall, East Jordan; Mrs. N. S. Holdridge, Hersey.

The convention adopted UP-TO-DATE FARMING as the official paper for the state and resolved that the Equity Farm Journal and Equity Exchanges should be eliminated from the society.

Our reporter said: "The farmers of Michigan seem to be aroused thoroughly now and have taken the work in hand for success. We have great hope that the new officers will show that Michigan can be organized and the good objects of our society accomplished."

"Keep Your Money in Your Own Pocket"

Says Wm. Galloway to You

Wm. Galloway
President
Wm. Galloway Company

I'm the man whose spreader is so much the best that I can afford to send one to you.

Freight Prepaid

FLOWER-LANGUAGE POST CARDS, A SET OF 12 FREE

Do you know the "Language of the Flowers?" If you will send 10c for a six months' trial subscription to our large paper, The Epitomist, we will send to you, free, a set of twelve beautiful flower post cards. Each is different and represents the natural colors of the flowers and every card has the language of the flowers, portrayed in verse. These cards are strictly HIGH-CLASS and are not like any you have seen, for they are entirely new.

Write today and we will lose no time in sending them to you. Ask about the surprise which we are sure will interest you. We have only a limited supply of these beautiful cards, so send today if you want them. Address The Epitomist, 44 Main St., Spencer, Ind.

This column is for members and subscribers. Use it to ask any questions that may concern you. Others may want a reply to the same question and an answer through this column will cover a multitude of cases. The answers will be made by Mr. Everitt and may be considered autheritative.

QUESTION: *As the national convention will be a mass convention, is each member a delegate, or is each union to send a delegate?—C. O. Livesay, Patoka, Ill.*

ANSWER: Each member in good standing October, 1907, is qualified to be a delegate and any member may attend the mass convention and take part in it. A local union may send a delegate of its choice, or several local unions may join in sending a delegate. The object in having a mass convention is to not show any partiality for any faction, but to secure A RE-UNITED SOCIETY with the full membership.

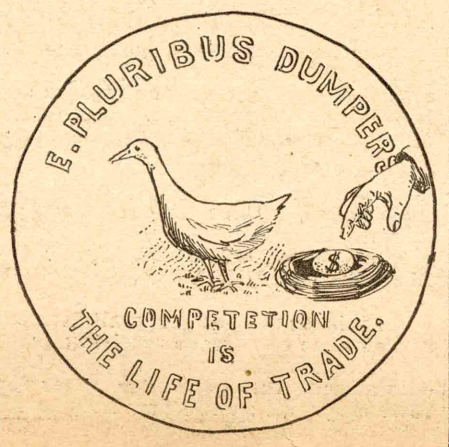
Q. *Do you expect the call for contributions to defray the railroad fare of delegates will result in an amount sufficient for this purpose?*

A. We do not expect it to reach a sufficient sum, but there will be enough to help some We print the call in this issue again to give those who have not reported, the opportunity. As the plan of the society is correct and the only practical one for farmers' co-operation, and as the future of farmers' successful co-operation depends up the mass convention, this convention should have the support of every farmer, either by his presence or to help some other person to come. The report from the Barnett-Pauley faction in this number leaves no doubt of this.

POST CARDS FREE

A Big Package Sent to All of Our Readers Who Write at Once

To any reader of this paper who writes immediately and incloses a 2-cent stamp we will mail a set of three most beautiful post cards you ever saw and our big farm paper on trial 3 months; 10 Christmas, floral and motto cards, all different, in exquisite colors, silk finish, beautifully embossed, etc., 10 cts.; 3 full sets, 30 cards all different and one year's subscription, 25 cents. Address Valley Farmer Postcard Dept., 530 Jackson St., Topeka, Kan.



A FARCE CONVENTION

(Concluded from page 2)

morning was one to make the rule adopted some three years ago, relative to the use of the "farmer's label" on produce offered in the market more stringent, which caused a long discussion and was finally adopted.

"The offcial organ of the society for the present will be the Equity Farm Journal of Chicago."

MINIMUM PRICES—The following minimum prices were agreed on:

Wheat No. 2 northern and No. 2 red winter, $1.10; corn, No. 2. 75 cents to January 1, from Jan. 1 to April, 80 cents, and after April 1, 85 cents; oats, No. 3, 55 cents; barley, No. 4, 65 cents; rye, 80 cents; buckwheat, $1.00; flax, $1.35; sweet potatoes, $1.00; white potatoes, 75 cents a bushel until Jan. 1, and 85 cents after; white beans, $2.00; the price of wool, peanuts, tobacco, etc., to be fixed by their several departments; hogs, 7 cents until Jan. 1, and 7½ cents after; sheep, 5½ to 6 cents; lambs, 6½ to 7 cents; cattle, 6 to 6½ cents; timothy hay, $15.00; clover seed, $8.00 to $10.00; timothy seed, $2.50; broom corn, per ton, $85 to $100.

OFFICERS—The officers elected are as follows:

President, C. O. Drayton, Greenville, Ill.; vice-president, M. F. Sharp, Bowling Green, Ky.; secretary-treasurer, D. Kump, Madison, Wis. Boad of directors. J. B. Whiting, Interlaken, N. Y.; J. C. Davis, Marshfield, Wis.; Chas. A. Speer, Fort Branch, Ind.; Benjamin Watson,, Dixon, Ky.

Adjourned to meet by representatives in Indianapolis in December.

President Greilick's Estimate of the Milwaukee Convention

Traverse City, Mich., Oct. 9th, 1908.

J. A. EVERITT,
Indianapolis, Ind.

Dear Sir:—It is with the deepest regret that I learn through your telegram of the death of Mr. Briggs. This was a terrible shock to me, as I talked with Mr. Briggs almost the last thing before I left Milwaukee. At that time he appeared to be in the best of health and spirit.

Now in regard to the convention. Michigan was in doubt whether it was advisable to send a delegate to the Milwaukee convention or not. We thought, however, that a chance for a compromise might arise, and that in that case it would be desirable to be represented.

The delegates, Mr. Drake and myself, no sooner arrived there than we found the same crowd in possession. It did not take us long to find out that Michigan would not be in accord with that convention.

I was elected chairman of the committee on credentials, not before Michigan's right to be represented at the convention was questioned. Mr. Drake was appointed upon the committee of official paper.

He soon found that he was hopelessly alone in his view of the same.

About this time we were informed of the illegality of the convention. This, together with the fact that we could not vote in the affirmative upon the business placed before the conventionfl decided us to leave at once for home and later attend the Indianapolis convention of October 27th.

I took no notes of the convention owing to the above facts.

This fact owing to the death of Mr. Briggs I am very sorry for. I am sure that Mr. Briggs kept posted as to what was being done, and had he lived, would, no doubt, have given you a fairly good report considering the disadvantage under which he worked. Should it be convenient I wish you would furnish me with the details of Mr. Briggs' death.

Hoping to be able to meet you in Indianapolis on the 27th, I remain

Yours truly,
W. E. GREILICK, Pres.
Mich. State Union, A. S. of E.

THE FIELD

DEAR EDITOR:

I own a farm and often have planned in my mind how I would love to have a band of farmers to help each other. I happened to get a piece of your paper and I want you to send me a copy, also I enclose 25 cents for which send the Third Power book. —Mrs. W. H. Cropper, Prospect, Ky.

DEAR EDITOR:

I have just read the article in UP-TO-DATE "Looking to the Future."

I don't believe there is a reader of your paper who did not bow his head in sorrow when the action of the 1907 convention became known to him. I have often wondered whether their action in attempting to discard and destroy our paper, which has fought the farmers' battles and has brought more money to farmers than all others combined, was the result of an affcetion of the head or the heart. There is only one way to maintain prices and that is to reorganize and re-establish our society and there is only one way to do this and that is for members of all factions to go to the mass convention October 27, next, so we may have again a reunited society, our old official paper, and there select capable and honest leaders.—F. B. McCowan, Kirkmanville, Ky.

DEAR MR. EVERITT:

I have always had a high regard for you and have frequently referred our southern people to you, to get the Third Power book. I believe you have supplied the ideas that have awakened the farmers of this nation. I know also that you have not been treated fairly. You are one of those benefactors of mankind that have had to pay the penalty by being persecuted by inferiors who usually lead the mob. I am still preaching Equity and the message of glad tidings that I first learned from your writings.—Sam J. Hampton, Fort Smith, Texas.

DEAR EDITOR:

I regret that at first I was deceived regarding the 1907 convention. I have worked for the Barnett-Pauley faction as I thought they were in the right, and a few of our local paid dues to that side and received only a few copies of their paper. As UP-TO-DATE FARMING was discontinued we were not posted very much until I received the "Supplement." I will pass this to as many as possible so they may know the truth. By all means we must hold a mass convention, considering all the complications, and I know all loyal members will say the same. I am at your service.—J. R. Brinkema, Sec., Glenville, Neb.

DEAR EDITOR:

UP-TO-DATE FARMING is a fine paper, a much needed paper. It is the great fault with farmers that they are not organized so they can protect their rights. I am a new subscriber.—D. H. Paulling, Jamestown, O.

Farmers' Handy Wagon

Absolutely the best wagon built for every kind of farm work, and the cheapest you can buy. It is low down, has wide steel wheels and wide tires, and will last a lifetime without repairs. Can be depended upon to haul any kind of a load. Guaranteed in every respect.

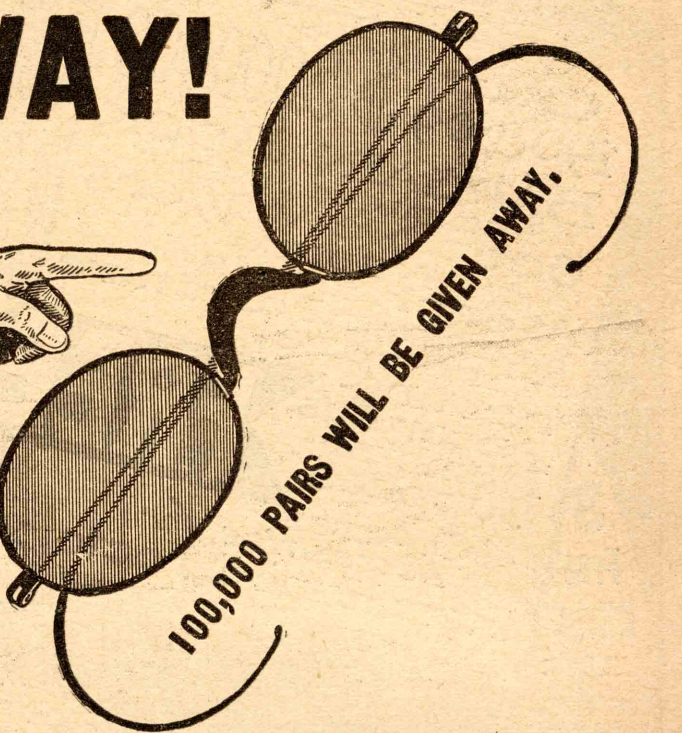
TEN KARAT ROLLED GOLD BRIDGE Spectacles GIVEN AWAY!



Spectacle-Wearers! Listen!

The following very remarkable letter was sent me, unsolicited, by Dr. G. W Smith, the County Health Officer of Ottawa County, and one of the most prominent physicians in the State of Kansas. Read his exact words:

MY DEAR DR. HAUX:

If anyone were to offer me fifty dollars spot cash for the pair of Perfect Vision Spectacles which you fitted to my eyes by mail, I would absolutely refuse to accept it—if I knew positively I could not get another pair like them. Your Spectacles are certainly wonderful.

(Signed), Dr G, W, Smith

Now I would like to get this kind of a testimonial from you, too—and that is the reason why I am making a very special, extraordinary, but honest proposition, whereby you can (for a short time only) obtain a handsome, perfect-fitting pair of Dr. Haux Perfect Vision ten karat ROLLED GOLD BRIDGE Spectacles without one cent of cost.

Don't Send Me One Penny

Just write me your name and address and I will mail you at once my Free Home Eye Tester and full particulars how to obtain a pair of my handsome ten karat ROLLED GOLD BRIDGE Spectacles without one cent of cost.

You see, I want to prove to every spectacle-wearer on earth that the Dr. Haux famous Perfect Vision Spectacles are really and truly ever so much better than any you have ever worn before—and I am going to give away at least one-hundred-thousand pairs of the Dr. Haux famous Perfect Vision ten karat ROLLED GOLD BRIDGE Spectacles in the next few weeks, in order to introduce my wonderful glasses to the largest number of spectacle-wearers in the shortest possible time.

These famous Perfect Vision Spectacles of mine will enable the very weakest eyes to see to thread the finest needle and read the smallest print, both day and night, just as well as you ever did before—and this even if your eyes are so very weak now that you cannot see the largest print in this paper.

I hereby also agree to cheerfully return you even the postage-stamp you use in answering this announcement, if you yourself don't find my wonderful glasses more perfect, clearer and better than any you have ever worn before, and you yourself are to be the sole judge. Can anything be fairer?

Write today for my Free Home Eye Tester and ten karat ROLLED GOLD BRIDGE Spectacle offer. Address:—

DR. HAUX SPECTACLE CO., Room 203, Haux Building, St. Louis, Mo.

I ALSO WANT A FEW AGENTS

And any man or woman not earning at least $50.00 weekly should ask for my SPECIAL AGENT'S TERMS at once.

NOTE.—The Above is the Largest Mail Order Spectacle House in the World, and Perfectly Reliable.

This Offer is Also Extended to All Who Have Ever Written Me Before.

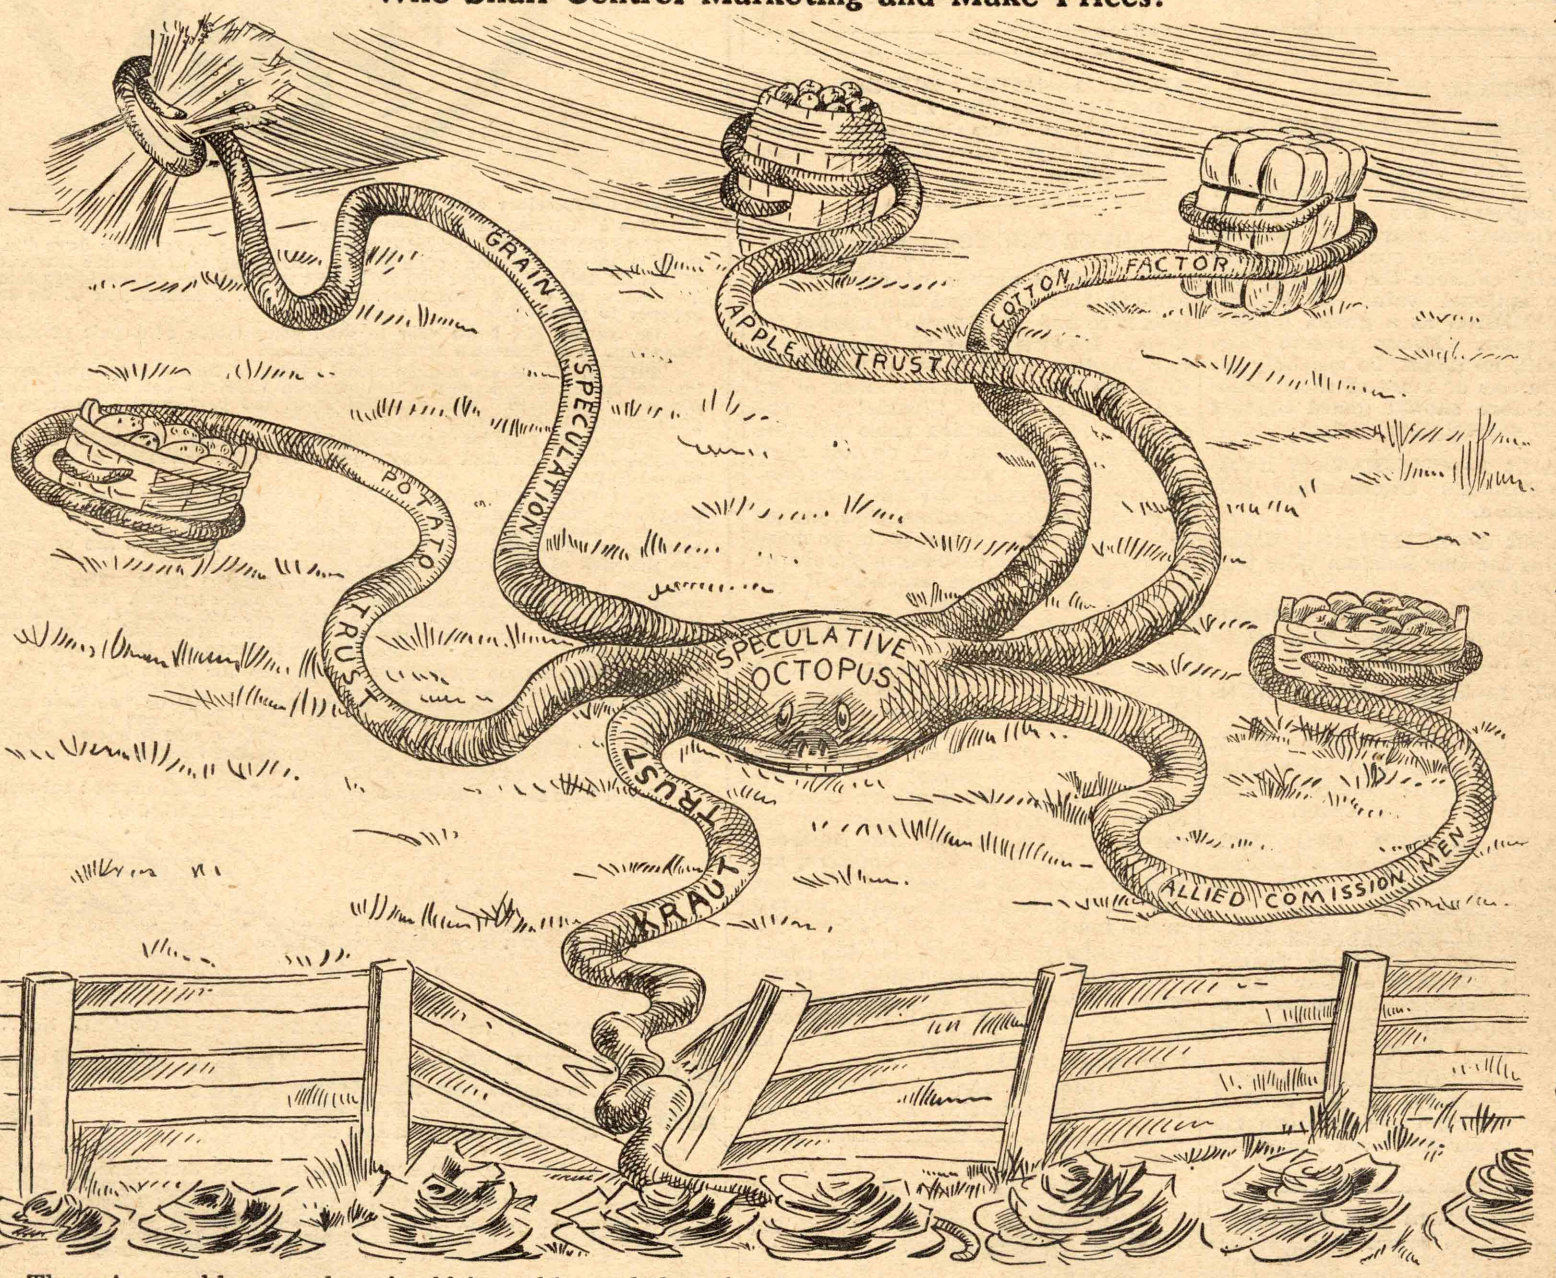
Up-To-Date Farming

OUR MOTTO:
FARMERS TO THE FRONT
OUR OBJECT:
EQUITABLE PRICES FOR ALL PRODUCTS
OUR PLAN:
CONTROLLED MARKETING

Volume XI | INDIANAPOLIS, INDIANA, NOVEMBER 1, 1908 | Number 21

EVEN SAUER KRAUT

Who Shall Control Marketing and Make Prices?



The price problem resolves itself into this, and there is no dodging the question: Shall the producers of the stuff control the marketing and determine the price, or shall those who buy and store for the profit they can make out of it, do so? Would consumers rather be subject to the charge of farmers who grow the products for a modest living, or to that of speculators whose greed was never known to be satisfied?

That is the problem up to both producers and consumers. It is known that almost all products, after leaving farmers' hands, go into price-making combines that extortion upon consumers at their own sweet will; but it would scarcely be expected that so modest an article as sauer kraut should find itself grasped by the tentacles of the speculative octopus. That it has done so is proven by the following taken from the American Grocer:

Sauer kraut will be a luxury that will find favor with the wealthy next winter if intentions of the National Kraut Manufacturers' Association are accomplished. At the annual meeting of the National Kraut Association, held in Chicago last week, re-

SUBSCRIPTION PRICE 50c PER YEAR A CLUB OF FOUR FOR $1.00
Foreign Subscriptions, including Canada, 75c a Year

Clubs. Four subscriptions for $1.00; Always state if a renewal or a new subscriber. *DON'T NEGLECT THIS.*

Your Address should always be written very plainly, including *COUNTY*. Do not give street or box number when not necessary to facilitate delivery of your mail. If on a rural route use the letters R. R. before the number.

enewals and Change of Address. Give the same name as before. If a change from one member of the family to another, so state. If you change your post office give old office as well as new.

Imperative Order. When writing about your subscription, requesting a change of address, renewing or ordering cancellation, do not fail to send your printed address as on the wrapper along. Failure to observe this order may cause us much unnecessary work.

The Latest Date shown with your address is the date to which your subscription is paid. Subscribers are urged to keep their time paid *IN ADVANCE*.

Members of Equity will find the date on their wrapper to which subscription has been paid.

Responsibility Disclaimer The editor assumes no responsibility for correctness of signed letters and articles, nor for matter in departments conducted by others whose names appear in the head.

Agents Wanted. If you want to engage in a profitable business all your time or part time, write to us.

Only Reliable Advertisers are admitted to our columns and we guarantee that they will deal honestly with subscribers. Should they not, we will make good any loss to paid in advance subscribers. It is understood that this guarantee is not binding on the publisher unless you mention UP-TO-DATE FARMING when you write and you report any dissatisfaction within a month of the date of the paper.

SPECIAL NUMBERS

UP-TO-DATE FARMING has in preparation the Special Numbers as announced below. This does not mean that any of the regular departments will be neglected, but these numbers will particularly feature the subjects mentioned. These special numbers will greatly enhance the already conceded exceptional value of UP-TO-DATE FARMING as a guide, teacher and counselor. Every present subscriber will, no doubt, be cpecially interested in one or more of these numbers, therefore should guard against letting his subscription expire:

NOVEMBER 1—CONVENTION NUMBER—Farmer's Organization and Co-operation.

DECEMBER 1—BUILDING— Valuable helps for Our Readers Who Will Build in 1909.

DECEMBER 15—HOLIDAY NUMBER—A Number to Bring More Good Cheer to the Farmers.

JANUARY 1—NEW YEARES NUMBER.

JANUARY 15—POULTRY NUMBER—The Producing and Marketing Ends of the Poultry Industry From a Down-to-Date View Point.

FEBRUARY 1—SEED AND NURSERY NUMBER—Weeds a National Curse—Pure Pedigree Seeds the Remedy to Remove the Curse.

FEBRUARY 15—FERTILIZER NUMBER—Consumers' Welfare Threatened—The Fertility of Our Farms Must be Restored—Increased Production Absolutely Necessaary to Meet Increased Demand.

MARCH 1—IMPROVED MACHINERY—The Demand for Greater Production and the Shortage of Farm Laborers Call for Improved Farm Machinery.

APRIL 1—DAIRY NUMBER—How the Producer May Protect Himself in Price and the Consumer in Price and Quality—Great Necessity for Co-Operation.

Your Subscription Has Expired

If the square to the left is marked with a "X," it is to inform the subscriber that his subscription expired with the last issue before this and should be renewed at once to insure receiving this paper without interruption. The renewal price is 50 cents, which pays for one year. We will gladly accept $1.00 for four subscriptions of which yours may be one, the other three new ones. A renewal blank is sent in this paper.

If the square to the right is marked with an "X", it is to remind you that your subscription has expired and remains unrenewed although you have been already notified. We don't want to lose a single subscriber, hence this second notice, and hope now to receive your renewal at once. See terms for a club in notice above.

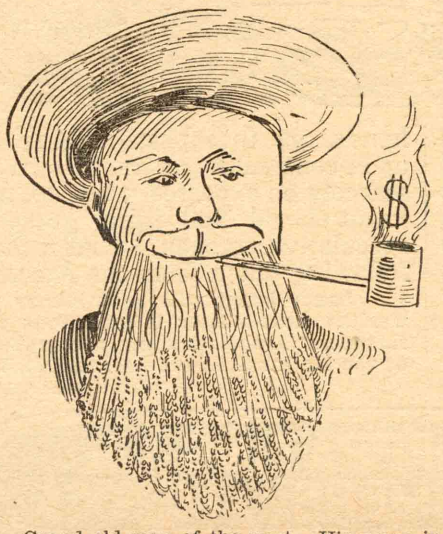
If your renewal is not received in ten days we will assume that this mark escaped your notice and we will then send you a *personal* letter. We hope now to receive your renewal and make the letter unnecessary. A renewal blank is sent in this paper.

ADVERTISE YOUR SURPLUS

Tens of thousands of our readers raise surplus crops and their chief concern is to find a satisfactory market for them. Likewise tens of thousands of our readers must have supplies for their families that they cannot or do not produce. To illustrate: The farmers in one section raise potatoes in great quantities, but do not raise corn, apples, hay and some other crops. In another section the chief crop is fruit, and apples, peaches, peas, grapes etc., are to ship. What could be more logical than that exchanges should be made between these sections of the country by the people wanting the goods of the other? And this trade can just as well be carried on with sections that must, from the very nature of the case, be buyers exclusively. To illustrate: The south raises a surplus of cotton and must have large quantities of every northern crop. The northern farmers cannot well reciprocate by buying the southern planters cotton directly, but, if given the opportunity, can supply his southern brethren with corn, oats, potatoes, apples, etc., etc., at a great saving under the fancy prices that usually prevail in the south.

Up-to-Date Farming is the best medium for such exchange. It maintains a department for this very object, but we must say that producers have not availed themselves of it as they should in the past.

We refer to the BUSINESS EXCHANGE department. See it. See the style of the advertisements and the terms for using it. As the season is right at hand now when buyers want to lay in their winter supplies and sellers want to reduce their stocks, both should use it to get together in satisfactory business relations.



Grand old man of the west. His name is Dollar Wheat.

UP-TO-DATE FARMING, in blocks of four, $1.00.

REQUEST ADVERTISERS WANT TO Know in what Paper seen. Therefore We TO their Advertisement was Urgently Request You to mention UP-TO-DATE every time you Write to Our Advertisers. READERS.

CEMENT POST MACHINE—Makes everlasting fence posts as cheap as wooden posts. Can be made in winter. Cheapest first-class machine and most good points. Send for circulars.
Champion Post Machine Co., 30 State St., Mendon, Mich.

Indianapolis, Indiana.

Esteemed Subscriber and Friend:

This is a personal letter—a letter from a friend.

Note the attached Special Coupons. For the next thirty days I'm going to hold these special propositions open to you. Knowing that you are interested in UP-TO-DATE FARMING, I trust you will want to introduce its teachings into your vicinity by sending us a new subscriber. Coupon No. 1 allows you to do so, *at no extra expense to yourself.*

On coupon No. 2 we offer to send your choice of a pair of shears, one dozen teaspoons, or a Woman's Handy Companion.

THE SHEARS are highly nickel plated, 8 inches long, and have the patented tension spring attachment which enables them to cut anything from wet tissue paper to cardboard. The material is of the best steel. Each pair of shears is guaranteed for 5 years.

THE ONE DOZEN TEASPOONS are made of Silveroid, a material that resembles silver and that always keeps its high polish with the care that spoons should have.

THE WOMAN'S COMPANION is something every woman needs. Get a companion for your wife or mother. It has 244 different household articles, including needles (what woman ever has enough good needles) pins, hairpins and other articles too numerous to mention. All of these premiums are of good material and are the pick of our premium list.

Just a word about UP-TO-DATE FARMING itself. You can readily see the great improvements and additions we have made the last few months. Even though it is *bigger* and *better* than ever, still we are not satisfied. Each issue will be an improvement over the preceding number. The household department interests the women more than ever. The agricultural features are in a class all by themselves.

If UP-TO-DATE FARMING has proven for years so valuable to its readers that thousands of them have written: "it is the only true farm paper," or "we cannot afford to be without UP-TO-DATE FARMING," or "we have stopped all other farm papers and rely on UP-TO-DATE only," will it not be as valuable to others? If it is thus esteemed by its present subscribers, will it not be equally esteemed by every farmer when once he is brought to peruse its pages? We believe so and we want YOUR help to introduce it to others.

I will look for one of the coupons back from each present subscriber.

Yours faithfully,

J. A. Everitt

Editor

EDITORIAL

TO "FIX" PRICES

It is silly longer to contend that prices arrange themselves automatically in accordance with the variations of supply and demand. There are too many evidences that individuals and corporations dealing in the commodities determine the prices that shall be paid for them. In the case of manufactured articles, merchandise and mine products, the owners or sellers name the price, but in the case of farm products the buyers name the price.

Only a few days ago the buyers of poultry, eggs and dairy products in St. Louis met to form an exchange, not in the nature of a trust, said those who participated in the meeting, but merely an association "for the purpose of fixing prices." These people, it was claimed, had been put to considerable inconvenience, and in some cases, to losses, by not knowing what the others had on hand, or what they were paying or charging; for this price making system, of course, involves the making of the price that shall be paid the producers as well as the price that shall be charged the consumers. Thus these dealers, acting in an organized capacity, determine the margin of profit between the buying and selling prices, and so fix their own income.

Heretofore these prices had been fixed by the city's general board of trade, which gave the actual dealers in these things only a general voice in the price-making, whereas they desired the entire say in the matter, and they now propose to have it by an organization of their own.

In mercantile transactions, and in general business, including manufacturers, it is a well settled principle that the seller names the price, and the buyer may pay it or leave the article alone. It is true, two may "haggle" and come to an agreement as to price, but that does not affect the general principle that the seller is the price maker. It necessarily must be so. The ownership of property depends upon it. Whoever owns an article can retain that ownership until a price satisfactory to himself (his price) is paid for it. There is but one exception in organized society or government, and that is the well known Right of Eminent Domain, which means that the public is greater than the individual, and the individual right must yield to the public good. If an individual own property (and that applies only to landed property or other property that may be declared a nuisance) that it is important for the public to possess, and he refuse to sell to the public at a reasonable price, such individual owner may be compelled to sell regardless of his own wishes in the matter. But in that case the purchaser does not fix the price. A jury of the individual's neighbors is called to do that, and to the actual value of the property may be added any damages the individual may sustain on account of having to surrender the property or by reason of the use to which it is put.

The above is the theory of exchange, of buying and selling, and it is observed in all cases except when farmers sell the products of their soil and toil. Neither the law of eminent domain nor the right to abate a nuisance applies then. It is simply accept the buyer's price or keep the stuff, and the farmer must sell or go without an income, or do without money to meet the wants he cannot himself supply. The price offered may be so low that he gives double value for the money he gets, but he must have what will buy other commodities; and there again he must meet the price fixed by another.

So far as selling and buying is concerned, the farmer is absolutely without protection or a chance. But he need not be. The farmer is compelled to sell to get money, but he is not compelled to sell at any specified time. If farmers would only practice what others teach them, and organize as others do, so as to act in concert as others do, they could refuse to sell except at their own prices, as others do, and gain for themselves reasonable profits, as others do.

GOOD ROADS AND MARKETS

At the national good roads convention at Buffalo, New York, last July, F. A. Derthick of Ohio, said:

> The producer is interested for the reason that in anticipation of the certain return each Fall and Spring of impassable roads he must hurry forward his crops to sell in a glutted market at prices not always warranted by the supply, and which would not be accepted if he were able to deliver his produce in response to the demand of the consumer, who in turn is often the victim of extortionate prices by reason of bad roads in the country. With good roads the stream of supplies would be more constant, thereby relieving the congestion noted above; the producer and consumer would be less dependent upon changing conditions, the great law of supply and demand would find full expression to the mutual financial advantage of both producer and consumer in the net of the many millions of dollars now finding their way into the hands of those who do not sow, nor reap, neither do they spin.

We endorse the sentiment expressed in the above, but we copy it because it concedes what we have contended for, almost alone, for a number of years—that it is a loss to the farmer "to hurry forward his crops to sell in a glutted market," by reason of which the consumer "is often the victim of extortionate prices" made not by farmers, but by speculative buyers and storers, and that, were it not for this congested, glutted-market selling, both producer and consumer would be benefited "many millions of dollars now finding their way into the hands of those who do not sow, nor reap, neither do they spin."

Whatever is the cause of such selling should be removed. If farmers rush their products to market at harvest time and thus lose millions of dollars to themselves, and other millions to consumers of their products, because of bad roads, then let the bad roads be made good as the most important work that could appeal to the public. If a lack of co-operation on the part of the producers is the cause of it, then let the producers take immediate steps looking to co-operation as the most important work of their lives.

To accomplish the saving of those milions we do not think farmers need to wait for the building of good roads, important as that is. The harvest of almost all the crops comes when the unimproved roads are yet solid, and that is the excuse for hurrying the crops to market at that time—the excuse in the above quotation. But if farmers dare not keep their stuff at home for fear of the bad roads that are to be expected later in the season, storage facilities at their market places would solve the problem, and in the aggregate "save the millions." Farmers can provide such storage; they are able to do it, and would, if they could only be brought to see the millions that might be saved by it. Why can't farmers act together like other people do? Whom do they fear? Can they not trust their neighbors, those of their own calling? Are they more suspicious of each other than they are of the rest of mankind, or than the rest of mankind is of themselves?

We see no reason why they should be. Confidence in one another and co-operation, means more to them than to any other class of people and these will come with organization.

ATTENDED WITH DANGER

The national forestry service informs us that they have received inquiries for their formula for poisoning prairie dogs, from Ohio, Illinois, Indiana, New York, many of the Southern States and states along the Atlantic coast, the object being to poison ground squirrels, gophers, field mice, badgers, chipmunks, rats, etc.

There is no doubt but the poison would be effective in the destruction of all these animals, but it would also be destructive of many others, whose destruction is not desirable. Since wheat is used as the medium for administering the poison, almost every animal and bird in the older states might easily fall a prey to it, it should be distributed, if at all, with the unmost care. The authorities admit at all, with the utmost care. The authorities admit poisoned wheat was put out for prairie dogs. These little animals are confined to special regions, and their destruction by almost any means seems justifiable. It is estimated that in the State of Texas prairie dogs annually consume as much pasturage as would sustain 1,562,500 cows. This is a loss to stop which the most radical means may well be adopted, but to distribute poisoned wheat indiscriminately over the country, or instructions with the poison to be used for that purpose, would be dangerous in the extreme. The careless administration of such poison, and the carelessness of the average person in such things is well known, would destroy every grain-eating bird and animal, wild or domestic, in the country.

The forestry service should not permit any such distribution, and the state and local authorities should be on the watch for it. Almost every state has a law with severe penalties, prohibiting such use of poisons, but irreparable damage might be done before that fact reached the authorities.

LAW REGARDING FEED STUFFS

We cannot say with some people that "the least governed is the best governed," for that goes too far. To have government there must be laws, and they must be obeyed. The truly law-abiding, however, need but few laws, and sometimes it really seems like we have too many laws. When we consider, though, that, while all laws are binding alike on all people, they are made solely to restrain the dishonest and the evil, we must realize that laws are necessary, and one reason why so many seem annoying is because they are not understood. Such is the feed stuff law of Indiana, and perhaps of other states. W. J. Jones, Jr., State Chemist, gives the following explanation of the Indiana law, which shows that it is in no sense oppressive or restrictive of farmers who produce and use their own feed, but that it is aimed solely at those who manufacture feed for sale, and may cheat the buyers and users by putting on the market goods not true to representation:

1. The Feeding Stuff Law covers all materials used for the feeding of domestic animals except hay, straw, whole seeds and the unmixed meals made directly from the entire grains of wheat, rye, barley, oats, Indian corn, buckwheat, broom corn, wheat flours and other flours. All materials except those specifically mentioned as being exempt must be registered and tagged when offered for sale in this state.
2. The law contains no provision which prevents any farmer or consumer from mixing and having ground materials of his own production in any quantity and proportion he may desire, for his own use. If after grinding such mixtures are offered or exposed for sale they must be registered and tagged. For example, a farmer or consumer may mix corn, oats, rye, barley and buckwheat and take it to the mill and have it ground, and such feed does not have to be tagged providing the feed returned to the consumer is made from the materials he took to the mill to have ground.
3. Any one in the state may purchase cereals separately, mix them in any proportion he desires and have them ground for pay for his own use without registering and tagging. When such materials are purchased already ground and mixed, or are offered or exposed for sale after mixing and grinding, a tag must be given the purchaser with each 100 lbs or fraction.
4. If a consumer takes wheat or other cereals to a mill and has it ground for pay or toll, receiving in return the by-products such as wheat bran, middlings, etc., from the cereals which he took to the mill, such by-products do not have to be tagged. If, however, the consumer takes his wheat or other cereals to the mill and sells it at so much per bushel, taking in exchange so many pounds of wheat bran, middlings or other by-products from the *common bin*, such by-products *must be registered and tagged*.
5. Feed shipped outside the state does not have to be tagged with the Indiana tag, but is subject to the laws of the state in which it is offered for sale.

THE RESULT IN CASH

Some powerful financial power is waging a merciless campaign to discredit the work of the Society of Equity in Kentucky, but cold cash as a result is a spot counter. We do not accept responsibility for a great deal of the work of the Society since the insurgent convention of a year ago; but wherever the plan as originally devised has been carried out, the result is highly satisfactory and honorable. Of such is the following clipped from the Maysville, Ky., Independent:

Bracken county Equity officials are in receipt of a check for $80,000 for tobacco sold and shipped from that county out of the 1906 crop of tobacco. Prior to this $155,000 had been received from the same source. Besides this amount there is a reserve of about $20,000 held in the county. There are 175 hogsheads more in the county that have been sold. As soon as the returns are received from this shipment, and others that are due, there will have been received in that county something over $330,000. The Equity officials expect to make a fifty per cent distribution within the next three weeks. The firm of Waldon & Louderback, who have a contract to prize the Equity tobacco there, have received over 1,000,000 pounds of the 1907 crop.

EVEN SAUERKRAUT

(Continued from page 1)

ports were made to the effect that the excessive drought had dwarfed the output to such an extent that a crop shortage is a certainty. The executive officers will determine the feasibility of increasing the price of the output.

It will be observed that the cabbage growers are not consulted. A crop shortage is made the pretext, but the National Kraut Association does the business. What farmer supposed there was a National Kraut Association, the kraut manufacturers combined in a national body, watching the cabbage patches of the country, putting a price on the heads as they stand, and raising at pleasure the price that must be paid for the finished product as it goes to the consumers' tables? The whole nation of kraut manufactuers thus organized for that purpose! Did any one suspect it?

We do not refer to this so much on account of its own importance, but rather because it shows how completely that class of people who handle farmers' produce are organized. What do the farmers think about it? It is in their interest we write. If the kraut makers can organize and control the price of both raw material and finished product, cannot the cabbage growers organize and control at least the minimum price of their product? It is better for all that they do so, not only as to cabbage, but as to everything which goes from the farms to the tables of those who consume but do not produce. Will not these classes, so vitally interested, give aid and encouragement to an organization that could not fail to be a great benefit to themselves?

WHAT THE TELESCOPE REVEALED *and* HOW IT LOOKS TO THE EDITOR

A shipment of 80 bags of potatoes from Belgium were received at New York October 14. The stock was reported as "unusually fine, clean and bright and the aooking qualities were excellent." The shipment sold for $2.25 per sack. Other shipments are expected to follow.

Wilmington (Del.) truck growers organized October 14. The association will test the plan of marketing the vegetable and fruit crops grown around Wilmington in bulk as compared with the methods now in vogue. One, or not more than two commission merchants will be selected on each important market to whom all the members will ship their stuff each day. A shipping master will be in charge at each station to order cars, mark, load and dispatch the shipments.

This is the Equity plan lacking the national scope and a knowledge of the actual demand and where it is. As a local effort it will fail to give full relief.

From the Fruit Trade Journal we learn that prospective German buyers of our apples are returning home without making purchases, because, as they explain, the price here for choice stock is so high that they cannot be exported to meek price prevailing in Germany on home stocks. This leads us to remark that there are probably no more than a home supply of apples and our country should keep them. Also we commend the growers for refusing to meet the price made in Germany. Let that country pay our price or do without. The same should more often be applied to some other crops.

From an exchange we learn that A. U. Chaney, general manager of the National Fruit Exchange, spent a portion of this week—October 12-17—in Chicago superintending the marketing of the Wisconsin cranberry crop. It is reported that half of the crop was contracted at $8.50@$9.00 per barrel. It should be known that Mr. Chaney is not an agent of the growers, nor is his association a growers association, but a handlers association. It is one of the trusts that the farmers trust their stuff too to make both the buying and selling prices. To the credit of the New Jersey cranberry growers be it said, by the same authority, that they are disposed to hold back their crops, believing that the market will be stronger. The cranberry crop is a short one.

Potatoes are selling at $1.00 a bushel in some large producing sections where the crop was short while in other states, notably Maine, the price is around 50 cents. Does this not call for national co-operation in reporting crops and marketing?

Clark County, Va., produced about 5,000 barrels of apples this season, which, it is expected, will bring to the growers $10,000 to $20,000. Profiting by former experience, a company of local people has been formed and a large cold storage plant is being erected which will aid fruit growers materially.

A national apple show will be held at Spokane, Wash., December 7th, to 12th.

The fololwing from The Produce News will give an idea of how they raise potatoes over in Maine:

"Presque Isle, Me., Oct. 15.—While the yield per acre of potatoes throughout Aroostook county cannot accurately be given, an investigation among shippers throughout the county makes it safe to say that the crop of 1908 will range as high as most any other year. The quality will be above the average. In the central part of the county which is the heart of the potato industry the acreage is about the same as in former years, but the yield is larger. One shipper who had 17 acres turned out 100 bushels an acre and from four acres he secured 470 bbls. of marketable stock. J. C. Graham has 29 acres which produced 3,000 bbls. Ernest Beckwith, his neighbor, who has 25 acres dug 100 bbls. to the acre, while 5,500 bbls. were dug by J. A. DeWitt & Son. W. N. Hardy, who has a $25,000 farm, has 34 acres in potatoes. He expects to harvest 5,000 bbls. Hoyt & Wheeler expect to harvest about 125 bbls. to the acre from their 130 acre farm."

The potato crop of the Burley tobacco district of Kentucky is a disappointment, probably owing to the unfavorable season, but, no doubt, also because that section is not well adapted to the crop. Our informant says: "They are short in supply and inferior in quality." This is the district that cut out the tobacco crop and largely substituted potatoes.

The visible supply of wheat in the U. S. is now 44,191,000 bushels against 51,110,000 bushels a year ago. What has become of the Grain Growers Department and the pooling campaign? The visible supply of corn is 4,617,000 bushels against 9,340,000 bushels a year ago; of oats 14,030,000 bushels against 11,683,000 bushels a gear ago; of barley 8,923,000 bushels against 6,768,000 bushels a year ago.

The visible supply of wheat in Canada is 16,548,000 bushels against 7,258,000 bushels a year ago. Total in U. S. and Canada, 60,739,000 bushels against 58,368,000 bushels a year ago.

Bradstreet says, commenting on the grain movement:

"While the receipts of wheat at interior markets have shown a slight shrinkage of late, they are still in excess of last week and double those of the corresponding week a year ago. High-water mark appears to have been reached in the interior receipts in the last week of September, but it is worth noting that for five weeks ending with October 10 the interior receipts of wheat were 58,000,000 bushels, 25,000,000 bushels larger than in the same period a year ago; and from July 1 to date the receipts aggregate 108,466,740 bushels, nearly 31,000,000 bushels more than in the same period a year ago."

Can any person bring forward a more plausible reason for this condition than our theory that the American Society of Equity, under the 1908 administration, lost the power it formerly exerted?

From Press Bulletin, New Series No. 15, from the Idaho Agricultural Experiment Station, Moscow, Idaho, we get the following conclusion regarding the much advertised Alaska wheat:

"In spite of all the beautiful stories which have been written concerning the origin of this wheat, regardless of the many wonderful things which have been imagined about its quality, and taking into consideration the impression as to yield, which has so skilfully been thrown broadcast throughout the American continent by this seed company, who advertise their wheat for sale at $20,00 per bushel, WE HAVE YET TO FIND ANY POINTS OF MERIT IN IT WHICH WOULD WARRANT THE PUBLIC PAYING MORE FOR "ALASKA" WHEAT THAN THE PREVAILING MARKET PRICE OF OUR COMMON VARIETIES."

"The Great West" is the name of a paper that purports to be "the official organ of the Canadian Society of Equity." It is now in its second year and 13th number. For its motto it has, "Farmers to the front," which is very good, as all members of the society know. But there has been an add-smith at work over in Canada as in this country and there has been added to the motto, this: "A paper for the farmers by the farmers and for union labor by union labor." When will pretended farmers' leaders know enough to let well enough alone? An examination of the contents of the paper revels strong political tendencies which is another bad feature for a paper that is the official organ of a farmers' society.

Hog prices have declined about 2 cents a pound from the high mark of about two months ago. This is not to say that the high price was not too high or the present price too low. But our contention that the conditions that make such fluctuations possible are demoralizing to every branch of business having to do with hogs from the producers to the consumers. A remedy can come only through an organization of the producers to regulate the supply and direct the marketing to properly supply the demand.

The crop of cornstalks is vast. How to dispose of them with the least trouble has long been a problem. Millions of tons go to decay in the fields every year. Cattle nibble at them when they can get nothing better, they are turned under by the plow with difficulty, doing their part, no doubt, to return fertility to the soil, but on the whole a good deal of nuisance to the farmer. If they can be used for paper they will be a new source of profit to him and the benefit of using them for this purpose will work both ways.—Indianapolis Star.

But will the farmer get the profit? If he does it will be different from anything known before. Utilizing of formerly waste material from the farms has not heretofore inured much to the farmers' benefit. And we don't expect anything better until they are in a position to take what they are entitled to before passing their produce on to others.

ST. LOUIS, Mo., Oct. 17.—A code of rules which is expected to result in uniform grading of grains in all exchanges of the United States was adopted by the Grain Dealers' National Association at the closing session of its annual convention here today. The rules with a few changes are those advocated by the Chief Grain Inspectors' National Association and they were urged upon the larger body by E. H. Culver, Toledo, O., president of the inspectors' organization.

The convention chose Indianapolis as the convention city for 1909.

The new rules will not affect this year's crops. They will not take effect until July, 1909, until which time the old methods, with varying standards of weights, measures and inspections will prevail.

FIGHTING PRAIRIE DOGS IN THE WEST

To Up-to-Date Farming:

The people of the West need no description of the prairie dog, but for the benefit of your readers elsewhere, I may say he is a small animal that burrows in the ground and lives in "towns," sometimes covering large areas and having thousands, perhaps millions, of inhabitants. Prairie dogs are great pests. Their burrows honey comb the ground occupied by them, and they consume so much of the tender grass as to virtually destroy the ranges inhabited by them.

The United States Forestry Service has taken upon itself the destruction of these pests; or, rather, to aid the ranchmen in their destruction. The government furnishes the poison and the formula; those interested, must apply it.

The first atempt at poisoning prairie dogs on anything like an exterminating scale, was made by a stockman in New Mexico, and the experiment was so successful as to attract the attention of the government service. To ascertain what really could be done, a selection was made of parts of the Shadville and Pike National Forests which are badly infested. The region in these forests upon which the dogs were located aggregated 300 square miles or more. In order to demonstrate the effectiveness of the work an area of some 60 or 75 thousand acres of actual dogtown was selected for the test. From 80 to 90 per cent of the dogs were killed with the first distribution of the poison. It will be necessary to go over the ground a second time and by "spotting" the occupied holes the remaining dogs will easily be killed with a very small amoun of the poisoning material. The average cost per acre for the poisoning material was only ane and one-half cents, and even then it was found that more material had been used than was necessary.

The poison is prepared by coating wheat with a preparation of strychnine, cyanide of potassium, anise oil, and molasses. When a sufficient quantity is ready, the poisoned wheat is carried to the field of operations. There the stockmen supply men and horses, the wheat is given out to the riders, and distribution begins.

Each rider carries the wheat in a tin pail supported by a gunny sack slung across his right shoulder and hanging at his left side. His left hand is free for the reins. With his right hand he uses a tablespoon to measure out the poison and drop it near the entrance of the holes. A little practice enables the men to drop the wheat while keeping their horses at a sharp trot. By crossing the town, to and fro, like a man sowing grain, they can cover a large area in a surprisingly short time.

The action of the poison is almost instantaneous. Most of the prairie dogs in a town are dead within an hour or two after the bait is dropped.

The work is considered to have demonstrated the entire feasibility of fighting the prairie dogs in this way. It was found, however, that to be successful the poison must be scattered in the spring, when the dogs first come out from their winter quarters and before the green grass is offered to appease their hungry appetites. Next spring the poisoning will be undertaken much more extensively. Stockmen and others who wish to try the dog medicine on their own account can obtain the formula for its preparation and directions for its use from the Forest Service.

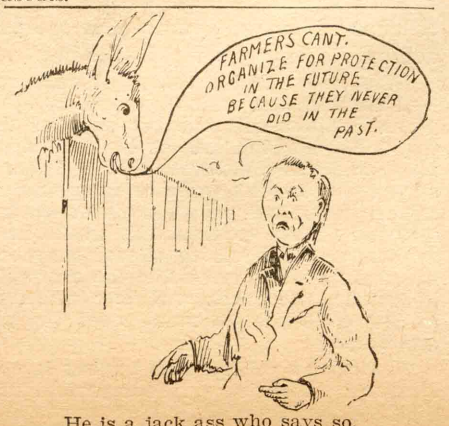
WESTERN EQUITY.

Boise, Idaho.

ORGANIZATION AND THE LACK OF IT

One of our Kentucky exchanges has this pointed paragraph, which literally bristles with an important lesson:

The difference between organization and the lack of it is seen in the market for blue grass seed. This summer an effort was made to pool the crops in a number of counties, and a temporary organization was effected. A t that time prices of seed for August delivery were about seventy-five cents per bushel. Abaut the first of August the attempt to combine was abandoned, and now seed is selling at sixty cents, or thereabouts.



He is a jack ass who says so.

HOW I GOT MY FARM

Interesting Letters From Our Subscribers

First Prize, $5.00.—Chas. C. Willson, Queenstown, Md.

Second Prizes, $1.00—to each five as follows:

Mrs. Alex Cole, Quanah, Tex.
T. S. Melton, R. R. 4, Lawton, Okla.
W. B. Spuren, 200 6th Ave., Cadillac, Michigan.
A. J. St. Clair, Riley, Ind.
Joseph J. Zimmerman, Floyd Knobs, Indiana.

Third Prizes.—A year's subscription to UP-TO-DATE FARMING to each five as follows:

S. T. Jones, Kassaw, Minn.
R. Sherod, Keosauqua, Ia.
A. C. Canble, Holyoke, Colo.
M. R. Clark, Brainerd, Minn.
Willie Mudd, Caneyville, Ky.

The History of Brookside Farm

Chas. C. Willson, Queenstown, Md.

In 1878 my mother deeded me a piece of land, that had been one field of the old home place, the tract was 149 acres—60 acres of cleared land, very much neglected, run down and poor—the rest was wood and branch, very thick and quite a lot of good timber on it. A stream of water ran up the middle about half way, then divided in the shape of a V. On each side of the stream was low or meadow ground, 100 or more yards wide. I selected the rising ground in the point of the V for my home, as that was the center of the land, and I wanted all the cleared land to till. I had $1,000 in cash and sold corn enough that fall, from a farm I had been renting, to make $600 more. I had ample stock and implements to work the land with. I cleared away a spot in the dense woods and built a very pretty modern cottage with nine rooms and cellar under back building. When completed and painted it cost $1604.

I had no money left for barns or out buildings, so I made sheds of straw for my horses and cattle; and moved over January 1st, 1879. My wife, who was young at the time, cried for days, at being moved into a woods, it was so thick we could not see out in any direction. I spent that winter in trying to get what would be the lawn, cleared off, leaving the best trees, and taking out the most indifferent; and also getting a place or field fenced for my stock. By the time spring came we had things shaped somewhat. Then my first set-back came. I had 26 handsome Cotswold sheep, which I had attended to carefully all winter, expecting by the sale of their lambs and wool to have quite a nice sum of money. My expectations were doomed to disappointment—two dogs came one night and killed and hurt so badly they had to be killed, all but six of the flock.

My aim was to clear the land so I could have more to till. I cut all the cord wood I could sell, in a village about one and a half miles off. My first crop of wheat was very poor—only 250 bushels—and for three years I did not make corn enough to run me. In 1881 I got a saw mill man to cut timber one half for the other, and in that way I got a very nice barn, stable, carriage house and implement shed built under one roof, and other small buildings, and fence for garden, lawn, and several fields. I also got lumber enough to build a small tenant house to put a hand in. 1881 also brought trouble for me—I lost a valuable stallion which made for me considerable revenue each year. With every reverse I would work the harder to make up for it. I fenced the farm in five fields and each year would clear up an acre or two, to add to my tillage, until I got 100 acres cleared and in grain. In the meadow or valley along the stream, I cut the heavy timber, sold what I could, then cut and burned the under growth, and fenced it for permanent pasture; by seeding grass seed and keeping the cattle constantly on it, I soon had it clean—it is now the most valuable part of my farm for grazing; no matter how dry the season, there is always good pasture in the meadow. In 1883 I had the misfortune to lose my barn with everything in it, by fire, supposed to have caught from a spark from the kitchen chimney. I lost all my implements, carriages and harness. Fortunately I had considerable insurance on them, but it did not cover my loss by far, but what I got enabled me to replace my buildings, but had to go in debt for implements. In rebuilding I separated each house and put most the money in a large barn and stable which in 1887 was fired at night by a man I had discharged. That was my baptism of fire. I had to rebuild, but on a smaller and cheaper scale. My land which I had been improving all the time, was producing very nicely about this time, the trees in the lawn were shaping up, and I had at last succeeded in getting a green sward in fruit. My wife had also many beautiful shrubs and flowers. One day on old gentleman, a neighboring farmer, drove up to see me on some business. When I went out to meet him, he looked around and said, "You have got a very pretty place here now." I said, "Yes, it was beginning to look in some shape." He said, "Do you know, I thought you were crazy when you started to build in this woods, and I was not the only one who thought so, but now I see your head was level, you knew what you could make of it." I told him I considered that the greatest compliment ever paid me. I have now one of the prettiest homes around here—the lawn is shaded with beautiful fruit trees and the ground slopes from the house, on each side, and in front, to the lower land of the meadow, a beautiful green. On either side of the house are beatiful flowers and shrubs—a wisteria shades the whole front porch during the summer. My farm is as productive now as any around here, will produce from 30 to 35 bushels of wheat and 60 bushels of corn per acre any good season—have grown 300 bushels of potatoes per acre, and bid fair to beat that this year. During the time I have been describing we have lived well, dressed well, entertained our friends, gone away on trips for a week at a time—it has not been all work and no play. I do not take the credit for all of this success for fully half of it is due my wife, she has aided me in every way.

An Eastern Shore Maryland Farmer.

Second Prize Letter

Mrs. Alex Cole, Quanah, Texas.

Our first one hundred acres was inherited, with a debt of $300 against the land. Valued in 1887 at $12 per acre. That being the year we set out to battle with the realities of life.

The land having lain out for 2 years previous, our first real obstacle was burs. We commenced raking and burning and by the third week could see the ground in places. So a furrow could be run with a walking turning plow. That being the year of the greatest blizzard Texas ever had; and the following summer, the greatest drought known to her people. The crop when gathered was 30 acres of corn, 75 bushels of "nubbins," cotton 40 acres, 3 bales. This wasn't very encouraging to one, with on eight hundred dollar debt starring him in the face.

However, with a good supply of will power, push and determination, we set out to conquer, and hit Old Mother Earth with more vim than ever. Energy the best help, never letting our expense exceed the income, we saved from the chip pile to the flour bin; helped each other in every way possible. I don't favor a woman going to the field regular, but when a man lifts, she can prize and when they lift, and prize together, debts will vanish. The third year we owned a good team, new wagon, owed no man and had money to loan. The fifth year, bought 100 acres of good improved land, paid $25 per acre and one thousand dollars down. Did our own work, cut out hired help, and pulled together. What was his interest, was mine. We learned economy the first year; and that is half the battle. Economy is everything. Never promise more than you can pay, and never buy what you don't need. We have 1600 acres fine land, 1300 in cultivation; six rent houses. We raised our hogs; never bought tobacco, snuff or whiskey; lived at home. The oldest boy has the appointment for West Point. The girls preparing for college. The boy aged 8 driving a 4 mule team, breaking for a 500 acre wheat crop. The boy aged 3, busy riding stick horses. Keep them employed for in employment there is contentment.

How I Got My Farm

I was born in Harrison county, Indiana, and moved to Louisville, Ky., in 1885. In 1903 I decided to buy a farm, but found that the farms near where I was raised were selling high. After reading many advertisements of land in different states, I at last decided to visit the Panhandle district of Texas. I learned land could be bought there for $1.25 per acre, and that good land having some improvements could be purchased for $8.00 to $10.00 an acre. One of our neighbors had a son living in Okla City, Okla., who had two farms for sale. I wrote to him and he offered to sell me an improved prairie farm of 160 acres for $2,300. My cousin who lived in Southern Missouri, advised me to first examine that part of the state before going west, but the land was too low and swampy to suit me so I started for the Lone Star State. I purchased a ticket for Amarillo, Texas, with stop-over privileges in Okla. I stopped at Okla. City to see the man I had communicated with and he told me his farm was in Camanche county, 20 miles south of Lawton. On arriving at Lawton I found a thriving little town of 7,000 inhabitants and which was only four years old. I learned that I would have to wait until the next day to get a train to take me to my destination. When the real estate agents found that I was a home seeker, they offered to show me the country. I went with one of them, saw a number of farms, was favorably impressed with the country, and thought I would like to farm where there were no rocks, stumps, bushes, briars, etc., to contend with. On the return trip, when we were 2½ miles from town the agent drove up to a raw prairie farm and said, "I will sell you this farm for $2,800." There was about 40 acres in one corner of the place which was rolling; on this was a pond or "tank", and I thought this would be a good place for a pasture. There was a raised place at a convenient distance from the pasture and road which would make a good building site and from where a splendid view of the surrounding country could be had. The farming land was level with a few drains to carry off the water. The next day I went out with another agent in a different direction. On returning to town the second day I called to see the agent with whom I had talked about the farm 2½ miles from town. I told him if he would take me out there again and let me examine the soil and if it suited, I would give him $2,600 for it, to this he agreed. After seeing it again I found the soil was dark brown, under which was a good clay subsoil, and as I was satisfied with it went back to town and clased the deal. I then went to northern Texas, but didn't see anything that made me regret my purchase. On returning home the family were sorry to learn that they had to leave their home and friends and move to a farm 1000 miles southwest. However, we bid farewell to our "old Kentucky home" and on the eighth of February, 1907, we arrived at Lawton, and a few days later moved into a box house which I had built on the farm. That year I broke up 60 acres of sod, which I planted to Kaffir corn and cane which furnished the horses and cows and chickens with feed. This year I broke out 40 acres more, making 100 acres in all. I sowed 10 acres to alfalfa, 27 acres was planted in cotton, 40 acres in popcorn and the rest to Kaffir corn, cane, potatoes, peanuts and garden. I could now sell the farm for $6,000 which I think is a good advance on the cost price. We are all better satisfied now and say with an Oklahoma poet:

"Gorgeous sunsets, wondrous laidscapes,
Where your valleys, hills and streams,
Make the fabbled lost alantus pale beside,
And your rich far-stretching prairies,
That with golden harvest gleams,
Tempt the hearts of all beholders to abide."

Very sincerely yours,
T. S. MELTON,
R. R. 4, Lawton, Okla.

(More letters will be printed in future numbers. Also we have announced the contest to continue. The second one will close December 15th. See announcement on this page.—Ed.)

How Did You Get Your Farm?

WE want readers of UP-TO-DATE to write out their experiences in getting their farms and send to us. We will pay you, see below. If you inherited the farm and there is an interesting story connected with it, we want it; if you carved and dug your farm out of a forest, or perchance removed layers of stone before you had the soil to plow and plant, tell us about your patient labor and trials endured; or if you have a prairie farm which, when you acquired it, was ready for the plow, or bought your farm ready made, we want to know how you got it.

Nearly every farm has an interestng story of its acquirement by the present owner; struggles of labor or litigation; difficulties to meet the payments, discouragements and triumphs.

Our object is to make UP-TO-DATE FARMING interesting and help others who may be paying for farms or want to buy farms.

For the best article on this subject received between October 15 and December 15, 1908, WE WILL GIVE $5.00.

For the NEXT BEST FIVE, $1.00 EACH.

For the NEXT BEST FIVE, ONE YEAR'S SUBSCRIPTION TO UP-TO-DATE FARMING.

We will not put a word limit on the letters, but letters carried out to unnecessary length will be scaled down in points on that account. Be brief, give us the story and we'll fix it for publication. Send photographs of interesting features, the buildings, or of some members of the family, if possible, to embellish the story.

EDITOR UP-TO-DATE FARMING, Indianapolis, Indiana.

IT is because men are prone to be partial towards those they hate, servile to those above them, arrogant towards those below them, and either harsh or overindulgent to those in poverty and distress, that it is so difficult to find any one capable of exercising sound judgment with respect to the qualities of others. Therefore it is the part of wisdom to withold judgment and immerse ourselves in our own affairs, in order that others may attend to theirs.—Confucius.

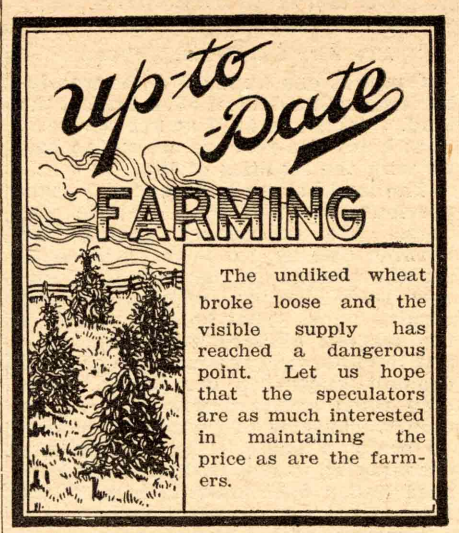
Spring Catalog ready January 1.

O. K. SEED STORE, Dept. A, Indianapolis, Ind.



The undiked wheat broke loose and the visible supply has reached a dangerous point. Let us hope that the speculators are as much interested in maintaining the price as are the farmers.

CORN CROP OF 1908

The corn crop of the present year, according to the government report issued October 7, is but slightly below that of last year, but it is near two per cent below the last ten-year average. This reduces the condition as reported a month before, and we are satisfied, from our own observation and private advices that it is still too high, as most government reports are.

Crop reporters do not appreciate the importance of their reports, nor the effect they have, as at present issued, upon the markets and prices, and a home pride prompts them to exaggerate conditions. They think an unfavorable report would reflect unfavorably upon their locality, and they do their utmost to make it good. We are not charging the reporters with falsehood or dishonesty, but with possibly a somewhat excessive pride in home and a mistaken understanding of the effect of their reports. This naturally permits or induces them to give the good the benefit of every doubt, and that in the aggregate leads to exaggerated government reports. This is the charitable way we account for the too frequent government reports of excessive yields of various crops. For that reason it is well to make due allowances, but the effect on markets and prices, often involving serious and unjust losses to farmers, is the same.

By states the October government figures of the corn crop are as follows:

STATES	1908	1907	10-Year Average
Illinois	72	86	84
Iowa	80	70	81
Texas	83	78	73
Missouri	71	84	81
Nebraska	80	69	75
Kansas	69	67	70
Oklahoma	73	67	76
Indiana	67	84	87
Georgia	84	92	82
Ohio	82	78	84
Kentucky	75	88	83
Tennessee	82	86	80
Alabama	83	85	80
North Carolina	82	89	82
Arkansas	79	60	77
Mississippi	81	74	76
All others	82	78	83
United States	77.8	78.0	79.7

It will be noted that Illinois is 14 points below last year, Missouri is 13 points, Indiana 17 points, Georgia 8 points, Kentucky 13 points, Tennessee 6 points, Alabama 2 points, and North Carolina 7 points. The Southern states, however, not being corn states, do not cut so much figure in this crop. The greatest deficiency in this list is in the strong corn states.

On the other hand, it will be seen that Iowa is reported 10 points above last year, Texas as 5 points above, Nebraska 11 points, Kansas 2 points, Oklahoma 6 points, Ohio 4 points, Arkansas 19 points, and Mississippi 7 points. It wil be noted that the states which show a gain this year stood very low the year before, and that virtually neutralizes their gain of this year over the crop of last year so far as the general crop is concerned. Hence the corn supply of this year cannot be otherwise than low, and farmers ought to refuse to sell except at a remunerative price.

SMALL POTATO CROP

The government crop report for September indicated a very small yield of potatoes, and the October report makes it still smaller—five points smaller. Maine is the only state where anything like a good crop is reported, and that falls 6 points below a full crop. The great potato states of New York, Michigan and Wisconsin, are reported at 61, 60 and 65 respectively, which is but little more than half a crop. Potatoes cannot be otherwise than scarce and high in price. Will the growers or the speculators get the profit?

TREE PLANTING IN THE MIDDLE WEST

To Up-to-Date Farming:

While the older states of the Mississippi Valley have been cutting down their magnificent natural forests, and reducing to ashes in the clearings timber that is every year growing more and more valuable, the youngser states of the middle west that were denied by nature trees of almost any kind, have been planting forests that are now growing into the most encouraging proportions. There are 160,000 acres of planted trees in Central Kansas, where at one time it was thought trees could not be grown. It is also an encourageing fact that the native timber in Kansas is on the increase, because the prairies fires no longer sweep across the plains, and the strips of forest along the rivers and in the ravines and gullies are becoming broader every year. The proportion of thrifty black walnut trees in these strips and groves is remarkable. A few years hence, if these indications do not fail, the American supply of black walnut will be greater than it ever was.

For a number of years it was thought that cotton wood was the only tree that could be profitably planted on these western plains, but later box-elder, honey locust, catalpa, osage orange, Russian mulberry, black walnut and red cedar, were found to do well almost anywhere in this region. In addition to these, persimmon, magnolia, basswood, juneberry, black cherry, buckeye, dogwood, sycamore, tulip-tree, pin-oak, red oak, redbut, and other trees, familiar in the natural forests of the more eastern states, have been planted and are growing successfully; so it does not take a very great stretch of the imagination to see the wood supply transferred from the region of natural forests east of the Mississippi to the plains where it was thought a few years ago timber would not grow at all.

The government forestry service is materially aiding this transformation by the establishment of experiment stations on the national forest reservations, the principal work of which will be the maintenance of model forests typical of the regions where located. These stations will carry on scientific experiments and studies which will lead to a full and exact knowledge of American forest culture and the benefits derived from forests in a locality.

Considerable research work of this character has already been done in the United States, but so far there has been a lack of persistence and permanency, and a failure to consider all the factors involved. The new system provides for the permanent assignment in a given region of speciallly trained men, who will have an opportunity to become thoroughly familiar with their region. It is claimed that the work will thus be conducted with the greatest efficiency and least expense. We are assured that the work will be entirely practical as well as scientific, and that it will aim in every case to solve problems of most importance to the lumberman, the forester, and the people as a whole.

TREE PLANTING ON ABANDONED FARMS

To Up-to-Date Farming:

That there are abandoned farms in this country seems almost incredible, impossible, in regions where every acre needs only to be offered to find a buyer at from $50 to $100, or more, per acre. But there are abandoned farms—farms that have been left by their owners, and that will neither sell nor rent for cultivation. The most of the abandoned farms are in the New England States. It is claimed that ten per cent of the entire area of Massachusetts may be set down as waste land, made so by the abandonment of farms, and that little Rhode Island has no less than 228 such farms—farms on which nobody lives and that are not cultivated or put to any other productive use. Connecticut and New Hampshire may also be credited with a due proportion.

Of late, however, a new use has been found for these abandoned farms. They are being set to trees—planted in forests. During the present year about 2,500 acres have been so planted by private citizens. Wealthy men see a good investment in these lands, and a number of them have planted tracts of at least 50 acres each this year, with an intention to increase the size of their plantings every year. One owner in Massachusetts who started a white pine plantation of 63 acres this year, expects to plant 50 acres for the next ten years. Others intend next spring to plant tracts of various sizes ranging up to 200 acres.

In addition to these individual efforts, some corporations are doing the same thing, but on a larger scale. Most notable among these are certain water companies. The largest plantation of this character, comprising over 1,000 acres, belongs to the Metropolitan Water and Sewerage Board, of Clinton, Mass.

White pine is the species most generally planted, but other species, which make excellent growth and are being used more and more, are Norway spruce, for timber and pulp-wood; chestnut, for telegraph poles, posts, ties and timber; red oak, for piles and ties; black locust, for fence posts, and sugar maple for various uses.

It is not only these tracts of waste land that planting is beginning to play such an important part. The practical farmer in this region now realizes that the cheapest and best way to get the special wood products which he needs on his farm, is by planting the trees. He realizes, too, the protective value of plantations which serve as shelter-belts and windbreaks. Altogether, this region offers excellent opportunities for tree planting.

EASTERN EQUITY.

What's An "Every Day" Harrow?

Question: What is a good, all-around disc harrow for every-day work on the farm?

Answer: Among a good many others that are excellent, there is one especially good, the Cutaway Harrow.

You need lightness, (easy draft) strength (resistance) under pressure of sod, roots, stones, etc.) and that the harrow be strongly knit together (which guarantees durability.)

The Cutaway Harrows leave the land loose, mellow, open-ready to draw in moisture and retain it for the plant rootlets. Many a farmer is discing his stubble and laid-over land, for he knows he will add many a bushel to the next year's crops. A writer recommends for all-around work the harrow with the 16 inch disc, because it revolves oftener and pulverizes the soil more rapidly and more thoroughly than a larger size.

The Cutaway people make 120 sizes and styles in widths from two feet to sixteen, for every imaginable use; cutting down stalks, cutting up sod land before plowing, reducing clods to powder, and covering peas, beans, grain, etc.

A Cutaway Disc Harrow is a great sod-reducer. It will cut and break the toughest sod without the help of a plow.

This answer cannot be extended here; but those who are interested, send to the Cutaway Harrow Company, 863 Main St., Higganum, Conn., for their FREE Catalogue. it describes just the style that will serve you best.

GREAT FOREST FIRES

To Up-to-Date Farming:

The present autumn has witnessed some very severe forest fires in some of the northern and northwesten states and Canada. Hundreds of thousands of acres of timber, and property to the value of millions, have been destroyed. These great fiires call to mind other forest fires so destructive and terrible as to make them historic. A brief review of them cannot but be interesting.

One of the earliest of these was the great Miramichi fire of 1825. It began its greatest destruction about one o'clock in the afternoon of October 7 of that year, at a place about 60 miles above the town of New Castle, on the Miramichi river, in New Brunskick. Before ten o'clock that night is was 20 miles below Newcastle. In nine hours it had destroyed a belt of forest 80 miles long and 25 miles wide. Over more than two and a half million acres almost every living thing was killed. Even the fish were afterwards found dead in heaps on the river banks. Five hundred and ninety buildings were burned, and a number of towns, including Newcastle, Chatham, and Douglastown, were destroyed. One hundred and sixty perished, and nearly a thousand head of stock. The loss from the Miramichi fire is estimated at $300,000, not including the value of the timber.

In the majority of such forest fires as this the destruction of the timber is a more serious loss, by far, than that of the cattle and buildings, for it carries with it the impoverishment of a whole region for tens or even hundreds of years afterwards. The loss of the stumpage value of the timber at the time of the fire is but a small part of the damage to the neighborhood. The wages that would have been earned in lumbering added to the value of the produce that would have been purchased to supply the lumber camps, and the cares that would have been devoted and other public improvements, furnish a much truer measure of how much, sooner or later, it costs a region when its forests are destroyed by fire.

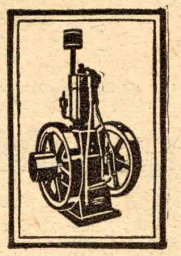
The Peshtigo fire of October, 1872, was still more severe than the Miramichi. It covered an area of more than 2,000 square miles in Wisconsin, and involved a loss in timber and other property, of many millions of dollars. Between 1,200 and 1,500 persons perished, including nearly half the population of Peshtigo, at that time a town of 2,000 inhabitants. Other fires of about the same time were most destructive in Michigan. A strip about 40 miles wide and 180 miles long, extending across the central part of the state, from Lake Michigan to Lake Huron, was devastated. The estimated loss in timber was about 4,000,000,000 feet board measure, and in money over $10,000,000. Several hundred persons perished.

In the early part of September, 1881, great fiires covered more than 1,800 square miles in various parts of Michigan. The estimated loss, in property, in addition to many hundred thousand acres of valuable timber, was more than $2,300,000. Over 5,000 persons were made destitute, and the number of lives lost is variously estimated at from 150 to 500.

The most destructive fire of more recent years was that which started near Hinckley, Minnesota, September 1, 1894. While the area burned over was less than in some other great fires, the loss of life and property was very heavy. Hinckley and six other towns were destroyed, about 500 lives were lost, more than 2,000 persons were left destitute, and the estimated loss in property of various kinds was $25,000,000. Except for the heroic conduct of locomotive engineers and other railroad men the loss of life would have been much greater.

This fire was all the more deplorable because it was wholly unnecessary. For many days before the high wind came and drove it into uncontrollable fury, it was burning slowly close to the town of Hinckley, and could have been put out.

CANADIAN EQUITY.



HAND POWER
OR
HORSE POWER
VERSUS
GASOLINE ENGINE
POWER

WHETHER you, your men or your horses do the farm work some sort of power is exerted.

The businesslike, money-making farmer will use the cheapest power.

Neither hand labor nor horse labor can accomplish so much at so little expense as an I. H. C. gasoline engine.

These engines are reliable and efficient. They will easily supply power for corn shelling, feed grinding, ensilage cutting, turning the fanning mill, operating the cream separator, and other dairy machines—and a dozen other things besides. They supply adequate, untiring, inexpensive power for everything that man or horse can do and for many they cannot do.

An I. H. C. gasoline engine installed outside the barn door or within the barn means a power house on the farm.

Horse power and man power can be applied only to certain tasks. I. H. C. gas engine power may be used for every other duty about the farm. There is an I. H. C. engine for every purpose.

They are money makers and money savers. They lighten both expense and labor. They afford a short cut to success and prosperity.

There is no doubt that on the average farm, an I. H. C. gasoline engine will more than repay its first cost each year.

The nice adaptation of these engines to all farm duties is one of the most excellent features They are built in:—

Vertical, 2, 3 and 25-horse power.
Horizontal, (Stationary and Portable) 4, 6, 8, 10 12, 15 and 20-horse power.
Traction, 10, 12, 15 and 20-horse power.
Air Cooled, 1 and 2-horse power.
Also sawing, spraying and pumping outfits.

It will be to your interest to investigate these dependable, efficient engines. Call on the International local agent and get catalogs and particulars, or write the home office.

International Harvester Company of America, Chicago, U.S.A.

CLARK'S CUTAWAY TOOLS

CLARK'S DOUBLE ACTION "CUTAWAY" HARROW

WITH EXTENSION HEAD is made especially for Orchard work. It will INCREASE your crops 25 to 50 per cent. This machine will cut from 28 to 30 acres, or will double-cut 15 acres in a day. It is drawn by two medium horses. It will move 15,000 tons of earth one foot in a day, and can be set to move the earth but little, or at so great an angle as to move all the earth one foot. Runs true in line of draft and keeps the surface true.

All disk harrows have to run in half lap.

THE JOINTED POLE TAKES ALL THE WEIGHT OFF THE HORSES' NECKS, and keeps their heels away from the disks.

BIG CROPS

We make 120 sizes and styles of Disk Harrows. Every machine fully warranted. Entire satisfaction guaranteed.

U.S. CREAM SEPARATORS

Hold World's Record for clean skimming

503

CAVENDISH, Vt., Sept. 8, 1908.
Since purchasing a U. S. separator one year ago, we have gained $11.37 per cow over the other separator, from our herd of seven cows, though three of these are heifers and one cow had been milked two years.
ALBERT S. EATON.

A saving of $11.37 per cow in one year amounts with 7 cows to $79.59 or within 41 cents of $80, the price of a No. 6 U. S. separator.

Stop and ask yourself, "How much am I losing?" Perhaps not as much as Mr. Eaton, yet you may be losing even more.

You perhaps will say, "The calves and pigs must have something to eat. To be sure they have, but it is not policy to feed them butter fat at 32 cents a lb. when substitutes at one and two cents a pound are just as good.

You can't afford such robbery in your dairy, therefore send for Cat. No. 137 at once.

PREMIUMS TO MANAGERS AND SECRETARIES OF CREAMERIES

Appreciating the importance of the managers and secretaries to the success of creameries, the National Dairy Show Association, whose third annual exposition will be held at the Colliseum, Chicago, December 2 to 10, will distribute $2,000 to managers and secretaries of creameries, in proportion to their efficiency as shown by certain required tests. The following may enter the contest:

Every manager or secretary of a creamery or cheese factory making not less than 50,000 nor more than 500,000 pounds of butter per year and not less than 20 000 nor more than 200,000 pounds of cheese per year.

A butter or cheesemaker who is manager or secretary: A butter or cheesemaker who owns a creamery or cheese factory will also be classed as a manager or secretary.

Each contestant will write a statement consisting of not less than 200 nor more than 1000 words. The statement shall show how the business is managed; the kind of records kept, and those who wish may submit sample pages of the system of records they are keeping.

The statement of methods may also contain an explanation of how the business is conducted, such as the number or salaried men connected with the plant, their duties and what they are expected to accomplish. It may also be stated how the product is manufactured, marketed, etc., and new methods planned to improve the quality of the product or the economical operation of the plant.

Due allowance will be made for location. A creamery in North Dakota marketing its product in New York will stand the same as the creamery in Michigan or Pennsylvania and one that makes 50,000 pounds of butter will be put on the same basis as the one making 500,000 pounds.

A secretary may write his report with a lead pencil and stand the same chance of getting as much of $2,000, (other things being equal) as the one whose report is typewritten.

Full details in reference to this contest and blanks for reports, will be sent to creameries and cheese factories about Novmber 1, 1908.

Every manager or secretary who receives a rating of 70, out of the possible 100 points, will receive a share of the pro rata of $2,000, and for every point above 70 he will receive an extra share of the pro rata fund.

The following points will be considered:

Statement of methods used	10
Completeness of report	10
Acuracy of report	5
Increase of business	5
Economical operation	10
Quantity of product (overrun)	10
Quality of product (price received)	20
Net results of patrons (price paid per pound of butterfat)	40
Total	100

The Managers and Secretaries program will be in charge of B. D. White, of the Dairy Division, Department of Agriculture, and he will examine the papers and give contestants proper rating. For further information write to B. D. White, Dairy Division, Department of Agriculture, Washington, D. C.

LIVE STOCK AT THE CHICAGO DAIRY SHOW

Preparations have been made to make this department again a very attractive part of the National Dairy Show. The premiums that will be offered for dairy cattle by the National Dairy Show Association will approximate $5,000, which amount will be distributed equally between the different breeds. Several of the breeders' associations have supplemented the above premiums with special prizes, and the aggregate of these special prizes will amount to approximately $2,000.

For showing the cattle, an arena 60 feet wide and 110 feet long has been provided for in the middle of the Coliseum. This arena will be suitable for a very fine cattle display.

While the amount of premium money offered will be the same for each breed, all of that offered in any one class will be awarded only in case there are four or more exhibitors showing in that class. Thus, if only two animals are shown in a class, they will be entitled to first and second premiums, provided they are meritorious animals; but an exhibitor can not receive two premiums in one class unless four or more exhibitors show in that class.

The above conditions do not apply in any championship class.

Space for cattle will be somewhat limited, therefore one exhibitor will be permitted nto enter not more tha twelve animals in any one breed.

Breeders and exhibitors of live stock desiring premium lists and further information should write Mr. B. H. Rawl, Superintendent of Live Stock, Dairy Division, Washington, D. C.

MILK AND CREAM CONTEST

The Dairy Division of the United States Department of Agriculture will conduct a Milk and Cream Contest which will be open to all dairymen in the United States. Space has been allotted for the use of the Dairy Division in making the exhibit. The first contest of this kind was held in connection with the National Dairy Show, Chicago, February 15-24, 1906, under the direction of the Dairy Division. Milk and cream was sent from 13 different states and much interest was shown by the dairymen and it proved to be a valuable educational feature. Results were published as Bulletin 87, B. A. I., U. S. Department or Agriculture.

Since the first National contest several states have had similar exhibits, including New Hampshire, Ohio, Connecticut, Illinois, Missouri, Massachusetts, Pennsylvania and Michigan. The city of Cleveland, Ohio, has also held two such contests. The object of this contest is educational and entirely for the benefit of the dairyman. The milk and cream will be carefully analyzed and scored by experts from the Department of Agriculture. Forty points will be allowed for flavor, 20 for composition, 20 for bacteria, 5 for acidity, and 10 for appearance of package and cleanliness of milk. Any defects will be pointed out in the score of dairymen will have opportunity to learn whether by the methods they are using they can produce a standard product.

There will be four classes in this contest, as follows:

Class I. Market milk (raw) two prizes (gold and silver medals.)

Class II. Market cream (raw) two prizes (gold and silver medals.)

Class III. Certified Milk (raw) two prizes (gold and silver medals.)

Class IV. Certified Cream (raw) two prizes (gold and silver medals.)

Milk and cream receiving a score of 90 or above will be classed as excellent. After being scored, the product will be placed on exhibition accompanied by the score.

Dairymen producing milk or cream for city consumption are invited to exhibit in accordance with the conditions prescribed on the entry blank.

DRY WEATHER AND SHEEP

The present season has been a good one for sheep. It is a mistaken notion that sheep can do well without much water to drink. They become thirsty and suffer for water if they have not access to it as other animals do, but a dry country is their natural habitation. The main reason why sheep do so well in the Rocky mountain states is because the lands are high and dry. Great portions of the country meet these conditions this season, and sheep in the central states ought to be healthy and in fine condition.

Pastures have been lean, it is true, but sheep will make the best of them; will do better on dry, lean pastures than any other animal. But sheep on the farms, confined usually to small areas, need frequent changes. One of the greatest drawbacks to success with sheep on the farms is lack of change of pasture. If there be two fields in which they can run week about, they are almost sure to do well and remain healthy, provided there is no mud and swampy land for them to run in. A friend of ours who keeps a large flock of sheep, uses them as farm scavangers. Whenever he can get them into a field without damage to a crop, he is sure to put them there, and it is amazing how they clean up the weeds, not exactly root and branch, but literally seed and leaf.

Any country almost and almost any season is good for sheep, if dry enough.

IMPROVEMENT IN HORSE BREEDING

The active demand for horses and the remunerative prices paid during the last few years have naturally awakened renewed interest in horse breeding, and it is very gratifying that the interest leads in the direction of better horses. No matter what style is desired, the better grades, standard or thoroughbred, stallions are sought. This is manifested in the fact that more stallions are being imported, or were during the past season, than for several years. It is another significant fact that while the general breeding is on the increase, ranch or range breeding is diminishing. The latter is not at all to be regretted, for the distribution of range horses throughout the older states, while it may in a measure satisfy the demand, does not add to the quality of horses found in the states. Every year sees the ranges driven into narrow compass and ranchmen may well husband their resources for the raising of cattle and sheep, leaving horse breeding to the older states where quality, not quantity, is made the controlling purpose.

These and many other conditions are decidedly encouraging to the better class of horse breeders. Everything indicates a continued demand, and there is little danger of a supply that will seriously affect the price. The strangely inexcusable financial depression of last year alarmed the large establishments, and put many laborers out of employment, but it did not so seriously affect horse owners and users, nor will it in the future. The figures of last year sustain this idea. The increase in horses, mainly in the older states, is given at 245,417, and the advance in valuation is officially placed, at $1,951,988.

We do not hesitate to say that farmers may safely hold their colts of this year and give them every possible advantage, while they do not for a moment relax their purpose to continue breeding in the future. And always aim for the best.

TWO GREAT SECTIONS COMPETING

It is natural that Kansas City should take great interest in the two great districts from which it draws its immense herds of live stock. The American Royal Live Stock Show of that city accentuates that interest by offering large special premiums that will bring in direct competition stock from the ranges and pastures of the Northwest with those from the ranges and pastures of the Southwest. Which of these immense regions will send in the best specimens? is the question.

Another somewhat novel feature of this show is the interest taken by northern and eastern feeders in car lots. It is evident that hereafter the bulk of feeders must come from regions tributary to Kansas City, and this affords a good opportunity for feeders to learn what those regions can produce, and to select choicest lots for practical tests as to what such lots may be made to do when taken east for feeding.

A NEW STOCK FEATURE

The American Royal Live Stock Show of Kansas City will have no special dairy division this year, though dairy stock will be shown. There are, however, a few classes arranged for milking short horns that will be judged not by milking tests, but by conformation, a novel feature that beef and milk production will be estimated equally—50 per cent for beef points and 50 per cent for milk indications. This will no doubt develop an interest in the milking qualities of shorthorns, and improve that side of one of our most valuable farm animals, without diminishing its excellence as a beef producer.

A Milk Substitute

Blatchford's Calf Meal is manufactured simply and solely to be a perfect Substitute for Milk. It is not a by-product sold as a Milk Substitute; it is composed entirely of selected condiments, oleaginous and leguminous seeds, lentils, flaxseed, locust bean meal and flour, etc., all of the best quality, recleaned, finely ground and carefully combined in such proportions as a long, practical and scientific experience and close business intimacy with all classes of farmers and stock owners (over one hundred years) has proved to be the best. It contains all the elements necessary for the rapid and symmetrical bodily growth of young animals in the most digestible form like milk, and being well cooked, it will not scour the calves. Every farmer should write J. W. Barwell at Waukegan, Ill., for full information. Tell him you read UP-TO-DATE FARMING.

Some farmers still get along without a cream separator. And it is just "get along" too. Every up-to-date farmer should know that he loses from 20 to 40 pounds of butter per cow every year if he depends on old pan setting methods of raising cream. How long will it take you with your cows to lose the cost of a good separator? Figure it out on say only 20 pounds of butter loss per cow. Send to the Sharples Separator Co., West Chester, Pa., for catalog 136, and other literature which will give you some pointed facts to think about.

Be Prepared for Emergencies

The loss of one single cow represents several anme what a simple outfit costs which would probably save her life. Many farmers are now prepared for sudden sickness of their cattle like Milk Fever. A home treatment is now sold by Geo. P. Pilling & Sons Co., of Philadelphia, Pa., that can be used easily by farmers. Send for booklet Q, which explains all about money-saving and money-making instruments for farmers.

Before you put a roof on that new house or barn or shed or get a new roof for the old one get a sample of Congo Roofing. It is backed by a $500 surety bond in every roll. It will never leak. Congo doesn't cost much. You can lay it yourself. Send for a free sample to the United Roofing & Mfg. Co., 584 West End Trust Bldg., Philadelphia, Pa.

No more sore necks and shoulders if you use Whipple Humane Horse Collars. Farmers, do you realize what this means? They do not cost much and every work horse needs them. Write Humane Horse Collar Co., 1916 So. 13th St., Omaha, Neb., for particulars.

—POLITICS AND— CREAM SEPARATORS

The manufacturer of a much advertised cream separator, sold mainly by implement dealers, is out with an announcement to employes that if Bryan should be elected his factory will have to at once close down. Regardless of political preference everybody may judge for himself of the propriety of threatening employes in this manner.

But if this separator factory does close down it will not be because either Taft or Bryan is elected, but because of the sweeping success of the new 1908 line of Improved DE LAVAL machines, which has already "closed down" most attempted competition.

So far as DE LAVAL machines are concerned, there are going to be just as many cows and just as much milk to separate whether Taft or Bryan is chosen President, and the well informed buyers of separators are going to put their money into DE LAVAL machines in as large proportion one way or the other, and do so in constantly increasing proportion as comparative separator merit becomes more a matter of actual knowledge and less of mere catalogue and advertising claims.

We are not in politics and not trying to dictate to other people how to vote, but we are in the separator business and are trying by every justifiable means to bring about the universal use of DE LAVAL Cream Separators because of their overwhelming superiority in every feature of separator practicability.

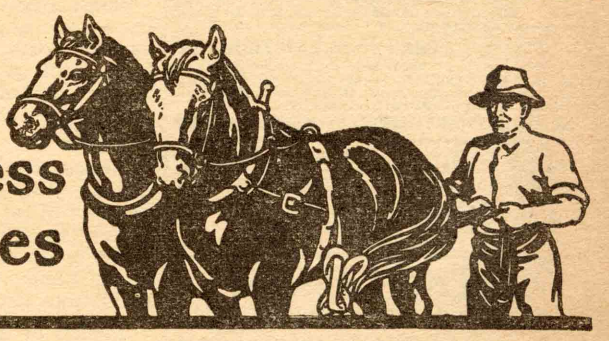
For Lameness in Horses



Much of the chronic lameness in horses is due to neglect. See that your horse is not allowed to go lame. Keep Sloan's Liniment on hand and apply at the first signs of stiffness. It's wonderfully penetrating—goes right to the spot—relieves the soreness — limbers up the joints and makes the muscles elastic and pliant.

Sloan's Liniment

will kill a spavin, curb or splint, reduce wind puffs and swollen joints, and is a sure and speedy remedy for fistula, sweeney, founder and thrush. Price, 50c. and $1.00.

Dr. Earl S. Sloan, - - Boston, Mass.

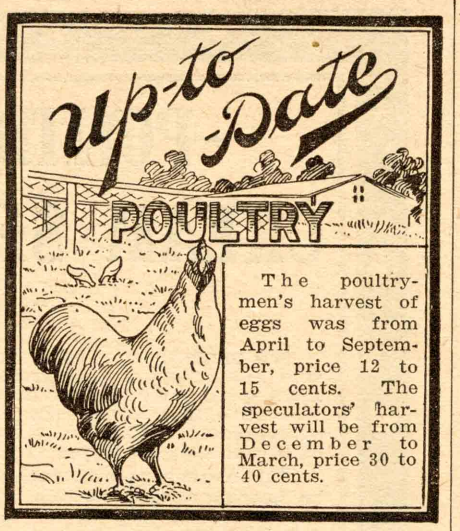
FLOWER POST CARDS
Free to You
In order to introduce our large illustrated monthly, The Epitomist, which is of interest to every member of the family, we make this big offer to you.
Send 10c for a six months' trial subscription and we will send you, prepaid, twelve beautiful flower post cards absolutely FREE. These cards are strictly high-class and are something entirely new. Each card represents a scenic view and has THE LANGUAGE OF THE FLOWERS worked out most beautifully in mottoes in flower designs. For instance, in this series the violets spell out the words "Faithfulness;" the sweet peas, "Wish You Joy;" Chrysanthemums, "I Love You;" roses, "Love," etc. You won't be disappointed, for these cards are not like any you ever saw, and REMEMBER, we have a surprise for everyone that sends for these cards. There are only a limited number, so send today if you want them. THE EPITOMIST, 55 Main St., Spencer, Indiana.



The poultrymen's harvest of eggs was from April to September, price 12 to 15 cents. The speculators' harvest will be from December to March, price 30 to 40 cents.

FRIENDLY SUGGESTIONS

Choose places screened from the light for the hens' nests. They like a quiet and secluded place.

When combs and wattles appear pale the fowls are not in good health, and ought to have a change of feed. A tonic of some kind with their feed for a few days might be advisable.

When any contagious disease appears, remove the affected fowls at once and take prompt preventive measures. The most of the flock might thus be saved that would otherwise possibly be lost.

Never feed stale or soured food, or allow the feeding and watering vessels to become filthy. Fowls will eat almost anything, and will exist in very unfavorable conditions, but that is no proof that such is their natural or best state. They always do best on pure food and cleanliness.

Don't think the same old nesting material will last forever. Renew the nests often, burning the old material. That is half the battle against pests.

Don't forget that growing fowls must have bone and feather material as well as flesh forming feed. Such as run at large will provide themselves during warm weather, and those that have access to an orchard will be abundantly supplied.

Those whose surroundings make it necessary to keep their fowls up, may arrange to let them out an hour or two before roosting time. They are not likely to do much damage in that time, or to annoy the neighbors, but they will make good use of the time.

Profits of the poultry yard are often cut down by keeping too many old hens that have passed their greatest usefulness. One cannot fix an exact age limit, for some hens are good layers at a greater age than others. The sure way is to keep tab on the work each hen does—manage to know approximately how many eggs they are producing. Thin out those that fail in that regard; and in the fall is the time to do it. Don't winter any unprofitable hens.

We wish to insist that Our Up-To-Date People gather their eggs promptly—every day—and marke them frequently, so that they are sure to sell none but fresh eggs. It is dishonest to sell a bad egg, or one that is subject to suspicion. It may never be known who did it, but that does not mitigate the wrong. Good, fresh eggs known to be such, are always eagerly sought, and those who are known to never market any other sort, never lack customers at the very best prices.

One of the greatest aids to winter eggs on the farm is a patch of rye, sown if possible, not later than September, to which the fowls may have easy access. It will afford them exactly the pasture the need all through the winter when not covered with snow. The secret of winter eggs is comfortable quarters and feed as nearly as possible corresponding with summer feed—grit, shell or lime, an occasional feed of some kind (chopped clover hay is not bad) and sufficient grain to supply the necessary heat and maintain abundance of flesh, but not enough to lay on too much fat. The water suppl must not be neglected.

AGE OF EGGS

It is reported in the papers that a young farmer in Indiana wrote his name and address upon an egg he was taking to market, with the request that whoever received the egg for use should write and tell him about it. Two years later he received a note from Pittsburg saying the egg had just been consumed as a part of a family meal in that city. A young lady friend of the writer in Southern Illinois, a farmer's daughter, wrote much the same thing on an egg as she was packing eggs to be sent to market. About a year and a half thereafter she received a letter from New York City stating that the egg had just been used there in a restaurant. The writer read the letter and knows the incident occurred.

These people supposed they were eating fresh eggs, and would have promptly rejected them had they known their age. And yet there was nothing in the appearance or flavor of the eggs that betrayed them. In the steam car, the electric motor and the auto man has conquered distance, in the telephone he has suspended the power of earth and air to obstruct the human voice, and in cold storage and preservatives he has overcome the powers of decay. The hen may perish and be forgotten, and yet her eggs may be served "fresh" on the epicure's table.

THINK OF WINTER

Every time a hen cackles in winter two or more cents are added to the bank account. And green feed, or vegetable feed of some kind, is needed to make them cackle most frequently. We have urged farmers for years to raise and preserve pumpkins for the use of the fowls in winter. Pumpkins are easily grown, are a certain crop, and need only to be kept from freezing to preserve them. All that has to be done in feeding them is to split them open, and put where the fowls can get to them.

Turnips are good winter feed also, perhaps better than pumpkins, but to be eaten satisfactorily they should be cut in small bits. Cabbage is an ideal winter feed, and the fowls will pick at the heads and get the benefit of them without cutting or treating in any way. The small, unsalable heads saved for that purpose may be made very valuable. Meat scraps, crushed shell, etc., are also necessary to supply the natural summer ration of insects.

These things are all said so often that farmers, and possibly farmers' wives, have come to pay but little attention to them, but winter eggs are a cash article, and hens must have the raw material if they manufacture them.

STORAGE EGGS

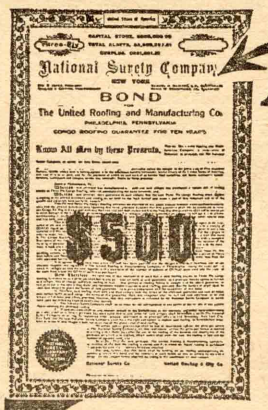
Farmers need not seriously fear the competition of cold storage eggs, for those who use eggs in the cities buy storage eggs only when they cannot get fresh ones; and to get guaranteed fresh eggs they are willing to pay a higher price. We have talked with many keepers of large hotels in different cities, that use large quantities of eggs, and they have invariably told us they would gladly pay an advanced price for guaranteed eggs direct from the farm.

Why might not farmers ship their own eggs under that very guarantee, and consigned directly to the user, under contract? It is no trouble to get egg cases, and farmers can get the same rates accorded shippers, with the return of cases on the same conditions. Many farmers could ship, in the laying season, two or three cases a week, and the gain would be an item.

Or two or three neighbors, equally honest, might club together and ship, possibly a case a day. It is worth thinking about. Every gain helps.

EGGS AND POULTRY STATES

Iowa has already the record of the greatest egg production. Ohio is second, Illiois third, and Missouri fourth. Eggs are said to be cheapest in Texas, where the price per dozen frequently goes below 8 cents. In Nevada the average price per dozen is 21 cents, which is the highest state average made. Texas produces more turkeys than any other state in the Union, reaching 650,000 annually. Illinois rates second in the production of turkeys. Kentucky leads in the number of geese produced, being credited with 542,000, and is followed by Missouri as second. Iowa leads in ducks, and reports 448,000 head.



A SURETY BOND WITH EVERY ROLL OF CONGO *NEVER LEAK* **ROOFING**

Congo is the only ready roofing on the market *backed by a Surety Bond.* We can afford to make our guarantee so strong because Congo itself is as strong as the guarantee.

Our ambition has been right from the start not only to make Congo the best all-round practicable and serviceable Ready Roofing, but to back it up by a guarantee so *sure* and *complete* that it will be the aim of every owner of a building to use Congo when needing roofing.

This bond covers a period of 10 years and gives to the user of 3-ply Congo the most reliable guarantee. It is issued by the National Surety Company of New York, one of the largest and most substantial companies in the country.

Congo doesn't cost much. It is extremely waterproof and *always stays so,* and it's very easy to lay. The new galvanized caps (a new feature with Congo) do not rust and cause leaks like tin caps or nails.

Write for a Sample to-day and further information.

SPECIAL NOTICE—If any Congo rolls that you purchase do **not** contain Guarantee Bonds, write us at once, telling us where and from whom they were purchased, and we will at once mail you the missing bonds.

EUROPEAN FRUIT GROWING AND AMERICA'S OPPORTUNITY

Mr. Orlando Harrison, of the large nursery firm of J. G. Harrison & Sons, Berlin, Maryland, who returned but a few days ago from an extended trip through various European countries, writes UP-TO-DATE FARMING as fololws:

After visiting orchards and nurseries in England, France, Switzerland, Belgium, Holland and Germany, I find the nurseries and farms are well cultivated but the orchards as far as I have seen have been poor, but little cultivation and but little spraying. Trees are headed too high, consequently poor fruit. The only good fruit I found in England was grown under glass, especially peaches. They have a promising crop of winter apples but only a small quantity of trees.

While many thousands of trees are grown against walls, it is not a profitable way to grow them as a commercial business.

In France I found the peaches and apples very poor with some good specimens of pears growing and maturing well. The peaches grown outside of glass are not to be compared with our peaches in quality.

The price of fruits is out of reason and that decreases the sales. In Switzerland I found more pears of good quality and there the apples and peaches are poor. The price of fruits is not quite so high in Switzerland as in England, France and Germany.

Europe is far behind America in commercial fruit growing.

I feel greatly encouraged in finding the great opportunity the markets of Europe afford for our American fruits. The fruit growers of the United States and Canada who will grow and pack only good fruit have a great future for the output of their fruit through the export trade.

It would now take many years for the Europeans to grow enough fruit to supply their people. I doubt if it will ever be done. They want our fruits in England.

The editor of the German Chronicle said to me: They welcome the American fruits in their markets. More fruit from America should be sent to Europe and the price should be in reach of every laboring man and by doing this many times the quantity of fruit would be consumed.

The Europeans are not fruit eaters like the Americans and we as American fruit growers should cultivate their trade to our mutual advantage.

In this certainly outlined the American fruit growers' opportunity. If Mr. Harrison saw conditions as they exist, is would be impossible to glut European markets with good fruit at equitable prices. But the trouble with American growers is glutting American markets. What can this foreign demand, however great and remunerative, benefit our growers if we still follow the inexcusable practice of doubtful grading and imperfect packing, and then throw our stuff all in a jumble on glutted markets, to be played with as though it was a matter of little moment? American growers have many things to learn and practice if they would avail themselves of this inviting opportunity. In the first place, they must learn to produce good fruit. This knowledge, we are glad to note, is being acquired in commendable ways, and with encouraging rapidity. But they must learn how to market, and that seems to be a lesson very few care to impart and but a small per cent seem interested in learning. To get the benefit of the market mentioned by Mr. Harrison, the growers themselves must learn what kind and grades of fruit are desired in Europe, and the packing most suitable to ocean shipments, and most popular after reaching the foreign markets. Then they must provide storage for the fruit, so as to prevent its ruining the market at home, and thus destroy the opportunity abroad.

It is positively painful to see American growers struggling as few workers struggle, to produce, and then when their efforts are successful, jumble their products in a heterogeneous mass on markets ruined by their own folly, when much less study than they give to production, and less care than they exercise in planting ordinary crops, and not more expensive preparation than is made in matters of far less importance, would give them such markets as beckon them over the seas.

BLOSSOMING OUT OF SEASON

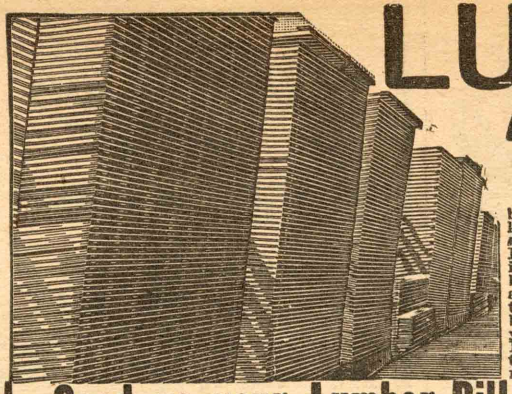
Fruit trees are not infrequently seen in bloom in the late summer or early fall, entirely out of the season when bloom should appear. It is seldom that the tree appears in full bloom; generally only a few scattered blossoms may be seen, and sometimes, these appear only on a single branch, or are confined to one side of the tree.

Such untimely blooms are an evidence of unfavorable soil or weather conditions and of disease and decay. They generally appear in hot, dry times, most likely after there has been a severe drouth accompanied by intense heat, followed by a rain and continued warm weather. The explanation is simple. The dry, hot weather hastened the conversion of the sap into wood, bringing the condition of rest to the tree. The rain and continued warm weather simulated the conditions of spring, and the tree, yielding to the conditions, put out some bloom. Being itself unthrifty and weak, it had not the strength to resist the conditions. Hence such unseasonable blossoming may be taken as an unmistakable evidence that the tree is not vigorous, and has, perhaps, passed the day of its usefulness. We have noticed such blooms most frequent on trees of the old fashioned English cherry, and we have noticed also that for some years these trees have been losing their vitality in this country, and we take it they will very soon disappear entirely.

MULCH THE STRAWBERRIES

We wish there were a nice strawberry bed on every farm. Farmers could have many luxuries they haven't now, and without cost in money—only a little preparation, care and labor. If the people in the cities have strawberries and cream they must pay for them, and then as a rule, they get them decidedly second hand. The farmer who has a well cared for patch may have them for the gathering during the entire season, and both the berries and the cream are at first hands, fresh and the real thing.

Weeds are the worst enemy of the garden strawberry bed. Strawberries can't thrive, will not do any good in fact, in a bed of weeds. The ground set to strawberries should be as free from weeds as possible, not too poor to produce weeds, but rich and in a high state of cultivation. That means weeds, of course, and it takes prompt and persistent culitvation to keep them down. The general rule on the farm is to let the patch run wild and grow up in weeds after the last berries are picked, but that is a bad rule; the weeds should be kept down throughout the season, and such new plants s are desired should be allowed to take root. Assuming that the bed has had that care, mulching is now the thing to do—thorough mulching with clean straw or other material known to be free from weed or other seeds. The mulching leaves both plants and ground in good condition for next spring. As soon as freezing is over, open up the mulch so as to expose the plants only, and no other work will likely be required until the berries are produced and gathered. Then remove the mulch, and begin the season's cultivation. This is the best way to have the greatest abundance and finest berries, and it keeps the weeds at a disadvantage.



LUMBER
BARGAIN PRICES.

A wonderful opportunity is offered you to buy lumber and building supplies of every kind at *Prices that will save you big money.* Such a chance seldom occurs. Lumber for your house, church. barn, meeting house, crib, store, factory, and in fact, buildings of every kind. We can furnish absolutely everything needed in construction material. Have your carpenter or builder make a complete list of everything you require, including Lumber, Sash Doors, Nails, Roofing, Siding, Ceiling, in fact, anything you may need in building material or merchandise of any kind.

Send us your Lumber Bill for Our Estimate.

We bought at Manufacturers' Sale over 50,000,000 Feet of all kinds of Lumber and Finishing Material We are making special concessions, to those who buy at once. Even if you have no use for this lumber at once, it will pay you to buy now. Our prices will save you 30 to 50 per cent.

We cheerfully invite inspection of our Lumber stock and will be glad to have you come to our warehouse and yards at Chicago, see the lumber we are offering, and you will recognize that it is all what we say of it; make your own selection and see it loaded. It is not necessary to come to Chicago; we can easily sell you by mail. We can quickly convince you of the wisdom of placing an order with us. Just send us your lumber bill, and we will easily *"Show You."* On application we will send copies of letters from customers who have bought. They saved money why can't you? Write us to-day. ***WE PURCHASED EVERY EXPOSITION, INCLUDING THE $50,000,000 ST. LOUIS WORLDS' FAIR. Send for our Free 600 page Catalog No. C.H.*** 204 It quotes low prices on Furniture, Household Goods, Building Material, Machinery and Supplies.

LOW FARES to the Cheap Lands

Plan to go on one of these days—

Nov. 3d & 17th, Dec. 1st & 15th

The trip will not cost much. These special low-fare tickets over the Rock Island-Frisco-C. & E. I. Lines will allow you to go one way and return another, without extra cost. You will see more of the Southwest than you could in any other way, and can better decide where to locate.

Ask the ticket agent to sell you a ticket over the Rock Island-Frisco-C. & E. I. Lines, either through Chicago, St. Louis, Kansas City, St. Joseph, Memphis or Birmingham.

If you will tell me where you want to go, I will tell you the cost of a ticket and send you a map-schedule.

I will also send you some interesting books about the Southwest. They will inform you of opportunities waiting for you there, and will open your eyes to new possibilities. Write for free copies today.

The Famous Jones

If someone should ask you who Jones is you would likely say, "Why Jones of Binghamton makes scales." For 44 years Jones has been Jones, doing business on the same square and supplying farmers all over the country with the famous Jones scales.

Now Jones has a new scales that's just a little bit ahead of others. They are pitless and guaranteed accurate. No farmer should be without good scales. Send to Jones, Box 1686, Binghamton, N. Y., for catalog. You know "Jones, he pays the freight."

Knew What A Fool Would Do

Lawyer—Now, sir, tell the court how far you were from the prisoner when the shot was fired.

Witness—Exactly thirteen feet and seven and a quarter inches.

Lawyer—How can you be so exact as that?

Witness—I measured it.

Lawyer—How came you to measure it? Tell the court that.

Witness—I knew some fool lawyer would ask me that very question.

Useful Roofing Information

Anyone who is considering the roofing proposition should secure the booklet on Amatite which has just been published. This booklet is full of practical information. It gives pointers that will enable you to know what's what in the roofing line. This booklet is published by the oldest roofing manufacturers in the country and may be relied upon for accuracy. It is mailed free to anyone sending their name and address. A sample of Amatite, with its mineral surface, which has made such a success as a lasting protection against the weather, is also sent with the booklet. Both are free and are well worth inspecting.

up-to-Date HOME ON THE FARM

The ladies own department. Write your experience and advice to others, for publication.

The Old Farmhouse

One day I passes an old farhouse,
The roses wild climbed up to the eaves;
The sparrow and wrens claimed it as home;
But the yard was full of leaves.
I remember the home as in days gone by,
With its busy days and its nights of rest,
Where brave young hearts beat courage high;
And the home was at its best.
—*Malvina Thompson.*

CITY AND COUNTRY—THE OLD HOME AND THE NEW

Many times people who have spent happy and successful lives in the home on the farm, conclude, as the years begin to tell on them and they have not the activity and endurance they once had, that they could do better and have fewer cares in the town or city, and forthwith they plan to change homes.

It is a mistake; almost certain the children may be married and settled in homes of their own. Some of them may have gone to town to live, and may be in business there, honored and respected and doing well; and the old place seems lonesome. You may not feel much like work. The fields seem large and the long rows tiresome. In the house the wife finds too many unused beds, too many empty chairs. The daily round of work, a fixed habit of many years, must still be done, it appears, but too many things are found undisturbed; are just as they were left yesterday, the day before, last week. There's a vacancy, a sad lack of something. But the work is just as fatiguing. In the widst of it all, you may conclude that your success may warrant you to quit the toil of the other years when so much depended upon your individual efforts, and as you look at it from the country, it may seem easier in the town. The children, solicitors for your happiness and welfare, and seeing things from their, not your, standpoint, may tell you so.

But will it be easier when you are there? Will your farm life of outdoor freedom and independence fit into the changed life of town or city? What will you old people do with yourselves during the long hours of nothing to do? The quiet walks in the lanes and in the fields, where every leisurely step reminds of something of the past, brings up a memory, with a tinge of sadness many times, but generally of pleasure and of triumph—these strolls contrast vividly with the constantly disturbed walk in the city streets, where at every turn you are jostled by someone, or are compelled to dodge vehicle or car. There is not a spot where you can feel you are yourself, or that what you see is your own, or that your brain planned or your hand helped to shape anything you can see in the bustle, and turmoil, and struggle of the frenzied life of which you know you are not a part, and whose noisy hum beats painfully on the unaccustomed ear. How you long to be at home again with the old things and nature!

What matters that there is a goodly sum of money in the bank that only a signature is needed to get. The birds that sang for you when you plowed your first furrow where was then the new home, and that sang for you all through the years, are singing for some one else now. The tiny shoot from the planted seed that peeped up at you so hopefully, is looking up from the same soil in another face now. The golden heads of the ripening wheat are nodding to another, and the flowers are blooming for other eyes and are giving their sweetness to other senses.

And it is all so different in town. The quiet is gone, and you no longer feel you are in the sacred realm of home. Only when imprisoned within the narrow walls of your room can you be sure that you are free from the bustle and gaze of what seems to you a distracted world. To us there is but one sadder sight than the old farm home turned down over to another, or perhaps gone into decay, and that is the sadly expressionless faces of the dear old folks that left to live in town.

'T is near the time of the sunset
And up from the busy street,
There flashes across my vision
A picture of woodlands sweet.
And I know that out of the sunset,
And out of the heat of the day,
That somewhere the peace of the forest
Is beckoning us away.

In spite of everything, the old days will come up, as they did to the poet Worden in the following:

I dunno what's he reason thet about this season,
When the golden rod is tallest an' the garden's gettin' brown;
When I hear the crickets honin' an' the locusts' gettin' dronin';
An' the apples in the orchard one by one a droppin' down.

Thet I sorter drop my hurry an' fo'get about my worry
As I loaf aroun' the pastur an' enjoy the autumn haze;
An' fo'git the cricket's hummin' and feel the tear drops comin'.
An' I somehow hear the voices thet I heard in other days.

It's a sort of a reviewin' what for years I been a-doin',
An' it seems as ef the biggest things was only childish play;
While the things most worth the keepin', an' for which to-day I'm weepin',
Took advantage of my blindness an' have vanished away.

Yes, this autumn air is clearer, an' it brings up objicks nearer,
Or perhaps it multiplies 'em when I see 'em through my tears.
Mebbe thet may be the reason thet along about this season
I kin see the loves I uster love arrayed along the years.

I kin hear my mother singin'; I kin feel her han's a-clingin'
Aroun' my boyish neck an' see her lovin' gaze.
I shall find my futur' brighter, all my loads will be the lighter,
For the dreams thet I am dreamin' as I loaf about these days.

"Children Teething"

Mrs. WINSLOW'S SOOTHING SYRUP should always be used for children teething. It soothes the child, softens the gums and allays all pain, cures wind colic and is the best remedy for diarrhoea. Twenty-five cts.

Indianapolis, Ind.

AN OLD-TIME REMEDY REVIVED

The "Family Doctor" revives an old-time, backwoods remedy, and unblushingly declares "there are no new-fangled dopes that can equal it for either purifying the blood or purifying the complexion." Put two tablespoonsful of sulphur precipitate in a glass, being careful there is no lumps in it. Pour six tablespoonsful of syrup or molasses in the sulphur and thoroughly mix. Take one teaspoonful of the mixture before breakfast and one just before going to bed for three days. Omit for three days. Repeat and omit for three days until taken for nine days. This is essentially a spring medicine, but it is good at any time when there is impurity of the blood, and we can almost see "the boys lining up at Rugby;" and the taste again comes to us from the old days. And the hand that held the spoon! Love and kindness mixed the dose. There were few doctors then, but there was plenty of malaria, and abundant impurities in the blood. The simple remedy was effective.

THE SANGUINE MAN

Be hopeful. Look for the best and expect it. We pity the man or woman who forever lives in an atmosphere of gloom of his or her own making. It is the very worst of gloom and takes more than the natural sun to dispel it.

There is no place in days like these,
For him who has no trust, no plan;
Though faults result and toil and strife,
We much prefer the sanguine man.

That's the kind most apt to win,
Great mountains pierce and great gulfs span.
The man succeeds who *knows* he will—
All hail to him, the sanguine man!

November in the Garden

There is much work to be done in the garden this month, fall being even a more busy time than spring with the flower grower. Even if there is nothing more to do than prepare a border or two, it is better done in the fall. No yard, however small, should be without its flowers. No woman is so busy that she cannot devote a little time to ornamental beds and borders. However, if her time is limited she should eschew the usual bedding plants, nor should time be wasted on the house plants that are delicate and require a good deal of time in their care. Geraniums and kindred bedding plants are expensive to buy, and they must be faithfully watered and cared for.

Where the time is limited it would be far better to plant a hardy border of perennial flowers that come up each year and which reward a little care with masses of bloom. When planting for beds or borders, remember that care must be taken to get them in the right places. Nothing is so distasteful to the flower lover as to see beds dotted all over the lawn, without regard to any special plan of treatment.

Here is a good rule to follow: Never, never, put a flower bed in the middle of the yard. Do not, in fact, locate a bed of any kind in the center of a grass plot of garden space. Beds placed in such positions are not beautiful, no matter how freely the plants may bloom. If one does not understand how to lay out a garden, the best thing to do it to keep to straight borders. Dig a border straight down the fence, on both sides of the yard, and put your flowers in there. Dig right up to the fence, but mark off the outer edge of the border in big scallops or curves. Straight lines are seldom beautiful.

Even if you do not intend to plant the borders until spring, get the ground ready this month. Have the beds dug out to a depth of a foot or two feet, if possible, and put a thick layer of well rotted manure in the bottom. Fill in with alternate layers of soil and manure. When digging the bed reserve the first six inches of soil from the top as it will be found much richer than the subsoil. Put this top dressing back near the top of the bed. As soil conditions differ, it is impossible to give a general rule as to the kind and amount of fertilizer that should go in every bed. If the soil is mostly clay, it must be all taken out and other soil substituted. If near the woods, have a load or two of woods earth brought in for the beds. Wood ashes are excellent for flower beds.

Fall is the best time to plant out shrubbery. Peonies should not be transplanted after the latter part of August, if the best results are to be obtained. Spireas, altheas, snowball lilacs, deutzias, pearl bush may all be planted this month. Prepare the ground the same as for a bed going down a foot or two and packing the soil well about the roots. This is also the time to plant out the honeysuckle vines, which should cover every porch. Good plants may be had for 10 cents each. Hall's Japan honeysuckle is one of the best, the leaves being glossy and beautiful. Then there should be a clematis or two, the best being the Clematis Paniculata. Do not forget the climbing roses which are so charming on house, on fence, or trellis. A beautiful and free growing rose is the Dorothy Perkins. It may be bought for thirty cents. The crimson rambler should also have a place in every collection.

Nothing is so satisfactory as an iris bed. Once planted it will require but little attention and will increase in beauty and bloom year after year. The bulbs can be obtained of the seedsmen and are cheap.

Dress on the Farm

All women are interested in fashions, although all women are not interested in the same kind of fashions. However, it is just as important that the dress of the woman who confines her goings and comings to the Sunday trip to church and back, be becoming and suitable as it is for the society woman to have lovely gowns for the receptions and dinners that are of daily occurance. The first will require only one dress a season, while the latter runs up bills of astonishing size in her efforts to appear well dressed, to say nothing of the immense amount of time consumed in choosing and trying on gowns.

The woman who goes out little socially does not need many clothes. One pretty dress suffices, and as it is not likely to have hard wear, it will probably look nice for two or three seasons, first for best year and then for second best.

Because she buys few dresses, and is away from a fashion center, the woman who lives on farms sometimes falls into the habit of doing her shopping carelessy. This she should never allow herself to do. A becoming dress is the best medicine in the world. And a woman who lives in a lonely place and sees few visitors should see to it that she has at least one really pretty dress, and as many more as she can afford.

None of these dresses need to be expensive. Just pretty and well chosen. Every woman should keep up with the styles enough to know how a dress ought to be made, and if it is given into the hands of the village dressmaker, the owner should know what styles are most becoming to her. Because Susie Green can wear one kind of a dress does not mean that all the neighbors would look well in the same style and color.

Any woman who does not cultivate the habit of looking well when at her work makes a mistake. Of course farm work is hard and it allows little times for primping. Farm work soils the clothes easily, and the men folk especially cannot look clean. For that reason they enjoy more seeing their wives in neat, clean dresses. A calico dress is perhaps the best choice, and there are so many pretty patterns that there is small excuse for choosing an ugly one.

Perhaps the greatest mistake is in making up the dresses in the ugly, shapeless wrapper style. There never was an uglier style nor is there any reason for making work dresses in this way, because it is no easier to make, and a wrapper is certainly cumbersome to iron. The very best work dress is made with waist and skirt attached by a narrow belt of the same material as the dress. The skirt can be a plain gored one, gathered in at the belt, and the plain waist needs no finish except the turn over collar of the material. The housewife will find that if she makes her work dresses with elbow sleeves she can work with more comfort and the sleeves will not soil so easily. Every woman should have at least two and preferably three or four of these work dresses.

2797
CHILD'S ONE-PIECE DRESS
All Seams Allowed

Golden brown French worsted has been used in the development of this stylish little frock. The front has a wide backward-turning plait either side of the centre-front box-plait and is joined to the yokes, which are trimmed with black or self-colored silk braid. A box-plait ornaments the center-back where the dress closes and the full-length sleeves are gathered into cuffs trimmed with the braid, to matchthe yokes. A narrow hem finishes the lower edge and the belt passes through straps at the under-arm seams, and fastens in front with a small button. For a child of 5 years the dress requires 3 yards of materials 27 inches wide, 2 3-8 yards 36 inches wide, or 2 yards 42 inches wide; 3½ yards of braid.

Price of pattern, 10 cents.

2591
GIRLS' JUMPER DRESS
All Seams Allowed

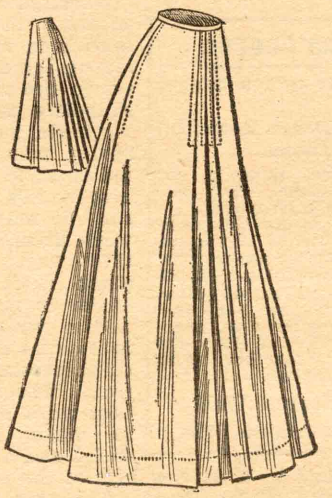
Closing at the back and having the plaited skirt joined to the waist under the belt, this little frock is simple in construction and becoming when worn. The material used in its development is navy blue serge, with trimming-bands and belt of blue-and-black striped taffeta silk; three small buttons ornamenting the front trimming-band. The wide tuck over the shoulders gives a broad shouldered appearance, which is very becoming. The guimpe, which is made with long or three-quarter length sleeves, is of silk or lawn, according to taste, the collar and cuffs being trimmed with insertions of lace. The pattern is in 5 sizes—6 to 14 years. For a girl of 10 years the dress requires 4⅝ yards of material 27 inches wide, 3¾ yards 36 inches wide, or 3 yards 42 inches wide; 3½ yards of braid; the guimpe needs 3 yards 18 inches wide, or 1½ yards 36 inches wide; 2⅛ yards of insertion.

Price of pattern, 10 cents.

2595
BOYS' RUSSIAN SUIT
All Seams Allowed

Mole-colored broad cloth has been used for the development of this jaunty little Russian sut, which is a distinctly new model that will no doubt prove very popular. The left front is made with a large rever and laps over the right front for the fastenings; pieces of wide braid and brass buttons giving the effect of a closing. The rever, collar and cuffs are also trimmed with the braid and a belt of the material gives a long waisted effect. The knickerbockers are gathered into the knees by elastic run through wide hemcastings. The pattern is in 4 sizes—2 to 5 years. For a boy of 4 years the suit requires 3¼ yards of material 27 inches wide, 2⅝ yards 36 inches wide, or 1⅝ yards 54 inches wide; 2¼ yards of braid.

Price of pattern, 10 cents.



2586
LADIES' FIVE-GORED PLAITED SKIRT
All Seams Allowed

In plain or striped serge, cheviot, broadcloth, or Venetian cloth, this is an extremely stylish model, which fits well over the hips and falls in a full flare around the foot. A group of plaits at the front and back form inverted plaits at this point; the skirt closing under the one at the back. The fullness over the hips is regulated by a backward-turning plait, and the lower edge is finishedby a deep hem. The model is particularly suitable for the skirt of the walking suit. The pattern is in 6 sizes—22 to 32 inches, waist measure. For 26 waist the skirt requires 9½ yards of material 20 inches wide, 5 yards 36 inches wide, 4⅜ yards 54 inches wide. Width of lower edge about 4 yards.

Price of pattern, 10 cents.

In the Home Circle

By Jane Gray

It is no use denying the fact that women do not take as kindly to new methods of work as do the men. Just why this should be so would be a difficult matter to explain; probably the women are not themselves conscious of their intollerent attitude concerning the new ways of performing household tasks and the new inventions for lightening kitchen labor.

How often we hear some woman say of some new labor-saving machine: "I would not be bothered with it." And this without giving it a trial. Too many women are suspicious of any new way of doing some old familiar household task. Such an atttitude means one of two things; either ignorant prejudice or an obstinate determination to cling to their mother's ways, whether that way be good or ill.

Not every housekeeper is prejudiced against new methods of which she reads, yet she may read and neglect to test the new way, allowing it to pass out of mind. Practical women who make use of new inventions are nearly always anxious that others may profit by their experience, hence they generally write to their favorite magazine, in the hope that other women will try their plans.

It is a fact that even after it has been demonstrated to some women that there are easier methods of performing certain household duties they will not try for themselves. They prefer to work hard and long, in the same way that their mothers before them did. What would you think of the woman who persisted in using tallow candles for sole illumination, or who refused to make use of the stove, preferring to cook in the fireplace- Certainly it is just as foolish to cling to other methods as much out of date as tallow candles and fireplace cookery.

Why should not women progress in their housekeeping? Why not try at least one new method each month? If it is found unsatisfactory, the experimentor is no worse off. New ways make the work more interesting and instead of looking forward week after week,month after month and year after year to the same depressing routine, the housewife is stimulated by the anticipation of finding a newer and easier way of doing things. Women allow themselves to grow old and weary before their time.

The farmer fills his barn with the latest improved machinery, he cares for his stock in the latest scientific ways. Why should his wife content herself with utensils that are not only out of date, but awkward, heavy and cumbersome to use?

Let me advise every woman to make occasional trips to the nearest city to inspect the inventions that are being constantly brought out to assist her in her labors. She will be able to tell very quickly which will be of real use to her, and choosing those, discard the useless articles. So many good articles are offered nowadays at such low prices that there is no excuse for a poorly equipped home, any more than for barns cluttered with out of date machinery. The farm kitchen is too often made the repository for all sorts of useless things that merely clutter and take up space. Order should be the first law of the farm woman. In fact, it is most important, because the farm woman spends more time in her kitchen than any others and she should have a more pleasant place to work. Clear out the trash and fit out the kitchen with useful new utensils.

* * *

I often wonder why country women do not take more interest in beautifytheir homes. The pretty, daintily furnished house is not the special prerogative of the city woman, although one might almost be excused for saying that it was from the bare, desolate looking rooms one meets all too often in the country districts.

The other week I made a trip through the country, and the result of my observations were discouraging, to say the least. One farm in particular, was such an unkept looking place that one could not help wondering how long it would be until the father and mother would be left alone, unhappy and deserted by the small flock of young children now growing up. That they will stay at home seems unlikely, nor would it be reasonable to expect it.

This particular farm comprised 195 acres, quite a respectable farm was it not? Well, the family lives in a two-room house. In one room the cooking and eating is done and in the other are the beds, the rest of the furniture being nothing more nor less than a very cheaply made bureau, a wardrobe and a few chairs. No white curtains at the window, nothing in fact, to lend a touch of beauty and grace to the bare interior. The mother told me that the room had not been cleaned up for three weeks as she had been busy outdoors.

Now, I ask, what kind of family life can be lived in such a place? Rooms not only bare, but positively unclean. And yet there are growing girls in that family.

The intellect of the farmer and his wife is no less keen than that of their city friends, not should their appreciation of beauty be less keen. To be sure, one does not ask the farm woman to keep up with the latest fads in fancy work, but she could at least see that her home is kept neat and clean,. and she can buy swiss for window curtains and table and bureau covers and she can wash them often enough to see that they are kept dainty, and she may be sure the family will show appreciation.

* * *

The woman who lives in the country has the means at command for a charming fall social. She does not need the flowers for which her sister pays such a high price. Nature has put at her very door more beautiful decorations than she could possibly buy.

She may write her invitations on birch bark. If she knows where to find some quotations appropiate to a woodland party, copy them on the invitations. The floor may be strewn with leaves, acorns or pines. For the vases use the lovely fern leaves that are to be had simply for the digging.

For amusement, have a nut search. Hide the nuts in the leaves and elsewhere about the room.

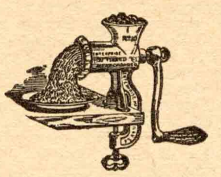
* * *

George Elliott tells us that a woman is never so much at home with herself as when she is sewing, and a famous nerve specialist declares that sewing has two distinct effects. It is advantageous if taken as a recreation, but if done under a strain is is harmful. Women are advised to cultivate the habit of keeping a bit of sewing handy to pick up when a friend drops in to spend the afternoon. There is satisfaction in this kind of pick up work, and it rests the body and mind alike. No woman can undergo an eternal round of working in the garden, feeding the chickens, cooking, milking the cows and churning without breaking down. Because too few mix a bit of pleasure with their work the doctors' offices are crowded, and doors of insane asylums open all too frequently.

If you do not care for sewing as a recreation, keep a favorite book at hand and pick it up where there are a few minutes to spare. Perhaps the men folk are late to dinner, or the dish water is not hot or a dozen other things have not happened just at the moment planned. Do not fret, but get your book and rest yourself, even if only ten minutes. The good effects will be felt all day.

Those who want a farm magazine six months free should send to the Farm Educator, Dept. C., Scranton, Pa., for their paper. Send them a postal card today. That's all.

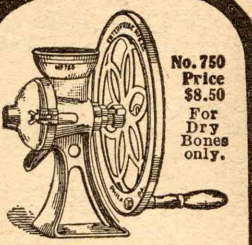
Large Family Size. No. 10—Price $2.50.



It is really better to own an "Enterprise" Meat Chopper and cut your sausage meat easily, quickly and well, than to trust to a borrowed machine to "grind" it. The

No. 25. 4 Quart Japanned. Price $5.50. 4 sizes. Tinned and Japanned.

Half the work at butchering time is spent in lard and sausage making. You can increase your products and lessen the time and labor of Sausage Stuffing and Lard Pressing if you use an



No. 750 Price $8.50 For Dry Bones only.

Cracked corn, ground bone, oyster and other shells, etc., are important items of egg-making material and *must* be furnished in winter to secure an abundance of high-priced eggs. They *can* be furnished at lowest cost by the use of an

ENTERPRISE

Meat and Food Chopper

is made in standard family sizes, and not only saves half the work at butchering time, but is useful in the kitchen every day in the year. "Enterprise" Meat Choppers *cut* the meat with a revolving steel knife against a perforated steel cutting plate without crushing, and make tough meat tender. Easily cleaned, practically unbreakable, and will last for years.

Made in 45 sizes and styles; for Hand, Steam and Electric power. No. 5, Small Family size, $1.75; No. 10, Large Family Size, $2.50. Sold direct if not to be had from your dealer.

Sausage Stuffer and Lard Press

Stuffs sausage quickly and uniformly. Patented Corrugated Spout prevents air entering the casing, thus assuring the preservation of the sausage. Cylinder is bored absolutely true. Meat cannot rise above the plate.

Can be changed into a Lard Press in a jiffy. Machine is strongly made and will last for years.

Other famous "Enterprise" household specialties are Coffee Mills; Raisin Seeders; Fruit, Wine and Jelly Presses; Cherry Stoners; Cold Handle Sad Irons, etc., etc.

Look for the name "Enterprise" on the machine you buy.

Bone, Shell and Corn Mill

Order one early in the season, and the hens will surely pay for it. The mill shown in cut costs only $8.50. Will grind corn, *dry* bones, oyster and other shells, etc., making valuable poultry food. May be used for making bone meal fertilizer.

A good all-round mill for farmers and poultrymen, and for strength and durability is unexcelled. Weight, 60 lbs. Capacity, 1¼ bushels of corn per hour. Look for the name *"Enterprise"* on the machine you buy. Sold by Hardware and General Stores, etc.

FREE—The "Enterprising Housekeeper"—a book containing over 200 choice recipes and kitchen helps. Sent on request.

THE ENTERPRISE MFG. CO. OF PA., 218 Dauphin Street, Philadelphia, Pa.

Here's Delight for a Boy or Girl at Christmas—Fine Fun All Winter Long

There is one gift which will make any boy, or any girl, supremely happy.

It's a gift that lets them enjoy out-of-doors to the utmost.

Boys and girls who are much in the open air grow strong in body, sturdy of limb and sound of lung. Outdoors-and-exercise a-plenty is nature's great tonic and invigorant.

What gives them outdoor fun is what a boy or girl likes most.

Skating is the finest of all Winter fun. The grandest of all outdoor sports.

Then let your boy and your girl enjoy this fine sport to the fullest.

Get them for Christmas each a pair of Barney & Berry Skates.

The skates that will delight them the most—the kind any knowing boy would himself pick out—the kind boys and girls for three generations have known as the keenest, swiftest, best-of-all skates.

They cost but little. And nothing else would please half as much.

Moreover the delight they give is not for Christmas Day only. They bring huge fun all Winter long. And for many Winters to come.

For skating is the most ready-at-hand of all Winter pleasures. Where there's water there's bound to be ice, and lots of it. Always our full share of skating weather.

Most any dealer will show you these skates. They're made in all styles. Should your dealer not have the particular kind you want, he will get them for you.

Our free catalogue will help you to choose the right style. Better write for it to-day. Christmas will soon be here.

A Narrow Escape

By Maude Alice Dixon

Thornton Cockeran of the Secret Service Bureau, stepped out of the Secretary of War's office and walked with a business-like air down the hall. In passing through the main corridor, he was accosted by a man, apparently a sight-seer, who inquired in regard to a certain painting on the wall, in which he appeared to be very much interested. Cockeran, a man well-versed in art, was willing to tell him all he knew concerning the picture, and finding the man interesting to talk to, they soon became acquainted. In the course of the conversation the man asked Cockeran out to lunch with him. Although he had an important government errand to do, Cockeran's train did not leave for an hour, so he saw no harm in accepting the invitation.

The stranger introduced himself as Roland Carroll of New Orleans and kept up a pleasant flow of conversation on all subjects. Among other topics discussed was the Spanish war, then being fought by the United States, in which Carroll was particularly interested. Cockeran would have almost thought his companion a Spaniard, had not the man's perfect English and vehemnent feelings against the Spanish told otherwise.

Just before they finished eating, a little incident occurred which aroused Cockeran's suspicions. Once he looked up rather quickly and caught Carroll slyly eyeing him. He immediately thought of a certain letter in his pocket from the Secretary of War to the commander of one Long Island fort. He dared not take any risks, so in a few moments he took out his watch and finding that he had just time enough to catch his train, he thanked his host, bade him good-bye, went hurriedly to his hotel and then to the depot.

The journey from Washington to New York seemed to Cockeran to take weeks. The Spanish fleet was hourly expected at New York and he had a message that had to be delivered before its arrival. Try as he might, it was impossible to keep his mind from running back to that little affair with Mr. Carroll, so he impatiently sat in his seat and waited for the journey's end.

While sitting there, gazing blankly in front of him, he became aware of someone watching him from the opposite seat. On looking he only saw a man, apparently intent on his paper. Cockeran was not deceived, however. He watched the man from the corner of his eye and in a few moments, saw him turn and look at him narrowly. What was it in him that made Cockeran think of Mr. Carroll of New Orleans? Perhaps his olive complexion, black hair and wicked dark eyes. "Could there possibly be a plot to get the message from him?" thought Cockeran. This seemed hardly that way. He therefore determined upon a safer plan. Going out on the platform of the car, he opened the letter, memorized the message, then tore it to bits, scattering it along the tracks for the distance of five miles. As the last paper fluttered in the air, he looked up and saw his fellow passenger opposite, watching him through the door-window, his eyes gleaming with cat-like intensity. Cockeran was astounded. Could he have possibly read the message? No, that was impossible, for his back was towards the door. He paused a moment and then went in, feeling safe in the place of the message now at any rate. When he reached his seat, the man was gone and he did not trouble himself to look him up.

New York was finally reached and Cockeran in order to foil his pursuers as far as possible, remained on the train until it was empty, for his tall form was easily distinguished in a crowd. As he sat looking out the window, who should he see rush by but Mr. Carroll of New Orleans and his fellow-traveller. He was now confident of a plot to get the message and his blue eyes kindled with excitement. He had no fear, he felt confident in himself and in his ability to deal with such men.

Cockeran did not leave the train until it began to move out, then he jumped off and hastened across the station. He had not gone far when he saw he was being followed. This time by an immigrant, evidently an organ-grinder. But Cockeran soon gave him the slip. Scurrying around through the crowd, he stepped into the ticket agent's office by whom he was well known in his capacity as a detective. In ten minutes he came out, got into a cab and went to his lodgings.

As he thought the matter over, he considered there was no time like the present, so he decided to run over to the fort that night and be back in the morning. He found on looking up, that he could make good connections and that the train would leave shortly. He glanced out of the window and saw the organ-grinder, who had found his house by some means, below. That caused Cockeran no annoyance, however. He could hood-wink him easily. Calling the landlady, he told her to leave the light burning until half past ten. "They'll think I'm in here, then," thought he. After a few necessary preparations for his journey, he went out the back way, through an alley and into the next street. "They must know me," he said to himself; they've probably followed me since I left the city. I'll have to take my up-town rooms."

He boarded the train in safety, delivered his message and was back in New York the next day as he had planned. But it was the subsequent events which are important and which caused Cockeran to leave the detective force for a year.

Although he had travelled all night, he was up by ten o'clock the next morning, walking briskly down the street, with the satisfaction of having done his duty. He was making his way towards the bureau in order to report, when he descried Mr. Carroll of New Orleans coming, smiling at him in his artful way, for he had already been recognized.

"Ah, good morning, Mr. Cockeran," he said suavely shaking Cockeran's hand, "this is indeed a surprise. I've thought of you many times since we parted."

"Yes, I think we have both thought of each other," casually remarked Cockeran.

"Well this is a pleasure," said he taking Cockeran's arm, "do you know that after you left me at Washington, I returned to my hotel and there found a letter sending me to New York, so here I am. You arrived all right?"

"Oh, yes," Cockeran replied, "I have been busy arranging my affair since I returned."

"Well, I have been occupying myself in the same way, "Mr. Carroll chatted on, "one's things do get so awfully mixed on a journey, you know. I'm on my way to the broker's now. Won't you come down and see me sometime? Tonight. Have you any other engagement? I'm stopping with a friend at New Rochelle. He will be out and we'll have the house to ourselves. One moment," he said, reaching into his pocket, "here is his card." The card read:

HAROLD E. RUXTON
236 M—— St.

Cockeran immediately saw through the artifice. He knew they wished to abduct him, since they knew the letter had been destroyed. Recognizing the fact, that a gang like this was dangerous to the country in time of war, he thought it was best to get hold of them. In order to do this, he decided to accept the invitation.

"Why yes, I should be delighted to do so," said he, "I can easily come to-night."

"All right, I shall expect you at eight-thirty," answered Mr. Carroll and with that they parted.

Cockeran hastened to report at the office and then went to the chief of police. There he was closeted for over an hour, telling his experience and formulating plans. At the end of the conference, the plan decided upon was this. Cockeran was to keep his engagement as if he was conscious of nothing. Soon after his arrival, a squad of officers would come, surround the house and at the first sign of anything wrong, break in.

The chief had not entered into this thing wholly on the story of Cockeran. He had been aware of this band working in the city and at this particular time it became serious, especially as these men were undoubtedly Spaniards.

Cockeran went to dinner and then home, spending the afternoon in preparing for his evening adventure. He took out his revolver cleaned it and loaded it up, got out some suitable clothes and made all other necessary preparations. He took a certain delight in entering into a thing like this and his eyes sparkled in anticipating it. Little did he know what was in store for him.

The time for action, came none too soon. It was about dusk when Cockeran boarded the train for New Rochelle. There were, also, a half a dozen plain-clothesmen scattered about in the diferent cars. His mind was all taken up with speculations as to what was going to happen and it was with some surprise that he felt the train slowing up at the New Rochelle depot. He stepped lightly off his car and walked along the platform. Many suburbanites were getting off and the station was well filled. A man in livery approached him, who introduced himself as Mr. Carrol's coachman. How the man recognized him in the crowd, Cockeran never knew but he thought he bore a close resemblance to his fellow-passenger from Washington. He followed the man to the carriage and entered it. Looking out the back window a few minutes after, he observed the carriage following in which he had seen his friends enter at the depot.

After a drive of about five minutes, the carriage pulled up at a capacious colonial dwelling, hidden with trees and shrubbery. On entering the drive-way, it stopped at the side entrance. Cockeran stepped out, and walking briskly across the piazza, rang the bell. He noticed that the carriage did not drive on but remained there. The door was opened by a short, thick-set man, who treating him very deferentially, escorted him across the hall.

Suddenly, without warning, the lights went out. Cockeran backed up against the wall, drew his revolver and waited the coming struggle. The hall was in utter darkness, he could see nothing. There was a silence and then like a cat the little man was upon him, dragging him to the floor. So sudden an attack was unplanned for by Cockeran. His revolver was wrenched away and he was helpless. His antagonist seemed like a demon. But Cockeran, summoning all his strength, gave a mighty throw and hurled his opponent across the hall.

"Bungled," hissed an angry voice in the darkness, and then there came a guttural snarl from his adversary.

Immediately Cockeran heard someone running down the hall and then something struck him which prostrated him. His antagonist pounced on him and he, too shattered by the blow to resist, felt himself bound and gagged. He was lifted by two men, carried through several rooms and then down a long flight of stairs. His only hope lay in the succor of his friends. Would they come in time? He shuddered to think of his end if they failed him, for he knew he was in the hands of desperadoes.

At last they entered a brightly lighted basement room. Cockeran glanced hastily around. The four brick walls were pierced by three openings, two doors and a hole into which the long coffin-like box on the floor would just about fit. A table, two chairs and a lamp made up the furniture.

Cockeran was placed in one of these chairs by his two masked captors, who, after removing the gag withdrew back of him. In a few moments an acquaintance came in, his host.

"Ah, Mr. Carroll, I wish to thank you for this charming reception," said Cockeran sarcastically.

But Carroll was no longer the aimiable man of the day before. His brow was knitted and his eyes darted evil flashes.

"Mr. Carroll?" exclaimed he with a short irritable laugh, "perhaps you would like to know my real name, Juan Rano of Seville."

"I thought as much," replied Cockeran. "What do you want with me," he inquired.

"You have a certain message. We wish to know it," he answered, settling down to business.

"And what if I won't tell you."

The Spaniard pointed to the box and then to the hole in the wall. A tremor passed through Cockeran. The horror of the thing dawned upon him. To be buried alive. There was no mercy on the face of the Spaniard. His only hope lay in drawing out the interview and giving his friends time to reach him. He would never give up the message whatever happened.

"We will give you three minutes to tell us," said the Spaniard, taking out his watch, "if at the end of that time, it is not told, you shall never leave this cellar."

An awful stillness came upon the room, the little watch ticking away the seconds sounded like a clock. Cockeran could hear the heavy breathing of the men behind him, but he was determined to hold out.

"Time's up," said Rano, replacing his watch. The men grabbed him roughly by the shoulders.

"Give me a little more time to think it over," said Cockeran, feigning childishness.

"Do you mean to tell us the message?" brusquely questioned the Spaniard.

"No, never," shouted Cockeran, thoroughly angered and rising as best he could with his manacled limbs.

The Spaniards had forseen this result and planned to take it as an excuse to keep him, not knowing that the message had already been delivered.

"In the box with him then, boys," said the Spaniard lightly.

At that moment someone rushed in the door.

* * *

The six officers—on reaching the house and seeing no lights, immediately suspected something wrong. Swiftly and quietly they surrounded it. But they were soon discovered by the coachman, who had waited outside with the carriage to drive away his accomplices. He jumped off his seat and ran into the house. Quicker than a flash one of the men was after him, stealthily following. In the darkness he was not discovered until he reached the door to the basement. This, the man stopped to unlock and the officer unexpectedly ran into him. The man quickly opened the door and shut it in the officer's face, snapping the lock.

The officer ran back and summoned two others. They, with their clubs began to beat down the door.

The coachman had hardly finished telling

his colleagues of the surprise, when the blows raining on the door, penetrated the basement room.

"That door will hold out for some time," said Rano, who was evidently the leader, "we'll have time to fix this man."

Working swiftly and cooly, they put Cockeran into the box and nailed down the cover. He was powerless. He could feel them lifting him up and hear the wooden sides of the box scraping against the hard bricks, as they pushed him into the cavity. He began to suffocate. A cold perspiration broke out on his livid face, he couldn't bear it much longer. Would they never come and release him? He could hear the Spaniards replacing the bricks to cover the entrance to the hole. Perhaps they would pass by and never see the place. He became desperate, frantic. He broke the rope that bound his hands and tore his hair, shouted and fought the sides of the box, but it was no use.

It seemed hours, when he heard a crash and in a moment the three officers burst into the room. The last Spaniard had just time to rush out the other door, leaving only one brick out in the entrance of Cockeran's living tomb and this one brick probably saved his life.

The rest of the officers appeared on the scene soon, some going in pursuit of the Spaniards, while the rest remained to release Cockeran.

They had immediately observed the one brick out of the wall, which led to an examination disclosing the recent removal of the bricks. Hurriedly they tore them down and pulled out the box. On opening it, they found Cockeran had fainted from exhaustion and suffocation. They sent for a physician and tried to revive him, themselves. When the physician arrived, he worked a long time to bring him back to consciousness. He was finally successful, but Cockeran was in a state of nervous prostration from which he was many weeks recovering.

As for the Spaniards, when the officers reached the lawn, onto which the other door led, the carriage had started at a furious rate down the drive-way and into the street, going towards the station where they would just catch a train to New York. The officers followed in their own carriage, as quickly as possible, and reached the station in time to see the train pull out with the Spaniards on it.

FALL CARES OF PLANTS

The following by Nettie Williams in the Journal of Agriculture, contains good and timely suggestions that will be appreciated by such of our country readers as enjoy winter plants:

The early frosts are often light and then we may have many days of beautiful, balmy weather. With this hope to cheer, I do not dig up my plants as early as some might, but cover on frosty nights with a sheet or anything large enough for the purpose. Then the plants will bloom as freely as ever until danger of hard freezing compels us to surrender our treasures. Geraniums will keep well in the cellar, and are doubly sure if left outdoors as long as possible in the fall, as this shortens the period of darkness. To store them, dig up each one with a spade, being careful not to shake the dirt from the roots, set quite close together in a box and pack soil in among them to keep roots well covered. I like to leave this box on a sunny porch for a while if the weather will permit. Sometimes I take up the plants a little early and keep them on the porch for some time, supplying moisture as needed, and they keep on blooming as nice as ever. Begonias, petunias, coleuses and many varieties will not live through the winter in the cellar, so these must be repotted or new slips started from them. Geranium slips rooted any time during September will bloom long before spring, and as the plants are small many can be kept where but one or two of the larger and older ones could be. In this manner I get a good variety of blossoms in a small space. Include a single petunia from the garden in your collection of window plants, choosing one with dark, rich-colored flowers and pot same as other plants. This grand outdoor bloomer, which is my especial favorite, is equally good as a winter bloomer. Repot the calla in good season, also the dainty oxalis. For any winter bloomers a good well-rotted chip dirt, or a mixture of equal parts of sand, woods loam and garden soil makes a good grower.

Gladiolus and dahlia bulbs after being nicely dried off will keep in any cellar that will keep potatoes. To store them put in sacks and hang up. Set the box containing geraniums near a window and give a little water occasionally, but not too often or they will rot.

If you have an oleander tree, set that in a light part of the cellar also, and moisten slightly. Caladium and canna bulbs are as touchy as sweet potatoes and will rot in a cellar. They must be kept in a dry, cool place, where there is no danger of frost.

Late in the fall cover the pansy bed lightly with straw or strawy manure, and the plants will bloom very early in spring. Set the tulip bulbs and other early spring flowering bulbs in October. And then try to find tme to cover the beds to be set with flowers next summer, heavily with manure, spade it under and then spade again in spring. They will then be in fine condition for producing flowers.

Help along the good work by sending us a club of four new one-year subscriptions for $1.00. Co-operate to place UP-TO-DATE FARMING in the million subscriber class.

THE HOUSEWIVES' EXCHANGE

So many good things are found in the mail basket each day that it does not seem quite fair to withhold all of them from the housewives who are among the readers of this paper. The housekeeper who has worked out for herself a new method of doing some household task whereby time and labor are saved and who takes the trouble to write to us about it does so in the hope that all the other readers may benefit by her experience. Therefore the best helps from these letters will be published from time to time. If you know some good way of performing a certain task, tell us about it, that others may profit by your ingenuity:

"I have found so many helps in UP-TO-DATE FARMING that I want to return my obligation by helping others," writes one housekeeper. She has found a new and delicious way of flavoring custard, by boiling half a dozen peach kernels in the milk. This makes a pleasant variety from the ordinary winter flavorings. Another change is obtained by stirring a few raisins or currants into the custard. This makes a change that is much liked by young people.

Here is a hint for pear preserving time from another reader:

"Add strained cranberry sauce to the preserves. It will give them a lovely red color and a new and delightful flavor. This discovery was made by accident. A batch of pear preserves turned out sickenly sweet and could not be used. A quantity of unsweetened strained cranberry sauce was added, and the concoction pronounced delicious."

A writer who says she wants to help tired mothers, tells of her plan in darning underwear:

"Long ago I gave over the never ending darning of the loose meshed garments that never could stay whole. So I evolved my own method by taking mosquito netting the color of the garment. As soon as a thin place appeared, it was covered with a piece of netting sewed neatly on the underside. The darning was simply done through the meshes of the net. This robs the work of most of its tediousness and saves strain on the eyes."

A REUNITED SOCIETY!

The Mass Convention to re-unite the society was a success. It represented all the factions. Men came from many states and some, very long distances. There was an unanimity of action that is seldom met with in a meeting of this kind. They came for the purpose of making conditions that the members could unite again and when they canvassed the situation carefully there was nothing left to do, but what they did do.

The partial report of the convention in this number tells the story. Future numbers will tell it more completely and emphasize the wisdom of calling the Mass Convention to re-organize and re-establish the only society that will ever bring to farmers their industrial freedom and independence.

The national officers of the Farmers Society of Equity now seek the hearty co-operation and loyal support of all old members, officers and organizers of the society, who want the original principles of Equity to prevail and the good objects of the original society to be accomplished to the end that farmers may soon exert a greater power, through union and co-operation, than ever before.

PARTIAL REPORT OF THE MASS CONVENTION

INDIANAPOLIS, INDAINA, OCTOBER 27, 28 AND 29, 1908

The Sixth Annual Convention of the American Society of Equity of North America as represented by the officers elected at the second convention in 1907, met in an assembly room at the Denison Hotel, Indianapolis, Ind., at 10 a. m., October 27, 1908, with President W. H. Mitchell in the chair.

The call for the convention was read, when the body considered the advisability of continuing under the old name, or whether a new name should be selected and a new incorporation effected.

Competent attorneys, in the persons of Judge Daniel Waite Howe, and J. E. Florea, were consulted. The status of the society in all its aspects was placed before them. After consideration they reported that in view of the late officers of the American Society of Equity having disregarded the law under which the society was incorporated, and even its own constitution and by-laws, together with its heavy indebtedness it would not be the part of wisdom for the convention to begin a contest for the charter. Further, for the same reasons, it was agreed that it would be unwise to continue as the American Society of Equity of North America even if the charter were presented to the convention.

Having reached this conclusion the following committees were appointed.

Committee on Name and Internal Work: C. W. Peckham, Kansas; J. P. Stelle, Ill.; W. E. Greilich, Mich.; L. J. Johnson, Ind.; H. B. Sherman, Ind.

Committee on Organization:—J. A. Everitt, Ind.; C. W. Peckham, Kan.; W. E. Greilich, Mich.

The committee reported favoring the name, "Farmers League of Equity." This was rejected, however, and the convention adopted the name "Farmers Society of Equity."

The committee on organization reported the following draft of articles of incorporation with acknowledgement, which were adopted and are published as filed with the Secretary of State.

ARTICLES OF INCORPORATION OF THE FARMERS SOCIETY OF EQUITY

We, the undersigned citizens of the United States of America hereby associate ourselves together as a society, hereinafter named, under and pursuant to the statutes of the State of Indiana approved March 6, 1889, and being an Act entitled "An Act for the incorporation of societies not for pecuniary profit, etc., etc.," by the following Articles:

ARTICLE I

The corporate name of this Association shall be "Farmers Society of Equity."

ARTICLE II

This society has no capital stock and is not organized for pecuniary profit.

ARTICLE III

The object for which this Association is organized shall be:

a. To educate, and to accomplish an organization and co-operation among farmers, stockmen, horticulturists, gardeners and men of kindred vocations and to establish a national society with such branches as may be necessary.

b. To obtain profitable prices for all products of the farm, garden and orchard.

c. To encourage the building and maintenance of elevators, cold storage houses and warehouses in the principal market cities or in all the localities where necessary, and granaries on the farm so that farm produce may be held for advantageous prices.

d. To report crops and crop conditions, to report markets and direct the marketing of crops so that farmers may operate intelligently in planting and marketing.

ARTICLE IV

The name of each incorporator is hereto subscribed and the place of residence to each is set opposite the name.

ARTICLE V.

The principal place of business and office of this society shall be located and maintained in the city of Indianapolis, Marion County, State of Indiana, with such branches elsewhere is may be necessary to carry out the object and purposes of the society.

ARTICLE VI

The term of existence of this Association shall be and it is incorporated for a term of fifty years.

ARTICLE VII

The officers of this society for the first year shall be a President, Vice-President, Treasurer, National Organizer and a Board of Directors who shall serve until their successors are elected and qualified. The President, Vice-President, Treasurer, National Organizer and Board of Directors and each and all shall be elected by popular vote of the members, to be cast at the Annual Meeting of the society at Indianapolis, Marion County, Indiana, in October of each year, the date to be determined by the Board of Directors.

ARTICLE VIII

The business and prudential concerns of this society shall be managed by a Board of Directors, consisting of not less than seven persons, including the President and Vice-President, who shall be members of this society in good standing. The Board of Directors and officers for the first year, who shall serve in that capacity until their successors are elected and qualified, are as follows:

James A. Everitt, President; W. E. Greilich, Vice-President. N. M. Ashby, John M. Myers, W. H. Mitchell, L. H. Johnson, R. Sherod, S. W. Morris, A. G. Schmidt

ARTICLE IX

The corporate seal of the Farmers Society of Equity shall be a five-pointed star with the words, "Justice and Equity to All," in the five points of the star, and in a circle the words "Profitable Prices for Farm Crops;" in the center the initials of the corporate name of the society, "F. S. E.", and the word "Seal."

In witness whereof we have hereunto set our hands and seals this 29th day of October, 1908:

J. A. Everitt, Indianapolis, Ind.; Wattes E. Grielich, Traverse City, Mich.; Irwin Rous, Indianapolis, Ind.; H. B. Sherman, Greensburg, Ind.; N. M. Ashby, Sebree, Ky.; L. H. Johnson, Attica, Ind.; R. Peckham, Haven, Kan.; Peter Unruh, Pawnee Rock, Kan.; Samuel M. Renn, Spencerville, Ind.; James Howey, East Jordan, Mich.; Frank Moore, Hays, Kans.

State of Indiana, }
County of Marion, } *ss.*

Before me, the undersigned, a notary public in and for the County of Marion, State of Indiana, personally came James A. Everitt, Wattes E. Greilich, H. B. Sherman, N. M. Ashby, John M. Myers, R. Sherod, W. H. Mitchell, L. H. Johnson, S. W. Morris, C. W. Peckham, Irwin C. Rous, H. A. Wells, Peter B. Unruh, Samuel M. Renn, James Howey, Frank Moore, and each for himself acknowledged the execution of the foregoing instrument and incorporation as their free act and deed this 29th day of October, 1908.

In witness whereof, I have hereunto set my hand and seal this 29th day of October, 1908.

(SEAL) IRVIN C. ROUS, Notary Public.

My commission expires September 6, 1910.

CERTIFICATE OF INCORPORATION

TO ALL TO WHOM THESE PRESENTS SHALL COME, GREETING:

Whereas, Articles of Association, duly signed and acknowledged, showing no Capital Stock having been filed in the office of the Secretary of State on the 30th day of October, 1908, for organization of the Farmers Society of Equity, under and in accordance with the provisions of an Act entitled "An act for the Incorporation of Societies not for Pecuniary Profit," etc., approved March 6th, 1889, and published on page 141 of the Acts of the General Assembly for that year, and acts amendatory thereof and supplementary thereto.

Now Therefore, I, Fred A. Sims, Secretary of the State of Indiana, by virtue of the powers and duties vested in me by law, do hereby certify that the said society is a body politic and corporate, authorized and empowered by the laws of the State of Indiana to proceed to carry out the objects of its organization.

In Witness Whereof, I have hereunto set my hand and affixed the seal of the State of Indiana, at the City of Indianapolis, this 30th day of October, A. D., 1908.

FRED A. SIMS,
Secretary of State.

(SEAL)

CONSTITUTION AND BY-LAWS

ARTICLE I.

Name and Membership

Section 1. The name of this organization shall be, FARMERS SOCIETY OF EQUITY.

Sec. 2. The membership shall consist of, and be confined to farmers and friends of farmers.

ARTICLE II.

Purposes and Objects

The purpose of this society is to secure equity and fair dealing in all the business relations of farmers. Its objects are fully set forth in the Articles of Incorporation, and the chief object is to secure equitable and profitable prices for all products of the farm, garden and orchard, including live stock, dairy products, poultry, etc.

ARTICLE III.

Organized Forms

The organized forms of this society shall be: Local Unions, County Unions, State Unions and a National Union.

ARTICLE IV

LOCAL UNIONS

Section 1. Local Unions shall consist of farmers and friends of farmers, accepted into the society according to its rules and usages. Each Local Union shall have control of its own affairs and may adopt By-Laws subject only to the Constitution and By-Laws of the higher Unions.

How Organized

Sec. 2. To organize a Local Union, at least ten persons qualified for membership may assemble and proceed to organize themselves into a Local Union by paying the membership fee, agreeing to uphold the society and this Constitution and By-Laws, electing the officers therein provided for and making due report thereof to the State Secretary, if the State is organized, otherwise to the National Secretary. Subsequent members may be admitted by majority vote.

Membership Fee

Sec. 3. The membership fee shall be $2.00 per member to join any Local Union of the society, or to become a member-at-large. This shall be sent to the State Secretary in organized States and to the National Secretary in unorganized States, except 25 cents out of each fee shall be retained in the Local Union treasury. The membership fee pays all dues for the first year.

Annual Dues

Sec. 4. The annual dues shall be $1.50 a year, payable in advance. This shall be sent to the State Secretary in organized States and to the National Secretary in unorganized States, except 40 cents out of each dues shall be retained in the Local Union treasury.

Apportionment

Sec. 5. The membership fee shall be apportioned as follows:

To the National Union	20 cents
To the State Union	$1.10
To the Local Union	20 cents
To the Official Paper	50 cents
Total	$2.00

(In states having a State Union the organization expense is paid by the state, which accounts for the major part of the fee going to the State.)

The annual dues shall be apportioned as follows:

To the National Union	25 cents
To the State Union	25 cents
To the County Union	10 cents
To the Local Union	40 cents
To the Official Paper	50 cents
Total	$1.50

Annual Dues Paying Date

Sec. 6. When the National Secretary issues a Local Union charter he will place thereon a date which shall be the annual dues paying date for that Local. When a member joins at other than the annual dues paying time he will pay the full membership fee of $2.00, which pays all dues for a year, and at the next annual dues paying date he will be required to pay only a pro rata amount of dues to carry him to the next following dues date.

Charter, How Granted

Sec. 7. On receipt of the report of the organization of a Local Union, accompanied by a charter fee of $2.00, the Secretary of the National Union shall make proper report thereof under the name chosen by the charter members and give the next consecutive Local Union number. He shall then send a Charter, properly executed and attested by the officers of the National Union, with its official seal, also copies of the Constitution and By-Laws for each member, a set of record books, blanks, etc., to the Secretary of the Local Union, all prepaid. Also he shall cause the name of each member to be placed on the subscription list of the Official Paper, which shall be sent to each member as long as he remains in good standing.

Changing Place of Membership

Sec. 8. Any member in good standing, wishing to change his membership, may, by a majority vote be granted a Demit for that purpose. The Secretary shall notifiy the State Secretary of such change, if the State is organized, otherwise notify the National Secretary. A member thus demitted may return to his own Local Union or may join another Local Union, on a majority vote, by depositing his Demit with the Secretary of such Union, who shall without delay, notify the Secretary as above. Members holding Demits stand as members-at-large as long as they pay the annual dues.

Officers and Election

Sec. 9. The officers of a Local Union shall be a President, a Vice-President, and a Secretary-Treasurer. The official term shall be one year and the regular election shall be held at the meeting in January. Elections shall be by ballot, except in case of only one candidate for an office, it may be by acclamation. All officers serve until their successors are elected and qualified.

Duties of Officers

Sec. 10. The duties of the President and Vice-President shall be such as usually devolve upon such officers in such organizations. The Secretary-Treasurer shall keep a correct record of all the proceedings of the Union, including a complete and correct membership roll, showing the date of joining and when dues were paid. He shall keep all books of the Union and is expected to conduct the correspondence of the Union. It shall be his duty to collect the fees and dues from the members and remit the same promptly to the State Secretary, if one, otherwise to the National Secretary. He shall be the custodian of all books, papers and property belonging to the Union. He shall make all reports required of the Union by the County, State or National Union. Upon the election and qualification of his successor, he shall turn over to such officer, the office with all books, supplies, accounts, money, etc.

Meetings

Sec. 11. Local Unions shall meet once each month and as much oftener as they desire. It shall be the duty of the officers to provide an entertaining program for each meeting. Five members shall constitute a quorum. The President may call

a Special Meeting at the request of not less than ten members, but all members residing not to exceed two miles from the place of meeting must be notified of the time and place of such meeing and of the object for which the meeting is called, provided that the President may call a Special Meeting when he may deem the interest of the Union requires it. At Called Meetings no business shall be transacted not mentioned in the call, unless all the members are present.

Grievances

Sec. 12. Local Unions shall have power to deal with their members for offenses against the Union or the society, and shall be governed by rules usually applied in such cases. The President shall preside at all trials unless himself be the complainant or defendant, in which case the Vice-President shall preside. The rules of evidence and methods of procedure shall, as near as may be, be the same as those observed in the Courts. On conviction, to be determined by a vote of guilty or not quitly, punishment may be reprimand, suspension or expulsion, also to be determined by a vote, voting first upon the heaviest penalty. If that fails to carry, then on the next, and so on until a penalty is fixed. Should no penalty be voted after a vote of conviction, the presiding officer shall administer a reprimand and dismiss the case. Suspensions shall not exceed three months, and the National Union must be notified of expulsion. Appeal may be taken to the County Union.

Arrearages

Sec. 13. A member three months in arrears for dues shall stand suspended without action of the Union, but the Secretary must report the same to the County, State and National Unions, so the membership rolls may be correct. A member suspended for non-payment of dues may be reinstated by the payment of arrearages.

ARTICLE V

Members-at-Large

Sec. 14. Members not convenient to a Local Union may become Members-at-Large of the society on payment of the membership fee and may maintain their membership by the payment of the annual dues, payment to be made to the State Secretary, if there is one, otherwise to the National Secretary.

ARTICLE VI

COUNTY UNIONS

How organized

Section 1. Any county having not less than three chartered Local Unions that will join therein, may organize a County Union. In meeting to organize, and in subsequent meetings each Local Union shall be entitled to one representative-at-large, and to an additional representative for every ten (10) members and major fraction thereof. The representatives shall meet at a time and place previously fixed and organize by electing the officers the same as provided for Local Unions.

All Local Unions in the county, so far as known, must be notified of the time and place of meeting to organize a County Union. Local Unions may be subsequently admitted to the County Union on evidence of charter.

Report of County Union

Sec. 2. After organization the Secretary shall report the fact thereof, together with the names and addresses of the officers, the names and numbers of the Local Unions joining therein, accompanied by a charter fee of $2.00, to the Secretary of the State Union, if one, otherwise to the Secretary of the National Union. The National Secretary will forward to the Secretary of the County Union a charter duly signed and attested. He will also furnish the County Union with an official seal and such other supples as may be customary.

Regular Meetings

Sec. 3. The regular meetings of County Unions shall be held quarterly, in January, April, July and October of each year.

Reports

Sec 4. Immediately after the meeting in January of each year, the Secretaries of County Unions shall send to the Secretary of the State and National Unions a carefully compiled statistical account of the work of the previous year, towit: The number of Local Unions in the county, of new Local Unions organized and admitted to the County Union during the year, the number suspended or ceased to work, if any, and the cause; the number of members received into the society by the Local Unions, the number withdrawn, suspended, expelled or died, and the number in good standing belonging to each Local Union at the close of the year, together with such other information as may be at any time called for by the State or National Unions.

Terms—Election

Sec. 5. The official term shall be one year and the annual election shall take place at the meeting in January of each year. Delegates to the State Union Meeting shall be selected in January and to the National Union Meeting at the July meeting each year as hereinafter provided for.

Work of County Unions

Sec. 6. County Unions are charged with the general supervision of the work of the society in their respective counties, and they are, therefore, expected to complete and maintain the organization therein. Also they will be the business heads of the society for marketing the crops in the county and will be supported in part out of the funds resulting from the sale of crops. To this end they should have active committees on extension work in all parts of the county, and even extending into other counties that are unorganized.

ARTICLE VII

STATE UNIONS

How organized

Section 1. Any state having not less

BUSINESS EXCHANGE

This Department is Intended to Bring Buyers and Sellers Together at Moderate Cost

THE BUSINESS EXCHANGE can be made the most valuable department in UP-TO-DATE FARMING. It can be made the medium of sale for surplus crops and as valuable to buyers to supply their needs. It should be used to a much greater extent than it is and thus one of the missions of this paper will be accomplished.

RATES—The Cost for Advertising Under This Head is 4c a Word Each Insertion

Each initial and number counts as a word. No display, except the first word will be set in two-line black letter without extra charge. To bring sellers and buyers together there is no surer way than thru this BUSINESS EXCHANGE. Advertisements under this head are small and we cannot investigate every advertiser. Our "Guarantee of Advertisers" does not apply. Rogues shall not advertise here if we know it. Report any unsatisfactory transactions promptly. When writing please say: "I saw it advertised in UP-TO-DATE FARMING."

THE THIRD POWER

THIS BOOK APPEALS TO FARMERS NOW AS NEVER BEFORE

The simple, but powerful story of how the farmer power—the third power—will rise in America. It is a book that should be read by every farmer. Any farmer once reading it should see that all his neighbors are supplied with a copy. It gives a new education and multiplies the value of present knowledge for every person who tills the soil and raises crops for market.

Some customers are operating as many as four outfits. Exclusive territory with practically no competition or risk. We help you get the business. Descriptive literature to responsible parties with necessary capital.

Wagon Agents Wanted
If you don't care to buy, perhaps you can sell for us. Big commissions to live agents who can find customers for our wagon outfits. Particulars to those who mean business and can furnish references.

We also install stationary vacuum cleaning plants in residences and public buildings of all kinds

AMERICAN AIR CLEANING CO.
MILWAUKEE, WIS.

UP-TO-DATE FARMING is from now on to be published by the Equity Publishing Company, Indianapolis, Ind., which will be incorporated under Indiana laws with a capital of $150,000.00, divided into 15,000 shares, with a par value of $10.00 each.

Over $75,000 worth of this stock has already been subscribed for. The balance of about 7,500 shares is now offered for sale for the first time. At the annual meeting of the Farmers Society of Equity, resolutions were adopted as follows:

Whereas, UP-TO-DATE FARMING has been made the Official Organ of the Farmers Society of Equity and steps are being taken to incorporate the Equity Publishing Company, we regard as of much importance to this society that the majority of the stock be kept within our membership.

Therefore, We request our members everywhere to invest in the stock of said Company but upon the condition that a majority of said stock be kept within the membership of our society.

This Company will be controlled entirely by members of the Farmers Society of Equity.

As an investment the Equity Publishing Company should pay from ten to twenty-five per cent dividends.

WRITE FOR PROSPECTUS

This is the first announcement that has been issued and we expect that the stock will be largely over-subscribed by our subscribers and friends. If you are interested in an investment that offers safety to principle, a constantly increasing value to your holdings, and good dividends paid twice a year, write at once for a free prospectus of the Equity Publishing Company. Address

THE EQUITY PUBLISHING CO., 227 W. Washington St., Indianapolis.

than five chartered County Unions, that will join therein, may organize a State Union. In meeting to organize each county shall be entitled to two representatives-at-large, and an additional representative for every 100 members of the society within that county. The representatives shall meet at a time and place previously fixed and organize by electing the officers as provided for Local Unions. In subsequent meetings the County Unions shall be entitled to one representative-at-large and each Local Union in the State to one representative.

Report of State Union

Sec. 2. After organization, the Secretary shall report the fact thereof, together with the names and addresses of the officers, the names and numbers of the County Unions joining therein, accompanied by a charter fee of five dollars ($5.00), to the Secretary of the National Union, who shall make due record thereof and forward to the Secretary of the State Union a charter duly signed and attested. He will also furnish the State Union with an official seal, and such other supplies as may be ordered by the National Union. All County Unions in the State, so far as known, must be notified of the time and place of meeting to organize, and County Unions may be subsequently admitted to the State Union on evidence or charter.

Officers

Sec. 3. The official term shall be one year, and the annual election shall take place at the meeting in January of each year. Representatives to the Annual Meeting of the National Union shall be selected at July meeting.

Work of State Unions

Sec. 4. State Unions, are charged with the general supervision of the work of the society, in their respective States, and they are, therefore, expected to complete and maintain the organization therein. In organized states, Local and County Unions shall send all State and National dues to the State Secretary, and the National dues will be forwarded by him to the National Secretary.

ARTICLE VIII

SECTION UNIONS

Section 1. These will be Unions organized to carry out the plan of the society in securing reports of supply, of demand and in directing the marketing of members' crops. They may each comprise several states (about seven Section Unions to the country.) The organization of Section Unions awaits sufficient development of the society to undertake marketing on the complete plan.

ARTICLE IX

THE NATIONAL UNION

Section 1. The National Union of the Farmers Society of Equity is the supreme head of the organization.

Meetings

Sec. 2. The National Union shall meet once each year at Indianapolis, Marion County, Indiana, during the month of October. The time to be determined by the Board of Directors.

Officers

Sec. 3. The officers of the National Union shall be a President, a Vice-President, a Secretary, a Treasurer, a National Organizer, other Directors to make 9 and a Director to represent each principal crop or class of crops, as they may be grouped in the plan of the society to facilitate marketing. Such crop Directors to be appointed by the Board of Directors as their necessity arises.

Election—Representation

Sec. 4. The officers and directors of the National Union, with the exception of the Secretary, shall be elected by a popular vote of the members on blanks furnished by the National Union, and forwarded to the National Secretary by mail, if necessary or by delegate representing such Union or Unions, to be voted in the National Annual Meeting of the society. The Annual Meeting of the Farmers Society of Equity is to be composed of representatives of subordinate Unions as follows: Each Local Union is entitled to one representative. In event it is impossible for a Local Union to send a delegate, it may join with another Local Union, or more than one, to send a delegate. In this event that delegate will be allowed as many votes in the convention as he carries credentials from organized Local Unions. Each County Union shall be allowed one representative. Each State Union shall have one representative for each two thousand members in the State, or major fraction thereof.

No one shall be elected a delegate to County, State or National Meetings, who is not a practical farmer, or whose chief income is not derived from cultivation of the soil.

The term of the officers shall be for one year, or until their successors are elected and qualified. The names of all candidates must be published in the official paper at least three times, the first publication being at least six weeks before the time of the Annual Meeting.

Board of Directors

Sec. 5. The Board of Directors shall consist of the President, Vice-President (ex-officio), and seven elected Directors, and the Directors of the various crops as these may be appointed. These shall canstitute the Executive Board of the society.

Duties of Officers

Sec. 4. The duties of the officers of the National Union, aside from those special duties that may now or hereafter be required of them, shall be the same as usually devolve upon such officers respectively. The President shall have general supervision of the work of the society, and may perform any other acts and duties that properly devolve upon an executive officer.

The Vice-President shall assist the President in the discharge of his duties when called upon and in the President's absence, or incapacity for any cause, he shall perform the duties of that station.

The Secretary shall keep a careful record of all the proceedings of the National

DROPSY Cured; quick relief; removes all swelling in 8 to 20 days; 30 to 60 days effects permanent cure. Trial treatment given free to sufferers; nothing fairer. Dr. H. H. Green's Sons, Box K, Atlanta, Georgia

Worry Hurts, Work Doesn't

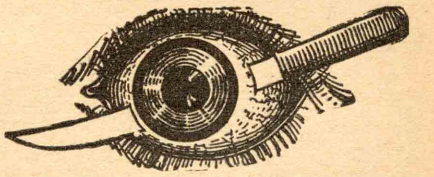
All our troubles are about things which never happen. We suffer through fear about tomorrow. When tomorrow comes the thing we worried about doesn't occur. If we work hard and keep busy we don't have time to worry. There is no real trouble or hard luck in the world but incurable sickness and death. Everything else in the world can be outlived and overcome.

We can shut our eyes and imagine we see a beautiful rose, or we can imagine we see a horrible murder. Both look real, but both are merely imagination. They are only mind pictures. Our worry is always only in the mind. When we think, we either let our minds run into worry or into pleasant thoughts. The great cure for worry is to occupy our minds with our work and with pleasant thoughts and then we kill worry. There is a wonderful book called DOLLARS AND SENSE which tells all about worry and happiness and how to live and act to get joy out of life. This book has 80 great helping chapters that tells us how to think, live, work and act to make our lives happy and full of peace and contentment.

You can get this book by sending 25 cents in stamps to R. Hunter & Co., Oak Park, Ill. The editor of this paper believes this wondeful book has done more to drive away the blues than anything ever published.

Everything in this great book is so simple, so sensible and so plain that you feel better the moment you start reading it. We want all our readers who want comfort and help to read this wonderful book. It brings joy and sunshine and drives away clouds and sadness.

Eyes Cured



Without the Knife

Grateful Patrons Tell of Almost Miraculous Cures of Cataracts, Granulated Lids, Wild Hairs, Ulcers, Weak, Watery Eyes and All Eye Diseases—Send Your Name and Address with Two-Cent Stamp for free Trial Bottle

The cures being made by this magic lotion every day are truly remarkable. I have repeatedly restored to sight persons nearly blind for years.

Ulcers, wild hairs, granulated lids disappear almost instantly with the use of this magic remedy. Weak, watery eyes are cleared in a single night and quickly restored to perfect health. It has repeatedly cured where all other remedies and all doctors had failed. It is indeed a magic remedy and I am glad to give this free trial to any sufferer from sore eyes or any eye trouble.

Many have thrown away their glasses after using it a week. Preachers, teachers, doctors, lawyers, engineers, students, dressmakers and all who use their eyes under strain find this Magic Lotion a safe, sure and quick relief. If you have sore eyes or any eye trouble write me to-day. I am in earnest in making my offer of a free trial bottle of this lotion. I am glad to furnish proof in many well-proven and authentic cases where it has cured cataract after the doctors said that only a dangerous and expensive operation would save the sight. If you have eye trouble of any kind you will make a serious mistake if you do not send for my great free offer of this Magic Eye Lotion. Address with full description of your trouble and a two-cent stamp, H. T. Schlegel Co., 2493 Home Bank Bldg., Peoria, Ill., and you will receive by return mail, prepaid, a trial bottle of this magic remedy that has restored many almost blind to sight.

Union, whether in Annual Meeting or acting through its officers or Board of Directors. He shall, with the President, sign all charters and commissions issued by the National Union, and attach the seal thereto, and see that the same are promptly transmitted to the proper place. He shall receive and receipt for all moneys transmitted or paid to the National Union, apportion the same to the several funds, and in a book or books kept for that purpose, make due entry thereof, and turn the same over to the treasurer with a statement, showing the amounts belonging to each fund, and take a receipt therefor. Before entering upon his duties the Secretary shall give bond in such sum as may be determined from time to time by the Board of Directors of the National Union, payable to "The National Union of the Farmers Society of Equity" for the use of the members thereof, conditioned upon the faithful discharge of his duties, which bond shall be approved by and held in the custody of the Board of Directors.

The Treasurer shall receive and receipt for all moneys belonging to the Farmers Society of Equity, keep a careful account thereof, and shall pay out the same only on warrants signed by the President and attested by the Secretary. Before entering upon the discharge of his duties, he shall give bond in such sum as may from time to time be fixed by the Board of Directors or the National Union, made payoble to "The National Union of the Farmers Society of Equity" for the use of the members thereof, which bond shall be approved by and remain in the custody of the Board of Directors. He shall make an itemized report of receipts and expenditures showing the financial condition of the society at the time when requested to do so by the Board of Directors.

The duties of the National Organizer shall be to answer calls and fill engagements for meetings of the Farmers Society of Equity, or other farmers' organizations according as the interest of the society may demand or the Board of Directors may direct.

Official Salaries

Sec. 5. The President of the society shall be paid $2,000 per annum and all necessary travelling expenses while in the actual discharge of his duties and office expenses as allowed by the Board of Directors.

The Vice-President shall be compensated when called upon to perform the duties of the President, when he shall be paid at the rate of $3.00 per day and travelling expenses.

The compensation of the Treasurer of this society shall be determined by the Board of Directors.

The compensation of the National Organizer shall be determined by the Board of Directors.

The compensation for the Directors of crops shall be determined by the Board of Directors

All other officers and members of the Board of Directors not already provided for, shall receive for their services $3.00 per day while in actual performance of their duties, together with traveling expenses in connection with meetings of said Board.

ARTICLE X

General Provisions

Section 1. The members of this society are expected to extend fraternal care to one anotner in sickness, misfortune and distress, and to their families in bereavement, but it is a cardinal principal that "He that will not work, neither shall he eat." Industrious habits are as important a qualification as any other, and while we advocate the priciples of benevolence and charity, we do not require the industrious and provident to lightly bestow their substance upon the shiftless and improvident.

Sec. 2. Members should favor each other in their business relations, and they should never go to law over their difficulties until all other means of agreement and settlement have been exhausted. In all such cases the society recommends arbitration.

Sec. 3. Partisan and sectarian discussions in the meetings of the Unions are prohibited, and members are under no obligation to support each other for political office because of such membership.

Sec. 4. Due decorum must be observed in all meetings, and presiding officers are given ample power to enforce order. Cushings' and Roberts' Manuals are held as authorities in parliamentary rules and usage.

Sec. 5. Every effort should be made to encourage young persons to take part in the exercises, and all should regard the meetings as schools of progress and advancement. The members are enjoined to faithfully attend the meetings, and to spare no pains to make them profitable and interesting.

Sec. 6. Co-operation is the great means by which we are to overcome the evil effects of hurtful combinations by others, and members are urged to avail themselves of every opportunity for profitable co-operation with each other, but we should never let this purpose breed a spirit of antagonism between legitimate local or other interests. Particularly the friendship of the people with whom farmers deal and to whom they sell their crops should be cultivated. Farming is a business, and farmers should not antagonize other legitimate and proper business interests.

Sec. 7. Controlled marketing is the means in our hands for compelling equitable prices for all products, and members should hold it their most sacred duty to adhere strictly to that principle and seek to have their neighbors do the same even if not members. Thus will each strengthen all . Adherence to this principle is the test of good membership, and all are expected to direct their best efforts thereto.

Sec. 8. The emblem of the Farmers Society of Equity is a five-pointed star, having in the points the following declaration: "Justice and Equity to All." Inside this is a circle of words expressing the essence of the chief object of the society, viz: "Profitable Prices for Farm Crops," while in the center the first letters of the name of the society, "F. S. E." appear in monogram. The official seal of the society is the emblem with the word "Seal" added.

Sec. 9. UP-TO-DATE FARMING, published at the headquarters of the society, is the official paper of the Farmers Society of Equity, and is furnished to each member of the society out of the membership fee and dues. This paper shall continue to be the official paper unless a change is ordered by a majority vote of the members voting, at the time of any Annual Meeting of the society. This can be made an issue on the demand of the Board of Directors, or by five hundred members in good standing; such demand to be published in the official paper three months before the time of the Annual Meeting. Blanks for the vote shall be furnished by the National Union and sent to Local Unions.

Sec. 10. This Constitution and By-Laws may be altered or amended at any Annual Meeting of the National Union by a two-thirds vote unless any part is provided to the contrary, but proposed alterations and amendments shall not be finally acted upon on the day of introduction.

Sec. 11. This Constitution and By-Laws shall go into effect at once when the society is chartered by the State of Indiana.

RESOLUTIONS

Your Committee on Resolutions beg to report as follows:

Whereas, The parctice of the department of Agriculture, in giving out crop reports just before harvest, is of no advantage to the farmers, but gives advance information to the speculator, that enables him to take

ORGANIZERS

The Farmers Society of Equity wants organizers. Any person who considers himself competent to present the grand principles of this grand movement should send at once for terms and particulars. With the instructions and assistance we will give success is sure to attend your efforts.

Don't conclude that this does not interest you. It does, or should interest every person whose interests are in agriculture, and others who have time to engage in an honorable and profitable business.

Address
FARMERS SOCIETY OF EQUITY
Indianapolis, Indiana

What is "Soil Culture"?

What is The New System of "Scientific Agriculture"?

Nothing more than judgment and common sense shown in handling the soils of our western tracts so that the rainfall may be held for immediate absorption by the root fibers of growing crops. It's a system that every farmer—East, West, North or South—can profitably follow. It is the very essence of practical agriculture. It is a distinct revelation to Eastern and Central State farmers who have been depending on 24 to 30 inches of rainfall yearly. They wonder how our Colorado "Scientific" farmers can gather such remarkable crops on lands once called "half deserts."

Happy Prospects. Denver is rubbing its eyes, stirring itself in wonder, gazing in admiration at the great tracts bursting into green and growing crops of alfalfa, corn, wheat and fruits, etc. (*Explanation of cuts below.*) White-faced farm houses, broad-gabled barns, bowing maples, pink-blossomed orchards, dairy farms, wheat and corn fields greet gladdened eyes at every angle. Campbell's "Soil Culture" is making wealth for Colorado farmer and manufacturer, for merchant and implement maker, for mail order concern and local merchant.

"Young Man! Go West," said Horace Greeley. Within a decade or two there will be little "West" left. Hundreds of thousands have heeded the call of the early fifties. Thousands now are heeding our call.

"Hurry to Colorado" Now

Buy with a few hundred dollars one of the cheap tracts now so generously offered. Start to be independent. Have a home of your own. Come! Breathe the lung-invigorating, health-giving ozone of Colorado. Enjoy the gladdening sunshine. Get more gladness out of life next to the soil. Plant trees, orchards, lawns, watch them grow as you nurse and tend them. Be free!

Start Small. You can start on a small acreage—40 to 80—at prices running from $8.50 to $16 per acre. We don't insist on all cash. A fifth or smaller part is sufficient if you are a settler.

Location. The Bijou Ranch is only 42 miles from Colorado Springs, 65 miles from Denver, 5 miles from two easily reached railroads—the Union Pacific and Rock Island. A new branch of the Rock Island has recently been surveyed straight thro' the property.

Crops. Alfalfa roots and grows rapidly, sucking up through its great "root pipes" the "sheet water" which underlies the Bijou Ranch. 35,000 acres overlay this great supply of moisture that comes as near as 6 feet to the surface. This is not a lake or open cave, but is the under-soaking of the melting snows from the "earth ridge" formed by the Eastern slopes of the Rockies. This water is easily, in most places, reached by the average hand pump. Corn, wheat, sugar-beets, oats, speltz, rye, potatoes, barley, fruits of all kinds, vegetables, grow readily under this system of Scientific Agriculture.

Book Free. Our new free book fresh from the press is described below and tells why you'll be glad after you "Hurry to Colorado." Send for it now.

Explanation of Cuts Below.

Photo at left. These are stacks of Alfalfa on the farm of D. J. Shearer. Photo at right. An enormous potato field—40 acres—harvesting over 8000 lbs. to acre—320,000 lbs. in all and sold on the ground for $3200 00.

"Hurry to Colorado" Now

Here's a fast passing opportunity. Here are cheap lands, fertile soil, railroads, possibilities for great increase in land values, healthful climate, schools, etc. Embrace this chance. Do it now. Get in line with hundreds of others. Send for our new book—free, yet valuable—"The New Colorado." It's a question-answerer. Shows ten-inch map of location of lands, distance from great centers, markets, shipping points, schools, churches, etc. It tells how much money you'll need to get started; how to figure profits; describes the glorious climate with its sunshiny days and life-renewing nights. This book explains what "Soil Culture" is and why it is forcing Colorado to the front as a wealth-producing state far ahead of its gold and silver mines. You learn in this book about soil, water, markets, schools, profits, crops; how to plan, what to buy, how to reach the ranch and its free board and lodging, etc., etc. Send now for it, to Dept. 39

Money back if not satisfactory.

COONER & FORTUNE CO
Indianapolis, Ind.

an unfair advantage of the tillers of the soil.

Therefore Resolved,

First, That we are unalterably opposed to such advance crop reports, and we call upon Congress to so amend the law governing the Department of Agriculture; that advance crop reports shall not be given out hereafter.

Second, that we, members of the Farmers Society of Equity, assembled in Mass Meeting, now declare our allegiance to this organization, as embodying the true principles of the original A. S. of E., and we call upon all men loyal to the principle of "Profitable Prices for Farm Products," to unite with our society in our efforts to liberate from the clutches of speculators, the tillers of the soil.

Third, That the delegates to the 1908 convention have our thanks for the true and loyal stand made by them against the designing men who conspired to turn the farmers organization over to men and methods that were antagonistic to the true principles of the organization.

Fourth, That UP-TO-DATE FARMING is the original and only official organ and the steadfast advocate of the true principles of Equity. And we pledge our steadfast faith and support to both the paper and its editor as long as they remain loyal to the principles of Equity. And we hereby express our confidence in J. A. Everitt, and in this manner we express our appreciation of his efforts, by tongue and pen, to help the farmers to the front.

In view of the great help and aid the Michigan Ladies' Society of Equity is and can be to the Farmers Society of Equity, therefore, be it resolved by the national representatives of the Farmers Society assembled in mass convention at Indianapolis, Ind., that we are in sympathy with the great struggle they are making to free themselves from the shackles of the combines that have been dictating prices for their products. We hereby pledge our organization to aid and assist them all we can to carry into effect the purposes of their society.

We further ask them to change the name of their society, if they can, to conform to the new name given our society, viz: Farmers Society of Equity, so as to distinguish them from the faction that claims to be the Society of Equity.

Whereas, There have been three factions in our society for a year, and

Whereas, One of the objects of this Mass Convention was to bring about a re-united society, and

Whereas, The Farmers Society of Equity represents the true, original principles of the society and represents the correct plan to accomplish the good objects; and

Therefore, Be it Resolved, that all members of the society who were in good standing in 1907, will be accepted into the Farmers Society of Equity on the payment of the annual dues provided, viz: $1.50 which will place them in good standing for one year from the date of payment; Provided the terms of this Resolution shall not be in force after the 1st day of March, 1909.

That whereas J. A. Everitt, the founder and protector of the principles of Equity, has for six years spent of his time and money and labor in behalf of the society, that as a token of our appreciation, we extend to him a vote of thanks and now make him a life member of the Farmers Society of Equity without dues.

Whereas, UP-TO-DATE FARMING has been made the Official organ of the Farmers Society of Equity and steps are being taken to incorporate the Equity Publishing Company, we regard it of much importance to this society that the majority of the stock be kept within our membership;

Therefore, we request our members everywhere to invest in the stock of said Company but upon the condition that a majority of said stock be kept within the membership of our society.

The resolutions were adopted.

OFFICERS ELECTED

The following officers and Directors were elected for the ensuing year:

President, James A. Everitt, Indianapolis, Ind., (by acclamation).

Vice-President, W. E. Greilich, Traverse City, Mich., (by ballot).

Treasurer, I. C. Rous, Indianapolis, Ind., (by acclamation).

National Organizer, H. B. Sherman, Greensburg, Ind., (by acclamation).

Directors:—N. M. Ashby, Sebree, Ky.; J. M. Myers, Ramsey, N. J.; R. Sherod, Keosauqua, Iowa; W. H. Mitchell, Hutchinson, Kan.; L. H. Johnson, Attica, Ind.; S. W. Morris, Rochester, Minn.; A. G. Schmidt, Madison, S. D.

IMPORANT INFORMATION FOR MEMBERS

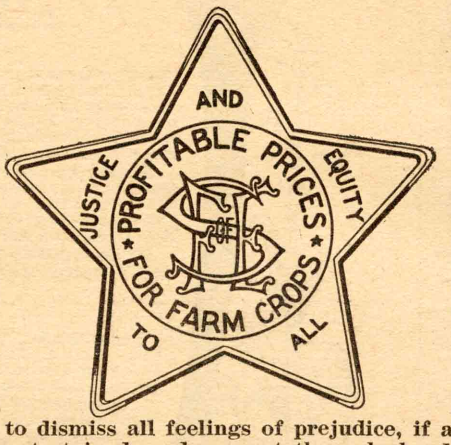
At the beginning of the report of the Mass Convention on page 18, we referred to the debts of the A. S. of E. as one reason why a contest was not made for the charter.

To be more explicit, we find in the Equity Farm Journal for October, reporting the Milwaukee convention that the headquarters is in debt on the year's business $5,400.00, with $195.43 cash on hand. Also from the same paper in the financial report of the official paper, we learn that it has a debt "accounts payable" of $7,543.19, with $2.25 cash on hand. These reports were October 1, 1908.

Thus we see that the total indebtedness for the year under the Barnett-Pauley, Drayton, Bowne, Nelson, et al. (mis)management is $12,943.19, with $197.60 of cash as an offset. But beside this there is the old debt of Mr. Everitt's, contracted while establishing the society, which amounts with interest, to about $8,000, and which is now in suite at Indianapolis. This makes the total indebtedness over $20,000.

Need there be any further argument? Recall the promises made by the people in control the past year and then contrast them with the performances. Farmers were probably never more grossly deceived than by these people. It apears to be very clear that the only way to a united society and a society that will grow and accomplish the objects dear to farmers, is through the Farmers Society of Equity, which has not a dollar of debt and is in charge of experienced people who have in the past demonstrated their honesty and executive ability beyond a semblance of a doubt.

A United Society



We believe every member of the Society of Equity, and every farmer in the country, even if not a member, wants to see a UNITED SOCIETY. If this is so, then the only other question is, how can it be accomplished?

Something is said in this number about the two conventions held in October and the conditions as they exist now. It should be easy for each member to make a choice and that choice, if made on merit and a due consideration for future prospects, should result in A UNITED SOCIETY.

Our appeal is to every member and to every union in the country to dismiss all feelings of prejudice, if any exists, all doubt, if any is still entertained, and support the only head that can bring about a re-united society.

The name, Farmers Society of Equity, is slightly different from the old name, but many have said it is a better name. It certainly is more significant of what the society is to be as disclosed in the adopted Constitution and By-Laws. (See Article II, "Purpose and Objects," and Article I, Sec. 4, second paragraph, about representation.)

Also it is now provided that the society will be governed by the members. (See again Article IX, Sec. 4, election of officers by the members and how every union can be represented.) This was the plan for electing officers in the original society and was provided for in its articles of incorporation, but the society drifted away from it.

Thus the society has gone back to original principles and to the original plans when it grew in numbers and greater power each day. All members should now be glad to affirm their loyalty to the original principles and plan and they should know that only through them can farmers ever gain their industrial freedom and independence. The terms for uniting with the Farmers Society of Equity are set out in a resolution printed in this number and are very liberal indeed. Although abundant time is given to take action, nothing will be gained by delay and we urge every member to appoint himself a committee to see that the Local Union takes action on the first day possible. Or, in event the Local Union will not act promptly, let him report direct.

The matter of official paper, we believe, is adjusted in a way that will appeal to the sense of Justice with every member. See By-laws, Article X, Sec. 9. The literature for the society is prepared and blanks and charters for Local, County and State Unions are all ready to send on application. Your headquarters now awaits your commands and you will find it capable of rendering prompt and efficient service.

Address all communications very plainly, Farmers Society of Equity, Indianapolis, Ind., or beter send for addressed return envelopes.

Yours for a United Society,

J. A. EVERITT, President.
I. C. ROUS, Secretary.

FREE BOOK TELLS OF THIS GUN

A SHOT WITH EVERY TICK OF THE WATCH

SIX SHOTS IN FOUR SECONDS

3 BIG PRESENTS FREE for GIRLS

In order to introduce my business, I am distributing free this beautiful Bisque doll, nearly 2 feet high, a Doll Bamboo Furniture Set, imported from Japan, and a 27-piece Doll's Tea Set. All I ask is a little advertising in your locality.

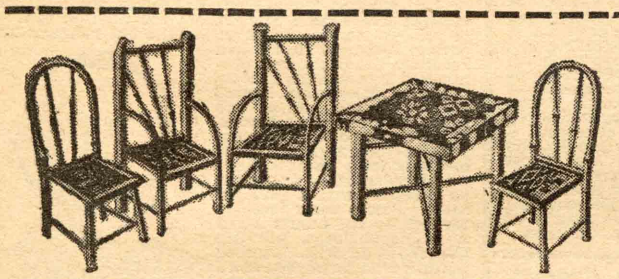
Dolly is magnificently dressed in a *genuine satin* dress, lace trimming, large florodora hat, has complete set of underwear, nice openwork stockings and patent leather shoes. The big blue eyes, which *open and shut*, the peaches and cream complexion, the little rosebud mouth, make this the handsomest and *sweetest doll* you could possibly imagine. Nothing could give a girl more delight than this doll, and I want every girl to have one free.

I do not stop here, though, but give also the lovely *genuine Bamboo Furniture Set* of 5 pieces, and the charming little Doll's Dinner Set of *27 different pieces*, as described and illustrated, to any little girl (or big girl, either), or mother, who will show and distribute 14 of my fine picture paintings in her neighborhood.

You don't have to sell these pictures. Just go among the people in your locality and tell them the grand offer Mr. Wilson has made you, and they will all take one of my elegant pictures as a receipt on my big 25 cent offer. You can easily and quickly dispose of 14 pictures in *a few hours time.* They are 16x20 inches, in 12 colors, with gold lithograph frame borders, all ready to hang on the wall in the parlor or sitting room.

I don't charge you anything for the pictures, as I *send them free*, and you can try and see what you can do, and if you can't distribute them on my plan, simply handing them out as a receipt, *they can be returned at my expense.* However, I know any bright girl or woman can earn these presents without any trouble whatever. *Just think*, you get a big, handsome Doll, and a 27-piece Doll's Tea Set, and a genuine Bamboo Furniture Set, all for this little work. It is the most generous offer ever made, and every girl reader of this paper, or mother who wants these prizes for her daughter, should write me at once and get the pictures to distribute. As soon as you have distributed them I will send you the Doll, Furniture Set and Tea Set, absolutely free. *I arrange to cover all express charges*, so they will not cost you a penny. Write to me today, and be the first in your neighborhood to get these beautiful free gifts.

I Give All Three Presents FREE



BAMBOO FURNITURE SET EXTRA

This beautiful little Doll's Furniture Set was made in far Japan, of genuine bamboo, all hand made and finished. The four chairs are made in two styles, as shown above, two with arms and two without arms. The sets are beautifully colored in green and red bamboo cane. The table matches the chairs, square cornered. With this 5-piece Furniture Set and the 27-piece Doll's Dinner Set, you can set Dollie up in housekeeping at once and give house parties and entertain your girl friends, just like grownup ladies.

ALSO FREE CHINA TEA SET

This handsome Tea Set, small enough for Dolly, consists of 6 cups, 6 saucers, 6 plates, 6 teaspoons, teapot, sugar bowl and cream pitcher. It is beautifully decorated, just like the large, expensive china costing many dollars. I also give six teaspoons, so that you can give a real tea party and invite your friends to bring their dolls also. Tea Set and Spoons are FREE.

You can write me something like this:

"DEAR MR. WILSON:—

Send me your 14 picture paintings to distribute on your plan. I will hand them out as receipts to those who accept your big 25 cent offer, and when this work is done, you will send me the *three beautiful presents* of Doll, Dinner Set and Furniture Set."

If you only send your name, however, I will know you want these presents. Remember, it *costs you nothing to try*, so why not write me today?

I will send you 1,000 personal, also bank references as to my reliability. These presents are waiting for you.

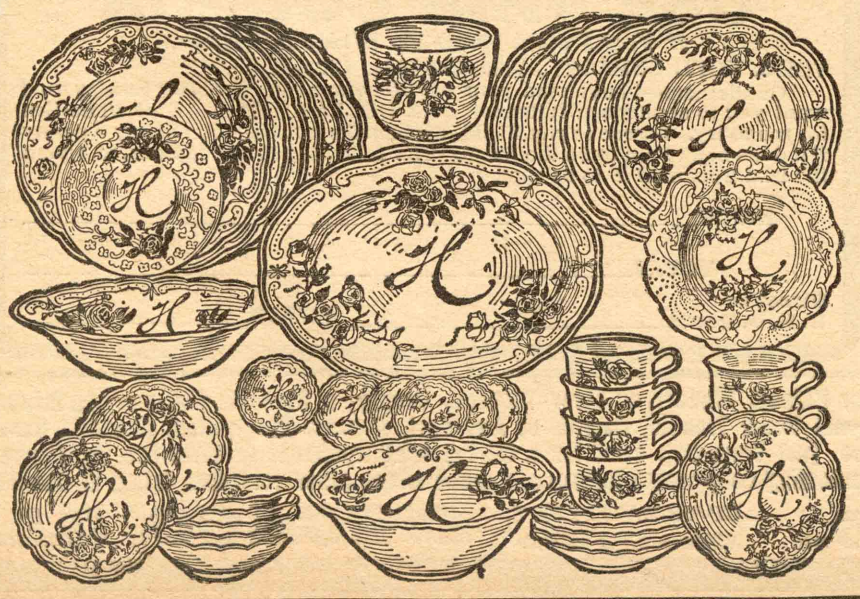
THIS OFFER MEANS WHAT IT SAYS

It is not an offer for "Your Choice" of these presents, *but for all of them*—the big, 2-foot Bisque Doll, the 5-piece Bamboo Furniture Set, and the 27-piece Doll's Dinner Set, mentioned.

Show the grand offer to your parents. They will be glad to help you if you do not understand it. Just write me anyway. It is not even necessary to write a letter, unless you want to. *Just your name and address* will do. I will know that it is an answer to this advertisement, and will have everything arranged for you to get these free presents, also an *extra present for mamma*, if you write at once. Send today, and address plainly,

WM. A. WILSON, Manager

120-122-126 CLINTON ST., Dept, 39, CHICAGO



Initial Dinner Set Prize

This is the biggest and best Dinner Set offer ever made by a *woman to women.* My firm have a few thousand *40-piece Initial Dinner Sets* to distribute as *special prizes* during the next few months. Any woman who wants one of these beautiful sets should send me her name at once. *NO MONEY REQUIRED.* The set consists of six large size Dinner Plates, six Breakfast Plates, six Cups, six Saucers, six Dessert Plates, six Individual Butter Plates, Meat Platter, Vegetable Dish, Open Sugar, Cake or Bread Plate. Each piece *special selected china*, decorated with sprays of pure gold, and each piece (except the cups and saucers) further decorated with the **owner's initial in gold,** making it the handsomest and most fashionable set ever offered as a prize premium.

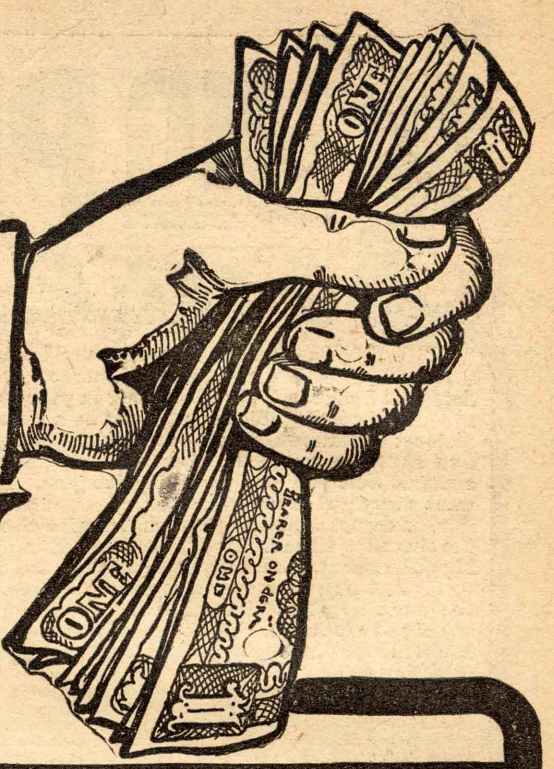
I will give this Dinner Set to any woman who will show my fine Colored Art Pictures, size 16x20, with handsome lithograph gold borders, ready to hang on the wall, and get only eighteen women to take a picture just as a receipt for my big 25-cent offer.

It is easy work to distribute the pictures, as they are only a receipt for a remarkable bargain 25-cent offer, and people who actually want a fashionable, beautiful Dinner Set of 40 pieces with *initial in gold* free, can do this little favor for me in a *few hours time. IT COSTS NOTHING TO TRY*, as I send the pictures free without a cent in advance, and if you don't succeed *there is no harm done. TRY IT ANYWAY.*

You don't even have to write a letter. Just send your name and address, and I will know that you answered my advertisements and would like to share in the free distribution of these wonderful 40-piece Gold Medal Gold Initial Dinner Sets.

MISS B. H. LIPE, Adv. Dept., 46-48 W. Monroe St., Chicago, Ill.

HOLD ON TO YOUR MONEY



Don't Spend a Penny

until you are certain you are getting GOOD VALUE for it. In these times every man and woman must be careful of their money, must hold on to it and NOT WASTE A CENT. Sick people should BUY NO MEDICINE unless they feel sure it will give them more than their money's worth in benefit and health. We want our pay for our medicine, but NOT UNTIL YOU SAY "Here is the dollar; you deserve it," not until we HAVE EARNED IT, not until you are WILLING to send it to us. HOLD ON TO YOUR MONEY until you are SATISFIED to pay it, until we HAVE PROVEN TO YOU that we have what we claim, until VITAE-ORE HAS DONE FOR YOU WHAT YOU WANT IT TO DO. Until then, pay us NOTHING. After that, you will be willing to pay, GLAD TO PAY, as hundreds of the readers of this paper have been glad to pay. YOU ARE TO BE THE JUDGE! We leave it to you entirely for you to decide.

We want your money only when you can say that we and Vitae-Ore have earned the dollar.

How can you refuse to give this remedy, which has won an international reputation by the cures it has made, a trial on the terms of such a LIBERAL OFFER? If you need medicinal treatment of any kind, if you are sick and ailing, if anyone in your family is ailing, worn-out, sickly, you do yourself an injustice if you do not send for Vitæ-Ore upon the terms of this thirty-day trial offer. Read the offer! Send for this medicine! Do it today! Each day lost makes a case older, more obstinate, harder, and pains you more. YOU DON'T PAY A CENT UNLESS IT BENEFITS YOU.

Read This 30-Day Trial Offer!

If You Are Sick we want to send you a full sized $1.00 package of Vitæ-Ore, enough for 30 days' continuous treatment, by mail, postpaid, and we want to send it to you on 30 days' trial. We don't want a penny—we just want you to try it, just want a letter from you asking for it, and will be glad to send it to you. We take absolutely all the risk—we take all chances. You don't risk a penny! All we ask is that you use V.-O. for 30 days and pay us $1.00 if it has helped you, if you are satisfied that it has done you more than $1.00 worth of positive, actual, visible good. Otherwise you pay nothing, we ask nothing, we want nothing. Can you not spare 100 minutes during the next 30 days to try it? Can you not give 5 minutes to write for it, 5 minutes to properly prepare it upon its arrival, and 3 minutes each day for 30 days to use it. That is all it takes. Cannot you give 100 minutes time if it means new health, new strength, new blood, new force, new energy, vigor, life and happiness? You are to be the judge. We are satisfied with your decision, are perfectly willing to trust to your honor, to your judgment, as to whether or not V.-O. has benefited you. Read what V.-O. is, and write today for a dollar package on trial. Address as below:

What Vitæ-Ore Is

(For Both Internal and External Use)

Vitæ-Ore is a mineral remedy, a combination of substances from which many world's noted curative springs derive medicinal power and healing virtue. These properties of the springs come from the natural deposits of mineral in the earth through which water forces its way, only a very small proportion of the medicinal substances in these mineral deposits being thus taken up by the liquid. Vitæ-Ore consists of compounds of Iron, Sulphur and Magnesium, elements which are among the chief curative agents in nearly every healing mineral spring, and are necessary for the creation and retention of health. One package of this mineral-substance, mixed with a quart of water, equals in medicinal strength and curative, healing value, many gallons of the world's powerful mineral waters, drunk fresh at the springs.

ITS PURITY IS GUARANTEED

Vitæ-Ore contains no alcohol or any injurious or poisonous drug. It is absolutely guaranteed to be pure and wholesome, under all Pure Food and Drug Laws, both State and National. It consists of substances that the body needs and thrives upon, that all of the family may safely use, old and young, children or grandmother. It is a clean remedy, sold by clean people, through clean methods.

HELP A FRIEND!

If you have a friend or neighbor who is sick or ailing, show him this offer and tell him to write to this Company for a 30-day trial treatment. It is a little thing for you to do, but it may mean big things for him, and if so, he will bless you for it.

Made a New Woman After Months of Misery.

BELLEVIEW, TENN.—I have been suffering a long time from Female Weakness and Bladder Trouble. My Kidneys ached continually day and night and my periods were so bad that I could not sit up, but was in bed half of the time. They usually lasted for three weeks at a time. I had doctors attending me, but they did me no good. Then I saw the advertisement of Vitæ-Ore and concluded to try it for a month. I sent for a trial package and began using it as per directions. I can now testify that this one trial package has almost entirely cured me. I feel like a new woman. I can do all my housework with pleasure. I am only sorry that I did not see your trial offer long ago and thus save months of misery. MRS. M. A. CUMINGS.

She Is Perfectly Cured.

TONY, WIS.—I have been using Vitæ-Ore for two months. Before using it, no food would agree with me whatever. Now I can eat almost anything. I must say that I am perfectly cured. I cannot praise this medicine enough and will recommend it to every one. MRS. LENDEBT BOS.

Permanent Benefit in a Serious Complication.

SUMNER, ILL.—I have been using Vitæ-Ore for five years. After having used local doctors' medicines which did me no permanent good, I found permanent relief in Vitæ-Ore. I find it a great remedy for the Stomach, Liver and Kidneys. It is a great relief for Rheumatism which I formerly had so often, particularly in Winter and Spring. My trouble was a serious complication of diseases and Vitæ-Ore is the only remedy which ever gave me any permanent benefit. It saved me many doctor bills. MRS. R. M. HARDACRE.

CURED HIS SCIATIC RHEUMATISM.

Left Leg Was Altogether Numb—Spent $280 for Treatment at One Time.

DES MOINES, IOWA—I am a brick-mason and have suffered with Sciatic Rheumatism for nigh on to three years. At one time I was in bed for ten months. The doctors first said that I had Lumbago and then others pronounced my condition Sciatica or Sciatic Rheumatism. I spent $280.00 for treatment at one time and received no benefit. At last I read an advertisement for Vitæ-Ore in my Lodge paper and sent for a dollar package on thirty days trial. I found it so beneficial that I sent for more. Before using Vitæ-Ore my left leg was numb; it had no feeling whatever. Vitæ-Ore fixed me up all right. It placed me on a solid foundation and I can use both my limbs now, the left as good as the right. I have no more pain, feel better in every way and have a splendid appetite. I suffered so badly that many a time I said to my wife that had I a dog that suffered as I did, I would shoot him to get him out of his misery, no matter how I loved him. I feel so good over my cure that I want to give every sufferer the benefit of my experience. FRED KOMEROWSK, 514 E. 16th St.

RESTORED TO PERFECT HEALTH.

Had Kidney Trouble and What the Doctors Called "Rose Cancer."

ERIE, PA.—Some time ago I was afflicted with Kidney trouble, and was all run down. I could not pick up a ten pound weight; none of my friends expected me to live. I procured a package of Vitæ-Ore and in three weeks from the day I began to use it I went to work. I continued the use of Vitæ-Ore and was restored to perfect health. I also had what the doctors called Rose Cancer, and I cured it by keeping Vitæ-Ore bound on the sore for six weeks. It has never bothered me since. I shall never cease to recommend Vitæ-Ore while I live. I am seventy years old, and strong and healthy. A. MYERS.

USE THIS COUPON

If You Don't Wish To Write a Letter.

THEO. NOEL COMPANY., Vitae-Ore Bldg., Chicago, Ill.

Gentlemen:—I have read your advertisement in Up-to-Date Farming and want you to send me a full-sized ONE DOLLAR PACKAGE of Vitae-Ore for me to try. I agree to pay $1.00 if it benefits me, but will not pay a penny if it does not. I am to be the judge. The following is my address, to which the trial treatment is to be sent:

NAME_____

TOWN_____

Street or R. F. D. Route_____ STATE_____

IF YOU SUFFER from Rheumatism, or any Kidney, Bladder, or Liver Disease, Dropsy, a Stomach Disorder, La Grippe, Female Ailments, Functional Heart Trouble, Catarrh of Any Part, Nervous Prostration, Anaemia, Sores and Ulcers, Constipation or Other Bowel Trouble, Impure Blood, or are just Worn-Out, send for a 30-day trial treatment of Vitae-Ore right away and see what it will do for you. It strikes at the root of disease, eradicating deep-seated lesions and cures where other remedies failed to benefit.

Address, THEO. NOEL CO., UP-TO-DATE DEPT. Vitae-Ore Bldg. CHICAGO, ILL.

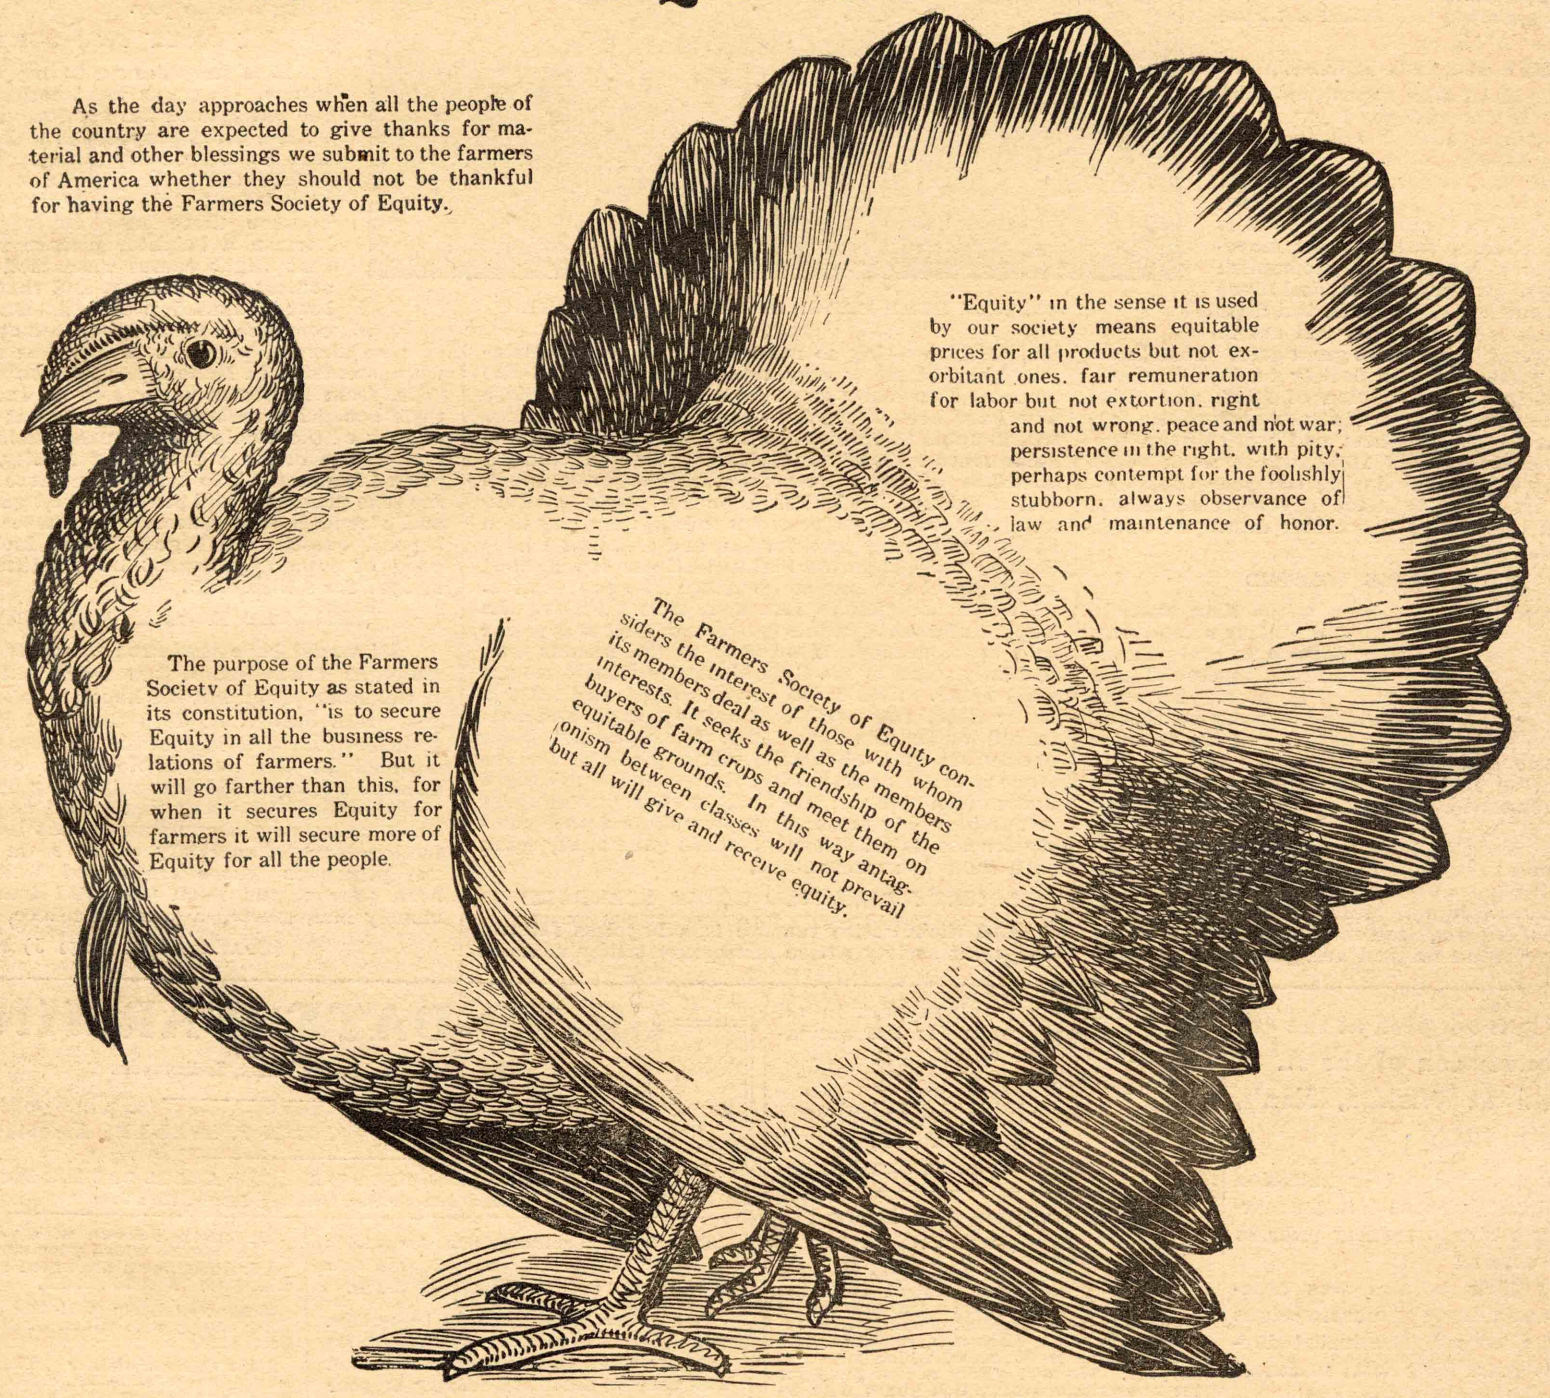
Up-To-Date Farming

OUR MOTTO:
FARMERS TO THE FRONT
OUR OBJECT:
EQUITABLE PRICES FOR ALL PRODUCTS
OUR PLAN:
CONTROLLED MARKETING

Volume XI | INDIANAPOLIS, INDIANA, NOVEMBER 15, 1908 | Number 22

WHAT EQUITY MEANS

As the day approaches when all the people of the country are expected to give thanks for material and other blessings we submit to the farmers of America whether they should not be thankful for having the Farmers Society of Equity.



"Equity" in the sense it is used by our society means equitable prices for all products but not exorbitant ones, fair remuneration for labor but not extortion, right and not wrong, peace and not war; persistence in the right, with pity, perhaps contempt for the foolishly stubborn, always observance of law and maintenance of honor.

The purpose of the Farmers Society of Equity as stated in its constitution, "is to secure Equity in all the business relations of farmers." But it will go farther than this, for when it secures Equity for farmers it will secure more of Equity for all the people.

The Farmers Society of Equity considers the interest of those with whom its members deal as well as the members interests. It seeks the friendship of the buyers of farm crops and meet them on equitable grounds. In this way antagonism between classes will not prevail but all will give and receive equity.

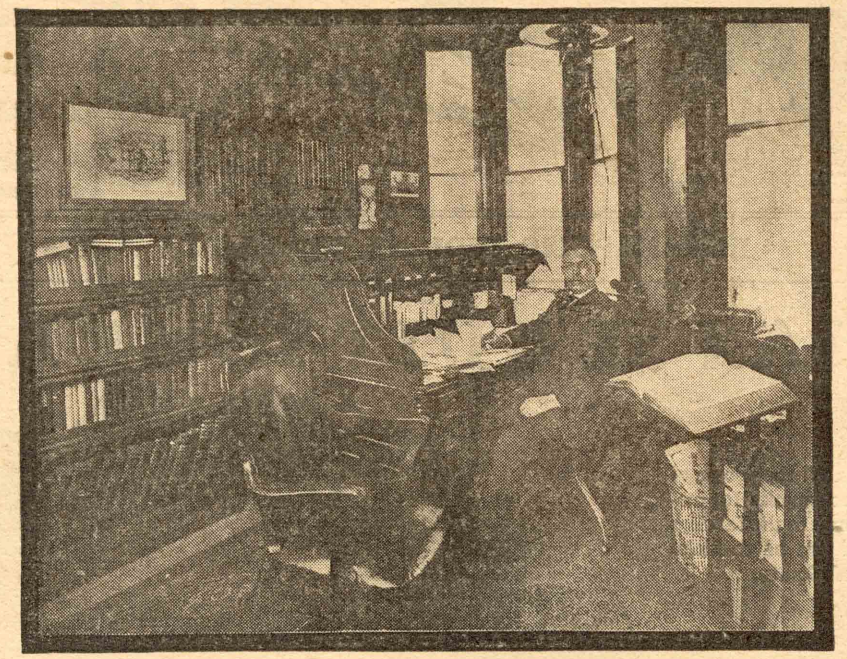
To establish such a society UP-TO-DATE FARMING is devoted. For such a society and for other blessings that have fallen to our lot in the past year, we should be truly thankful, and for the complete success of the Farmers Society of Equity, all good people should pray and earnestly labor.

"FOR THE CO-OPERATING OR ORGANIZED FARMERS OF AMERICA"

FOR A GREATER SOCIETY

AN ADDRESS AND AN APPEAL TO FARMERS AND FRIENDS *of* EQUITY

WHEN several years ago I began the agitation to secure steady and remunerative prices for farm crops and equity in all the business relations of life, the idea was so different from prevailing practices as to be almost startling, and it met more ridicule than opposition, because the self-appointed wise ones did not think it worth while to oppose a thing so far from the acceptable way of doing business. But when in 1903 the idea had gained such momentum as to launch a society to accomplish clearly defined purposes on the broad lines of Equity, the ridicule gave place to the most determined opposition, much of it coming from sources whence one would not have expected it.



OFFICE OF THE EDITOR OF UP-TO-DATE FARMING

MOVEMENT GAINED HEADWAY

But in spite of that opposition, venomous and bitter though it was, the movement gained such headway as to become formidable and actually to control some of the most important crops, and secure prices for them such as had not been hoped for before. But as it is too often the case, when a new movement attains a position to accomplish great things, persons more ambitious than wise, conclude they can do it a little better than it is being done, and get to themselves great glory if not great gain. That there were such persons in the Society of Equity manifested itself in the convention of 1906, and some of the officers elected then virtually wasted the following year in laying plans and working up the distastrous convention of 1907, whose work made development impossible during the year that succeeded it. It not only made development impossible, but actually tore down and destroyed much that had been done.

TWO YEARS WASTED

Thus have two years been worse than wasted; years that should have seen the Society a crowning success, with its feet firmly planted in every farming district of the country, and its masterful and protecting hand laid upon every crop. Through a strange fatuity the disturbing element concluded their road to success lay in the ruin of the founder of the society and the destruction of the medium that had given its doctrines publicity, and made the world acknowledge its practicability and beneficense.

This course on their part naturally led to much acrimony, and in self-defense the columns of Up-to-Date Farming have been marred with no little bitterness. It has told only truths, it is true, but such reading has become tiresome and distasteful to many of our broad minded and peace-loving readers. For devoting so much space to this unfortunate quarrel many may think I went beyond the bounds of necessity or of good judgment. If those who have been inclined to thus criticize my course will imagine themselves in my place; see their good name most wickedly and viciously assailed, the destruction of their business ruthlessly attempted, and a Society, their life hope for great good to humanity, torn asunder and wrecked, they may then be able to see my justification, and feel that I have done no more than the higher instincts of manhood would impel any one to do under like provocation.

But I am glad to announce that I believe the whole unfortunate affair is over; at least it is so far as I am concrned. I owed it to the friends who so firmly stood by me through it all to vindicate my good name. This I did in the courts, and after a bitter fight, saw my traducers convicted and sentenced under the law. But I understand these parties are even at this late date, pleading for another hearing or imploring the mercy of the court that convicted them. So be it. I shall pursue them no further. My personal vindication, a debt I owed my friends, is all I sought. That gained, my work with them is accomplished.

SOCIETY DESERTED THEIR STANDARD

But their entire venture is a hopeless failure. The great society whose management they usurped for their own imaginary glory, has deserted their standard. Their last attempted meeting was declared illegal in their own household and a violation of the terms of its charter, hence a failure. About the only work of the meeting was an open declaration of its hopeless bankruptcy, with a debt of many thousands and no means of payment. And the publication that was to destroy Up-to-Date Farming and shed a halo of glory around the heads of the instigators, and pour showers of gold into the lap of the society, brought only the shame of criminal conviction to its sponcers and an unextricable burden of debt to the society, debt which it can have little hope of ever being able to pay.

I DRAW THE CURTAIN

It is no pleasure to me to say these things. It opens but another chapter in the struggle of the good people to accomplish a great purpose, as that of the original Society of Equity certainly was. I hereby draw the curtain over the dark picture and I do so all the more gladly because there now appears above the horizon a brighter picture which shows that Right comes unscathed from every contest with Wrong, and that honest and broad minded people determined to accomplish a great thing cannot fail.

The sincere, patriotic and self-sacrificing men who assembled in Indianapolis, October 27, of this year, from homes so distant as to include within their beneficent embrace, all the great agricultural regions of the whole country; assembled on call to restore the original Society of Equity, or, if that proved impractical, to bring once more to the front the true principles and purposes that gave it vitality and strength—the sincerity of these men proves beyond question that great ideas looking to the good of humanity cannot be smothered and destroyed for selfish ends.

ERECTED A GRANDER EDIFICE

All would have preferred to see the society restored as it was before it was dragged in the mire of unknown paths, but the hopeless mismanagement and great burden of debt that had been saddled upon it made that impossible.. Hence the men assembled in the memorable mass convention of October 27 to 30 did the only thing open to them, perhaps the best thing that could have presented itself under any circumstances, cut loose from all factional strife, carefully culled from the rubbish the principles whose truth and beneficence had been proven, and upon the solid foundation previously laid, erected a grander edifice, a purer and

(Continued on page 5)

Resolutions adopted at the 4th annual convention of the A. S. *of* E. held at Wichita, Kan's, October 4th, 1908:

Whereas; Our beloved organization has suffered a serious check in the marvelous growth it was making prior to October, 1907, and

Whereas; This reverse was occasioned by designing and unscrupulous persons, who have demonstrated during the last year, their total unfitness to lead a great organization, and

Whereas; The Organization while in their control, has drifted far from its original purposes, to the great detriment of the producer,

Therefore, Be it resolved; that this convention reaffirms its allegiance to the original principles of the American Society of Equity as laid down by its founder, and we ask him to take the active lead in re-organization which must begin at once, and we hereby pledge him our loyal support in all efforts he shall make for the accomplishment of this object.

Signed,

MAX FALK,
G. M. BOLL,
S. T. CROSS,
Com. on Resolutions.

Your Subscription Has Expired

If the square to the left is marked with a "X," it is to inform the subscriber that his subscription expired with the last issue before this and should be renewed at once to insure receiving this paper without interruption. The renewal price is 50 cents, which pays for one year. We will gladly accept $1.00 for four subscriptions of which yours may be one, the other three new ones. A renewal blank is sent in this paper.

If the square to the right is marked with an "X", it is to remind you that your subscription has expired and remains unrenewed although you have been already notified. We don't want to lose a single subscriber, hence this second notice, and hope now to receive your renewal at once. See terms for a club in notice above.

If your renewal is not received in ten days we will assume that this mark escaped your notice and we will then send you a *personal* letter. We hope now to receive your renewal and make the letter unnecessary. A renewal blank is sent in this paper.

Volume XI | INDIANAPOLIS, INDIANA, NOVEMBER 15, 1908 | Number 22

The Toil and Importance of the Farming Class

From an address delivered by United States Senator McCumber, of North Dakota, before the Indianapolis Grain Dealers' Association January 9, 1908, we print the fallowing, because it is in exact line with the teachings of this paper for more than six years:

"In championing the cause of a square deal for all persons interested in the grain trade, I have at all times kept my mind on the injustice to the producer, the farmer. I know his life as I know my own. I know it from day light to dark, from the beginning of the year to its close. I know of its incessant labors, its hardships, its cares, its anxieties. I know there are no laborers on the face of the earth who put in as many industrious hours each day. I know there are no women in the world who labor as long and as strenuously as the wives and daughters on the farm, and I know also that measured by the actual numbers of hours of faithful labor performed by the farmer and his family, his services are the most poorly paid of any in the United States.

"I have had occasion, Mr. Chairman, to watch the laborers performing their tasks upon the great public and other buildings in our large cities. I could not but compare their easy, orderly work with the rushing, hurrying, panting labor of the farmer; and in the long days of June before the chime of the first stroke of the hour of four had died on the listening ear, and while the sun was still high in the heavens, and the farmer's day was scarce half done, the uplifted trowel fell, the mortar already hoisted, dried in its hod; the nail half driven, stopped in its course, and I thought of the farmer and his children, that same hot sun pouring down upon them, the great drops of perspiration beading their sunburned faces, with fully five hours steady work before their tired hands could rest; and I could not but feel the injustice, aye, the iniquity of the comparative condition of these two classes of laborers.

"Since the days of creation, upon the shoulders of the tiller of the soil has been laid the whole burden of the world. His strong hands have produced the wealth that others might live in luxury. He has partaken only of the coarsest of the fruits which the children's toil has lured out of the earth. He has fed the flocks and gathered the wool, but the finest weave has never been for him.

"If, by his giant strength, he has raised himself, Atlas-like he has raised the world with him; still upon his shoulders rests its ponderous weight; still he feeds and clothes not only the vast army of the idlers of earth—the drones of society—but also the vaster hoards that wait upon them.

"Answering the appeals to war, he has welded his plowshare into a sword, conquered, and returned again to his lowly sphere, cheerfully dividing his toil earned store with him whose delicate hands could not be darkened with the touch of soil.

"Mr Chairman, the world has long preached honor to toil while it dishonored the toiler. The press of the country lauds the honesty and independence of the farmer on the one hand, while cartooning him with beggarly intelligence and ludicrous aspect on the other.

"On the canvas of the public mind the artist of the press ever presents as the portrait of the farmer the same old giant, raw boned, stoop shouldered caricature, the same peaked hat and broom whiskers, the same galluses, the same trousers tucked slovenly into the same old boots, and the same childish innocence. I can only pause today to stamp the one word "lie" upon this persistent libel. I shall not flatter him with the idea that he is more honest than others. He is neither better nor worse. Integrity is not the special attribute of any trade, profession or calling. It is born of the lessons learned at a mother's knee, and once thoroughly learned never to be forgotten. Neither will I say that he is independent in the broad sense of that term. For I know in many ways he is the most dependent of all classes. He never knows what a day may bring forth. From seed time to harvest he is subject to every whim of the heavens. The erratic clouds either pour or hold their store, seemingly guided by no precedent and certainly evidencing little judicious economy in distribution.

"His world is a world of chance, and his life a continual war against every form of nature's destructive agencies. The tares—the wild oats, the mustard, the cactus, the French weed, infest his lands with a tenacity worthy of a holier cause. The demon of disease hovers over his stock and his poultry, and the rust and the chinch bug are ever alert for favorable breeding weather.

"What do I ask for the tiller of the soil? Simply that a given quantity of labor performed by him shall receive in return a compensation equivalent to that received by the skilled laborer in any other field of manual employment; that his wife and daughter shall receive for their labor, hour for hour, as much as the woman at the typewriter of the government clerk; that he and his family shall have as much of the comforts of life as any other family of equal judgment, industry and economy.

"Let me give an illustration for comparison:

"Does it not require just as much labor to clean the seed, plow the ground, harrow it, sow the wheat, cut it, bind it, shock it, often several times over, stack it, thresh it, and haul it to market as it does to grind it into flour, mix that flour and bake it? We all know, as a matter of fact, that it requires at least ten times the labor to produce a bushel of wheat and get it to mill as it does to grind it and make bread of it. Well, the farmer gets for that labor on the average, say seventy cents. One bushel of wheat makes seventy-five loaves of bread at five cents a loaf, $3.75.

"In these days of rapid social and industrial evolution, when old land marks are being swept away, when old principles, ideas and theories are crumbling and disappearing, and the new, unsettled and half chaotic are crowding fast upon us, days and conditions fraught with greater uncertainties and dangers, with vaster and more complex problems than any past age has ever had to cope with, days when sensational journalism has filled the country with passion and unrest, when great fortunes with their vulgar display are driving the thoughts of the public toward paternalism and socialism which cannot but degenerate the individual, we must look to the great agricultural class for that thoughtful conservatism, that true patriotism, which shall keep us right and shield us from national disasters."

Make Farm Life Better

In reply to the Commission's request for information regarding the condition of farm life, a farm laborer wrote to President Roosevelt, among other things, the following:

"I have been a farmhand just long enough to learn the cause of so many sons and daughters and well-meaning, reliable farmhands leaving the beautiful farm and country and going to the city. A lack of order and system on the farm and too long hours for a day is what is driving the best minds from the farm to the city and shop. What can we expect of a hand, or the farmer's wife and her posterity, in the way of intellectual development when they get out of their beds at 3:30 in the morning and work from that time until 8 or 9 P. M.? And no attention paid to the sanitary conditions of the home, and necessary conveniences on the farm for doing the farm work with the least labor and time?"

Is the above picture over drawn? Those conversant with average farm life and management cannot say that it is. Is the farmers' calling so unprofitable that they must needs keep such hours in order to make a living? Do they work those long hours because the work has charm for them they cannot resist? Do they pay little attention to the sanitary condition of their homes because they dare not take the thought and time from their regular farm work?

We cannot get a solution in an affirmative answer to any of these questions; else what is to become of the seven billion dollars Secretary Wilson officially reports a single year's crops to be worth? Rather take this view of it: People are what they are taught to be. From the first of January to the last of December the farmer hears nothing in the way of instruction but production. It is the curriculum of the agricultural colleges. It is the work of the experiment stations. It is the essence of the farmers' institutes. It is the purpose of the expositions. It is the effort of the agricultural press. The farmer hears little else. He is urged to do nothing else. His education leads him to think of nothing else.

The condition described by the President's correspondent is the natural and inevitable outgrowth of the present trend of agricultural teaching. Already producing enough to make farmers the richest class on earth, they are, en masse, the poorest, and yet they are continually taught they must produce more. The railroads at times helplessly blocked with farm products, every educational influence urges farmers to produce more. The elevators and storage houses filled to bursting, the market manipulators, like the yawning maw of hell, pleads for more. So the farmer is kept upon the jump, not because he is getting well paid for his work or that additional products are needed, but because greed wants more, and he is taught to hurry it and rush it in.

Change the Curriculum. Let the farmer take time to breathe, and study the principles of marketing for awhile. Teach him how to sell. Let him know his products are his own, and he has a right to keep them until he gets a price that pays him for his work. Then he may sleep during the early morning hours when sleep is so sweet. He may take time to keep his farm and its paraphernalia in order. He may look after the sanitary conditions of his home, and he may have the evening hours for reading and improvement, and association with his family. Don't blame the farmers for the deplorable condition mentioned. Put the blame where it belongs, at the door of his unwise or mistaken teachers.

CHANGES BASE

A good friend of Equity, Dan R. Koch, of Tazewell county, Illinois, calls our attention to the fact, though we had noticed it before, that the Orange Judd Farmer changes the base if its opposition to the Society of Equity. From the beginning that publication has been one of the bitterest foes of this organization of farmers. Now it declares the society is good and its purposes laudable, but it vents its spleen against the founder of the society. When an opponent of the principle or a cause, has to abandon his opposition to the thing itself and make his fight personal, it is a confession that he is the dead Goliath and the other fellow is David with his sling and a bag yet full of just as smooth stones as the one that prostrated the giant. The article referred to is an acknowledgement that the Orange Judd Farmer has been wrong all the time.

NECESSITY FOR ORGANIZATION

We are glad to transfer to our columns the following article which appeared October 22, as the leading editorial in the St. Louis Journal of Agriculture. We may have doubts of the success of the plan of the Georgia peach growers because we have seen so many capitalized marketing efforts fail, but the methods of distribution are good, precisely what UP-TO-DATE FARMING has advocated for years; and could it be reduced to practice not only in Georgia, but throughout the entire country, and not only as applying to the peach crop but to all farm products, the problem of agricultural success and independence would be solved. We believe the system proposed by the Georgia peach growers is entirely practical, and that it could be made effective all over the country by a national organization, and be made to apply to all crops as well as to any one of them; but such a movement would be gigantic in its work and stupendous in its results. This paper will not be content until such a movement is in operation. We gladly give our readers the Journal of Agriculture's editorial as containing many valuable points that are incontrovertable, and that seldom appear in the public press:

Organization is as necessary for the farmer these days as for anyone else. In fact, no business can be successfully carried on without organization and co-operation. Facts, not rumors and theories, emphasize the necessity of fruit growers and farmers organizing not only for the purpose of exchanging views and relating experiences in the growing of crops, but for the marketing of the crops so that they may yield the greatest profit. Those who raise fruits and vegetables which are perishable can only hope to successfully and profitably market their products through organization. For two years or more the peach growers, because of lack of organization and system, have lost heavily—so much so, in fact, that in several sections the growers are cutting down their trees. Last summer, while fruit was rotting on the ground in the orchards, there was a scarcity in the cities and high prices prevailed. Why? Simply because of the haphazard way in which the crop was sent to market.

That is the cause. Now as to the remedy. The fruit growers of Georgia, having diagnosed the ailment, propose to effect a cure. They held a convention in Atlanta which was attended by growers from all over the state and from outside of the state as well. The meeting was harmonious and plans were adopted for the marketing of the next crop in a more systematic manner. As it is through organization the sepculators and gamblers fix the prices of farm products, it is only through organization that the producer can fix the price of what he has to sell and ascertain which is the best market to which to ship. The Georgians organized what is now known as the Georgia Fruit Exchange, and which is to be incorporated. There will be 10,000 shares of stock issued at $10 per share, making the cash capital of the concern $100,000. The plan is to establish about a dozen different distributing centers in different fruit growing sections of the state. In every state there should be an organization of fruit and vegetable growers separate from all other organizations. Its purpose would be chiefly to have the perishable products marketed in a systematic manner. With a good manager there would be no need of having peaches selling at 50 cents a crate in one town and $2.50 in another town 200 miles distant, and in some sections the fruit rotting in the orchards. The exchange, by wire, telephone and mail, could keep in close touch with the market conditions in all markets and would know how and when and where to ship. No individual could afford this expense, consequently the practicability and necessity of organization.

Valuable statistics would of course be gathered by the association and each year the exchange would become more valuable to the producer. The consumer would also reap the benefits because the exchange would be constantly advised of the necessities of any community and fruits and vegetables would be shipped where most needed. Besides, at points of concentration, the fruits could be properly sorted and packed.

MUST BE UNDER ONE HEAD

Mr. Fred Warren, president of the Southern Texas Truck Growers' Association, agrees with UP-TO-DATE FARMING and the Society of Equity that successful handling of farm products from the growers' standpoint, can only be done by an effort under one head. At least he advances in very strong language the ideas that have been for years advocated by this paper. In a recent interview, Mr. Warren is reported to have said:

To my mind, there is only one solution to the problem and that is through organization under one head, thereby eliminating the competitive feature of each local organization working on its own lines. They are bound to run up against each other and both will suffer.

The usual rule among the men on the other end is to play one against the other, and get farm products as cheaply as possible. Under the plan proposed by us this could not occur and the farmer has a much better show for prices than under the ruinous local schemes.

In other words we have the matter as clearly stated as it could be in UP-TO-DATE FARMING, and there is no question as to the soundness of the position. So long as small localities undertake the work that can only be done by all, the competition of growers with growers will continue, and producers will still financially cut their own throats, to the great delight of speculators who profit by that unfortunate situation. We are glad that farmers generally are becoming educated along these lines. Farmers can co-operate in a national organization that shall take care of not one crop only but of all crops, so that the same protection that is thrown around one will be thrown around all, to the extent that the general direction and guardianship will eminate from a single and definite source, to the effect at least that no part can be played against any other part. The local work must be done, of course, by local representatives, who will adapt their plans to local conditions or necessities, but all will be so directed by the central head that there shall be no conflict between any of the parts. Another advantage is that the national organization, through its ramifications, will have a constant eye on all parts not only of the area of production, but of the centers of demand and consumption, and under the information given from its headquarters, national or state, not a single shipment need find itself in a glutted market.

Another advantage of such arrangement is that the different crops produced in the broad area of the nation serve as a check upon any greed that might manifest itself among the farmers, for farmers are only human beings. Producers of some crops are consumers of others, and the returns received for some crops must be expended in the purchase of others. Hence these different crops resist extortion from any source, and, from the very nature of things, must resist it successfully, to the great benefit and safe-guarding of consumers as well as producers.

This is the plan of the Farmers Society of Equity, which we know is practical because it has been proven so by the actual test. Can any one suggest a better?

CITY RETAIL TRADE

No matter what producers receive for their stuff on the farm, they are very much interested in what consumers in the cities are required to pay. Says a leading produce market journal: "It is thought that, if the retail grocers would get their prices down to a more reasonable figure, there would be a much larger consumption of eggs."

That is it exactly. When retail prices are put exorbitantly high for any article of food, that article is cut out of the bill of fare of thousands of people of good appetites but moderate means. That, of course, reduces consumption and cripples the demand, materially contributing to the glutting of markets and thus reacting injuriously upon the producers.

We do not know whether these high prices to consumers are made by the retailers in the hope of raping larger profits, or whether they are forced by the speculative buyers and handlers. It is certain that it is not the result of high prices paid the producers, yet the producers suffer by it in the loss of demand, while consumers of moderate means suffer by it the deprivation it forces upon them.

Our plea for equitable prices, if conceded, would adjust these difficulties at both ends of the line. There are inordinate profits somewhere between the two parties most vitally concerned. If the inordinate profits could be cut out, leaving only reasonable ones, with the excessive part equitably divided between producers and consumers, exchange would adjust itself on a different level, and almost our entire population would be benefitted.

GRAIN ASSOCIATIONS

A paper lying before us mentions the—

Western grain dealers' association.
Illinois grain dealers' association.
Indiana grain dealers' association.
Kansas grain dealers association.
Ohio grain dealers' association.
Oklahoma grain dealers' association.
Tri-State grain dealers' association.
Texas grain dealers' association.

And we suppose the list could have been continued, perhaps almost indefinitely. Now pray tell us where is the—

Western grain growers' association.
Illinois grain growers' association.
Indiana grain growers' association.
Kansas grain growers association.
Ohio grain growers association.
Oklahoma grain growers' association.
Tri-State grain growers' association.
Texas grain growers' association.

Or is it a fact that growing the grain is not so important as dealing in it? There is every reason to believe it is not so profitable, and in the above two lists, the one of things that exist and the other of things that do not, but ought to, may be found the cause. Farmers should get a move on themselves. They must meet organization with organization. Study the methods, plans and purposes of the Farmers Society of Equity.

WHAT THE TELESCOPE REVEALED

And How it Looks to the Editor

During the warm weather that prevailed the latter part of October the receipts of apples at central markets, were very heavy and inquiries from outlying districts and the south were numerous. Prices ranged from $2.00 to $3.00 per bushel for good stock, down to $1.75 for poor, and up to $4.00 for fancy. The indications are for higher prices but reports are to the effect that the apples are practically out of first hands.

What apple producers need is a system of marketing that finds the demand wherever it exists and then more direct shipments. Such a system will, we believe, find markets that will absorb 50 per cent more fruit.

Fancy King apples, about 45 in a box, sold in New york at $4.25 a box or at the rate of about $16.00 a barrel. The package often adds greatly to the price.

We have been noticing the potato markets and it is evident that farmers feel sure of their position to get a good price or hold their stock. Notwithstanding the weather has been warm and favorable for moving the stock and freezing weather cannot be far off, the receipts are likht and many storage houses are suffering from an empty feeling. A large shortage, probably 28,000,000 bushels under last year exists in the crop and the only question is whether producers are prepared to store their crops or will be forced to move them on the advent of freezing weather. If the latter is the case to a very great extent, prices may go lower temporarily. Prices now range from 40 cents to 75 cents to farmers in principal producing sections according to willingness to sell.

And this is the season of the year when the poultry dealers are scouring the country for the juicy turkeys, ducks, geese and chickens. How satisfactory it would be if the farmers were organized and could enforce their prices agreed on in national convention of the Farmers Society of Equity?

The visible supply statement is as follows, October 24, 1908:

Wheat, United States	49,575,000 bu.
Year ago	50,214,000 bu.
United States and Canada	69,733,000 bu.
Year ago	61,788,000 bu.
Corn, United States	2,911,000 bu.
Year ago	8,743,000 bu.
Oats, United States	16,479,000bu.
Year ago	12,636,000 bu.
Barley, United States	9,519,000 bu.
Year ago	7,773,000 bu.
Cotton, World's Visible	2,996,000 bls
Year ago	2,987,000 bls

The gain in wheat stocks in all America for the week preceding October 24th was 3,130,000 bushels as against an increase a year ago of 517,000 bushels. There was also a gain in European stocks of 1,500,000 bushels against a loss of 2,000,000 a year ago. Bradstreet says that the visible in America and Europe now exceeds the visible a year ago.

The movement and visible supply of wheat seem to indicate lack of former control by farmers. But as long as the price at Chicago is at or above $1.00 farmers evidently think it is a good time to sell. Let us hope the middlemen will support the farmers in their desire for good prices.

Cash prices November 4th for leading crops were as follows:

WHEAT.—No. 2 red, Chicago, $1.01; Louisville, $1.02; Toledo, $1.03; Kansas City, $1.03@$1.04; Cincinnati, $1.03@$1.04; Indianapolis, $1.01; New York, $1.09; Minneapolos, spring wheat, No. 1 hard, $1.05; No. 1 northern, $1.04.

CORN.—New No. 2, Chicago, 65c@68c; Louisville, 77c; Toledo, 66c; Kansas City, 63c@65c; St. Louis, 64c@66c; Cincinnati, 65c@66c; Indianapolis, 65c; New York, 72c@73c.

OATS.—No. 2 white, Chicago 49c@51c; Louisville, 50½c; Toledo, 49½c; Kansas City, 46c@48c; St. Louis, 50c; Cincinnati, 48½@49c; Indianapolis, 48½c; New York, 50c@51c.

BARLEY.—Good malting, Chicago, 60c@62c.

COTTON.—Good middlings, New York, $9.35@$9.60.

HOGS.—Best heavies, Chicago, $6.30@$6.40; Indianapolis, $6.40.

Good rains have fallen in much of the territory west of the Mississippi river, but the sever drought continues in states east, particularly in Illinois, Michigan, Indiana, Ohio and Kentucky. This condition makes an irregular winter wheat crop prospect.

Good weather for cotton picking continues up to November 1st with a good quality of crop. Prices are low compared with prices of other farm crops and commodities cotton planters must buy.

Good to high prices continue to prevail for leading farm crops with every indication that they will go still higher on their merits and considering the short supplies and great demand.

THERE SHOULD BE MORE IN IT

Make Farming More Profitable and It Will Be More Attractive

President Roosevelt appointed a committee to inquire into conditions on American farms and report recommendations looking to improvements. The commission is evidently making extensive inquiry, judging by the fact that eight blanks (all the same) have been received at various times by the editor of UP-TO- DATE FARMING and employes of the office. But we wonder if Mr. Charles Bloomer, Rural Route 1, Bellaire Kans., the writer of the following, has not covered the subject when he says, "The principal thing to make farming more attractive is to make it more profitable?". And has not UP-TO-DATE FARMING taught for years this fact, "Give farmers steady, profitable prices for their products and all other things they need will come?" Mr. Bloomer's article follows.

It is hard to avoid being overworked on a farm at certain times of the year, such as June, July and November. Farmers are exposed to all kinds of weather and these extremes, with the insect pests, and the diseases among live stock, go to make farm life hard and unattractive. Lack of confidence by the creditor class adds to the hardships. Farmers often see their homes sold for one-third the real value. Farmers are the only laboring class not organized. The independent (?) farmer is told what he can have for what he sells and told what he shall pay for what he buys. I fed hogs sixty cent corn last winter and sold for $3.80 a hundred. I sold a first-class beef hide that weighed 85 pounds for $2.52 and paid $2.75 for a pair of shoes for a 10-year-old boy. 60 pounds of wheat often sells for from sixty to eighty cents and forty-eight pounds of flour sells for $1.35.

The farmers' commission appointed by the President seems to be the only evidence that anyone was thinking of the farmers. I think that the cases of prosperty that fall to the farmers are exaggerated and advertised too much, causing them too much competition. Two years ago most of the merchants were feeding hogs and the ones that were not were trying to. Last winter they were all just as anxious to quit, and now many a farmer is losing hogs with the cholera that he has held at a loss over two poor crop years.

One would think, to read the papers, that on the farm "everybody works but father." Father generally does about eight hours chores a day and eight or ten hours field work. There are not many wives and children that would be happy without the money that results from father's toil.

The principle thing that will make farming more attractive is to make it more profitable. I think more electric lines, the parcels post and something to prevent cornering and causing a money monopoly (the same as in wheat and corn) would be to the farmers' interest; and something should be done to encourage foreign countries such as Germany and France, to buy our meats.

CHAS. BLOOMER.

Rural Route No. 1, Bellaire, Kan.

The bureau of Plant Industry of the Department of Agriculture has been experimenting with tobacco with the view of determining whether the harmful element, nicotine, can be reduced to a degree to make it harmless. The conclusions are that the finest grades of tobacco contain only small amounts of nicotine, while the coarser kinds are charged with it to a much greater degree. It is claimed the excess nicotine can be removed by the use of petroleum ether or by spraying the tobacco when in sweat with citric acid. Fuller particulars can be secured from the department of agriculture at Washington.

FOR A GREATER SOCIETY

(Continued from page 2)

greater society, at least one step nearer those in whose interest it is the—FARMERS SOCIETY OF EQUITY.

WE GREET YOU

The society was duly incorporated as a legal body with law given life, and thus we greet good people everywhere. Thus we come with clean hands, true hearts, and honest purposes. Thus we place our feet more firmly upon the eternal truths of Equity, of fairness and Justice to all men, of right to those who toil that the earth may produce, as well as to the millions that must live on the result of that toil.

AN EARNEST PLEA

With confidence do I come to all these people in an earnest plea that all acrimony be forgotten, that prejudices be dismissed, and that hearts as great as the cause to which we are devoted, unite to accomplish the greatest good yet undertaken in behalf of agriculture or those who consume its products.

Up-to-Date Farming freed from the necessity of defending itself and the cause it holds dear from the assaults of the enemies of both, will be able to do more than it ever has done in teaching Justice, Equity and Truth. No pains will be spared, no duty shirked, no task neglected, to make the paper what truth loving and progressive people would like to have it—the truest, most instructive and most useful publication that comes from the American press today; a paper that will make brighter every home it enters, every one who reads it wiser, and every soul with which it communes better and nobler.

UP-TO-DATE FARMING TO BE THE PEOPLE'S PAPER

And I shall do more for the people even than that. Every parent knows how fondly one clings to a child. Much the same feeling have I toward Up-to-Date Farming. But designing men took advantage of the ownership of the paper to poison the minds of my friends and make it appear as a personal and selfish enterprise, and contended that its benefits should accrue to all and not to one. To make a recurrence of such a contention impossible, I have decided to place the ownership of the paper in a joint stock company; to incorporate THE EQUITY PUBLISHING COMPANY, which shall be the owner and publisher of Up-to-Date Farming, and thus enable every member of the society who wishes to do so to become a joint owner of the official paper and a sharer in all its emoluments and honors, and that, too, without in any way burdening the society or placing upon it any additional responsibility. I have purposely placed the shares at ten dollars ($10) each, so that the most moderate farmer may become a stock holder, thus being a joint owner of the paper that has aroused the world to new ideas and that is destined to give to farming a new impulse, new methods of marketing and price-making and new and more certain sources of revenue and income, thus benefiting every soil tiller and every consumer of what the soil produces. A complete prospectus will we sent free on request.

This must inevitably make Up-to-Date Farming at no distant day the greatest paper that visits the homes of the people, and nothing less will satisfy my ambition.

SHARE WITH OTHERS THE GRAND RESULTS

But do not think, good friends, that I am making a personal sacrifice in thus distributing the ownership and emoluments of the pet institution of my life. I confess that my long fight for Equity has impaired my resources, at least to the extent that single handed and alone I cannot make Up-to-Date Farming, at once, what I am determined it shall be. But with the help of what shall be received for the purchase of stock from those whom I expect to join me in the work, I know I can I shall then be as proud of the paper as will they, and how gladly will I share with them the grand results. Besides the part I shall retain in the ownership of the business will be worth as much as the whole of it is worth now. Hence I shall lose nothing, having in reality only divided the acrued gains with the good people who helped me to make them by joining with me in the work.

MY PURPOSE TO SEE EQUITY ESTABLISHED

I may say further that it has never been my purpose through this instrumentality to accumulate a personal fortune. What I want is to see Equity established and become a ruling principle in all the business relations of life. That accomplished will make the business world a brighter star than it has ever been, and it will place farmers at the head of the list of productive industries. That will be enough for me and mine, and the noble men and women who become share holders therein will be joint owners of the great business, and will share as well in the immortal achievements.

ONWARD AND FORWARD

I thus extend my hand to all, grateful to the friends who have so firmly stood by me, to the grand men who assisted in the re-organization of the society, and who expressed such unbounded faith in the work to be done and in your humble co-worker as its promoter. With our hands thus clasped in unselfish devotion to a good cause, let our motto be, onward, and every movement a forward one; determined to make a beter society, a better paper, and thus win better, speedier and greater results. Re-unite the old members, and secure new ones. Go into the by-ways and high-ways and preach Equity to every one who produces from the earth, and to every one who has to do with handling it or lives upon what is produced.

THE GREAT TEACHER

It may be easier just now to procure subscribers to Up-to-Date Farming than to obtain members to the Farmers Society of Equity. To accomplish the purpose before us we must have both. Up-to-Date Farming must be the great teacher, and to enlarge our school, I have decided until the first of January next to accept subscriptions at half price or 25 cents per year, and when such subscribers become members of the Farmers Society of Equity the amount paid will be deducted from the portion of the membership fee required to be sent for the official paper. I am determined to meet the friends of Equity more than half way. Will they meet me on the same middle ground? If so, we shall soon have the greatest society and the greatest paper that has yet been known, and up-and-down prices with their attendant annoyances and losses will have disappeared forever.

MY PLEDGE

I am working as few men ever worked. I am sacrificing as not many sacrifice. But give me the subscribers—the readers—and I pledge to do the rest. Any one can spare 25 cents for a year's reading. Ask for it and send it in as a service to the society, for reading Up-to-Date Farming makes all the other work of organizing easy.

The earnestness manifested in the convention last month, if shared by the folks at home, ought to procure a hundred thousand subscribers on this proposition between now and the New Year. Let us have them, and we will show what can be done for the people in so just a cause.

My Appeal for a Greater, Better and Grander Society

I appeal to every old member to reinstate, to every Local Union to become active, and to every friend of Equity to join the Farmers Society of Equity. The harvest is great and the harvesters must be great, too. Ours is the greatest work ever given to people since the apostles were sent forth. Our work is to send and carry the gospel of Equity to all the people in the land. It is a work that all can engage in and be honored for faithful service. A word or act for Equity today may be worth ten tomorrow. In fact, though, there is no tomorrow, so do them TODAY. How you can help is explained below.

Gratefully, Hopefully and Devotedly Yours,

J. A. EVERITT,
Editor Up-to-Date Farming and President of Farmers Society of Equity.

To the Publishers of
UP-TO-DATE FARMING,
Indianapolis, Indiana. 1

Gentlemen:—To help make a greater, better and more powerful paper, and to educate the farmers so the Farmers Society of Equity may be established I send the following subscriptions for one year on your special limited offer of 25 cents. (This offer is limited to December 31, 1908.)

My name .....

R. R..... P. O. .....

Co. ..... State.....

Attach this to a sheet and write list below.

To I. C. Rous,
Treasurer Equity Publishing Co., 2
Indianapolis, Indiana.

Dear Sir:—So that "The Great Teacher"—UP-TO-DATE FARMING—may be strengthened and so it may teach the principles of controlled marketing to compel profitable prices, I hereby subscribe for ..... shares of the capital stock at $10.00 per share (one fourth may be remitted with order and balance in three equal payments three months apart, when the entire subscription is remitted, 2 per cent discount is given.)

My name .....

R. R..... P. O. .....

Co. ..... State.....

To Garrett Wall,
Secretary Equity Publishing Co., 3
Indianapolis, Indiana.

Please send me free of charge a copy of the prospectus of the Equity Publishing Coompany. If conditions and terms are satisfactory, I want some of the stock and in this way I will help to speed the education that will establish the Farmers Society of Equity.

Autumn Heralds

It was autumn, and incessant
Piped the quails from shock and sheaves,
And like lively coals the apples
Burned among the withered leaves.
—Longfellow.

AFTER THE DROUTH—WHAT?

The farming season of 1908 has been a very unusualy one; in fact, a most remarkable one. The spring was introduced by heavy rains, producing destructive floods, and delaying farm operations over a large extent of the country's best farming territory. In the middle fruit region, something not easily accounted for even by the scientists so affected the apple trees that, though the bloom was abundant, the apples failed to set or dropped prematurely, resulting in an almost entire failure of the crop, and even giving the foliage an unhealthy appearance throughout the entire season. Other fruits were almost equally affected.

After the floods came a protracted drouth over an unusually large area, accompanied at times by intense heat. The soaking and baking put the soil in an exceedingly bad condition and made proper preparation for the seed almost impossible. The drouth was broken occasionally by heavy local rains, generally accompanied by severe storms but confined to very small areas, the water drying up almost as soon as it had fallen. Indeed, the world over, the season seems to have been characterized by severe storms or parching drouths.

But our interest centers in our own country, and the conditions mentioned made farm operations difficult and doubtful. Winter wheat was injured more than had been expected, the oat crop was cut down in acreage, yield and quality, the hay crop was materially reduced, and the potato crop, as well as orchard crops, was a near failure. All the minor crops were alike injuriously affected, and the corn crop became a discouraging feature from the beginning. It was impossible to make the ground ready for planting at the proper time, and then the bad condition of the soil kept the farmer and the growing corn at a constant disadvantage. The result could be nothing but a light crop of chaffy grain on a reduced acreage.

The drouth and heat, continuing through the autumn, dried up the pastures, and put the live stock on prematurely early feed. This makes an unusual home demand on the short hay, fodder and corn crops, and adds to the farmers' embarrassment. It has also hurried live stock to market before it was finished, and of course, it brought back smaller returns.

Still we have yet to find a farmer who is discouraged. Farmers are not built of material that becomes discouraged. They may meet reverses and disappointments, but it is a strange day when they are not ready to take up the fight again. Indeed there is no great cause for discouragement. The season has been a peculiarly unfavorable one, but it has been storing up good things for the future. It has been not altogether unlike the season of 1854. During the drouth of that summer the heat was so intense in most of the then corn belt, that the corn tassels were cooked and bleached white as fast as they appeared. The result was that the bloom failed to perfect itself, very little pollen was shed, and but few grains on the puny excuses for ears were fertilized.

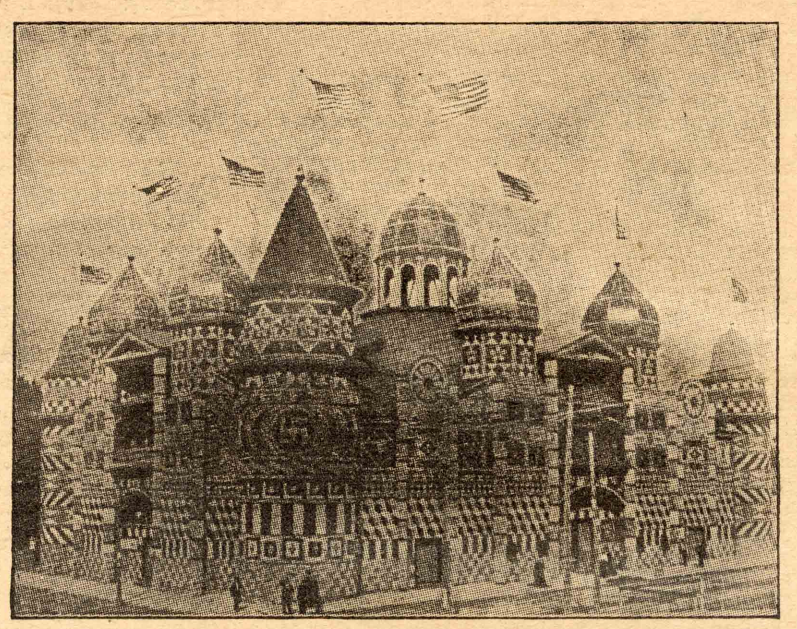
That disastrous year, however, was followed by one of unusual growth and production. The soil next spring was very friable and mellow, easy to make into a fine seed bed. The rest and parching of the season before seemed to have given it new life and energy—evidently made available plant food that had been previously unavailable, and thus served as an addition to its fertility. Who knows but this is at least one of nature's methods of preparing food for the growing plants, of changing the unavailable to available plant food, and thus keep up the round of production.

Besides, the fields need a period of cleaning up. The cultivated fields were seldom so clear of weeds as they are now, and we have never seen pasture fields so clean. What has not been eaten by the stock has been scorched and dried up by the sun. This may also be nature's way of cleaning house, and we have not a doubt that next spring will find cultivated ground in fine condition.

Based thus on previous experiences, we predict that those who succeeded in sowing winter wheat this fall will reap a rich harvest, and that the small acreage will guarantee a good price. Also, as intimated above, the soil next spring will be found in fine condition for corn, whose cultivation will be unusually easy, and result in a large yield of heavy grain. The temptation to plant a large acreage may militate against the price that will be paid for the crop of 1909, but the supply of all the grains will be so entirely cleaned up that not much trouble need be anticipated on that score.

If our assumption is correct regarding the effect of the present season upon the soil, it will manifest upon the pastures also, and they will show a greener carpet and ranker forage, freer from weeds, than for years before. But we are not prepared to say what effect may be on the meadows. They seem dry and brown and dead, and the hay grasses may indeed prove badly killed. The reason we do not anticipate such

SOUTH DAKOTA'S PALACE BUILT OF CORN



This palace, erected at Mitchel, S. D., is built entirely of corn. It is in honor of the state's splendid harvests. It is known as "The Mitchell Corn Palace," and a more beautiful and novel structure it would be difficult to imagine, let alone to built. In style of architecture, it resembles an antique Oriental mosque with Turkish style spires, domes and ornamental exterior. The many colored varieties afforded a latitude for a riot of coloring and ornamentation—squares, diamonds, checks, bias, bars, circles, stripes, stars, etc., all intermingled under the direction of a genius in harmonious blendings of color and designs. The building served in the annual agricultural exhibit in October.

The palace is 100x140 feet. It stands on a commanding eminence where it can be seen from all parts of the city. One regrettable feature is that the structure cannot be permanent as corn is not an enduring building material.

CLARK'S CUTAWAY TOOLS

CLARK'S DOUBLE ACTION "CUTAWAY" HARROW

WITH EXTENSION HEAD is needed on every farm. It will INCREASE your crops 25 to 50 per cent. This machine will cut from 28 to 30 acres, or will double-cut 15 acres in a day. It is drawn by two medium horses. It will move 15,000 tons of earth one foot in a day, and can be set to move the earth but little, or at so great an angle as to move all the earth one foot. Runs true in line of draft and keeps the surface true.

All disk harrows have to run in half lap.

THE JOINTED POLE TAKES ALL THE WEIGHT OFF THE HORSES' NECKS, and keeps their heels away from the disks.

We make 120 sizes and styles of Disk Harrows. Every machine fully warranted. Entire satisfaction guaranteed.

FREE A FARM MAGAZINE FOR SIX MONTHS

Send us your name and address **today**, and get **THE FARM EDUCATOR** absolutely free of charge for six months. This magazine is illustrated and teaches the principles of **profitable** Agriculture. It gives **practical** hints which **should save** and **make money** for farmers and stock raisers. It explains the important truths of modern farming in the clearest manner. It is a compendium of the experience of men who have made a **success** on farms, and **know** what they are writing about. If you are on a farm, or wish to "go to the land," this magazine will give you most valuable information. There is **positively no money consideration** in connection with this free offer. Write today.

THE FARM EDUCATOR, Dept. C., SCRANTON, PA.

results in the pastures is, that the pasture grasses have stronger root systems, and the rough treatment of tramping and grazing makes them more resistant of bad usage. Thus are we inclined to view what is to follow this season of drouth.

CORN HEATING IN THE CRIB

It is important to gather corn early. The longer it remains in the field the greater the waste to which it is subject. Small animals and birds will prey upon it, and weathering will damage it more or less. Besides, the earlier the stalk field can be made available the more valuable it is as pasture.

But corn retains moisture for quite a long time after it has ripened, and if bulked in the crib when too moist it is very liable to heat and damage, or possibly be ruined. Certain it is that heated corn loses its vitality and will not do for seed. If there are any fears that the corn is too damp to crib safely, old rails, pickets or other pieces of timber thrown in occasionally as the crib is being filled, will hold the ears up and keep them from packing, secure ventilation, and insure the corn to dry out in perfect safety, while they take up but very little room. It is not a bad idea to do that as a precautionary measure, even though no danger seems apparent.

EXHIBITS GO TO OMAHA FREE

Baggage cars will be furnished by the railroads coming into Omaha to bring exhibits to the National Corn Exposition, free of charge and those who desire to send exhibits will be notified as to the days these cars will be carried by the railroads.

This arrangement was announced recently by the corn show management, which has had the matter up with various railroads for some time.

The first railroad to agree to furnish the cars was the Chicago Great Western, General Passenger Agent, J. P. Elmer, writing as follows:

"We are permitted by law to move exhibits for fairs and expositions, and we shall therefore, take great pleasure in arranging baggage cars as you request."

Other railroads have been quick to follow and before the end of the week all roads are expected to furnish the cars which mean much to both exhibitors and the corn exposition.

The plan is to have cars at all county seats in the states which will exhibit at the show in Omaha. Exhibitors need only express their corn, wheat, oats, alfalfa or other exhibits to the nearest point where the baggage car stops to have the exhibits brought to Omaha without charge.

The exposition will furnish an attendant with each baggage car, who will be in charge from the starting place of the car until it gets to Omaha, seeing that the exhibits are properly handled. This insures the exhibits arriving in Omaha in the best possible condition and in good time.

LOYALTY AND FAIRNESS

If loyalty and fairness marked everybody's conduct in his dealings with other people there would be little room for complaint and little need for societies to cultivate the amenities, and keep men friendly and helpful to one another.

For instance, when a wholesale house stands by a retailer, and is watchful of the retailer's interests, always looking for what will promote his business, and giving him bargains that mean to live and let live, that customer ought to be loyal to such a house, and ought to reciprocate by cultivating the same spirit of helpfulness.

And when the process is reversed, and the wholesaler's customer becomes a seller with customers of his own, the best interests of those customers should be made his own, and it should be his business and his pleasure to serve them satisfactority and well. He should have his profits; his business must pay him; but he should never take advantage of an opportunity to extortion. The call to fair play is louder in business than in almost any other walk of life. The customer so treated should be loyal to his merchant. He should realize that exchange is the merchant's business, and that business is not business if it yield no profit. The customer is small who begrudges a fair profit on the goods he purchases. He can better afford to pay the merchant such a profit than to go to the source of supply and get them himself, or to send abroad and patronize some one whom he does not know, and who can have no more interest in him than as some one who may yet have a few more dollars to spend. UP-TO-DATE FARMING always liked this motto: "I will stand by those who stand by me," and if people will more conscientiously live up to it, every home interest will be better protected and promoted, and there will be less of selfishness and dissatisfaction in all lines of effort. "All for Home."

THE POTATO CROP

As we have several times predicted, the government has felt compelled to reduce its estimate of this year's potato crop. The September report places the conditions 9 points below that of the August report. What that means in bushels we are unable to say, but it is very unusual falling off for a single month. It is a significant fact, however, that the price for the early potatoes was based on the August report, whose bearish tendency was a loss to the growers and a gain to the speculative buyers. Let us admit that the conditions were exactly as reported August 1, and during August there was an actual falling off of reported September 1, thus exonerating the agricultural department from any purpose to benefit speculation, it must be admitted also that the effect was the same—the indication of a crop above the facts and prices below those warranted by actual supply and demand. The September report is equally uncertain. It can affect only the late potato market, and should make better prices for the growers, but it is a fact well known that the speculating price makers never bring prices up to correspond with short reports until they are compelled to do so, but that they immediately seize upon reports of large yields to force prices down. Hence the growers of late potatoes will not gain from the September report what the growers of early potatoes lost by the August report.

The government is too great to take these chances of wronging its industrious producers. It cannot possibly know from month to month what yields of crops may be. Every such report is liable to do injustice either to growers or buyers, and it cannot afford to wrong either. The department of agriculture, therefore, should quit making preliminary or monthly reports, which are so often misleading. We say it with all respect to the department. We have said time and again, and everybody knows it is a fact, that farmers, for whom it is claimed the department was established, have never asked for these reports, that they can in no way benefit either producers or consumers, who have nothing to do with making prices, and that itself should be sufficient argument for their discontinuance.

DON'T BLOW ABOUT CROPS

We scarcely know which is worse in a fruit bearing orchard, the blowhard or the hard blow; the one may shake off the fruit, the other may make it of little worth. Speaking of the apple crop of two years ago an exchange says: "The growers commenced early to brag about the tremendous yield there was going to be; the newspapers took it up and begged for buyers until it was thought a certain comparatively small section had more fruit than the world could use." The natural result was that buyers put prices down until the big crop brought the growers less money than a smaller one might have done.

People like to make it appear that they are doing a big business, and therefore farmers are given to bragging upon their crops. That is what is the matter with the government reports. Home pride leads the reporters to exaggerate conditions in their home localities, and when the reports come out they are over-statements. Tell the truth. If a report is worth anything it is because it is true. If it is over drawn it injures the very one whose pride it may tickle. Demand is comparatively steady, and price depends largely upon the quantity produced. It may be pleasant to hear people talk about a locality having a bumper crop, but the low prices such talk makes do not add to the income.

THE FARMER AND THE ARTIST

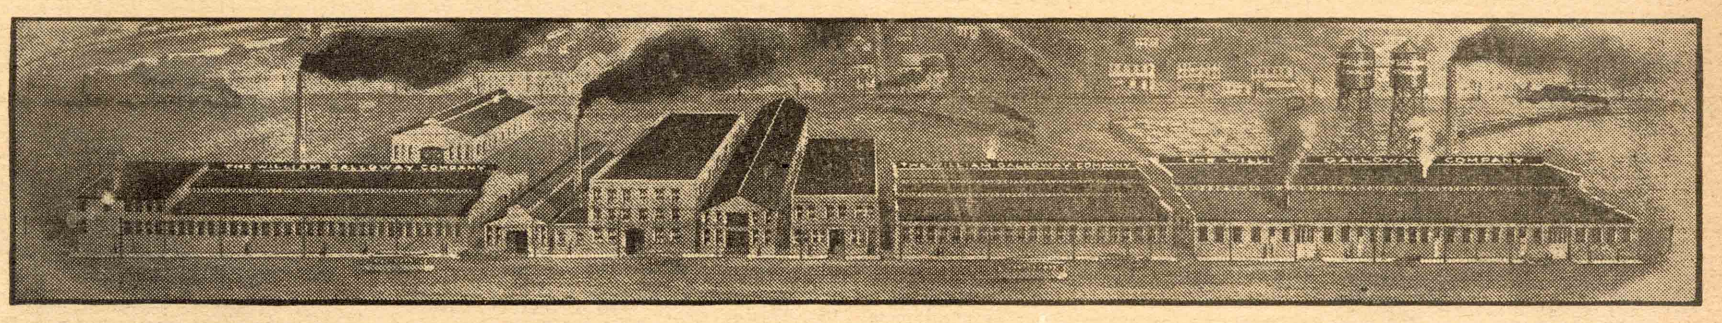
Editor UP-TO-DATE FARMING:

Why does the artist persist in painting the farmer as an ignorant looking, uncouth, long bearded individual, such as no one even sees in city, village or country? The farmer is no longer the Rube shallow dudes used to make fun of. He is an honorable if not an honored citizen, engaged in one of the best callings on earth, doing more for the world of man and beast than all others combined, and it is time the artists got the the "Rube" notion out of their heads, or off their pencils, at least.

REUBEN INDIGNANT.

After you read this copy of UP-TO-DATE put it in the hands of a farmer who is not acquainted with it.

REQUEST ADVERTISERS WANT TO Know in what Paper seen. Therefore We TO their Advertisement was Urgently Request You to mention UP-TO-DATE every time you Write to Our Advertisers. READERS.



THESE ARE THE LARGE FACTORIES OF THE WILLIAM GALLOWAY COMPANY AT WATERLOO IOWA

WE wish to call the attention of our readers to the enormous plant, as pictured above, of the William Galloway Company.

The cut shows the new factory.

This company has made such strides in the last three years that they have had to get into new quarters altogether to meet the demands of their trade.

The company was organized in 1900 by William Galloway. Incorporated in 1906 for $100,000.00. Its capital increased to $150,000.00 six months later. Capital increased to $200,000.00 July 1, 1907. Authorized capital increased August 5, 1908 to $400,000.00.

This just goes to show what square dealing with one purpose in view of giving absolutely the best article it is possible to manufacture and selling it at a reasonable price direct from factory to farm.

The William Galloway Company is not a catalog house, but acts through the manufacturer selling products direct to the user, and it is today the largest concern in the world that actually makes and actually sells manure spreaders, cream separators, and gasoline engines right to the customer.

The wonderful success and growth of this company has been one of the most promising evidences of the prosperity and practical point of view of the American farmer.

These great factories have been built to their present enormous proportions on the direct from the factory to farm selling plan, established by William Galloway—claimed to be the most liberal in the world on farm implements of highest standard, including Galloway Manure Spreaders, Galloway Gasoline Engines, Galloway Cream Separators—Hay machinery and general line of farm utilities.

This has made the Galloway Company one of the most substantial in America, and its stability has been the natural outgrowth of the reliability of the officers of the company themselves, headed by William Galloway who is known to so many of the readers of UP-TO-DATE FARMING.

"We challenge the world to produce a better layout than this on any of these lines"—writes an officer of the company whose factories are illustrated above.

Note also by the map here the central location of Waterloo making prompt shipping facilities to all parts of the country the best that could be found.

Besides this, the company maintains Factory Transfer Stations for prompt shipments at Minneapolis, Minnesota, Kansas City, Missouri, and Madison, Wis. These facts are most interesting when considered in connection with the liberal selling plan upon which the company transacts all its business.

For example right now on the Galloway Wagon Box Manure Spreader the company makes the offer—"Take a real 30 days' free trial. Test the Galloway on your own place for a month's work free. Keep your money in your pocket. We prepay all freight charges to you anywhere you live, and if you are not convinced by a month's free trial that you want to keep the Galloway, we pay the return freight also. Everything is at our risk and the price is so low direct from the factory that you save from $25 to $50, according to which size spreader you select to try."

That is about the most liberal, open and above board offer that any manufacturer could make and this, together with the high standard of workmanship and material put into all Galloways has made the Galloway Company great.

The company has just issued its new 1909 free catalogue covering each line separately. These books have become famous among farmers everywhere. If you write a postal or letter and say that you are one of our readers—also what kind of a machine you are interested in, you will be sent one of the new catalogues promptly postpaid. Address personally, William Galloway, President, The William Galloway Company, 509 Jefferson Street, Waterloo, Ia., for prompt attention.

Isn't It More Sensible

to examine an article before buying, than to take for granted the merits claimed for it?

Of course it is.

That's the way we sell the

Tubular Separator

Furthermore, we assist you in the examination by explaining the mechanism thoroughly.

The simplicity of the Tubular is exemplified in its entire construction; its durability is guaranteed by us and vouched for by satisfied every day users; and its efficiency proves itself, immediately, upon using.

To prove these merits try a Tubular and be convinced.

Catalog 136, explaining fully the entire mechanism, sent free for the asking.

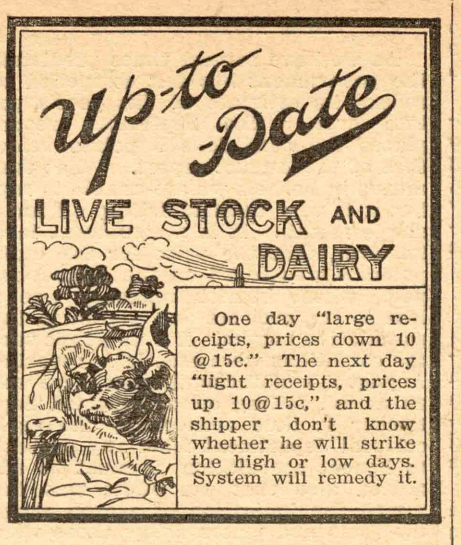
DON'T FAIL TO MENTION UP-TO-DATE FARMING when writing our advertisers



One day "large receipts, prices down 10 @15c." The next day "light receipts, prices up 10@15c," and the shipper don't know whether he will strike the high or low days. System will remedy it.

HOG CHOLERA IN KANSAS

A communication from th eexperiment station of the Kansas State Agricultural college informs us that hog cholera is unusually prevalent in that state at this time. Hundreds of farms in Kansas have become infected with the disease, we are told, and the spread of it is attributed to the excessive rainfall during the past spring and summer. The virus, it is thought, was washed from infected pens and farms into small streams and rivers, these tributaries entered into larger streams and flooded districts, thus sweeping the infection over large areas. Dogs, birds, and even the boots of stock buyers are also considered means of distributing the germs.

We know how to sympathize with our Kansas friends, for not so very many years ago the states on this side of the Missouri were overrun by the dread swine plague. But the Kansas station urges farmers to not let stray dogs into their hog pens, to keep the birds out by covering the pens, and to see to it that stock buyers disinfect their footwear before allowing them to look at the hogs. Of course such recommendations would create a laugh but that farmers are too polite to laugh at smart men. The remedies suggested are just about as smile provoking. One given on the authority of the United States department of Agriculture, is to take some blood from a hog that is immune from the cholera (one that cannot be made to have it) mix it with blood taken from a hog that already has it, and squirt the mixture some how into the veins of a hog that is liable to take it, and let the disease and its anti fight it out in the third hog. Another remedy is to pass some of the hog cholera serum through the veins of a horse; then when taken from the horse and injected into the hog—we suppose the hog becomes too horsey to think any more about the cholera. But we are talking only as a common farmer, while these people of the experiment stations are experts, and know things. Who knows but the blood of the horse might not kick the cholera entirely out of the humbler animals? Try the blood of a mule once.

Joking aside, these recommendations, made in apparent seriousness, however effective, canont appeal to the common farmer, who may seriously need a practical remedy. Where is the farmer who will keep a bottle of carbolic acid to rub on the shoes of every stock buyer that comes to see his hogs; or that will take blood out of a sick hog, inject it into a well horse, and then after a time again puncture the horse to get blood to inject into his hogs?

Clean up the house, burn all the bedding, treat the pens freely with lime, remove every sick hog on the first appearance of symptoms, give the hogs access to fine coal or slack to work on at pleasure, do not allow them to have any decaying feed, animal or vegitable, and especially deny them swill or sour slops. Sulphur mixed with their feed is good as is copperas in the water they drink. If possible keep them from stagnant ponds. These are good precautionary measures, and sometimes prove remedial.

DEHORNING CATTLE

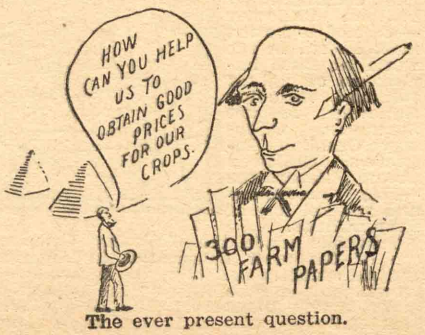
There is no longer any objection offered to dehorning cattle. Cattle men everywhere concede that it is the thing to do, and the most sensitive to animal suffering do not oppose it. Fattened animals may be dehorned with no aparent check to their taking on fat and flesh, and milch cows have been dehorned with no perceptible reduction in the flow of milk. Certain it is that stock that must run together are better without horns—better for themselves as well as for those who furnish stable room and feed.

The best time to dehorn is when the animal is a calf. There is no dehorning to do then, very little if any pain to inflict, and no sore to make and heal. The calf should not be more than a few days old, and it must not be more than a few weeks. It must be done while there is yet only a horn button at the place where the horn is to be, not yet attached to the head. Take a stick of Caustic soda, a common drug store article, wrap one end in paper or cloth; a bit of oil cloth is the best, as the object is to prevent any of the moist caustic coming in contact with the bare flesh. Having the calf held securely, wet the other end of the stick and rub the horn button therewith, being sure that the caustic is wet enough to give off some of the material like a strong solution or paste. Continue to rub the buttons alternately until the hair come off and the place looks blistered and raw, but the space need not be more than a half or three-quarters of an inch in diameter. That ends it. Nothing further is necessary. All you have is a small surface burn, which will cause the calf to shake its head a little when turned loose. No horns will appear. You simply destroyed the seed, and the head will develop into that of a finely formed natural muley. If any of the caustic is to be saved for future use, (a single stick is enough to treat a number of calves), it must be dried and tightly corked in a bottle. Exposed it absorbs moisture from the air and soon dissolves.

HOGS IN WINTER

It is not profitable to allow hogs to rough it in winter. Few animals are more susceptible to weather changes, and few suffer more when exposed to cold rains, snows or sleet. Because in summer hogs eagerly seek water and mud to wallow in, and select a cool, damp place to rest or sleep in, many people conclude storms do not much affect them, but the conclusion is erroneous. Though a thick skinned animal, it is very sensitive, and has a thinly set coating of hair that does not cling together and form a mat as the hair of most animals does. Hence the animal suffers when exposed to either heat or cold, and its health is thus easily affected, its growth retarded if a growing animal, and its general condition rapidly declines.

This is enough to say that the hog should be sheltered in winter, and contrary to its choice in summer, its winter bed should be a dry one. No elaborate housing is necessary, dryness being the element of principal importance. Hogs will crowd together in their sleeping aparment in the cold weather, and if the bed be wet, or even damp, an unhealthy condition is almost immediately produced, as is evidenced by the smoke (vapor) that arises from it, and fatal results may follow. We are performing a very common office when we urge farmers to house their hogs in winter and keep their sleeping place dry.



The ever present question.

TIME TO BUY CREAM SEPARATORS NOW

There never was a better time to buy the best of Cream Separators than right now.

The advantages derived from the use of the good Cream Separator are greater in the fall and winter than at any other time,—when the cows are old in lactation, the loss of butter-fat is otherwise greatest, and butter prices are highest.

Likewise are the advantages of the superior DE LAVAL separators greatest over imitating separators when the milk is hard to separate and the weather cold and variable.

In every case a DE LAVAL separator, of suitable size, will surely at least save its cost between now and July 1st next, and go on returning 100% per year on the investment for twenty years to come.

The agricultural and particularly the dairying outlook was never brighter and more promising.

HOGS AND PACKERS

During the last month the hog market of Chicago, the center of the packers' combine, ought to be a lesson for farmers. Almost every day saw a raid on the prices, frequently marking daily declines of 10 to 15 cents. A strange fatuity seems to possess farmers and shippers when prices start downward. They seem to become panic stricken, and rush the stuff in, compelling the very thing they wish to escape, a further reduction. With the drop in prices during the first week in October, the shipments began to increase. The first week the receipts were 101,805, and the next week 125,446 were rushed in. Unconceivable conditions contributed to these increased shipments. The unusual drouth and light corn crop, with the consequent high price of corn helped to frighten feeders, no doubt, and made them eager to unload; but packers have found that, with little regard to feeding conditions, the way to increase shipments is to begin a reduction of prices.

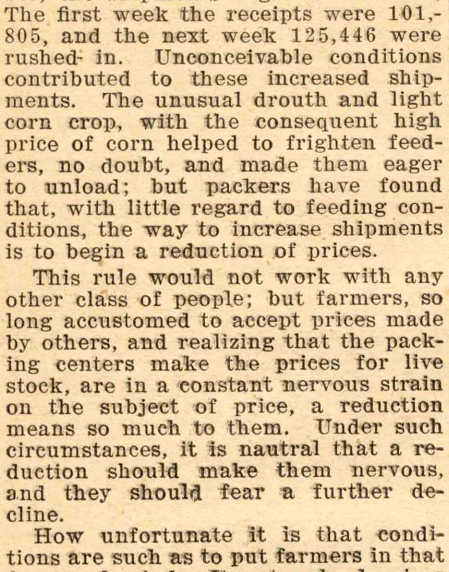
This rule would not work with any other class of people; but farmers, so long accustomed to accept prices made by others, and realizing that the packing centers make the prices for live stock, are in a constant nervous strain on the subject of price, a reduction means so much to them. Under such circumstances, it is nautral that a reduction should make them nervous, and they should fear a further decline.

How unfortunate it is that conditions are such as to put farmers in that frame of mind. It not only deprives them of the profits to which they are justly entitled, but it robs them of their independence and makes their calling subservient to some body else, or to a calling entirely foreign to their own. The publication or educational influence that shall bring them out of that subserviency, and restore them to merited independence will deserve the lasting gratitude and honors of the wordl.

QUALITY OF MILK

There is an almost universal demand for rich milk—those who have milk at all desire the richest there is. This desire is not always based on greatest usefulness. Quantity is sometimes more important than quality. If butter making is the object, then the richer the milk is in butter fat the better, but if the milk is to be used for food in the family the butter fat does not add greatly to its usefulness. In that case quantity is of more importance. Protein is what is needed most for growing children, and the butter fat does not add much to the protein in milk—thin milk has nearly as much protein as rich milk. A quart of rich Jersey milk may make more butter than two quarts of average Holstein milk, but the two quarts are worth more as food than the one quart. Hence for family use as milk, we would rather have the two gallons from the Holstein than the one gallon from the Jersey.

It is often found that the rich Jersey milk will not argue with the babe. It is because it contains too much fat. The fat adds to the heat of the body, a thing the child seldom needs, and it is hard to digest; but it does not build up bone and muscle, the thing the growing child most needs. To determine what is best of anything, it must be measured by the purpose required.



CAVENDISH, VT., Sept. 8, 1908.
Since purchasing a U. S. separator one year ago, we have gained $11.37 per cow over the water separator, from our herd of seven cows, though three of these are heifers and one cow had been milked two years.
ALBERT S. EATON.

A saving of $11.37 per cow in one year amounts with 7 cows to $79.59 or within 41 cents of $80, the price of a No. 6 U. S. separator.

Stop and ask yourself, "How much am I losing?" Perhaps not as much as Mr. Eaton, yet you may be losing even more.

You perhaps will say, "The calves and pigs must have something to eat. To be sure they have, but it is not policy to feed them butter fat at 32 cents a lb. when substitutes at one and two cents a pound are just as good.

You can't afford such robbery in your dairy, therefore send for Cat. No. 137 at once.

ADDRESS ALL LETTERS TO

Prompt Deliveries from 16 Warehouses in U. S. and Canada

LETTERS FROM SUBSCRIBERS

The editor of UP-TO-DATE has decided to find out whether the Wagon Box Manure Spreader was the success one is lead to believe it is by reading advertisements. A list of subscribers was selected and written to with the request that they tell us exactly what they think of this style spreader.

We are glad to print the two following letters—the first replies received:

Centralia, Ill., Nov. 4, 1908.

EDITOR UP-TO-DATE FARMING:

I am pleased to tell you or the readers of UP-TO-DATE that I can recommend the Wm. Galloway manure spreader; it is a perfect piece of machinery; is simple and easy to operate. Any boy that can drive a team can run one. It is well built and will scatter any kind of manure from dust to mud. I will put my spreader on a test with any spreader made, don't care what price. My truck is a farm wagon. Every farmer has that and that is all they need for a Wagon Box Manure Spreader. The value the spreader it to a farmer is owing to the manure he has to spread. I've had mine 20 months and I really think it has paid for itself. Fits any wagon fine and is a perfect success. There is no use of a photo of the spreader for they are just as the picture shows them.

If there is any farmer who wants to hear from me personal, write me and enclose a 2-cent stamp. I will answer at once.

Yours respectfully,
GEORGE V. QUICK.

Jaybird, Ohio, Nov 6, 1908.

EDITOR UP-TO-DATE FARMING:

In regard to Wagon Box Spreader, I have a Galloway Box Spreader; I think it is a success in every way. I can hardly estimate the value; I would not do without it on a farm. I consider the Wagon Box Spreder a success in every respect. I think the spreader has more than paid for itself in the last year. I have two wagons it fits either one. I would advise all farmers to use the Galloway Box Spreader as it is the most perfect in the force feed than any spreader I have seen.

Yours truly,
W. H. NEWMAN.

The Wm. Galloway Co., makers of the Galloway Wagon Box Spreader have an advertisement in this issue. You do not have to accept the testimony of these good farmers whose letters we print. Try the spreader on your own farm on trial. See the advertisement and send for full particulars.

"Keep Your Money in Your Own Pocket"

Says Wm. Galloway to You

Wm. Galloway
President
Wm. Galloway Company

I'm the man whose spreader is so much the best that I can afford to send one to you.

Freight Prepaid

All Freight Prepaid and I don't keep you waiting. I don't delay to write a lot of letters. I trust you to make the fair month's trial of my Galloway Spreader when you get it direct from the factory at Waterloo, Iowa, or shipped at once from one of my Factory's Transfer Stations—Minneapolis—Kansas City—or Madison, Wisconsin. Write me so you can get one for

30 Days Real Free Trial

Here's the idea—Keep your money in your own pocket. Order now—direct from this offer—by letter or postal. Let me send you one of my Galloway Spreaders on 30 DAYS' FREE TRIAL. No money down. Freight prepaid. I know you are a responsible man if you have any need for a manure spreader. Keep your money in your own pocket until you try my Spreader. Tell me to send you my Special Manure Spreader Proposition. I back the Galloway permanently with every guarantee that any practical and reasonable man could ask for. I back the Galloway to give Genuine Satisfaction. If it is not everything it is claimed to be—if it does not do all that the best spreader ought to do—send it back, and I will return every cent of your money without question.

I challenge the world to produce as practical, durable and all round satisfactory a spreader at any price as my

GALLOWAY'S

THE ONLY ENDLESS APRON FORCE FEED
WAGON BOX MANURE SPREADER

Take my hand and signature and bond on that—as legal binding as any contract ever made on earth. My Wagon Box Spreader is made in three sizes—capacity 50 to 60 bushels. It is built to last a lifetime and it fits any truck or high wheeled wagon—narrow or wide tread. It's the lightest draft and simplest machine made. For those who want a larger spreader, I have just perfected a 60 or 70-bushel pattern, complete with trucks. It's new. It's in a class by itself. It has all the merits of the famous Galloway Spreaders with some additional exclusive features that will interest you. It is 45 inches wide and has adjustable bolster stakes. Ask for full information about this new machine—all explained in my New Free Spreader Catalog for 1908-9.

YOU JUST WRITE ME ONCE. Just say on a postal or by letter that you want to get my New Free Spreader Catalog and my Special Spreader Proposition. I'll take care of you right.

Wm. Galloway, President
Wm. Galloway Co.

Get My Special Proposition

which is real co-operation between the Manufacturers and the Farmer. It gives you a chance to cut down the cost of your spreader and almost pay for it in one year. It means exactly what it says.

Every statement I make to you and every Galloway spreader is backed by my

$25,000 Bank Bond Guarantee

BEEF OR MILK

Prof. A. L. Hacker of the Nebraska Experiment Station, has made an ingenius comparison of the relative value to the human family of the beef animal and the milch cow. For the purpose he takes the greatest prize winner at the Chicago fat stock show, a steer which was made to gain in a year 700 pounds live weight, and that dressed a little more than 60 per cent., the yearly net gain being some 400 pounds of meat, but which contained only about 200 pounds of actual food nutrients.

For the other side of the comparison Prof. Hacker took the prize cow, Katie Gerber, that in one year produced 18,500 pounds of milk. That milk contained 620 pounds of butter fat, 700 pounds of milk sugar, about 400 pounds of casein, and 150 pounds of albumen. Here we have nearly 2000 pounds of actual food nutrients as the year's product of the cow against 200 pounds produced during the year by the steer. The steer consumed a much greater value of feed than the cow, and had to be killed to get the benefit of what he had produced, while the cow lived on to duplicate her work the next year.

The lesson is obvious and almost startling. Where an abundant milk product can be made available, the dairy cow, so far as profit or factor in feeding the human family is concerned, leaves the beef steer almost too far in the rear to be considered.

RELATIVE STRENGTH OF CAST IRON MALLEABLE IRON WROUGHT IRON STEEL

HERCULES STEEL STUMP PULLER

A SURETY BOND WITH EVERY ROLL OF CONGO ROOFING
NEVER LEAK

Congo is the only ready roofing on the market *backed by a Surety Bond.* We can afford to make our guarantee so strong because Congo itself is as strong as the guarantee.

Our ambition has been right from the start not only to make Congo the best all-round practicable and serviceable Ready Roofing, but to back it up by a guarantee so *sure* and *complete* that it will be the aim of every owner of a building to use Congo when needing roofing.

This bond covers a period of 10 years and gives to the user of 3-ply Congo the most reliable guarantee. It is issued by the National Surety Company of New York, one of the largest and most substantial companies in the country.

Congo doesn't cost much. It is extremely waterproof and *always stays so,* and it's very easy to lay. The new galvanized caps (a new feature with Congo) do not rust and cause leaks like tin caps or nails.

Write for a Sample to-day and further information.

SPECIAL NOTICE—If any Congo rolls that you purchase do not contain Guarantee Bonds, write us at once, telling us where and from whom they were purchased, and we will at once mail you the missing bonds.

THE THIRD POWER

THIS BOOK APPEALS TO FARMERS NOW AS NEVER BEFORE

The simple, but powerful story of how the farmer power—the third power—will rise in America. It is a book that should be read by every farmer. Any farmer once reading it should see that all his neighbors are supplied with a copy. It gives a new education and multiplies the value of present knowledge for every person who tills the soil and raises crops for market.

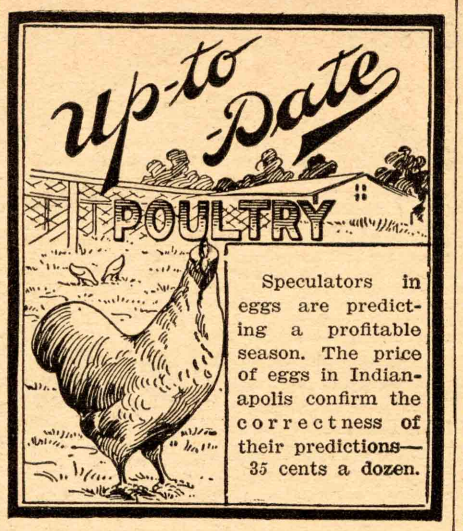
J. A. EVERITT, Publisher
Indianapolis, Ind.



Speculators in eggs are predicting a profitable season. The price of eggs in Indianapolis confirm the correctness of their predictions—35 cents a dozen.

TURKEYS AND THANKSGIVING

It does not take very long to fatten turkeys. Thanksgiving will soon be here and is the time when the sale birds are expected to go to market. As these fowls sell by weight, every pound or fraction added to their weight adds to the money they will bring, and it will also add to their desirability and attractiveness on the consumer's table. It is presumed that these birds are already well fatted, but there is yet time to add no little to their condition and value. We would advise that the turkeys be put upon full feed, not at once, but by increasing gradually for a day or two up to full feed. We do not think it advisable to pen them for so short a time, nor to take them from their usual range, but to give them a good grain feed morning and night.

If the grain can be varied, corn in the morning and wheat in the evening, or vice versa, or corn and oats at one time and wheat and oats at the other, with plenty of water at all times, good results may be secured. Some do not think it best to feed new corn unless it is well dried, without boiling it, but we think there need be no apprehensions from new corn this late in the season.

The only trouble with this course of feeding is with the birds that are not for sale. They do not need the extra feed, but they cannot well be separated from the birds that it is desirable to fatten. The extra feed, however, will not harm the specimens that are to be kept, and it will pay to feed all together rather than not to feed the birds to be sold.

CLEANING THE HEN HOUSE

All who write in the interest of poultry culture urge the frequent cleaning of the hen house. No one thing connected with the care of poultry is more important than that, if we consider it only from a sanitary view point. But we may look at it from another point and find it almost equally important. Accumulations in the well kept hen house are a most valuable fertilizer. Twenty to thirty dollars per ton is paid for commercial fertilizer, and clean hen manure is as valuable as any of them. It is so strong in fact that it must be used with great care. In the Farmer's Digest, a paper largely devoted to fertilizers, and whose principal mission is to induce the purchase and use of commercial fertilizers, we find the following. If what is said of poultry manure is not true, it would not be found in a paper devoted to commercial fertilizers:

It has been found by experience and analysis that hen manure is a very rich and concentrated fertilizer. It is a valuable fertilizer for nearly all field and garden crops, but must be used sparingly, owing to its great strength. When applying to it the soil for the growth of vegetables, the manure should be thoroughly mixed with the soil, since large masses in one place will kill the roots of plants. Applying hen manure to the plowed surface and work it in well with harrow or rake, and if possible allow a rain or two to dissolve out a part of the strength before planting. Hen manure for potatoes may be placed evenly in the row or hills, not more than a large tablespoonful to the hill. This should be covered lightly with fine soil or milder manure, and then the potatoes be dropped and covered.

Isn't it strange that farmers all over this country are constantly shoveling out all waste, and actually wasting it, an article of such value? If cared for, kept free from litter, and pulverized, requiring no mill and easy to do, these droppings are worth more and will go further than any commercial fertilizer on the market. So whenever engaged in cleaning out the poultry house, remember you are shoveling up an article that is worth at least $30 a ton, and save it to be used where it will return its full value in increased production.

VIGOR IN THE BREEDING STOCK

Poultry breeding is no longer a side line on the farm. It is a part of the regular business, and from it comes a good portion of the revenue. The poultry, therefore, must no longer be treated as a side line, but must have attention co-equal with that accorded the cattle, sheep and hogs.

One of the most important things to consider, and from now until next spring is the time to attend to it, is to secure vigor in the breeding stock. Cull out during the winter everything that shows weakness, or does not come fully up to the standard of health and strength a fowl ought to measure to. Such fowls are open bids for disease in the flock and for failure in future operation.

Young chicks are weak and delicate at the very best, and must have careful treatment to bring them through their period of infancy. Add to this natural delicacy a weakness inherited from their parents and the poultry raiser is up against a hard proposition. Select to lay the eggs for hatching hens of known vigor, health and strength, and that have not been exhausted in winter laying, and mate them with roosters of like known health and vigor. This course intelligently followed, may result in a great decrease in the mortality of the young chicks, and in the building up of vigor in the flock that will defy disease and eliminate losses.

THE EASIEST MONEY

We agree with a friend of ours that the "easiest money picked up on the farm is that received for eggs," and that of all farm products eggs are the easiest and quickest turned into money. We agree also that on most farms they are very carelessly handled, and yet to get the most out of them they should be handled not only with care, but honestly. Eggs should be marketed when fresh, and they should be spotlessly clean. To have an attractive lot of eggs they should be uniform in size and appearance, and we agree with the Farm News that to have such uniformity, it is necessary to weed out of the flock all old and sickly hens, undersized and scrubby stock, and, to maintain the vigor, change the roosters every year.

To harden the shells so the eggs will ship well, the hens should have ground bone, crushed shell, or lime, or all three at different times and at frequent intervals. A bran mash two or three times a week aids that object. Even in summer time, no matter how good a range the fowls may have, they should have a daily feed of grain. Keep the nests clean, and gather the eggs every day. When gathered do not keep them in a damp place. Sometimes in hot weather one is tempted to keep the eggs in a spring house or damp cellar for the sake of the coolness, but it is a mistake. And it is an equal or even greater mistake to keep them in a hot kitchen. The best plan is not to keep them long, but while they are kept, a cool, dry place is where they should be stored; and cover them so they will not be fly-specked. Soiled eggs should be cleaned with a dry cloth, or one but slightly damp. It will not do to wash them, for a washed egg quickly spoils and is easily broken. Do not pack eggs in bran, oats, saw dust, or anything else of that kind, for it will make them look old. Any buyer will furnish egg cases, and that furnishes the ideal packing. Market frequently.

WINTER IN THE ORCHARD

Fruit growers in a large portion of the apple belt are seriously discouraged. A year of over yield and more than glutted markets, causing a large percentage of the product to go to waste in the orchard, followed by two years of almost entire failure, with a knowledge that the trees themselves have deteriated and now present a very unhealthy appearance, constitute a combination of circumstances that are enough to discourage the most determined people.

But the thing to do now is to get the orchards back to a healthy and thrifty state that they may be in condition to do the work nature may assign them next year. During the winter, work may be done in the orchard when one can scarcely work elsewhere and another advantage is that the work may be dropped at any moment to take up some other job, or to attend to the winter chores, nothing being lost by the break, and nothing being at a loss to find the place to begin again.

From November to March trees may be trimmed, brush burned, dead trees taken out and destroyed, all rubbish removed, and a general cleaning up made. The winter months are really the house cleaning season of the orchard and it should only not be neglected, but it should be thoroughly done. Fire is the very best agent of destruction, for in the burning of the brush and rubbish much more is destroyed that it is important to destroy, than what is seen to be gathered up and placed on the fire. If the entire orchard can be burnt over, if the fire be kept from the trunks of the trees, and if it be sure that there will not be heat enough generated to injure the branches, it will prove one of the finest cleaning up process. But firing the orchard must not be undertaken unless all conditions are favorable and the matter is in charge of cool heads and resourceful hands.

We earnestly recommend severe pruning of trees that have not borne much in the last two seasons. Especially would we cut back old trees, and so far as possible make them put out new growths. This plan was a favorite one with the late Prof. J. P. Stelle, of the Mobile, Ala., Register, who claimed that he would much rather make a new orchard of an old one than to make it from the nursery.

If pruning and cleaning up be supplemented by treating the trunks of the trees, and even as high up on the lower branches as can be reached, with a lime wash, or strong soap suds, or a kerosene emulsion, another valuable step has been taken toward renewing the orchard. We would not make the lime wash too strong. The object is not so much to whiten and ornament the trees as it is to kill insects and destroy eggs, nests and fungi. The winter is on. Take your time. Do these things, or as many of them as may be reasonably done, and then, if the orchard again fail, it will not be the fault of the orchardist. If it bear you will see the effect of the winter work.

UP-TO-DATE VINDICATED

The apple crop for this year is about marketed so far as the orchardists or producers are concerned. While the government reports and the buyers' reports promulgated in general press, and even in most of the farm papers, though admitting that the apple crop was small, persisted in declaring that it was equal to meet the demand, UP-TO-DATE FARMING said it was the smallest crop for years, that it was entirely inadequate to supply the demand, and that farmers ought to receive a remunerative price. We said also that, after the fruit had passed from the growers' hands, the tone of these reports would change, and the sources which in the beginning had reported an adequate crop, would be the strongest in the proclaiming an apple shortage. It is no pleasure to us to repeat these things, but we do it to vindicate the truth of history, and in the hope of eventually educating farmers. We now clip from one of the leading trade papers of the country, the following:

"Buyers are now back from the New York orchards, and all with the same story. The size of the crop has been exaggerated, and will not nearly approximate the figures of last year. They expect apples to be high this year."

"Back from the orchards." The apples are bought, and the farmers have sold themselves and their fruit at the same time. Now the crop is light, apples are scarce, and will be high. We sincerely wish farmers would learn.

The Board of Trade, Dept. O., Phoenix, Ariz., will be glad to send free to farmers full information about the splendid country near this thriving city. The west is booming. Last year the productive wealth of 160,000 acres was $8,752,000 or an average of $55 per acre. What other section of the country can equal this record? Farmers who are interested in this section where weather is ideal should write to the secretary as above.

Every hunter knows how important it is to have a reliable gun—one you can depend upon to shoot hard and quick and straight. Such guns are made by the Union Fire Arms Co., 277 Auburndale, Toledo, Ohio. Whether you want rifle or shotgut—repeater or single shot send for their large catalog. If interested at all in hunting and guns you should do this.

The motor-buggy for country use is gaining great headway in many localities. The Black Motor Buggy is built for hills and mud and sand. It is a medium priced motor vehicle. Made either buggy or surry. Send to the Black Mfg. Co., 124 E. Ohio St., Chicago, for their catalog A239, which explains about their several sizes.

Before you buy a wagon or a set of wheels send for the free book of the Empire Mfg. Co., Box 68A. H., Quincy, Ill. Low down handy wagons are money savers for farmers. They work and make roads—not destroy them. Just send for this book and be *shown*.

Low Fares to the Cheap Lands

November 17

Plan to go on one of these days—

The trip will not cost much. These special low-fare tickets over the Rock Island-Frisco-C. & E. I. Lines will allow you to go one way and return another, without extra cost. You will see more of the South-west than you could in any other way, and can better decide where to locate.

Ask the ticket agent to sell you a ticket over the Rock Island-Frisco-C. & E. I. Lines, either through Chicago, St. Louis, Kansas City, St. Joseph, Memphis or Birmingham, according to your location.

If you will tell me where you want to go, I will tell you the cost of a ticket and send you a map-schedule.

I will also send you some interesting books about the Southwest. They will inform you of opportunities waiting for you there, and will open your eyes to new possibilities. Write for free copies today.

TIME TO SPRAY

Scalecide Kills San Jose Scale and Saves the Orchards and Shrubs

The New Jersey Bulletin No. 186 says "SCALECIDE did almost perfect work applied in October. No injury of any kind was caused on the trees or fruit buds."

Thos. Mehan & Sons, Landscape Gardeners, Mt. Airy, Philadelphia, Pa., say: "We recommend one of the oil solutions and at present are using 'SCALECIDE,' which we consider the best preparation on the market. We have discontinued the use of lime-sulphur treatment, having found the oils far more effective and much easier to apply."

DIRECTIONS FOR USE

For Fall Spraying mix one gallon of SCALECIDE to every fifteen gallons of COLD water. Spray after trees have dropped their foliage.

For Spring Spraying mix one gallon of SCALECIDE to every twenty gallons of COLD water. Use from April to June.

PRICES: 50-gal. bbl., $25.00; 30-gal. tin, $15.00; 10-gal, can, $6.00; 5-gal. can, $3.25; 1-gal. can, $1.00, f. o. b. New York.

Brass bucket spray pumps, $3.00.

Barrel spray pumps, for larger orchards, $6.00.

REMEMBER: One gallon makes 16 to 20 gallons of spray. Spray when the leaves have dropped off so the spray reaches the bark. "Procrastination is the thief of time," and also will steal your trees and bushes away from you. Order a supply of SCALECIDE now and mention UP-TO-DATE.

O. K. SEED STORE, Dept. A, Indianapolis, Ind.

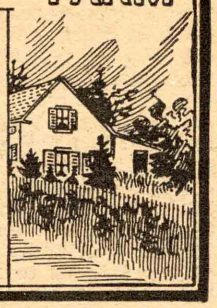
up-to-Date HOME ON THE FARM

All the ladies on the farm who want to organize a National Ladies Sosiety of Equity are requested to write to Mrs. James Howey, East Jordan, Mich.



"Over the river and through the wood
To Grandfather's house we go."
—Whittier.

LIFE IN THE COUNTRY

There is no reason why a farmer's wife or daughter should not keep in touch with the world's progress as a city woman. Women who live in the country are very apt to neglect the cultivation of their minds and talents, because there is so much work to be done—actual physical work. They fail to realize that no matter how tired they may be physically, it will be restful to them to take up a book, a magazine or a newspaper and forget their workday lives.

Surely every country house takes a daily newspaper of some kind, and there is a great deal of education in a newspaper. Women in the country should make it a daily habit to read the newspapers thoroughly and keep in touch with what is going on in the world. Then when they come in contact with city folks, they will feel more self-possessed than many country women do. They are apt to be humbly retiring and too shy, as if they felt themselves "out of it."

Comparatively speaking, country people are really affluent and independent, if they would only think so. City people are the victims of the grocer, the butcher and the baker, as well as the coal man and the gas man. They pay for everything they get except air and would be glad to pay for that if they could get the country kind. Not so with the country people. Their fields are broad, their pastures and poultry yards supply their meat and eggs, their gardens fill their vegetable cellars every fall and their fruit houses are stocked with freshly canned and cured fruits in abundance. They work during the spring, summer and harvest time, but the winter is their own. Most of the winter's work consists in doing chores, and there is abundance of time for mind cultuvation. The long winter evenings should be given over to reading and study, and those who live on the farm could thereby become as cultivated and brilliant as the city folks they so often envy. It is the country life which is to be envied, surely not the city life with its cramped, narrow space and its hideous conventionalities.

If the country woman could only realize it, she has a great many more blessings to be thankful for than the city woman. All she needs is the cultivation of her mental capacities and keeping in touch with what is going on in the big, wide world outside of her country home.

BEAUTIFYING THE HOME

The subject of beautifying the home is of unending interest to most women. Few of them have the slightest hope of being able to copy in their own homes the delightful features that are so freely illustrated today in the magazines that are to be picked up on every hand. Yet there is scarcely a woman who does not study these views of other women's beautiful homes, not with envy, but animated bythe more practical desire of finding some little feature that would add beauty to their own homes. Perhaps there are few of the costly homes illustrated that suggest ideas for the simple homes of the majority of the people of this country, yet such an interior may sometimes be copied with great success.

But whether or not she can have these beautiful things in her own home the average woman never loses interest in the search for ideas to make her own home—be it only two rooms in extent—more comfortable and attractive. The elaborate homes are not the most attractive. Many of the old fashioned kitchens that still are to be found in farm houses, and which are used generally for cooking, eating and living apartment, suggest more of homely cheer than the most elaborately equipped culinary department of the city mansion.

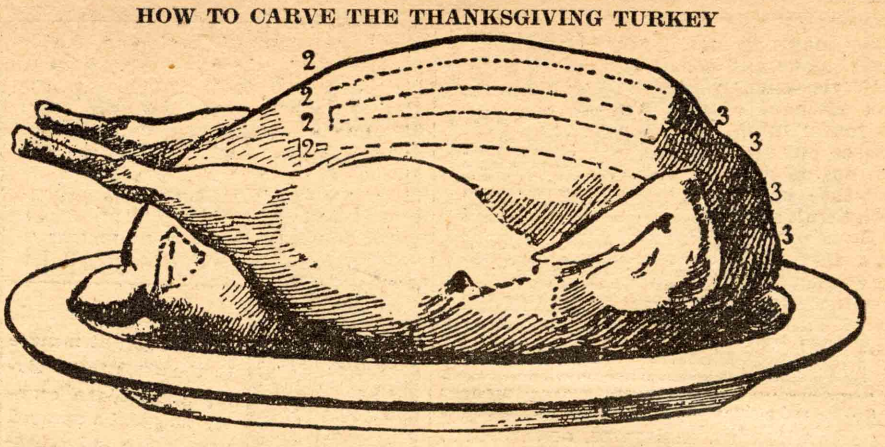
Who that has seen a great roomy kitchen of the olden time with its fireplace, kept more for ornament than use, its quaint windows hung with snowy curtains reaching just to the sill, its pots of red geraniums and its comfortable old - fashioned rocker drawn up close to the window, can ever forget the picture? It was a place to linger and enjoy one's self. Would that there were more kitchens of this kind.

The requirements of space in the city have crowded out the old kitchens with their cheer and memories of good times that are past, but out in the country where one does not buy

"Children Teething"

Mrs. WINSLOW'S SOOTHING SYRUP should always be used for children teething. It soothes the child, softens the gums and allays all pain, cures wind colic and is the best remedy for diarrhoea. Twenty-five cts.

HOW TO CARVE THE THANKSGIVING TURKEY



THE fork should be inserted firmly in the breast of the fowl, just forward of figure 2. If the whole bird is to be served, both wings and both legs should be severed from the body at once and allowed to fall neatly on the platter. Then the carving knife should be drawn along the body, from 2 to 3, making as many slices as may be desired, allowing the pieces to rest for the moment carefully on the platter. Then the wings and legs should be unjointed at the middle joint—a process, by the way, which may require some practice. A piece should be cut from the rear part—figures 1, 1—to allow taking out the dressing. The tastes of the guests being consulted concerning the parts preferred, the meat may then be placed on the waiting plates. In case no choice is named, place a piece of the "dark" and a piece of the "light" meat on plate. Do not serve the lower part of the leg unless a guest expresses decided preference for a "drumstick". The richest, most palatable portions of the turkey—in the order of preference—are the two bits in the small cavities on the back of the bird, the meat in the "pockets" of the neck and the upper joints of the legs.

Remember twelve Christmas Cards for your own renewal, or for one new yearly subscriber at 50 cents a year.

You cannot buy these cards from your lacol dealer. Address.

UP-TO-DATE FARMING, Indianapolis, Ind.

ground by the foot, and where the fancy may run riot in the planning of ingle nooks and cosy little corners the old-style kitchen is still possible. In fact kitchens of this type are still to be found in many communities. Old houses built nearly half a century ago are not so rare as might be supposed, and they have in them the making of delightful homes.

However, the old kitchens are seldom as inviting as one would like to see them. One reason is that they are too cluttered up with a nondescript collection of miscellaneous articles, that have no real place in the kitchen. For some odd reason pantries are not included in the country home, except those of the better sort, so that the kitchen is used for store room, pantry, and as catch all for odds and ends of all kinds.

The kitchen that is properly furnished, either in the country or the city, is not crowded until it is a disgusting place to go into. It contains those things essential for the work to be performed there, and no more. The first necessity is a stove and next in importance comes the kitchen sink. There should be a sink, even if the house is not provided with running water and sewer connection, the latter, of course, not being possible on the farm. It is a comparatively easy matter and one costing very little, to connect the well and cistern with the kitchen sink, and only the woman who has been compelled to carry every drop of water that she uses from the pump in the yard, or else from the back porch, can ever appreciate the saving in time and strength that follows the installation of the kitchen sink and piping the water directly into the kitchen.

Two other articles of furniture are necessary, a place to put dishes, and a work table. In all of the newer houses the dish and pot closets are built into the walls, thus economizing space and adding to the neatness of the kitchen. Since the kitchen cabinet has come into such general use, the old kitchen table has not been in such demand. The cabinet does away with one closet or cupboard, as it has a place for the dishes used regularly and also for the kitchen utensils in greatest use. Like the kitchen sink, the cabinet is a great saver of time and steps, and ought to be in every kitchen. With these three articles, stove, sink and cabinet, or kitchen table, in case the cabinet cannot be had, the kitchen has all the furniture it needs, with the addition of a rocking chair to rest in at odd moments, and a couple of plain kitchen chairs. More furniture would only be in the way, and

IMPROVEMENT OF THE FARM HOME

When the elderly people of today get in a reminiscent mood, and look at the farm homes of their childhood, and contrast them with the homes of the present, they cannot but be lost in amazement. It is doubtful if there was ever a like period in the history of the human race when so great improvements were made in rural homes as have been made in this country within the last half a century. In large areas where, that many years ago, could be seen nothing but the old time log cabins, now stand commodious frame or brick residences, surrounded by well kept lawns, decked in season with a profusion of flowers, and with up-to-date outbuildings adjacent thereto, and all conveniently arranged. Entering, still more marked improvements are seen—carpets, furniture, musical instruments, sewing machines, and other helpful appliances, such as were unknown in the towns and cities fifty years ago.

But UP-TO-DATE FARMING is not satisfied. The farmer and his family have not all they ought to have until there is nothing better to procure. The class upon which the world depends for both food and raiment ought to have every convenience, beauty and comfort enjoyed by the most wealthy. But they have not yet. In many cases it is their own fault. So many are content to plod along in the beaten paths and worn ruts, and scarcely see the improvements that are being made around them. We would wake such people up, and insist that they modernize their labor, thought and living; cultivate their tastes, stimulate their ambitions, and boldly step out into the procession of progress.

This time of year, nature's period of rest, is a good time to plan the home surroundings for the coming season. Even though the dwelling may be a modest one, not up to those referred to above, it is susceptible of many conveniences that are not expensive. Study them out and provide them. Paint, paint, paint! Not costly, but "making all things new." The flowers of next growing season need but the planting of the seeds or plants, and a little care and culture afterwards. The grass plot needs but to be trimmed to cover the yard with a carpet of nature's weaving. The growing children! How they can help with all these things. Each may have its own part of the yard for ornamentation—its own plot of flowers, etc. If the children of our day had had the opportunities and examples of the present—well, they might have been as careless, and listless, and sightless, as are so many children of today.

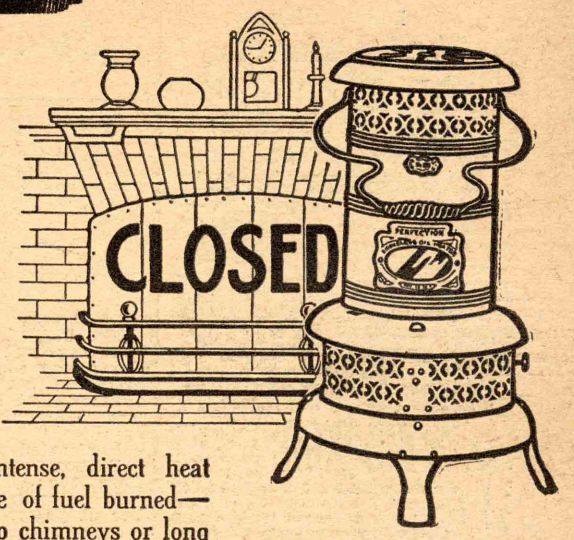
At all events, make the home beautiful.

THE SCHOOL AND ITS PURPOSES

The school is not merely a place for children and young people to assemble daily, to study and recite lessons, and to become proficient in things taught in books. It is rather a place to build character, to qualify for successful living—to make good men and women. It would be so much easier to do these things if teacher and pupils understood and appreciated them.

In most of the states of the American union, the public school is a state institution. State law requires it, provides for its cost, prescribes the qualifications of its teachers, and outlines its methods of procedure. The state does this, theoretically, not for the good of the children especially, but for its own good. The good of the state depends upon every boy and girl growing up within it. The state is good and progressive only as its people are good and progressive. The state knows that as the children of today, so will the people of the future be—so will the state be in the future. Hence the state provides for schools, not to make scholars only, but to make successful, broad minded and progressive people and good citizens. This is the real object of the schools and the purpose of their creation. Education is but an incident, a means to the end.

We are very sorry this central idea has not a more prominent place in the thought of the public schools. The state itself should make it more prominently a qualification of the teachers, and require that their work be done with a view to good people and good citizenship. The state has a right to see to the accomplishment of its purpose, and if it fail to do that its object in the creation of the schools will fail. Learned bad people, educated bad citizens, are more dangerous than the ignorant. Let education and goodness, right living and right thinking, go hand in hand, and the glorious future of the state, of government, is assured.



The Heat that Doesn't go up the Flue

You receive intense, direct heat from every ounce of fuel burned—there are no damp chimneys or long pipes to waste the heat from a

What is a good kind of material for children's wash dresse?—*Patience P.*

One of the most beautiful, practical and inexpensive wash goods is Simpson-Eddystone Prints. There are so many pretty patterns and the fabric is so substantial. It stands the frequent washing that children's dresses must have, and it doesn't fade. Make them up simply. They are so pretty themselves that they do not need elaborate trimming. The Sheperd Checks are particularly good for children's dresses.

"I got a bad fall when I was a child," said the talkative caller, "it knocked all the senses out of me."

"And have you no hope of ever recovering from it?" was the cool reply.

Up-to-Date Farming Pattern Dep't.

CHRISTMAS SUGGESTIONS

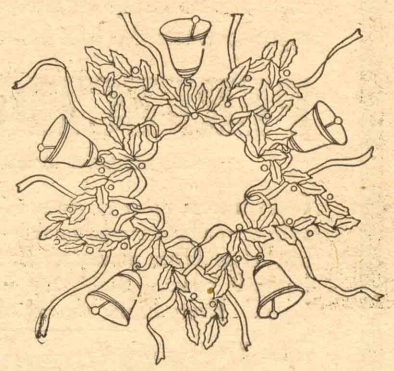
899

No. 899. With an unusual amount of daintiness and grace this glove case should prove very desirable as a gift. When embroidered in the appropriate shades of silk as furnished it cannot fail to please the most discriminating woman. The prices are:

Perforated tissue paper pattern, 15c.

Pattern stamped on white or brown linen, 30c; silks to work, 20c.

When ordering don't neglect to state number of pattern.



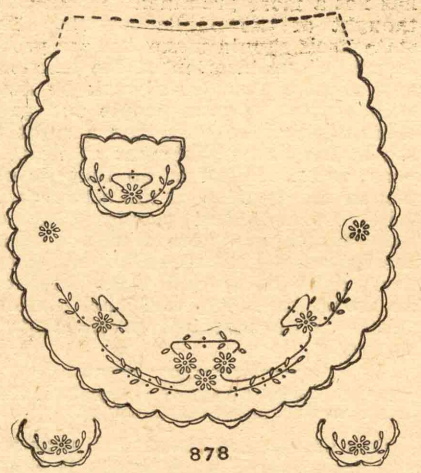
844

844. Somehow, there is a certain strong all year attraction in a genuine Christmas embroidery theme. Holly, bells and bright colored streamers, what can be more beautiful and appropriate? The design shown, handsome in itself is further enhanced by the delicate tinting in which it is done. The prices are:

Perforated tissue paper pattern, 25c.

Pattern tinted on tan ticking with front and back, 65c; material to work, cottons, 25c; silks, 60c.

When ordering don't neglect to state number of pattern.



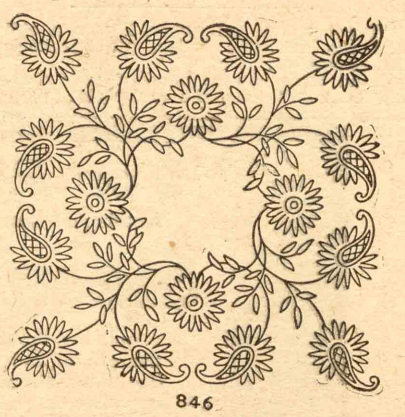
878

878. When actual usefulness is considered essential, the design here shown for a ladies' embroidered apron, should be the first choice of the needle woman. Dainty, and still easy to work, this number is ideal and will make a much appreciated gift. The prices are:

Perforated tissue paper pattern, 25c.

Pattern stamped on lawn, 35c; material to work, 15c.

When ordering don't neglect to state number of pattern.



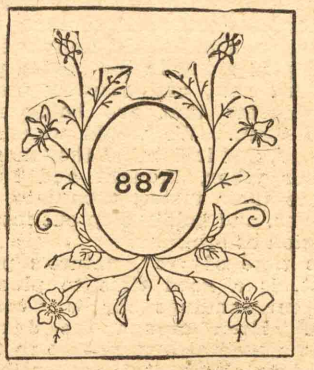
846

846. Experience with the needle is practically unnecessary in the execution of the pillow top design here shown. Repousse braid is made in zig-zag form and the points are simply tacked down to form the flowers and buds as stamped on the pattern. The balance of the design is made in simple stitchery. The prices are:

Perforated tissue paper pattern, 25c.

Pattern stamped on brown linen, 65c; material to work, 90c.

When ordering don't neglect to state number of pattern.



887. The pretty wild rose design for a picture frame here shown will, when made up make a most appropriate gift for any occasion. It is decidedly easy to make, simply being sewed to the card board mount which is furnished with the stamped pattern. The prices are:

Perforated tissue paper pattern, 15c.

Pattern stamped on white or brown linen with card board mount, 30c; silk to work, 20 cents.

When ordering don't neglect to state number of pattern.

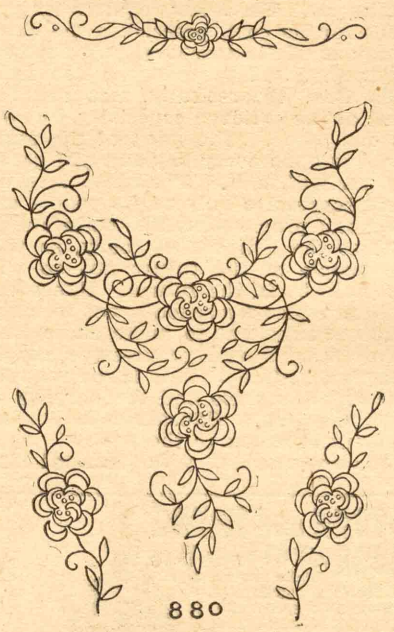
907

907. As a variety of suitable gifts for men is so small a practical article such as the forget-me-not shaving pad here offered should prove a valuable suggestion. It is quickly embroidered and when made up with the card board and pad of paper furnished with the stamped pattern it makes a gift that is long remembered. The prices are:

Perforated tissue paper pattern, 15c.

Pattern stamped on white or brown linen with pad, 30c; silks to work, 20c.

When ordering don't neglect to state number of pattern.



880

880. Pleasing to the eye and of novel conception is this adaption of the rose design for shadow embroidery. As the shadow work is so quickly done and shows up so effective when finished, this number should prove decidedly useful to the busy woman. The prices are:

Perforated tissue paper pattern, 25c.

Pattern stamped on 2½ yards of fine lawn 75c; stamped on 2½ yards of fine linen, $1.85; material to work, 20c.

When ordering don't neglect to state number of pattern.

Worry Hurts, Work Doesn't

All our troubles are about things which never happen. We suffer through fear about tomorrow. When tomorrow comes the thing we worried about doesn't occur. If we work hard and keep busy we don't have time to worry. There is no real trouble or hard luck in the world but incurable sickness and death. Everything else in the world can be outlived and overcome.

We can shut our eyes and imagine we see a beautiful rose, or we can imagine we see a horrible murder. Both look real, but both are merely imagination. They are only mind pictures. Our worry is always only in the mind. When we think, we either let our minds run into worry or into pleasant thoughts. The great cure for worry is to occupy our minds with our work and with pleasant thoughts and then we kill worry. There is a wonderful book called DOLLARS AND SENSE which tells all about worry and happiness and how to live and act to get joy out of life. This book has 80 great helping chapters that tells us how to think, live, work and act to make our lives happy and full of peace and contentment.

You can get this book by sending 25 cents in stamps to R. Hunter & Co., Oak Park, Ill. The editor of this paper believes this wondeful book has done more to drive away the blues than anything ever published.

Everything in this great book is so simple, so sensible and so plain that you feel better the moment you start reading it. We want all our readers who want comfort and help to read this wonderful book. It brings joy and sunshine and drives away clouds and sadness.

REQUEST ADVERTISERS WANT TO *Know in what Paper seen. Therefore We* TO *their Advertisement was Urgently Request You to mention UP-TO-DATE every time you Write to Our Advertisers.* READERS.

SOMETHING For EVERY READER

IS THERE ANYTHING ON THIS PAGE YOU WANT?

UP-TO-DATE FARMING wants new readers, more readers. The best manner in which to get this is through the co-operation of our present readers, many thousands of whom have assisted us before, and have beautiful and useful premiums to show for their efforts.

Send us a club of new subscribers to UP-TO-DATE FARMING. Don't think you can't get up a good large club, for you can. Honest Abe says, "The successful man is he who once he makes up his mind to do a thing, does it."

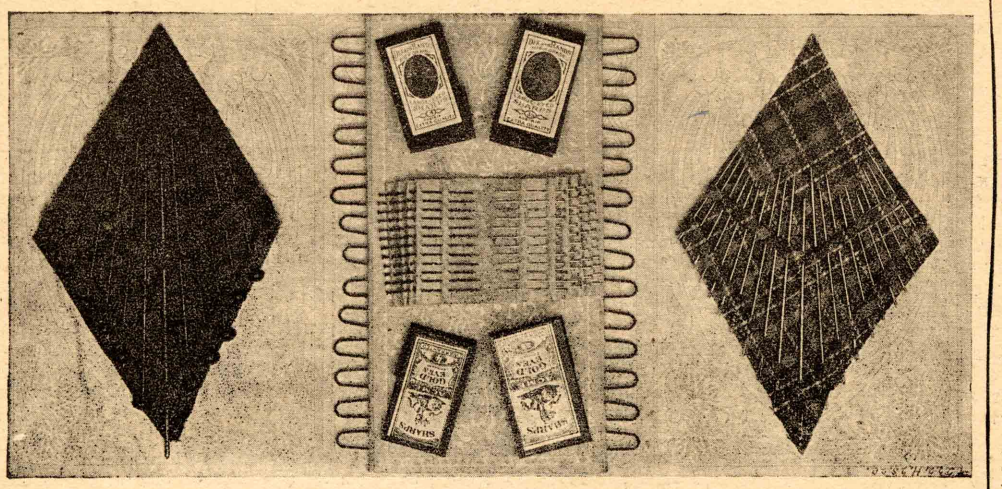
UP-TO-DATE FARMING is in a class by itself, and no matter how many other papers you take you ought also to take this one. Don't you think you should help to increase the circulation of UP-TO-DATE FARMING? We don't expect you to send us a club of new subscribers for nothing—for we are willing and glad to reward any assistance on your part. We NEED your help and need it NOW. You probably have noticed how hard we are working to give this paper the largest circulation of any farm paper when it will make you more money than all the other papers combined.

Your own renewal will count as one of the subscriptions necessary to obtain a premium—renew today, and at the same time get your friends to subscribe.

With every club that is sent us within 30 days we will give, in addition to the regular premiums, a complete Child's Table Set, like illustration noted below. Be sure to ask for

THE CHILDS TABLE SET—It's FREE with every Club. Address all Clubs to UP-TO-DATE FARMING, Indianapolis, Ind.

Woman's Handy Companion

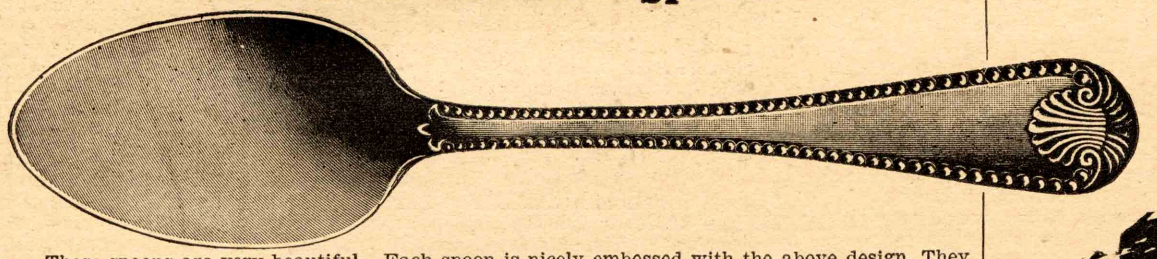


224 Different Articles, All Used Daily by the Women. Size of Package 7x4 Inches

A complete work basket that will be appreciated by every housekeeper. A full variety of high grade, large sized needles—Darning, Wool, Yarn, Carpet, Button, etc., *all silver steel, will not bend.* Also hair pins, best quality, white and black pins, and a large assortment of toilet articles. There is not an article in this package but what is used every day.

The Woman's Companion retails at 25 cents, which is one-fourth the price if bought separately, but we will send the complete outfit FREE, for one new or renewal subscription at 50 cents.

One Dozen Silveroid Spoons



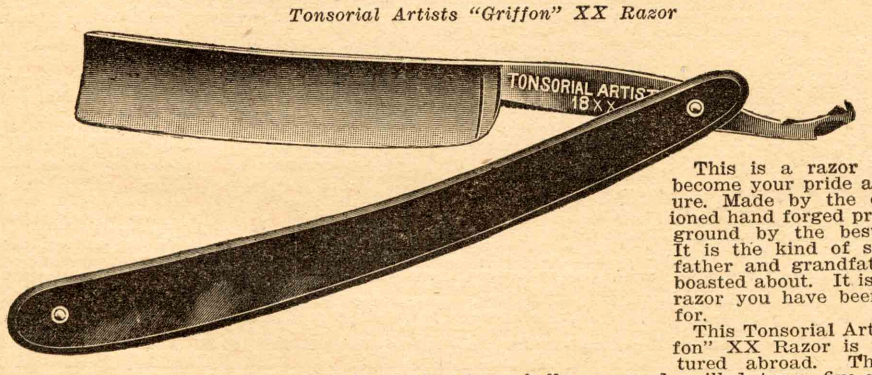
These spoons are very beautiful. Each spoon is nicely embossed with the above design. They are made of a metal called Silveroid that looks like PURE silver, and it carries its high finish indefinitely. We buy them in great quantities, and are able to give one dozen spoons, exactly like the above pattern, for one new or renewal subscription.

SPECIAL NOTICE:—If you are at all doubtful as to the high quality of these spoons, let me send you one, free, as a sample.

Twelve teaspoons for sending us one subscription at 50 cents a year.

Razors for Men

Tonsorial Artists "Griffon" XX Razor



This is a razor that will become your pride and pleasure. Made by the old fashioned hand forged process and ground by the best cutlers. It is the kind of steel your father and grandfather have boasted about. It is the good razor you have been looking for.

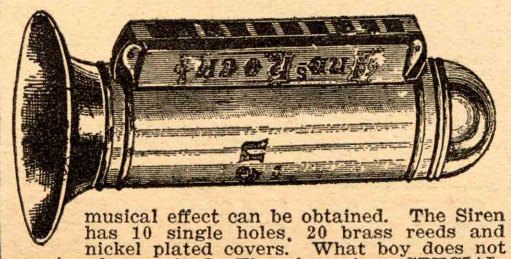
This Tonsorial Artist "Griffon" XX Razor is manufactured abroad. The blades are hand hamemred and hand finished, Hamburg hollow ground, milled tang, five-eight inch size, square point.

No other razor is better known for its high quality than the above. Every farmer needs a GOOD razor, and the Tonsorial Artist will fill the bill.

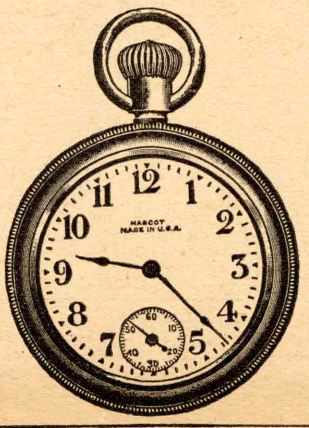
Sent prepaid for a club of 4 subscriptions at the regular rate of 50 cents each.

Siren Horn Harmonica

The Siren is a harmonica with a horn attached, highly nickel plated. By placing the right hand over the end of the horn the finest



musical effect can be obtained. The Siren has 10 single holes, 20 brass reeds and nickel plated covers. What boy does not want a harmonica? The above is a SPECIAL for sending us two new or renewal subscriptions at our regular rate of 50 cents a year.



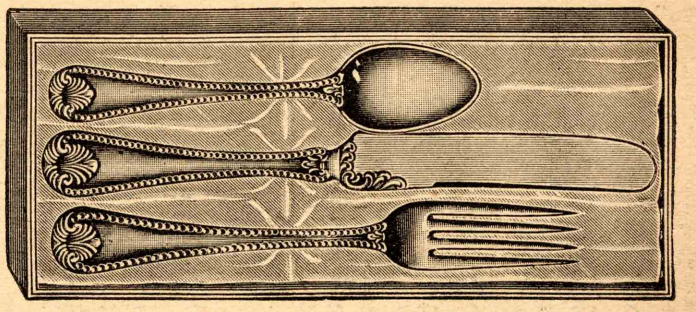
THE MASCOTT WATCH

Everybody, whether a man or boy wants a good watch, and one that will keep correct time.

The Mascot is a Nickel Watch, stem wind and stem set, heavy crystal, a good time-piece, and guaranteed for one year.

Sent prepaid on receipt of a club of three subscribers at the regular rate of 50 cents a year.

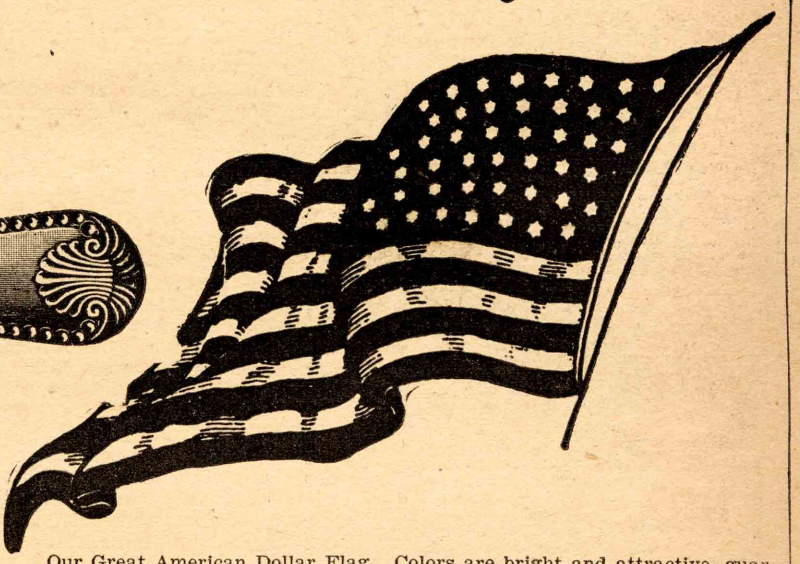
Child's Table Set



Every child likes to feel they possess something that is entirely their own. How proud and happy your children would be could they but have the above set for their own use. If you haven't children of your own, then some little friend would always feel grateful to you were you to give them this little table set as a present. It is *exactly* as reproduced above, being made of Silveroid, and beautifully embossed.

Sent free for a year's subscription to UP-TO-DATE FARMING at 50 cents. Or given free as a special inducement for you to take advantage of one of the other offers on this page.

Old Glory



Our Great American Dollar Flag. Colors are bright and attractive, guaranteed fast to sun and rain, made of cotton bunting, stripes are sewed double stitched throughout, top of flag has heavy canvas band with large brass grommets on each end, size 3x5 feet.

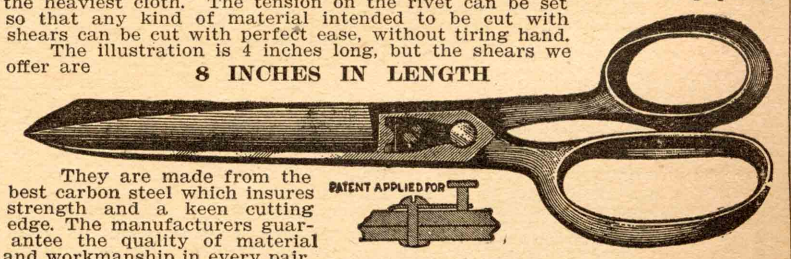
Show your patriotism and pride, by sending us three subscriptions at the regular price of 50c a year, and we will send you the above "Old Glory" free.

Ever-Sharp Shears Free

Dear to the heart of every woman—a pair of finest steel shears that are always sharp, and enables the user to cut any thing from *wet* tissue paper to the heaviest cloth. The tension on the rivet can be set so that any kind of material intended to be cut with shears can be cut with perfect ease, without tiring hand.

The illustration is 4 inches long, but the shears we offer are

8 INCHES IN LENGTH

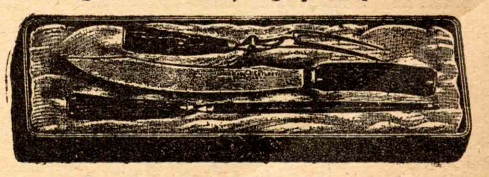


They are made from the best carbon steel which insures strength and a keen cutting edge. The manufacturers guarantee the quality of material and workmanship in every pair.

One pair of these shears (or scissors if preferred) will be sent free for sending us one new or renewal subscription at 50 cents.

Carving Set

A very handsome set; 8-inch steel plate; the handles are genuine stag; solid forged bolster; adjustable guard on fork; highly tempered Milton



steel for sharpening; metal caps on end of handles. Complete in lined case. Will prove a valuable addition to every table.

Sent prepaid for getting six of your friends to subscribe to UP-TO-DATE FARMING at the regular rate of 50 cents a year.

THE NEW

Demi-Bloc System

of

Double-Gun Manufacture

adds new excellences to the superiority of the

STEVENS

FIREARMS

One of these new features is the forging and compressing of the barrel and lug all in one piece. This gives the strongest breech mechanism possible to make.

Then the barrels, loop and extension rib are brazed in one process. So the barrels are necessarily straight and true.

While the solid top-snap, illustrated below, operating with our new rotary cross-bolt, makes a fastening unequalled for strength. Thus Stevens Guns cannot shake loose.

If you'll send for the **Stevens Catalog,** you'll learn all about these new Demi-Bloc features, and all the many superiorities of Stevens firearms—shotguns, rifles, pistols. 5c. for postage brings it.

"Guns and Gunning," by Dan Beard—all about hunting and shooting, game, the care of a gun, etc., will be sent, postpaid, for 20c., paper cover; or 30c. cloth, stamped in gilt.

If you don't find Stevens firearms at your dealers, we'll supply you direct, on receipt of catalog price.

The Housewife's Exchange

A busy mother who makes use of any and all of the labor saving devices that come her way, wants to know how many women who read these pages appreciate the difference that the use of round pans make in time saving when it comes to washing up. Whether a pan has round or square corners may seem a small matter, but any woman can count up the minutes saved each dish washing period for herself. In most kitchens will probably be found the old fashioned stove pans made with seamed square corners. Now, where is the woman who does not dread the task of cleaning out the corners of these pans?

Even after one has scraped and scraped, she cannot be sure that the pan is entirely clean. Bits of the food cooked in the pan get into the cracks of the corner seams and refuse to be dislodged. No one likes the idea of the refuse from the last baking, together with stale dishwater, working out in the next roast and gravy cooked in the pan. Thus cleanliness would be a consideration, says this housewife, were the matter of time saving not taken into account. The latter, however, is important. There are baking pans made nowadays cut from one piece and pressed into shape. These pans have rounded corners and no seams. It is no trouble at all to run a flexible bladed knife around the pan, and the sides come up clean. Two minutes' work as aginst fifteen for the old style pan. Now multiply by seven days a week, 365 days a year, and see whether it pays to buy up-to-date kitchen utensils.

To be sure the new style enamel pan costs more. An ordinary sheet iron pan may be bought for about fifteen cents, whereas the new kind costs from $1.00 up to $1.50. But think of saving fifteen minutes every day for a life time, and then ask whether the old kind really pays to save the first cost.

There is a new strainer on the market that costs only ten cents, but which saves an endless amount of labor. This seive-like strainer has a wire at the top that allows it to rest firmly on the jar or whatever vessel it is desired to strain the liquid into. It's use in jelly-time saves the labor of caring for a cotton jelly bag, but that is not the end of its usefulness. There is not a day when the cook does not have need of a strainer of some kind, and she usually makes the cotton bag serve because there is none other at hand.

* * *

Before putting the window and door screens away for the winter, rub the wire on both sides with coal oil or even lard and the wire will not rust.

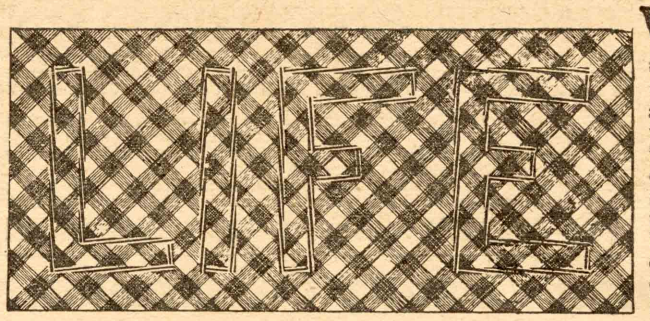
* * *

A reader who lately moved into a new house found out to her deep distress that one of the bedrooms was infected with bugs. Being afraid that the bugs might infest other rooms, she set on a campaign to protect the beds as well as to clean out the infected room. One of the first things she did was to protect her beds against the strips at the ends of the wire springs. These wooden ends were painted with white enamel, leaving no possible place for a bug to hide. This housekeeper advises those who are making use of wooden beds to paint the slats as well as the inside rails and the back of the head board that goes against the wall. In fact, all parts of the bed that are not visible should be painted white. The painted surface can be wiped off easily and it is no trick at all to keep such a bed clean.

* * *

"I always make it a rule to shut myself away in my own room for an hour every afternoon," writes a mother who says she had five children to look after. "If I did not get this rest I do not know how I should be able to get along. I look on that quiet hour as a safeguard to my health, and I come downstairs better in both mind and body. Who can say that husband and children do not benefit as well as myself, for they are saved a peevish, tired and cross woman at the head of the house."

AN OPTICAL ILLUSION



WHEN looking at the accompanying sketch you will say that the letters are alternately inclined to the right and left. They are not so and can be proved by measuring the distance of the top and bottom of any vertical strokes from the edge of the entire block. They will be found to be exactly the same distance. Or take any of the horizontal strokes of the four letters and see how far their extremities are from the top and bottom of the entire block. It will be found that a line joining the extremities of the strokes are strictly parallel to the top or bottom and that they are not on a slant a all. It is the slant of the numerous short lines that go to make up the letter as a whole that deceives the eye.

How often do we not hear women complain about how tired it makes them to stand at the ironing table for several hours? One housekeeper writes of her way, and says that her back never gets tired. She says she has the ironink board elevated to exactly the right height, and that she does not have to lean over the board at a back breaking angle. Her device is simple and of home construction. Two horses were made of rough lumber, and fitted to the proper height. The board is placed across these horses. It is not only the right height, but it is held stationary and the ironer is not worried pulling the board back into place. Women who suffed from fatigue when ironing should try this plan.

* * *

Aunt Hannah tells how to doctor a chicken that is not fat enough to make a promising roast. Taking a sorry specimen, she trussed it up in beef suet, and it came from the oven the juiciest, tenderest fowl imaginable. Taking the strips of suet she cut them thin and bound them around the chicken until it was completely covered. It was then put into the oven and came out quite the best chicken the family had ever tasted.

* * *

How many cooks make use of the flexible kitchen knife or spatula, as it is sometimes called? These knives are for sale in the larger stores, and may be found either in the hardware store or in the household departments, at 25 cents for the smallest size. Unless one has made use of such a knife, she can have no idea of the immense saving in time and energy its use accomplishes. The blade being flexible bends itself into corners the ordinary knife never reaches. It cleans cake or other dough from the pan, leaving the tin or crockery clean. It takes dough from a board in a twinkling, but it is perhaps in the scraping of the pots and pans used in cooking that it finds its best use. The flexible knife cleans the pan in which meat has been cooked in a fourth of the time required for scraping with the stiff knife. The woman who once tries this knife will never be without one.

* * *

Every woman who prides herself upon the variety and tastiness of her "table" will be interested in the new book of recipes by Helen Louise Johnson.

The important point about Miss Johnson's recipe book, which is called the "Enterprize Housekeeper," is that it contains over two hundred tested recipes calling for the use of meats, fowl and other things left over from previous meals. This book will be sent free to any woman sending her name and address to The Enterprise Mfg., Co., of Pa., 218 Dauphin Street, Philadelphia.

60 OLD TIME SONGS FREE
WORDS AND MUSIC

This magnificent collection of the songs our mothers sang, is durably bound in a scarlet and black cover. THE THANKSGIVING DINNER

Of course, there must be a delicious pumpkin pie. No Thanksgiving table would ever be complete without it. Choose a pumpkin which has a glossy exterior and a meaty interior. The small ones which are flat at the end are often the sweetest. Do not peel it, but cut into pieces. Throw away the seeds and the inner shreds. Put into a large porcelain kettle and add a cup of boiling water. This is to keep it from sticking. Place it on the back of the stove to cook slowly. About five hours or more are required to bring it to the proper condition. It should be sweet, tender and nearly dry. Pull off the loose skin and run through a colander. If it seems watery, let it drain over night. When it is ready to bake into pies measure the pulp, and to every cup of it allow one teaspoonful of salt, half a grated nutmeg, a tablespoonful of mace and a large cup of sugar. Beat four eggs and stir them into the pulp. Add four cups of sweet milk. If you wish add a half cup of cream. Beat well and taste to see if sweet enough. Turn into deep pie plates lined with a good pastry and bake three quarters of on hour. When done it will be a rich golden brown and quite firm in the center.

Pumpkin tartlets are also a Thanksgiving dainty made in some homes. To one pint of boiled pumpkin add one tablespoonful each of butter, and flour, six well beaten eggs, a cupful of sugar, quarter of a teaspoonful each of mace and nutmeg. Bake in muffin rings lined with rich flaky crust. These are very delicious.

For the Thanksgiving dinner table use a centerpiece of fruits, piled in a common wood trencher. A trencher is nothing more nor less than the housewife's chopping bowl. Wreath the bowl with trailing vines and put a few sprays of bright hued autumn leaves amidst the fruit.

Housekeepers' Helps and Hints

A pan of cold water in the oven will prevent the bread from burning while baking.

Salt will remove stains from the oil cloth table cover. Apply with a dampened cloth.

Common baking soda will clean tinware. Rub hard with damp cloth. Paper may be also used with good results.

Here is the way to make a good, practical iron holder that will not burn the hand: Sew a thickness of leather from the upper part of an old shoe between two thicknesses of cloth. It takes little time and the holder will last well.

Does the lamp wick refuse to turn up evenly? Then pull out a few threads lengthwise. It will also work with the wick of the oil stove.

The noise of squeaky thinks may be stopped by oiling with coal oil.

Laying tough meat in vinegar a few moments will make it tender.

If you wish to leave a pot of vegetables boiling add a teaspoonful of butter to the water in which they are cooking and they will not boil over.

Finger marks on paint can be easily removed by rubbing with a clean white cloth dipped in kerosene. The wood should afterwards be wiped with a dry cloth.

After trimming, turn the wick of a lamp below the burner or the oil will ooze.

Paraffine used on the tops of preserve glasses can be saved until the next season by washing in cold water and putting in a tin box with a tight lid.

Furniture takes a better polish, if, before starting the rubbing, all dirt and dust is rubbed from the wood by a slightly dampened cloth.

REPAIRING UNION SUITS

Wool union suits that have become too small through shrinkage can be made almost as good as new. Cut the suit in half around the waist line. Buy a skein of wool yarn the color of the suit and crochet a common stitch on to the waist part, row after row, until you think you have the desired length of garment. Then join this with the same stitch on to the trouser part and you will have a suit which can be worn a few more seasons.

IRONING SHIRTS

To prepare a shirt for starching, turn the right side out, gather up the breast and collar neatly in the left hand, dip them in cold water and wring out.

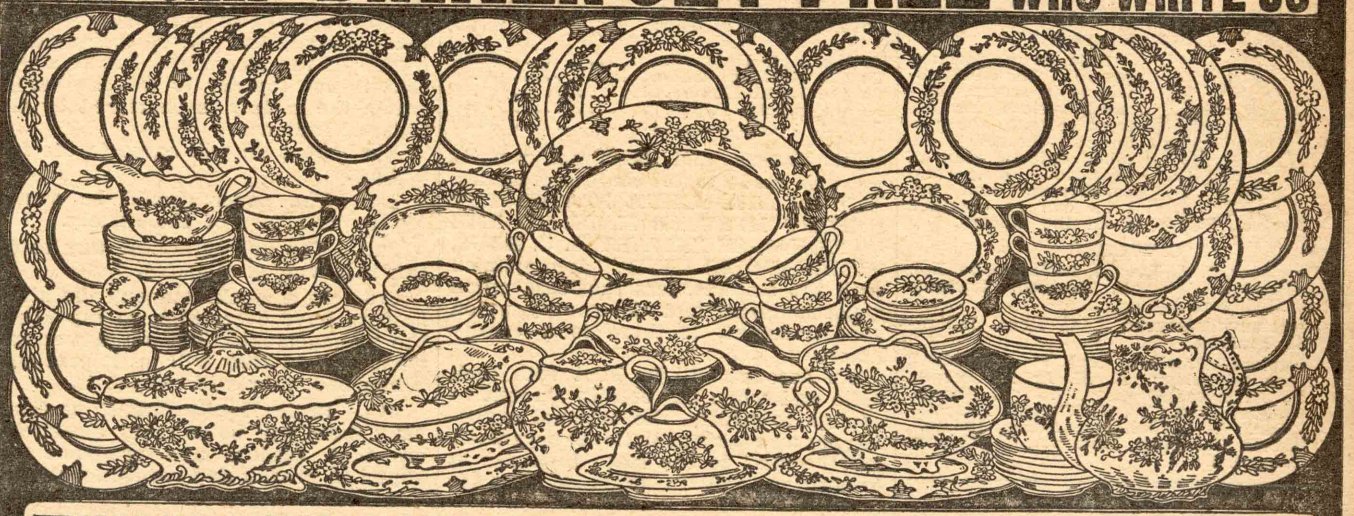
This is to make the part to be starched wet, as the rest of the shirt must be dry, else it would not iron at once.

Do the same to the cuffs.

Afterwards give a little dry rub to the breast and cuffs, or else take a piece of muslin dampened, and rub over in case of tough starch remaining.

Wring dry in a towel, fold the shirt up, doubling the breasts and spreading out the cuffs, roll tightly up for an hour, when it is ready for ironing.

A HANDSOME FULL-SIZED **DINNER SET FREE** TO EVERY LADY WHO WRITE US



THE MOST GIGANTIC OFFER OF THE CENTURY

YOU NEED NO MONEY. We Trust You with Our Goods.

WE PREPAY FREIGHT on Soap, Premiums and Dinner Set.

BARBER | WITCH HAZEL | CASTILE | GLYCERINE | OATMEAL | PINE TAR | VIOLET

OUR PRICE 25 CENTS A BOX.

Being determined to earn a National Reputation as the most progressive house in the United States and gain a wider distribution for our *strictly pure*, high-grade groceries, we now offer absolutely FREE to every lady who writes us a handsome, artistically floral decorated, full size

54-PIECE DINNER SET FOR THE SALE OF ONLY 12 BOXES SOAP

of extra quality and finely perfumed, giving as premiums, with each box of 7 large cakes, *Baking Powder, Perfume, Talcum Powder, Teaspoons, Shears* and *Needles*, (as per Plan 195) illustrated above. We can safely recommend The Pure Food Co. as being a thorcughly reliable and responsible firm.—EDITOR.

As Christmas and New Years approach you wonder what to get for certain loved ones and friends. Ever think of calendars, books and beautiful cards? Go to any first class store and ask to see the line made by Raphiel Tuck & Sons Co., New York, London and Paris. For exquisite work of the printer's and lithographer's art this firm leads all others. A card for each of your friends will be a splendid way to remember them.

Aunt Dilsie's 'Ligion

Auntie's favorite song or hymn was something about being a shining light, with a refrain of "You in your little corner and I in mine." The song summed up Aunt Dilsie's creed. "Keep a shinin' honey, 'ats mah 'ligion," she used to say, and she certainly practiced what she preached. Her face always shining with good nature, was reflected in every kitchen utensil that cleaning and rubbing could put a polish on.

Auntie's one trial was the kitchen stove, which, in spite of all her efforts, would not shine.

"Miss Fanny," she would say, "'pears to me lak that stove is my thawn in the flesh. Yas'm it surely am. That stove jest sets there a defyin' me to make it shine. "Clar to goodness, Miss, you done got to get a new stove or Dilsie's got to get a new mist'is—yes'm. That's Suah!"

To get a new stove was unnecessary. To convince Dilsie that it shined good enough, was a hopeless task. Undoubtedly we should have lost Auntie but for the advice of a neighbor to "try X-Ray Stove Polish."

We chose Dilsie's afternoon off to experiment with the polish for ourselves, and we were so successful that the stove was the brightest article n Dilsie's bright kitchen.

Naturally, when Auntie returned, we had to peep and listen to learn how the shining stove would appeal to her.

"For th' Lawd's sake," she broke out, "Miss Fanny done got a new stove for Dilsie, an' jest th' shinest stove ah evah laid mah eyes on." But as she stooped to a closer examination she discovered that it was the same old stove only polished out of all recognition, and just then our giggling betrayed us.

At first Dilsie affected to be angry because we had polished her stove. But she soon accepted the eradication of her "thawn in the flesh" with gratification, and any time when she has newly polished the stove Aunt Dilsie is sure to stand off and gaze beamingly at its brilliance with the remark "That X-Ray Stove Polish suahly am the shinest polish 'at ever was. It suah am the beatenest polish in the hull wohld."

F. S. E. OFFICIAL DEPARTMENT

Farmers Society of Equity

(INCORPORATED)

This is a farmers society. Its chief object is to secure profitable prices for all farm crops to the producers thereof. Its other objects, plan of operation, etc., and constitution and by-laws can be obtained from the officers.

OFFICERS

President, J. A. Everitt, Indianapolis, Ind.
Vice-President, W. E. Greilich, Traverse City, Michigan.

Secretary-Treasurer, I. C. Rous, Indianapolis, Indiana.

Directors—President and Vice-President, and the following: N. M. Ashby, Sebree, Ky.; J. M. Myers, Ramsey, N. J.; R. Sherod, Keosauqua, Iowa.; W. H. Mitchell, Hutchinson, Kan.; L. H. Johnson, Attica, Ind.; S. W. Morris, Rochester, Minn.; A. G. Schmidt, Madison, S. D.

33

NOTICES

LOCAL UNIONS. The Farmers' Society of Equity has ready for delivery a complete assortment of blanks, forms and instructions for the use of local unions. If your union has not received them please apply to headquarters at once. Price with charter, 50 cents.

ORGANIZERS. Send us the dates of your meetings at least 10 days before the date of the paper you want them to appear in. Also keep a supply of report blanks on hand. They are free.

Members' buttons for F. S. E. cost secretaries and organizers one cent each. A supply should always be kept on hand for delivery to new members. The same way with members' cards and fee and dues stamps, but these will be sent on request without advance payment.

You're not quite ready to start, you say;
The time to be starting is now—today,
Don't dally; begin!
No man has ever been ready as yet,
Nor ever will be;
You may fall ere you reach where your hopes are set,
But try it and see.

—*Kiser.*

Something to work for.

UP-TO-DATE FARMING is in its element when teaching farmers the correct principles of profitable farming and organizing them to get the profitable prices.

Upward and ever onward, Justice, Equity, Truth and Brotherhood. These will be our watch-words until the Farmers Society of Equity is firmly planted in every agricultural district in the country.

* * *

Your Local Union. If it has not been meeting regularly call it together at once. Any member can make this request of the president or secretary.

At the next meeing read the constitution and by-laws of the F. S. of E., as printed in November 1st number; the resolutions and other acts of the convention. Also the minimum prices as printed in this number.

Each local should then act on these matters and report the action to I. C. Rous, secretary F. S. of E., Indianapolis, Ind.

* * *

In this number is printed a communication to Michigan members, from state president, W. E. Greilich. This is accompanied by a blank for members and local unions to vote. This blank can be used by members in other states also, and we request that it be used.

* * *

The mass convention that organized the Farmers Society of Equity passed the following resolution:

Resolved, that all members of the society who were in good standing in 1907, will be accepted into the Farmers Society of Equity on the payment of the annual dues provided, viz: $1.50, which will place them in good standing for one year from the date of payment; Provided the terms of this resolution shall not be in force after the 1st day of March, 1909.

The dues are apportioned as follows:

To the National Union	$0.25
To the State Union	.25
To the County Union	.10
To the Local Union	.40
To the Official Paper	.50
Total	$1.50

The membership fee is $2.00 and apportioned as follows:

To the State Union	$1.10
To the National Union	.20
To the Local Union	.20
To the Official Paper	.50
Total	$2.00

In Kansas and Michigan reports must be made to the state secretaries. BUT IN ALL OTHER STATES THE REPORT MUST BE MADE TO THE NATIONAL SECRETARY, I. C. ROUS, INDIANAPOLIS, IND., accompanied with the amount, less the local union apportionment, and the county union apportionment, if there is a county union.

An account will be kept with each state and when the credits amount to enough to justify, the national organizer, or an assistant national organizer, will be sent to the state to assist in organizing and to organize a state union.

Members and local unions are particularly cautioned against disregarding the above instructions, as to disregard them, and send reports otherwise, may cause dissatisfaction and result in loss of money.

* * *

Since the 1907 convention many local unions held the dues awaiting the action of the 1908 convention. These should now proceed as recommended by Pres. Greilich of Michigan and published on page 20 of this issue. When reporting the vote it should be accompanied by the dues held.

In all cases where dues were not paid in 1908, whether by members of local unions or members at large, the dues should be paid now as provided in the resolution printed above. This should be done without delay so that funds may soon be on hand to prosecute a vigorous organizing campaign in each state and so each member will get the official paper.

In no other way can a united society be brought about.

* * *

We believe UP-TO-DATE FARMING was the first paper to proclaim as a basic, fundamental principle, that "co-operation is the life of trade," as opposed to the old, generally accepted belief that "competition is the life of trade."

This is accepted as true in nearly all lines of human endeavor, but with no class is it more emphatically true than with farmers. Farmers can only be a free and prosperous class when they accept this law and make it the law of their life and business.

When farmers work together for the common good their days of uncertainties in profits will be past. And this time will not come in any other way than through the Farmers Society of Equity.

If what we write is true, then we appeal to every reader to see that our society has its full original strength by the end of this year and we'll multiply this in 1909.

* * *

There are exceptions to all rules. This is generally accepted as true.

UP-TO-DATE FARMING has urged a rule on farmers to not invest in foreign capital stock corporations, and we will maintain this rule in the future.

But we can conscientiously argue an exception to this rule in the case of the Equity Publishing Company to publish the official paper of the Farmers Society of Equity, viz: UP-TO-DATE FARMING.

Some of our arguments are presented in "For a Greater Society" beginning on page 2 of this issue. Besides the points covered in that article, there is the additional argument that the paper has been published almost eleven years, is not an experiment, but is one of the sound business institutions of the country.

Also, we believe every reader of the paper, every member of the Society of Equity, and indeed every observing farmer in the country will admit that farmers have at last the right plan for organizing and that they are going to organize on the F. S. of E. plan. This being true, as it is true, UP-TO-DATE FARMING is going to be inseparable from the organization. Hence it should be owned by the members. But in a way that is not counter to the law under which the society is chartered by the State of Indiana.

We believe all will agree to the following:

1st. The paper should be owned by the members of the society.

2nd. The only practical way to do this is in a stock company.

3rd. In a stock company the stock holders have everything to say about the management. When the management is good they will let it continue. When bad, they will change it.

4th. In the Equity Publishing Company there will be so many stockholders that wisdom and prudence are bound to prevail and revolutionary action will be impossible.

5th. The step to incorporate the Equity Publishing Company is in the best interest of UP-TO-DATE FARMING, and of the Farmers Society of Equity. Therefore the stockholders can have every confidence in the permanency of the business and that it will be profitable.

We quote from the by-laws of the Farmers Society of Equity as follows:

Sec. 9. UP-TO-DATE FARMING, published at the headquarters of the society, is the official paper of the Farmers Society of Equity, and is furnished to each member of the society out of the membership fee and dues. This paper shall continue to be the official paper unless a change is ordered by a majority vote of the members voting, at the time of any Annual Meeting of the society. This can be made an issue on the demand of the Board of Directors, or by five hundred members in good standing; such demand to be published in the official paper three months before the time of the Annual Meeting. Blanks for the vote shall be furnished by the National Union and sent to Local Unions.

May not this corporation be well condsidered an exception to the rule?

* * *

We intended to print in this number some of the addresses made in the Mass Convention, but the great quantity of other important matter prevents. We expect to print them in a future number.

NOTICE TO MICHIGAN MEMBERS

The new secretary of the Michigan State Union is Charles A. Emmreson, Postoffice address, R. R. 4, Traverse City, Michigan. In a letter from him he requests us to print this appeal to the Michigan members to now pay their dues without further delay. The dues are $1.50 per member, and where a member belongs to a local union should be paid through the union. Members at large should send direct to Mr. Emmerson the full amount. Or in case the local union is not meeting regularly then each member had better send the dues to the new secretary.

Michigan has remained neutral in the difficulties that the society experienced the past year and always sought to bring about a reunited society. At its late state convention it was agreed to organize the state and the officers elected are anxious to begin the campaign without delay and the only delay that need be experienced is the support of the present members. Hence this call.

The list of officers was printed in October 15th number, but we will mention again that Mr. W. E. Greilich of Traverse City is president. The fact that the president and secretary are at the same place is greatly to the advantage of the society. Mr. James Howey of E. Jordan is V. P., and one of the best workers in the state. L. E. Dufer of Sherwood is treasurer and he is the only old officer re-elected. Geo. Sofer of Stanwood is state organizer. He is the right man in the right place, if he is given support. In addition to the above there are on the directorate the following: W. H. Beman of Empire; C. U. Masten of Sherwood; and M. N. Drake of Trufant.

ORGANIZERS

The Farmers Society of Equity wants organizers. Any person who considers himself competent to present the grand principles of this grand movement should send at once for terms and particulars. With the instructions and assistance we will give success is sure to attend your efforts.

Don't conclude that this does not interest you. It does, or should interest every person whose interests are in agriculture, and others who have time to engage in an honorable and profitable business.

The F. S. E. has now added new features to interest and entertain members that were never present before. These will multiply results to organizers and hold the interest of members until there is enough organization to accomplish their objects.

Address
FARMERS SOCIETY OF EQUITY
Indianapolis, Indiana

Notice to Local Unions

All local Unions desiring a charter from the Farmers Society of Equity can secure it by reporting its officers and members to the number of ten or more and remitting the dues as provided in the By-Laws to-wit: $1.50, less 40 cents to remain in the Local Union, or $1.10 per member. And an additional sum of 50 cents for supplies and delivery. Reports should be made to the Farmers Society of Equity, Indianapolis, Indiana, except for Kansas, they should be sent to C. W. Peckham, Secretary, Haven, Kan., and for Michigan to Charles Emmerson, Secretary, Traverse City, Mich.

On receipt of such report the charter and all necessary blanks, members' buttons, etc., etc., will be forwarded, all charges prepaid. Give express office.

There is not a single individual in this list of officers and directors but who will roll up his sleeves and pitch into the campaign to organize Michigan if they are suported. It can be done if a good start is made and this is the time to make the start by every member considering this appeal is to him personally and responding to it at once.

The general has issued the order to battle. Now let every good soldier march to the front and cowards retreat to the rear.

The Proper Care of Work Horses

Is a matter of vital concern to team owners everywhere, but at no time so much as in the hot, muggy summer weather when the shoulders and neck become sore and galled. If you want your team to work in comfort, write Johnson-Slocum Co., 426 State St., Caro, Mich., for a copy of their catalog explaining the merits of their new Adjustable Hameless Horse Collars.

THE march of progress compels revolution—the abandoning of the old, the inauguration of the new. Those who bring this about are called Revolutionists, dangerous people, and they are indeed undesirable citizens to those who are in power. Revolution means death to the old, but it also means birth to a better life.

Revolution is fraught with great danger, much sorrow and suffering. The leader is a man with a prophetic vision, who knows that in order to bring harmony radical measures are necessary.—Thomas Jefferson.

This column is for members and subscribers. Use it to ask any questions that may concern you. Others may want a reply to the same question and an answer through this column will cover a multitude of cases. The answers will be made by Mr. Everitt and may be considered reliable.

Mr. J. A. Everitt:

Question I write you for information. I am a member of Milford Local. At our last meeting we heard a report that there had been a national meeting at Milwaukee, but we can't find out what was done there. We received a letter from S. B. Robinson, Secretary, requesting our Local to collect dues and forward at once as there had been a national meeting held, the most harmonious of all meetings. We don't know what to do and ask your advice. We understand the society's attorney at Milwaukee declared the meeting void. If this is so, how are we to proceed? If the Mass Convention can save the society please let us know. Send full particulars of the Mass Convention and the plans for the next year.. Yours fraternally, J. C. Woodward, Milford, Ky.

Answer. What purported to be the National Convention of the American Society of Equity, and which was confined to representatives of the Barnett-Pauley faction met at Milwaukee, Wis., October 6th.

At the evening session of the first day Mr. Oliver H. Carson, Indianapolis, Ind., attorney for the society, made a brief statement of the legal status of the convention, and said in part:

"I have been employed on several law matters for this society. I have acted in your behalf as I have been requested by your board of directors. About ten days ago it was suggested by one of them that perhaps I had beter attend this convention. When he indicated two or three days later that it was the desire of the board that I should attend. I then said to him that I had grave doubts as to the convention having any legal warrant, and I thought that a matter that ought to have attention. He requested that I give it attention, but it was not until yesterday at a meeting of the board of directors that I had an opportunity to speak to the full board and give them my opinion on the question that had been raised.

"The American Society of Equity of North America is a corporation, and as a corporation it is governed by the rules and laws that appertain to corporations. It was incorporated in 1902, as I recall, under certain statutes of the State of Indiana, and is therefore governed by the laws of the State of Indiana. It is a fundamental rule of corporations—to which there are no exceptions that I have knowledge of—that the members of the corporation, the stockholders where it is a corporation for profit, and the mere members where it is a corporation not for profit, have no legal warrant for holding a meeting outside of the state where it is organized, unless the laws of the state giving legal birth to the corporation shall specially provide for meetings outside the state. Indiana is not such a state, and there is nothing in the laws of Indiana that would warrant the meeting of a corporation outside of that state. After careful search I find that no distinction is made in this respect between corporations organized for profit and corporations not organized for profit. If you were not a corporation you could meet wherever you choose, but being a corporation you are bound by the statutes of the state in which you were organized and by the decisions of the courts in such matters, and you must govern yourselves accordingly."

As a result of this it was resolved to call the Milwaukee meeting a conference and then attempt to legalize it by selecting one or more representatives from each state represented to meet in Indianapolis, Indiana, in December and ratify the work of the conference.

From the Articles of Incorporation of the American Society of Equity of N. A., as filed with the Secretary of State of Indiana, on December 24, 1908, we quote as follows:

The principal office of this society shall be located and maintained in Indianapolis, Marion County, Indiana. * * * The officers of this society shall be a president, vice-president, treasurer, secretary, organizer, general counsel and board of directors and each and all shall be elected by popular vote of the members at the annual meeting of the society at Indianapolis, Marion County, Indiana, on the first Monday of October of each year.

From the law of Indiana, we quote as follows:

Any such corporation may change its articles of incorporation in the manner prescribed by its own rules, but no such change shall be of legal effect until a certificate thereof, under the seal of such corporation, shall be filed in the office of the Secretary of State and recorded in the office of the recorder in which the original certificate was recorded.

This is the contract between the State of Indiana and the society and must govern the society until it is changed by process of law and record. It provides where the regular annual meeting shall be held and when, and what purports to be a regular annual meeting, if held outside of Indiana, or if held in December instead of in October, we believe, cannot be a legal regular annual meeting as provided by law.

One of the objects of the A. S. of E. as set forth in the Articles of Incorporation is: To obtain profitable prices for all the products of the farm, orchard and garden. Now, the society could not abandon this object and substitute for it another object, for instance; to secure low prices for consumers. And one part of the Articles of Incorporation is just as binding as another. If we are correct, and this is also the view held by good attorneys that we have consulted with, then it must be that the acts of the officers selected at the Milwaukee convention, even if ratified by the subsequent meeting in December, will be illegal. We leave the reader to judge.

Besides the grave doubt regarding the ability to legalize that headquarters before October, 1909, there are other conditions that members should know and which will cause them to hesitate, or refuse to support it. We refer to its debts.

In Secretary Pauley's financial report he reports $195.43 on hand with a headquarters indebtedness, (outside of Mr. Everitt's account, which was owing before he took office) of $5,400.00. The financial report of the Equity Farm Journal (official paper) shows $78.13 on hand, and an indebtedness of 7,543.19.

Summarized, we have the following:

Indebtedness of the Barnett-Pauley headquarters, exclusive of official paper	$ 5,400.00
Indebtedness of official paper...	7,543.00
Owing to J. A. Everitt, about....	7,000.00
Total	$19,943.00

Further comment should be unnecessary, except that Mr. S. B. Robertson should place the actual conditions of the society before you when he requests you "to forward dues at once."

The entire hope for the society now centers in the Farmers Society of Equity. Its convention was a great success, it represents all the good influences that caused the society to grow every day while they were unrestrained and that made the society the great power for good it was. The Farmers Society of Equity has not a dollar of indebtedness. A report of the convention and by-laws etc., were printed in this paper November 1st.

Q. The Honorable James Wilson, Secretary of Agriculture will soon make his annual report to the President and the country at large. His past reports covered the amounts of crops raised and the value thereof, but not a word about the cost of production. This omission I consider a big blunder. A business man could not do such onesided business and hope to succeed. I think farmers have a right to know not only what they produce and what its brings them, but how much it cost to produce it. Will you kindly give your opinion of this matter?—J. F. Drabek, Florence, Neb.

A. We have grave doubts whether it would be practicable for the Secretary of Agriculture to report on the cost of producing crops with sufficient accuracy, and on a scale sufficiently comprehensive, to be of much value to the farmers.

You understand that the same crop is produced over a wide extent of territory and under very dissimilar conditions. To take any one particular territory would not be a safe guide for all of the others, and to take enough territories or districts into consideration and compute the cost of raising the crops and then strike an average, would again not be very valuable to the individual farmer.

We believe each individual farmer should keep such an account of his business as would enable him to determine the cost of producing the various crops on his farm. This he would know could be relied upon and it would be an incentive to him to reduce the expense, while also making efforts to increase the yield, and to secure profitable prices, thus enhancing his net profit.

BUSINESS EXCHANGE

This Department is Intended to Bring Buyers and Sellers Together at Moderate Cost

THE BUSINESS EXCHANGE can be made the most valuable department in UP-TO-DATE FARMING. It can be made the medium of sale for surplus crops and as valuable to buyers to supply their needs. It should be used to a much greater extent than it is and thus one of the missions of this paper will be accomplished.

RATES—The Cost for Advertising Under This Head is 4c a Word Each Insertion

Each initial and number counts as a word. No display, except the first word will be set in two-line black letter without extra charge. To bring sellers and buyers together there is no surer way than thru this BUSINESS EXCHANGE. Advertisements under this head are small and we cannot investigate every advertiser. Our "Guarantee of Advertisers" does not apply. Rogues shall not advertise here if we know it. Report any unsatisfactory transactions promptly. When writing please say: "I saw it advertised in UP-TO-DATE FARMING."

Agents Wanted

Agents make money selling Ferry's Handy Hame Fasteners. Every farmer and teamster needs from one to a dozen pair. Sample 25c. Dozen $2.25 Cooner & Fortune Co Indianapolis. Ind.

Agents make $103.50 per month selling wonderful self-sharpening patented scissors and cutlery. A. C. Giebner sold 22 pairs in 3 hours, made $13; you can do it. We show you how. Free outfit. Thomas Mfg Co., 460 Home Bldg. Dayton, Ohio.

Agents: $75 monthly, Combination Rolling Pin. Nine articles combined. Lightning seller. Sample Free. Forshee Mfg. Co., Box 241. Dayton, Ohio

Agents wanted—Household Necessities, large profits. Stamp for mammoth catalog. Shipman Agents Supply Dept., 651 Prospect Ave.. Buffalo, N. Y.

Permanent, profitable, employment. Golden opportunity for salesman or farmer. Seeds, Feed, Silos and Specialties. Necessities, great demand. Lake Erie Seed Co., Buffalo, N. Y.

Wanted good agents either sex in your neighborhood to sell the great discovery, Golden Magic Oil, which instantly relieves all rheumatic aches and pains and lame back. Cures all rheumatism therefore has enormous sales. Men with rigs to travel through the country are also desired. Money in this for you. Write us today. The Stover Remedy Co., Dept. D., Grand Rapids, Mich.

Auctioneers

Auctioneer farm and live stock; any locality. Satisfaction guaranteed. W. W. Marmaduke, Washington, Ind.

Dogs and Pet Stock

For Sale Collie Pups and Ferrets, best of stock at very low prices. Ralph Miller, Lowell, O.

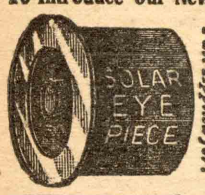
$1.00 Special 60-day Offer

To Introduce Our New Excelsior Solar Telescope



Pat. Applied for.

Never before sold on any telescope for less than $8.00 or $10.00.

THIS is a large powerful Achromatic Telescope for Terrestrial and Celestial use. This telescope is provided with an adjustable Solar Eye-piece. With this wonderful eye-piece you look the Sun square in the face, on the brightest and hottest day, and study its face as you do the moon by night. Every student needs one. This eye-piece alone is worth more than we charge for the entire telescope. Remove the Solar Eye-piece lense and you have a perfect telescope for land observations. Read what this customer says:

Stevensville, Ont., Dec. 18, 1906.
R. C. Irving & Co., Indianapolis.
Dear Sirs.—I received your telescope last Saturday. It is a dandy and I am well pleased with it.
Yours very truly, Enos. Winger.

Positively such a good telescope was never sold for this price before. These telescopes are made by one of the largest manufacturers of Europe. Measure closed 12 inches and open 3½ feet in five sections. They are BRASS BOUND, BRASS SAFETY CAP on each end to exclude dust, etc., with POWERFUL LENSES, scientifically ground and adjusted. GUARANTEED BY THE MAKER. Heretofore telescopes of this size have been sold for from $8 to $10. Objects miles away are brought to view with astonishing clearness. Sent by mail

Postpaid for $1.10.

This is a grand opportunity and you should not miss it. We WARRANT each telescope just as represented or MONEY REFUNDED. Remit by Registered letter, Postoffice Money Order or Bank Draft, payable to our order.

PEOPLES WHOLESALE STORE
INDIANAPOLIS, INDIANA

To All Members Society *of* Equity

Traverse City, Mich., November 10, 1908.

To the Local Secretaries and Members of the Society of Equity in Michigan:

As the members have not received any word of encouragement from the new state officers, we wish to say that it was all owing to the conditions exising at headquarters. But your new President and Secretary have been busy formulating plans to bring our state into line where our organization can be perfected. We know that united we can win, but divided we will fail. We also know that some of our members favor one side and some the other, while some are for mutual agreement. The latter we find, can never be accomplished. Therefore we present the facts as they appear to us, for you to decide, and wherever the majority stand let the minority concede. For only in unity can we make our society what it would have been had the trouble at headquarters been given proper consideration before the 1907 convention.

At the state meeting held at Traverse City, September 30th, it was decided to send a delegate to the Milwaukee convention, to see if there would be a chance for a compromise between the different factions of the A. S. of E. Your delegates to Milwaukee soon learned that Michigan was not in accord with that convention.

To begin with, we found all of the parties who have been placed before the public in an unfavorable light in possession. There seemed to be no disposition whatever, to recognize any one who differed with them. Consequently there was no chance for a compromise.

We found that the society was in a bad shape financially. It being necessary to attempt to borrow $7,000.00 from the delegates present. With what success we were unable to learn. In addition to this there is an indebtedness of several thousand dollars against the official organ, The Equity Farm Journal. Also the society's attorney declared the convention illegal.

The representatives from Michigan only stayed in Milwaukee two days. We could not endorse the officers they proposed to elect, neither could we endorse a lot of other business that came before that convention.

We therefore concluded to return home and attend the Mass Convention to be held in Indianapolis on the 27. The undersigned attended the convention at Indianapolis on the above date, and found eight states represented as follows: Indiana, Illinois, Kansas, Kentucky, Minnesota, Michigan, Iowa, and New Jersey.

The first day was devoted to a general discussion of the situation. We finally came to the following conclusions:

First, that to attempt to obtain possession of the charter of the A. S. of E. of N. A. would lead to a long and costly litigation.

Second, we did not care to assume the debts and clouded name of that organization.

We therefore concluded to form a new society and call it the Farmers Society of Equity, and to incorporate the same. (The Farmers Society of Equity, as it existed the past year, was not an incorporated organization). Considerable time was spent in forming a satisfactory constitution and by-laws. One of the strong points of the constitution and by-laws as adopted provides that a delegate to a state or national convention, must be an actual tiller of the soil and a producer of farm products.

UP-TO-DATE FARMING was adopted as the official paper, on terms that it may be changed from year to year, but only by a majority vote of the members.

The following officers were elected:

President, J. A. Everitt, Indianapolis; Vice-President, W. E. Greilich, Traverse City, Michigan; Treasure, I. C Rous, Indianapolis, Seven Directors—one from each state represented. I did not take their names. As the President and Vice-President are also Directors, you will observe that the whole number of Directors is nine.

The membership fee is to be $2.00, apportioned as follows:

To the National Union	$0.20
To the State Union	1.10
To the Local Union	.20
To the Official Paper	.50
Total	$2.00

The State Union is to have charge of organization, which accounts for the major part of the fee going to it.

The dues are to be $1.50, apportioned as follows:

To the State Union	$0.25
To the County Union	.10
To the Local Union	.40
To the National Union	.25
To the Official Paper	.50
Total	$1.50

It was decided that all who were members in 1907 or 1908, by paying to the Local Uuion the required dues of $1.50, should be enrolled as a member of the Farmers Society of Equity. Understand just what is meant by this. If a member paid dues for 1907, but did not pay dues for 1908, he may become a member in good standing for a year by paying $1.50, the annual dues now, and reporting to state headquarters. This is to retain the full strength of the society. When dues were paid in and held in the Locals, it should be reported to state headquarters at once.

UP-TO-DATE FARMING will more fully explain the business of the convention, particularly the constitution and by-laws.

Now a word as to the outlook of the new society: Kansas gives us our greatest strength, coming to us with 175 Local Unions. (Kansas was not represented at the Milwaukee convention, and not one Local Union is with that section.)

Kentucky, Minnesota and New Jersey all come in with a big and enthusiastic membership for the Farmers Society of Equity, while members in all the other states are deserting the insurgents ranks.

Wisconsin has been the strong hold of the insurgents, but we are going to get heavy accessions there, too, as I learned at the Milwaukee convention. I feel very confident from the way Michigan expressed herself at the state convention at Traverse City, that we will have an almost unanimous membership from her.

In conclusion, I wish to say that the action taken at Indianapolis seems to have been the only thing that could have been done and retain the true principles of the original society as given to us by its founder, J. A. Everitt. My impression of Mr. Everitt is that he is every inch a man. I find him a very modest man, and I firmly believe, an honest man. And I believe that the people of Michigan will make no mistake when they stand by him. I further believe that the Farmers Society of Equity has come to stay and that it will be the only Society of Equity in existence in 1910.

For the purpose of reorganizing Michigan in case it becomes necessary, and for the purpose of getting a full expression from the entire membership, we have decided to give each member a chance to be heard.

Yours truly,

W. E. GREILICH, President,
Traverse City, Michigan.

FLOWER POST CARDS Free to You

In order to introduce our large illustrated monthly, The Epitomist, which is of interest to every member of the family, we make this big offer to you.

Send 10c for a six months' trial subscription and we will send you, prepaid, twelve beautiful flower post cards absolutely FREE. These cards are strictly high-class and are something entirely new. Each card represents a scenic view and has THE LANGUAGE OF THE FLOWERS worked out most beautifully in mottoes in flower designs. For instance, in this series the violets spell out the words "Faithfulness;" the sweet peas, "Wish You Joy;" Chrysanthemums, "I Love You;" roses, "Love," etc. You won't be disappointed, for these cards are not like any you ever saw, and REMEMBER, we have a surprise for everyone that sends for these cards. There are only a limited number, so send today if you want them. THE EPITOMIST, 55 Main St., Spencer, Indiana.

Michigan Ladies Society *of* Equity

President, Mrs. James Howey, East Jordan.
Vice-President, Mrs. M. N. Drake, Trufant.
Secretary, Mrs. Bertha Hammond, Traverse City.
Treasurer, Mrs. Nellie Thompson, East Jordan.

The First Annual State Meeting of Michigan Ladies' Society of Equity met in Traverse City, Oct. 1-2.

Meeting was called to order by State President, Mrs. Howey, and opened with prayer. Mrs. Nellie Thompson, of East Jordan was appointed secretary pro tem. Mrs. Frank Kidder gave a report of previous meeting held in April 1-2. Report accepted.

Motion made and seconded that all ladies present become delegates, with voting power. Carried.

Motion made by Mrs. Crowell, seconded by Mrs. Thompson, that Mrs. Henry Verus of Empire act as committee on credentials. Carried.

Report accepted, delegates seated. Motion made and seconded that the state president appoint all committees. Carried.

Reports from Locals called for. Good reports were given by the delegates from the various locals, who came prepared to tell of the good work done and the esteem in which the society is held by its members. A new work was taken up during the summer, the plan to buy the eggs of the members in each local, setting our own price. This proved very satisfactory, two locals buying and handling almost 500 dozen eggs.

Each local shows a steady increase in membership.

History of our society and account of a year's work done, given by President Howey, the society being one year old October 2nd.

Motion made and seconded that we send greetings to A. S. of E. state convention now in session.

Adjourned until 2:00 p. m.

Afternoon session called at 2:30 p. m. after remaining in the convention hall to hear an address to the ladies given by State President, U. S. Holdridge, in answer to our greetings. The encouraging words of this address and the rousing cheers that were given the ladies will long be remembered. President Holdridge called for a standing vote of delegates in favor of the Ladies Society as workers with them for Equity. Every man rose to his feet. Then it was the ladies' turn to cheer.

A good essay was read by Mrs. Thompson. Mrs. Kidder gave a fine talk on the help we can be to each other when organized, and the bond of sympathy that brought to her in her sorrow—47 letters from Equity members over the state.

Plans were arranged to secure a state deputy to do organizing work.

The Union decided to hold only one state meeting in a year. Business closed.

The M. L. S. of E. wishes to thank retiring President Holdridge for courtesies shown us during our meeting and in the year. The thanks of the Union further extended to the editors of UP-TO-DATE FARMING and the Charlevoix County Herald for space given us in their papers and courtesies received.

Adjourned to meet October, 1909.

MRS. BERTHA HAMMOND.
Secretary.

FREE DEAFNESS CURE

A remarkable offer by one of the leading ear specialists in this country, who will send two months' medicine free to prove his ability to cure Deafness, Head Noises and Catarrh, Address Dr. G. M. Branaman, 1481 Walnut St., Kansas City, Mo.

Here's What Will Please a Boy or Girl for Christmas

Of all things the young people like, and long for, they'll get the most fun, and the most good, out of skates.

It's because skating is such fun—because it fills the lungs with so much beneficial air—that it does them more good than any other winter exercise.

It develops them all over—lungs, legs, the whole body; makes them strong, husky and healthy. So, let your boys and girls make the most of this great winter sport.

Give them a pair of Barney & Berry Skates for Christmas—the keenest, the truest, the best skates you can buy.

The kind which fathers for three generations have bought for their children.

These best-of-all Skates cost but little. Yet they'll give longer-lasting delight than any other gift. Think of the fun ahead—not only this year, but for years to come.

Skating is always plentiful. We're sure to get our full share of ice every year. If not in December, then in January and February.

You can get Barney & Berry Skates at almost any dealer's. In all styles. Should your dealer not have the particular kind you want, he will get them for you.

Our free catalog will help you choose the skates your boy or girl wants.

Write for it to-day, while you've time before Christmas.

BARNEY & BERRY
135 Broad Street, Springfield, Mass.

Barney & Berry Skates

A CART LOAD OF FUN This is the name of our book that should be in every home. More fun to the square inch than a cage of monkeys. A "cart-load" indeed. Space will not permit of our telling much about this book. Take our word for it, that it is worth many times our price. If you are not satisfied we return your money on request. Among the titles of the anecdotes and stories contained in "A CART LOAD OF FUN" are the following: "A Man with a Liver," "Pumpkin Pie," "Potts and the Lightning-Rod Man," "How to Go-a-Courting," "Baumgartner's Dog," "Stowe's Elephant Story," "Marriage a Scheme to Manufacture Happiness," "Mrs. Jones' Burglar," "Deacon Amos Tenderloin Discusses Dudes," "The Sad Case of Fillay du Biff," "A Primeval Scrap," "A One-Horse Hotel," "He Concluded not to Commit Suicide," "Queerly Married," "Hannah was Aroused," "How the Tired Patient Man had His Feelings Upset," "Jone's Baby," "Breaking up a Cat Concert," and 148 others. "A CART LOAD OF FUN" is a book of 64 large double column pages, neatly bound in attractive colored paper covers, price 10c each, 3 for 25c; postpaid. COONER & FORTUNE CO., Indianapolis **FOR 10 cts.**

A Hame Fastener Made of Metal

Nothing connected with hitching up a work horse is so bothersome as *fastening the hames.* You know this. And it's been that way *for years.* Tug and pull and stretch—and after awhile you have it.

Now this can be done *as easy as anything* with Ferry's Handy Hame Fasteners. Just slip the tongue in the proper hole, press up—*and its done. "Fastened in a twinkle."* It *automatically locks* so the more the *hames* pull the tighter *it* holds. But when *you* want to take it off a very little *pull does the trick.*

Nothing like them. Can be fastened to hames in a couple minutes. Last longer than the harness and *can be attached to a new set.* No straps—made entirely of malleable iron. Don't need to remove gloves to use. Fits any collar.

Read these letters:

SOLD GROSS IN THREE DAYS

Will you please send me another gross of Hame Fasteners. I can sell these I have inside of three days. OTTO DOMM.
R. R. 2, Pigeon, Mich.

GIVING ENTIRE SATISFACTION

The Hame Fasteners are at hand. They are all right and are giving entire satisfaction. SAMUEL J. HELLER.
R. R. 1, Wind Gap, Pa.

JUST WHAT YOU SAID

I received my Hame Fastener today. It is what you said and does fine.
SOLON R. HOFFMAN.
Clemmons, S. C.

We could print *hundreds more*—send for circulars containing testimonials.

The price of Ferry's Fasteners is *only* 25c each post-paid. A dozen for $2.25 by express at purchaser's expense.

We Want Agents who can push the sale of a *splendid article* like this. Show one and sell it. Every farmer and teamster uses from four to twenty pairs. Make 200 per cent profit. *Send for sample today.* Don't let someone get ahead of *you.*

COONER & FORTUNE CO.

Write to-day for free copy of official bulletin telling facts that interest every ambitious farmer in America.

Learn how your countrymen are getting rich in Arizona.

Men like yourself are enjoying prosperity without any of the hardships you endure.

They are making more money with less work.

They are getting more pleasure out of life.

Their families are in better health, their children attend the finest schools. It s a generous land filled with generous people. Everybody who wants to can prosper.

Government experts pronounce Salt River Valley unexcelled by any district in the world. Six crops of hay per year. Cantaloupes pay $150 per acre. Strawberries yield $500 to $1,000 per acre. Every month a producing month. Arizona produces earliest fruits, greatest yield per acre, highest quality, and receives maximum price. Demand unlimited; a thousand opportunities on every hand. Low cost of living. Healthful climate. Address

BOARD OF TRADE,
Dept. O
Phoenix, Arizona.

MINIMUM PRICES

The following minimum prices were agreed upon by the 1908 convention of the Farmers Society of Equity. It is urged that all producers will familiarize themselves with them, keep them in mind, ask them, or if market affords it or conditions in any locality justify it, a higher price and hold for them.

Where the price is based on a central market the farm price will be the minimum price less the freight and a fair commission for the home handler, unless the owner ships direct.

Minimum Prices As Agreed Upon by the Convention:

Wheat, No. 1 hard at Minneapolis,	$1.25 bu.
Wheat, No. 2. red at Chicago	1.20 bu.
Corn, No. 2, at Chicago, until Jan. 1,	.60 bu.
Corn, No. 2, at Chicago, after Jan. 1,	.65 bu.

Flax, at Chicago,	1.25 bu.
Wool, at home,	30c lb.
Broom Corn	$75.00 to $100.00 ton

HOW THE F. S. OF E. IS RECEIVED

The following is a specimen of several reports received since the Mass Convention and we expect such reports to increase as the report of the convention reaches all the locals and they have an opportunity to express themselves:

MR. EVERITT, President.

I will give you a report of Frinkton, (Mich.) Local Union last night, at which meeting Mr. Howey reported the result of the Mass Convention. Thirty members were in attendance, the best attendance since April. Every one came to hear the report and all were much interested. When the report was made a vote was taken which unanimously endorsed the action of the convention. The new name, Farmers Society of Equity, immediately came in favor. Some of the members paid dues and the report will be sent to our state secretary. We are much encouraged and have made a good start in the new era.—Mrs. James Howey, East Jordan, Mich. November 7, 1908.

TURN YOUR HOGS INTO MONEY

Has it ever suggested itself that you can save much of the drudgery and hard work of butchering and also make your hogs pay you better than they have ever done before? All this can be accomplished with the aid of an "Enterprize" butchering outfit consisting of an "Enterprise" Meat and Food Chopper and an "Enterprise" Sausage Stuffer and Lard Press. These machines will easily pay for themselves in a single season.

Another great help to farmers is the "Enterprize" Bone, Shell and Corn Mill. You know that bone meal, ground shells and carcked corn are excellent for poultry. You can increase egg yield and the money returns from your poultry yard by grinding your own poultry food—making a saving in its cost, and adding to its quality.

To anyone interested, The Enterprize Manufacturing Company of Pa., 218 Dauphin St., Philadelphia, will send the "Enterprise Housekeeper," a Cook Book of over 200 choice recipes and suggestions for dainty dishes. Your name and address on a postal card is sufficient.

A TRAIN LOAD

The largest shipment of implements ever made by manufacturer to a dealer left Canton today for Stamford, Texas. It was shipped from the Parlin & Orendorff Co., Canton, Ill., to the Pendick-Hughes Company, of Stamford, Tex.

The shipment consists of 40 cars of plow tools, weighing approximately 2,538,600 pounds, and is moving in a solid train. The train is accompanied by the P. & O. 5th Regiment Band, of Canton, Ill., of 34 pieces, representative of the manufacturers and dealers, railroad representatives and a committee of business men from Stamford. Daylight runs only were made and short stops at all stations. The train arrived in Stamford November 10th, and there was broken up and distributed to the trade. The train and its movement attracted a great deal of attention. This great shipment speaks volumes for the excellence of P. & O. agricultural tools. Send for the company's catalog No. 41, and full information about the great train

Nothing is easier than fault-finding; no talent, no self-denial, no brains, no character are required to set up in the grumbling business.
—Robert West.

Another Bulb Reminder

Do not fail to put in a few bulbs this fall. The cost will not be much, and the beauty and pleasure of the lovely blooms which are the first of the spring flowers, will amply repay. There is so little of beauty in the average life, that no one can afford to let escape the least opportunity for making life brighter. After the long winter, nothing brings such joy to the tired woman as to get out in the yard for a little work. And she feels that life is worth living after all when the leaves push up through the hard ground and the flowers come into bloom. Tulips, daffodils and narcissus are among the best and most satisfactory of the bulbs. Prepare the ground well, and put the bulbs four inches below the surface. After the first freeze, cover the bed with leaves. Do not cover too early, else the field mice will make a home there.

Had the Blues

"Havn't you any milk that is more cheerful than this?" queried the new boarder as he poured some of the liquid into his coffee.

"Why, what do you mean by that?" queried the landlady.

"Oh, nothing," rejoined the new boarder; "only this milk seems to have the blues."

Uncle Sam is the largest employer of labor in the country. Hundreds of thousands of people work for the Government. From the President down our Uncle Samuel has attractive positions.

The civil service offers excellent opportunities to men and women over 18 years of age. Good pay, permanent positions and high-grade work are the attractions. Prepare for something of this kind. Learn about the chances for yourself. By addressing the International Correspondence Schools, Box 1131, Scranton, Pa., you can secure full information free.

Here's Hoping

"I begin to realize," said young Mr. Kallow, "that I am no longer a mere youth, now that I've got a little hair on my lip."

"Yes," said Miss Knox, "and I suppose in a month or so you'll have another one."—Catholic Standard and Times.

UP-TO-DATE FARMING has advocated guaranteed bank deposits for years. Now the Oklahoma Trust Co., of Muskogee, Okla., is asking for deposits and guarantees them under the state law. They will pay 4 per cent interest on savings accounts and sell state 6 per cent bonds. Those who are interested should send for booklet A. Z., which explains it all—from a to z.

128-Page Encyclopedia Free

Galvanized Hog Troughs, $1.50

Extra strong, made of heavy 1/3 in. boiler steel. Best shaped tank manufactured; absolutely indestructible, clean and sanitary. All metal, well rivited, stands strong and firm on the ground. Satisfaction guaranteed. Regular price $2.50 to $5.00. Our prices $1.50 to $2.75.

Rubberized-Galvo Roofing

$1.25 per 108 square feet

The greatest Roofing value on earth. No higher grade manufactured. Unexcelled as to quality, wear and economy. Easy to put on. Requires no previous experience. Can be put on over shingles without removing them. Does not require a coating after it is on the roof. Weather-proof and fire-proof. Contains no coal, tar, residuum or injurious compositions. This roofing is bought direct from manufacturers and is usually sold at double our prices. It is guaranteed to give lasting service. Rubberized-Galvo Roofing is slate color, tough, leather-like material, made of a combination of wool felt and highest grade of natural, pure asphalt. Makes buildings warmer in winter and cooler in summer. Not affected by acids or gases. Has rubbery surface and on this account we call it Rubberized-Galvo Roofing. It toughens and hardens with age. We furnish with each order, sufficient cement to make the laps and large head nails to put it on with. It is appropriate for any kind of building. **1 ply per sq., $1.25. 2 ply per sq., $1.40. 3 ply per sq., $1.75.** These prices are per sq., of 108 sq. ft., and are F. O. B. Cars, Chicago. Also have in stock 1000 sqs., of pure asphalt rock surfaced roofing, bought by us at manufacturers' sale. Put up two to five lengths to a roll and each roll contains 108 sq. ft. Price per 108 sq. ft., including nails and caps, **$1.50.** Red, rozin-sized, Building Paper per roll 500 sq. ft., **45c.** Slaters Roofing Felt, per roll of 500 sq. ft., **75c.**

The Man of the Hour

THE MASTER EYE SPECIALIST WHO SAYS:

There is no excuse for you to wait and grow blind from Cataracts, Glaucoma, Iritis or any chronic disease of the internal eyeball, because it can be cured—the disease can be stopped—the inflammatory product can be absorbed and the sight restored.

There is no need for you to suffer with Granulated Lids, Wild Hairs, Red, Sore Eyes, Scums over the sight, Spots on the Eyes, Pterygiums, Ulcers of the eyes, because it can be cured.

There is no need for you to go around wearing glasses for weak eyes or eye strains or allowing your eyes to ache and pain and blur, and cause you to have headaches, because I have a treatment that stops these diseases quickly and completely and you can use it at home without interfering with your work or duties.

This treatment is not new. I have used it in my pracice for eighteen years, and treated a hundred thousand people with it and know the remarkable cures that I have made with it and say positively that it does cure these diseases when the structures are not injured.

After 28 Years Experience I Know That Ninety Per cent of the Total Blind People of the World

W. OAKLEY COFFEE, M. D.

EQUIPPED WITH EVERY DEVICE KNOWN TO MODERN SCIENCE, RIPE WITH 28 YEARS OF SUCCESSFUL PRACTICE in the treatment of the Eye and the Ear. Backed by thousands of testimonials from grateful patients. Dr. W. OAKLEY COFFEE offers you ABSOLUTELY FREE without one item of expense to you a 15 DAYS' TREATMENT in order that you may thoroughly test the famous absorption method which has unquestionably made him the foremost physician in this country today in the successful treatment by mail of the Eye and the Ear. Why should you hesitate? It costs you nothing! Dr. Coffee doesn't want your money nor to waste his time unless he knows that he can cure you. He won't even attempt your cure unless satisfied that he can master your ailment. Dr. Coffee is one of the foremost citizens of Des Moines, Iowa. His big Infirmary just completed stands as a monument to his successful career.

are made blind from simply neglecting simple diseases to start on that could be easily and quickly cured by simple remedies had they used them. I want to warn you that the little blurring of your sight, the running together of words when you are reading, the little floating spots before your eyes, the redness and congestion or slight inflammation in the eyes today, may mean a total and complete blindness in a year's time. Are you going to be one of these people? Are you going to allow your eyes to grow weak and grow blind or have an operation performed on them or burn them out with Blue Stone or caustic, without making an honest, reasonable effort? Remember that it does not make any difference what kind of an eye disease or weakness that you have, I want you to write to me, let me tell you about your case; let me prepare my marvelous Absorption remedies and send them absolutely free of charge for you to use on your eyes for fifteen days. This is what I want and what I ask of you.

DO NOT GO BLIND

You can't realize all the horrors, the terrible suffering, the long black night which blind people have to go through after you get blind. You would give anything on earth for sight, but if you wait too long until the Optic Nerve is destroyed, nothing can be done. Twenty-eight years of my life have been devoted to the studying and treating peoples' eyes and save them from blindness and restoring their sight. I have treated

A HUNDRED THOUSAND PEOPLE WITH THESE REMEDIES

and I know how they suffer and how they feel and how thankful they were to me for giving them eyesight and this is what I want to do for you if you will allow me, and I do it free—give you the privilege of trying this treatment without price and without money.

I have restored sight to many people past eighty years of age. I have restored sight to children, to babies in their mother's arms when they could not see the light of day before using the treatment. I have treated every form and character of eye disease and weakness. I have caused people to throw away their glasses after they had worn them twenty years. Their sight returned to normal. It is this twenty-eight years experience, these records of cures of the thousands of cases, with my prescriptions and my medicines that I am offering you absolutely free to try.

AFTER TWENTY-EIGHT YEARS EXPERIENCE

I have originated a combination of remedies that I think are the most wonderful and effective for removing all diseases and weakness from the eyes, ever known to the medical profession. These medicines have a particular action on the glands, blood vessels, and nerves of the eyes in causing them to throw off all diseases and weakness and I am offering my services and a fifteen days' course of these remedies absolutely free to you if you suffer with any weakness or disease of the eyes whatever.

I DON'T ASK YOU FOR MONEY

I simply ask you to write me a history of your cose—tell me all about it, how long you have suffered—let me prescribe the medicines and send them to you and restore your sight and cure your blindness.

Warning Symptoms of Failing Sight and Eye Diseases

Do your eyes smart or burn?
Do they weep or run water?
Do they ache or pain either in or above the eyeball?
Does the type blur or words run together when reading?
Do you have floating spots before the eyes?
Do your eyes feel weak, sore or tired?
Is your vision becoming smoky or cloudy, or dim?
Are your eyes red, sore, inflamed or lids granulated?
Are you wearing glasses now? If so, how long?
Have you any Spots, Scums, Pterygiums or Growths of any kind growing on the eyeball? If so, describe them.
Have you Cataract forming in the eyes?
Do you see two objects (or double vision?)
Do you suffer with Wild Hairs?
Can you see to read the smallest print?
Test the sight of each eye separately and see if one eye is failing.
Take a plain white card and stick a pin through it and close one eye and look through it with the other. If you see any spots or webs it is cataracts forming.
All these symptoms indicate disease, weakness or disturbed circulation in the eyes. Any of them may mean that a disease is creeping over your Optic Nerve that will make you totally blind if it is not stopped.
I want you to write me about any of the above symptoms; let me tell you what they mean; let me cure it before it is too late. Don't take chances on blindness. There is no excuse for it.

I am going to prevent blindness in every person that will let me help them. I have a large Infirmary which is equipped with every scientific appliance necessary for the successful treatment of eye diseases by the Absorption method. I am not going to give you any excuse for not trying this treatment. I am not going to allow you to go around wearing glasses or suffering with weak or diseased eyes or to gradually grow blind or to have an operation performed on them, if you will allow me to send you these medicines and prove to you how quickly and completely they cure these diseases and restore the eye to health and strength.

I DON'T CARE

who has treated you or who has pronounced your case incurable or how long you have suffered or whether you have any confidence in these statements or my theory or not, I simply ask you to investigate for yourself. Write me the history of your case—tell me your troubles and let me give you relief. I will send you the treatment—let you use it for fifteen days. If the treatment is not satisfatcory—that settles it. You have paid nothing, you owe nothing. I don't want anything of you. I believe that I have an absolute cure if it is used in time. I don't ask you to risk any money or place yourself under any obligations—simply to give the treatment a fair trial.

All this I do for every person suffering with eye diseases, absolutely free.

CUT OUT THIS COUPON---SEND TODAY

IF YOU WANT TO TRY THE MOST REMARKABLE TREATMENT ON EARTH FOR THESE DISEASES—A TREATMENT THAT IS CURING THOUSANDS—IF YOU WANT TO TRY IT ABSOLUTELY FREE; ACT NOW—YOU MAY NEVER HAVE THIS CHANCE AGAIN.

DR. W. O. COFFEE, Dept. 68, Des Moines, Iowa.

My eyes are bothering me and I fear there is something wrong with them. Please send me your diagnosis blank with full instructions how to test my eyes. I will fill out the blank carefully and return it to you. If you think your treatment will benefit me, you are to send me 15 days' treatment free as advertised in the November Up-to-Date. It is understood that I am under no obligation to continue the treatment unless I am satisfied that it will benefit or cure my case, and of this I am to be the sole judge.

NATIONAL CORN EXPOSITION

PRICE FORGOTTEN

We have frequently called attention to the National Corn Exposition, to be held at Omaha, Neb., December 9 to 19, of this year. We have done so because we are in favor of every educational influence that may uplift farming and make farmers wiser and better able to overcome the difficulties they must meet in their calling. The exposition management asks UP-TO-DATE FARMING for an editorial opinion of the exposition. We cheerfully give it.

We are in favor of the exposition. As we have said, we are in favor of everything educational in agricultural lines. We are in favor of corn-breeding—of creating

Continued on page 4.

The Farmers Society of Equity

Its Scope and Philosophy---The Cycle of Profitable Farming

There are four distinct steps or stages in the completion or perfection of agricultural rural life or business:

1. Co-operation.
2. Production.
3. Selling or marketing.
4. Mutual benefits.

These, well understood and worked out to their full meaning, constitute successful farming, and bring individual and class independence to the tillers of the soil. Nothing short of that will or can.

Co-operation

Working single and alone, farmers are as powerless to make progress as are the beasts that meekly serve them without thought of their own share in the value of their labor.

The very nature of farming, the cultivation of land adjoining or widely separated, makes it necessary that farmers understand each other in a business sense, and that they co-operate with one another in what and how much they shall grow as well as in how they shall grow it.

Co-operation, of course, is futile unless it applies to production. Production is the creative part of farming, and concerning the things created or produced comes the first ctll for co-operation.

No one farmer can supply the demand of the millions who depend upon agriculture for life and comfort; and since it takes millions of farmers to supply the millions of people dependent upon them, the farmers must co-operate so that each may know, in a general way at least, what the others are doing, that there may not be a shortage in some lines and an excess or waste surplus in others.

Co-operation, therefore, must precede production so as to wisely regulate that part of the business in the interest of both producer and consumer, and these two classes cover the entire human race as well as the domestic animals kpet for service.

An impossibile task, the objector is ready to urge; but it is no more impossible than countless things that have been achieved within the memory of men now living. A thousand trains, ten thousand trains, are thundering over the continent at this moment, east and west, north and south, as well as in all directions between, on the same track, or on parallel or divergent lines, crossing each other's way at distant and most unseemly places, each laden with valuable freight or precious lives. And the train dispatchers know, or may know, where every car is at every moment, night or day.

Impossible, said the learned scientist, as he saw with amazement the old six-mile-an-hour locomotive puff its slow way along the wooden track of the Camden and Amboy road less than a hundred years ago! And it would have been impossible then, but it is done now. So are hundreds of other things that wise men thought just as impossible. So will hundreds of other things be done that seem impossible now; and the clock of time is striking the hour for farmers to move a step forward, and they can and will!

Production

The long list of agricultural teachers stop at production; but their work is less than half done. Production without co-operation and without system, without the knowledge co-operation brings, may, by excessive quantities, prove, as it often has proved, an injury and loss to the producer, with no corresponding benefit to the consumer; or it may be so short as to stint or starve the consumer, with no corresponding benefit to the producer.

In the case of excess the surplus lodges somewhere between producer and consumer, and in case of shortage the exhorbitant price charged the consumers flows into open coffers between these two most interested classes.

Hence, if we leave the farmer where his accredited teachers leave him at the end of his season of production, he has little assurance of being better off than he was at its beginning. He may live, as the uncivilized live, on what his hands have gathered from orchard, field or forest; but if he have the comforts and conveniences or any of the luxuries of civilization, he must exchange what he has produced for what some one else has produced in other lines, and here the most important question is: Must he give too much of what his labor has produced for what he wants of what some other person's labor has produced? Shall the exchange be on an equitable basis, giving value for value, or shall the farmer be discriminated against and be required to give too much of his for not enough of the other fellow's?

Selling or Marketing

Since we have outlived the age of barter, the swapping of one commodity for another, and exchanges are effected by selling and buying, the farmer must market his stuff at a price. The fairness of the exchange depends entirely on the price.

If the price paid the farmer for his stuff is too low, below the general level of values, or if the price charged the farmer for his supplies is too high, is above the general level of values, then the farmer is compelled to give more of his products than what he receives in exchange; therefore—a clear discrimination against the farmer.

Heretofore the farmer has not been consulted in regard to either of these prices. A power, somewhere, called "The Market," has named the price at which he shall sell his products, and he has been compelled to accept that price or keep his stuff.

But the stuff he was commanded to sell at the price or to keep, was what he had produced not to keep but to sell. It was what he depended upon for money with which to buy the necessaries and comforts produced by some one else; and necessity, as inexorable as the most stringent laws of the nation, compelled him to sell at the price arbitrarily offered. And when he took the money he was thus forced to accept, much or little, and went to make his purchases, he again found he was not consulted as to the price. This time the price was made by the seller, and the farmer must pay it or do without the goods. In this case the farmer is very properly not consulted. He is the purchaser now, and the seller, the owner, has a right to name the price.

It is when the farmer is a seller that he is wronged. While such conditions exist, his calling is put at an unsurmountable disadvantage. The sacred rights of property and the accepted rules of business are suspended in his case, though they are freely permitted to apply to all others. This is so, and it will be so, until, co-operating with his fellows, he places himself in positon to name the price of his property as do those whose property he must purchase. Thus marketing becomes an essential step in successful farming, even more essential than production.

Mutual Benefits

When we thus provide for equitable and remunerative prices for farm products, it might seem that the course of successful farming had been completed — effective co-operation, successful production, and remunerative marketing.

But not yet. There is a thread of mutual benfits running through it all from beginning to end. This thread, strong as a chain when recognized, connects producer with producer, and impels co-operation, without which all efforts must fail. It also reaches from the producer to the consumer, and pleads for fair prices for each, that the other may buy more abundantly at prices properly adjusted to the general level of values, in order that labor elsewhere may so correspond to the labor on the farm as to enable the consumer, who is not a farmer, to supply his every want as fully as like effort supplies it on the farm.

This line of mutual benefit extends to factory, shop and mine; to the lines of transportation and the general marts of trade; to the wholesale house and the retail store; and it means that labor and effort everywhere should be equitably rewarded; that profits must be neither too high nor too low, so that mutual benefits shall result from both production and trade on the basis of equity in all the business relations of life.

It means the elimination of the unearned accumulations that pile mountain high and make millionaires of those who "toil not, neither do they spin," but who grasp, with unstinted greed, the unguarded values that leave the fields of the producers never reaching the homes of the consumers; whose business it is, in the name of commodities or of "wind," to gather from the farms with one hand at beggar's prices while with the other they dole out meager supplies to the consumers at prices which fill the capacious maw between.

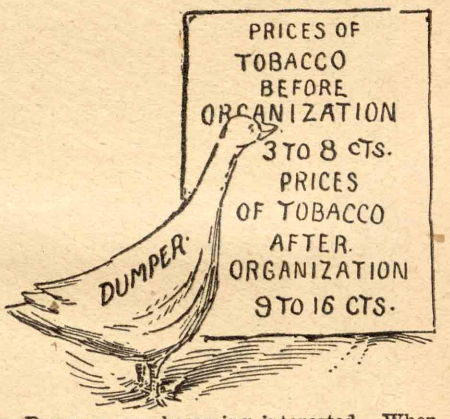
Successful farming, as a business, success in all human effort—co-operation, production, marketing and mutual benefits—equity in all the business relations of life, means all of this, and who stops short of it fails to respond to the beckoning hand of human progress that may be so plainly seen above the horizon of present achievement.

Here we may pause. These purposes gained makes profitable farming, profitable trading, profitable manufacturing; adequate supplies for all, with just reward for every line of labor, and fair exchange, whether direct or through the medium of money, bringing mutual benefits to all mankind.

This is the scope of the Farmers Society of Equity, and it is for the accomplishment of so great a purpose that we ask farmers to take the four great steps mentioned.

To this end, we have adopted means peculiarly our own, to teach and impress the four great lessons contained therein; to teach those lessons in such a way that they will neither be forgotten nor disregarded, yet in perfect consonance with the high moral standard of the present age.

It is entirely proper that so great a work should be inaugurated by the farmers, the only class now without the pale of co-operative protection, and it should bear their name; but it is equally proper that not only the farmers but their friends be invited to participate therein. All but the known enemies of agriculture and of equity—those who prey upon the defenseless and revel in the misfortunes of the unprotected as the hog wallows in the mire—may well join in a work that means so much and whose accomplishment must redound to the great good, not of agriculture alone, but of the whole human race.



Dumpers are becoming interested. When this occurs, we can convert them.

A little help on the part of our subscribers will help UP-TO-DATE FARMING in its fight to secure good prices for its readers. Help along the good work by sending us a club of four new subscriptions for $1.00.

UP-TO-DATE FARMING

227 West Washington Street, Indianapolis

J. A. EVERITT, Editor JOHN P. STELLE, Associate Editor

SUBSCRIPTION PRICE 50c PER YEAR A CLUB OF FOUR FOR $1.00
Foreign Subscriptions, including Canada, 75c a Year

Clubs. Four subscriptions for $1.00; Always state if a renewal or a new subscriber. *DON'T NEGLECT THIS.*

Your Address should always be written very plainly, including *COUNTY*. Do not give street or box number when not necessary to facilitate delivery of your mail. If on a rural route use the letters R. R. before the number.

Renewals and Change of Address. Give the same name as before. If a change from one member of the family to another, so state. If you change your post office give old office as well as new.

Important. When writing about your subscription, requesting a change of address, renewing or ordering cancellation, do not fail to send your printed address a long as on the wrapper. Failure to do this may cause us much unnecessary work.

The Latest Date shown with your address is the date to which your subscription is paid. Subscribers are urged to keep their time paid *IN ADVANCE.*

Members of the Farmers Society of Equity will find the date on their wrapper to which subscription has been paid.

Respnsibility Disclaimer The editor assumes no responsibility for correctness of signed letters and articles, nor for matter in departments conducted by others whose names appear in the head.

Agents Wanted. If you want to engage in a profitable business all your time or part time, write to us.

Only Reliable Advertisers are admitted to our columns and we guarantee that they will deal honestly with subscribers. Should they not, we will make good any loss to paid in advance subscribers. It is understood that this guarantee is not binding on the publisher unless you mention UP-TO-DATE FARMING when you write and you report any dissatisfaction within a month of the date of the paper.

Volume XI | INDIANAPOLIS, INDIANA, DECEMBER 1, 1908 | Number 23

A Crop Report Absurdity

According to Secretary Wilson the Laws of Nature have Reversed

We have almost always apologized for our criticisms of the Government crop reports, for we feel a delicacy in differing with officials whose business it is to know they are right, and who have unlimited facilities for getting the information and every possible means of testing the truth. But criticism of the report issued November 10 needs no apology. A press dispatch from Washington, bearing date of November 6, was as follows:

The Department of Agriculture today issued a preliminary estimate of the production of the principal crops of the United States, showing that corn, wheat, oats and eight other crops representing approximately 70 per cent. of the value of all farm crops this year, aggregate about 3 per cent. greater than a year ago, and 24 per cent greater than the average for the last five years.

Then comes the report itself. At present we shall notice in detail only corn. The total crop of 1908 is put at 2,642,687,000 bushels, while that of 1907 was only 2,592,320,000 bushels, making the crop of 1908 more than 50,000,000 bushels greater than that of 1907.

The United States has seldom had a year so unfavorable to the production of corn as 1908. In a very large portion of the corn producing country, the season began with excessive rains and floods, and it was late before the ground could be prepared for the seed, and even then it was seeded in bad condition. Hundreds of acres usually put to corn were on that account left unplanted. Passing through the corn belt one may see field after field thus standing in last year's stubble. Corn had scarcely been planted when an unprecedented drought set in, and has continued with only a few local rains until this time, past the middle of November. This drought was not local any more than the spring floods had been, but covered a large area of the corn belt. To report under these conditions a larger corn crop than the crop of last year is the height of absurdity. And we are not reporting these conditions from hearsay or from newspaper reports. All readers within the area mentioned know their truth. The writer himself has been through several of the principal corn States, not only this season but other seasons, and he never saw in any of them so unpromising a corn crop as that of the present year. This impression was most emphatically confirmed by corn growers who attended the recent Equity convention in Indianapolis from all parts of the corn belt. "Throughout our entire route we virtually saw no corn," was a common expression. The cattle markets have been unseasonably crowded this fall with unfed cattle, stockers and feeders, and there has absolutely been no local demand for such stuff. The invariable reason given is lack of corn to feed. And again: Both the local and market price of corn is above the ordinary price at this season, and the reason given is scarcity of corn on the market; there is but little to sell. The situation is unmistakable. The scarcity of corn cannot be concealed, and the Department of Agriculture makes itself ridiculous in reporting a bumper crop. At least it seems so to us. But we want to be right. We have given the basis for our contention that there is a light crop this year. If any corn grower knows we are mistaken, he will greatly oblige by writing and giving us the proofs.

Why should the Department of Agriculture exaggerate the crops? We do not know. Perhaps the local reporters mislead the department. But it is almost always so that when the products are in the farmers' hands ready for market, or being got ready, big crops are reported. If the reports affect the growers at all, such reports would induce them to sell, to hurry the stuff to market and accept low prices to avoid the glut attendant upon bumper crops. This would be the natural effect of such reports, and such effects have been produced by them. We would not say that is the design. But it so often transpires that, after the bulk of the marketing is done and the harvested crops are in other hands, the department "discovers" somebody had overestimated the yield, and the crop had fallen short of the estimate. These corrections usually come just in time to boost the price in the hands of speculation. This was notoriously so in case of the apple crop a few years ago. If the crop reporting machinery works it so in spite of the honored clerks and officials, then we wish Secretary Wilson would shorten a cog or a crank here and there, or lengthen them. Perhaps it would be well to readjust the entire machine.

Some other crops are reported as follows:

Buckwheat—average yield, 19.8 bushels per acre; total production, 15,648,000 bushels. Production last year, 14,290,000 bushels. Quality a little above that of last year.

Potatoes—average yield, 85.9 bushels per acre; total production, 274,660,000 bushels. Production last year, 297,942,000 bushels. Quality a little below that of last year.

Tobacco—average yield, 825.2 pounds per acre; total production, 629,634,000 pounds. Production last year, 698,126,000 pounds. Quality below that of last year.

Rice—average yield in the rough, 34.7 bushels per acre; total production, 22,718,000 bushels. Production last year, 18,738,000 bushels.

The Necessity of Higher Prices

Are Farmers in a Position to Pay Higher Prices

The National Vehicle Magazine, of November 1, announces the organization of the New York State Implement and Vehicle Dealers Association, and some of the purposes and reasons given are interesting, especially to farmers. Note the following:

"The object of the organization is to band all regular dealers together in one body, in order that, by concerted action the evils of selling goods to farmer agents can be stopped."

We do not object to the organization, nor to any purpose it may have in view. We quote the above to show farmers what others are doing and why they are doing it, in an earnest endeavor to convince farmers that they must do something too.

Arguments made for the organization of them dealers apply with equal force to farmers. "Nothing can be done except by concerted action." "In the West the conditions have been vastly helped by organization. The association has placed money in every dealer's pocket, and at the same time made the business more pleasant," etc.

Following the announcement of the above organization, the magazine places at the head of its leading editorials the words which head this article. The Carriage Manufacturers' Association of America and the National Federation of Retail Implement and Vehicle Dealers' Associations, and at the same time in Chicago, and the National Farm Wagon Association and the National Plow Association were there in force also. The sentiment regarding prices for 1909 was made a matter of special inquiry. "It was the concensus of opinion," declares the magazine, "that in all lines, **particularly those going to the farmer**, . . . an advance of prices on nearly all lines sold to the farmers, particularly farm wagons and vehicles, was inevitable." One of the reasons given was, "that the farmers, as a class, were actually in a position, owing to bounteous crops and high prices for every variety of farm products, to pay higher prices for vehicles, implements and machinery."

We do not like the last reason given. These people have a right to determine their prices, but those prices should be based on equity. Here the basis seems to be the ability of farmers to pay. The idea apparently prevails that if farmers are able to pay more they must be charged more. Ability to pay is no reason for higher prices unless former prices were based on charity—made too low to enable farmers to have the tools and implements they needed in their business. We have never heard it claimed that prices charged farmers at any time were charity prices.

There is one point these large bodies fail to consider when they come to count costs and expenses preparatory to making prices, and that is the salaries, not of their workmen, but of their high officials, promoters, and perhaps some of their general salesmen or heads of departments. During the last few years the hingher grade of salaries have increased enormously. In fact, there seems almost a mania for high salaries, and those who ask them are generally in a position to exact them. A case of moderate service that recently came under our own observation involved the payment of $35 per day when the party was only tentatively engaged in the service, and $50 per day when actually engaged in it. This was professional service, it is true, and we do not claim it was beyond the modern level of charges for that class of service at the place where it was rendered, but it serves to illustrate the height to which salaries have gone. Presidents of many of the great corporations receive higher salaries than the President of the United States, and not a few promoters and managers are paid more than national cabinet officers. These great salaries draw heavily upon the incomes of the corporations or companies, and afford one of the prime reasons for higher prices for manufactured goods.

Farmers should see in this the only course open to them. They must guard their own incomes or they need not expect to have any. Organization gives the other classes power to enforce prices and pay great salaries. Organization is the only means by which farmers can secure corresponding prices for their own goods, and co-operation through organization is their remedy.

PERSONAL TO SUBSCRIBERS

If a Square Below is Marked Please Read This Very Carefully

☐ If this square is marked with "X" it is to inform you that your subscription is about to expire, as you can see by the date on your wrapper.

We sincerely hope you have enjoyed reading this paper and that its teachings have benefitted you and will continue to do so. If you live on a farm or have farm interests, we don't see how it can be otherwise. Or if you live in town or city and may not be directly interested in farming, and have carefully read UP-TO-DATE FARMING, you must have been benefitted.

Agriculture is the greatest and most important business of this country. All other industries and institutions are so dependent upon it that every person, even if not engaged in farming, should study the problems of agriculture. It must be admitted that UP-TO-DATE FARMING has been, and is now, the great teacher of farmers and leader in thoughts and methods to better their condition. It has been and is the paper that is solving their serious problems.

These are the reasons why it has a large circulation in towns and cities as well as in the country. It is read by many of the foremost people of the nation. The teachings of UP-TO-DATE FARMING, more than anything else, are responsible for the President's Commission on Country Life being appointed.

We can, therefore, consistently appeal to you, whether you are farming or not, to renew your subscription now. We hope to have it promptly before your name is removed from our list.

The subscription price is 50 cents a year, but for a short time yet, and for educational purposes, we will continue to accept clubs of four (4) for $1. We hope you will accompany your renewal with a club of four or more.

If the square to the right is marked with an "X," it is to remind you that your subscription has expired and remains unrenewed. We don't want to lose a single subscriber but we want to get all the new ones possible so the power of UP-TO-DATE FARMING may be constantly increasing. Therefore this second notice, and we hope to hear from you at once. ☐

NATIONAL CORN EXPOSITION

(Continued from page 1)

or originating improved varieties. That has been done to the great improvement of this important crop. We believe corn may not only be improved in quality, but that it may be made more productive. We admit the possibility of the claim of the exposition management that seed may be so improved as to increase the yield, other things being equal, ten bushels per acre. We admit these things are possibilities, because improvements have been made that justify the claim.

But what else? One important fact connected with this very work is entirely overlooked or ignored by the management of this and all other farm product expositions, and that is the price. Ask them managers, for instance, what regulates the price, and every one of them will say, the law of supply and demand; and the law supply and demand is: As the supply increases; the demand remaining the same, the price decreases, and as the supply decreases, the demand remaining the same, the price increases. If there is any such law that is it.

The management of the Omaha exposition declares it to be a "movement to increase the yields and improve the crops." Not a word about increasing or even maintaining the price. If the production of corn was short of supplying the demands of the producers they would be in position to welcome an increased yield without any reference to price. But it is well known that the farmers of this country grow corn as a commercial product, and that they are already supplying the demand for corn at a moderate price, a price that sometimes falls below the cost of production. Under such circumstances an increased production must lower the price, and, perhaps, actually reduce the producer's income, saying nothing of profits, as has been done in the case of many crops of various kinds that have been reported by the national department of agriculture. The price, therefore, is of more interest to farmers than is increased production or yield.

This fact is ignored by the management of these expositions. In the article before us, from which we are asked to get our arguments, the case of a Mr. Brandes is mentioned, who paid $15 for an improved ear of corn, with the seed from which he increased the yield ten bushels per acre. From that is taken a county whose corn area is 140,000 acres, and an increased production of 1,400,000 bushels is shown, with a claimed added value to the crop of three-quarters of a million dollars. Any one must know the added value in money depends entirely on the price, and the price depends upon the relation of the supply to the demand.

Take the country over. The corn area of the United States for 1907, as given by the department of agriculture in the Year Book for that year, page 609, was 99,931,000 acres, and the production was 2,592,320,000 bushels. This crop supplied the demand for corn at a little more than 51 cents per bushel (51.6), the average price December 1, 1907. Suppose this crop had been by any means increased ten bushels per acre, as the exposition alleges can be done, and as it claims its purpose is. There would have been to add to the crop of 1907 999,310,000 bushels, making a total crop of 3,591,630,000 bushels. Now we have a simple mathematical probelm: If 2,592,320,000 bushels will supply the demand for corn at 51 cents per bushel, at what price per bushel would 3,591,630,000 bushels supply it? Any school boy or girl can work it out, and find the price would have been 34 cents per bushel, barring a slight fraction. The crop actually produced was worth, at 51 cents per bushel, $1,322,083,200. The increased crop, at the proportinate price of 34 cents per bushel, according to the law of supply and demand, would have been worth $1,221,154,200, which is $100,929,000 less than the actual smaller crop was worth. In other words, had the only named purpose of the exposition been accomplished, the corn growers of the United States would have been compelled to pay more than a hundred million dollars for the privilege of producing and handling a billion bushels more of corn!

These are facts and figures entirely justified by the law of supply and demand, behind which speculative price-makers always take refuge when we talk of farm price-making. But even those figures tell only a part of the story, for when a demand is supplied the excess becomes a waste product that nobody wants, and the price is crushed far below the proportionate figure. This position is sustained by both ancient and modern writers on economics. So the increase spoken of, could it have been brought about, or could it be brought at any future time, instead of being a benefit to the corn growers, would have been, or would be, disastrous to them, without a corresponding increase in demand or consumption.

We do not bring these things up to discourage people who are laboring to improve corn, or who are engaged in holding corn or other crop expositions. We admire their work and sustain them in it. But we wish to convince them and farmers generally that there is more in farming than production; that each commercial crop has a demand and that does not vary much from year to year, and when that demand is supplied no more is purchased. Even if a reduced price should increase the consumption, little benefit accrues to the growers, for the entire crop must sell at the diminished price, whether the producers get paid for their labor or not. We wish these good people to pay some attention to selling as well as to producing, to maintaining price as well as to increasing yields. Their estimates of value gains are always faulty, because they are based on the prices that prevail for the smaller crops.

But, it may be said, there is no danger that all the expositions on earth will ever accomplish the universal results considered, hence there is no cause for alarm. That argues more than those who make it would be willing to accept, which is that the real safety of such movements is in their failure to accomplish their avowed purposes. If we concede that they may do good by enabling some to increase their yields without revolutionizing production or materially over-reaching the normal supply; then the expositions become the builders of the few at the expense of the many who may find it impossible to take advantage of the opportunities offered and benefit by the improvements made.

What shall be done then? Shall we quit having crop expositions? We do not so argue. As we have already said, we favor them as great educational forces, but we want them to cease to be one-sided affairs. While they teach the improvement of the products and the increase of the yields, teach also how to maintain the price. Teach how to fully supply the demand at moderate, but remunerative prices, without glutting the markets and destroying values to the great loss of the producers themselves. We are tired of the eternal song of increased production. Let us have a little music set to the tune of steady and reasonably remunerative prices. Expositions and colleges and institutes can teach that as well as the other. If not, their usefulness may well be questioned.

PATRIOTISM IN SPEECH AND IN PRACTICE

Patriotism is love of home; and when the Fourth of July orator gets in his best licks how we do shout and clap our hands, and think we are the most patriotic people in the world. When the preacher brings in a paragraph dripping with the goodness there is in our home institutions, how fervently we shout Amen. When at the school exhibition the boys and girls eloquently recite for us a poet's account of some heroic event in our country's history, or the brave act of some patriotic soldier or statesman, how enthusiastic we become.

But are we really as patriotic, as great home lovers, as we think we are? We go home from any of these exercises, our veins still tingling with what we think is patriotic ardor, and perhaps our first act is to send to a distant city for some article found described in a catalogue, and that our home merchant could have supplied as well as the catalogue house!

If we love home we ought to promote home, ought we not? Every article we buy carries a profit with it to somebody, and that profit helps to make up the income of that person. It is more important that the home merchant have an income than that the distant city catalogue house owner have one. "Many a little make a muckle." If the home merchant have the trade of all his people he can make his profits on a much narrower margin, and thus reduce the cost to his customers.

But will he do that? That is a question for the merchant to decide, and upon that decision the customer is entirely free to act. The merchant must be patriotic and stand by the customer. He must not send abroad for cabbage, onions, potatoes, etc., that his country customers could furnish him. Does he argue that other localities may produce these things cheaper, and he can ship them in at less cost than he can buy them at home? Ah, that is exactly the argument of the fellow that sends to the catalogue house.

Equity. Let merchant and farmer clasp hands on the basis of equity. Each treat the other right, just charges and fair in profits, exercise in practical things the love of home we are all so proud of, work home resources for all they are worth, and give home the prosperity and promotion it is capable or reaching. Be patriotic all the year, and in business as well as at the exhibitions and celebrations.

COTTON, TOBACCO, POTATOES

Southern Farmers Should Diversefy Wisely

The Inland Farmer is inclined to advise its Southern readers to grow less cotton and more potatoes, and quotes from Prof. Massey to the effect that the potato is the only important agricultural crop that is produced in this country in quantities insufficient to supply the demand.

The farmers of America are under obligation to supply at least American demand for every American crop, and since the demand for cotton is abundantly supplied, as is indicated by the low and fluctuating prices that so often characterize the cotton market, it might be well for cotton growers to consider a division of their acres and efforts with potatoes. This depends, however, upon the adaptability of Southern soil and climate to the growth of potatoes. The Southern people have been so absorbed in cotton that they have not tested many other crops, and so far as potatoes are concerned, they have had little cause to do so. A few years ago, while in the South, we saw great vessels come into the Southern harbors from the New England ports, particularly from those of Maine, laden with potatoes as ballast, a weighting that had to be carried even though stone or gravel had to be used. Of course these potatoes sold in the South as cheap as they did in the fields where they were grown, because they had to pay no freight. But the question of substituting the deficient potato for the surplus cotton is well worth considering, both from a food and financial standpoint. Just enough cotton to supply the demand would bring the grower as much money as more than enough brings, and the returns received for the potatoes, be it much or little, would be that much added.

But how about tobacco? Undoubtedly an excess of tobacco is produced, else the trust or all the buyers in the world could not play with the price and crop as has been done for some years past. Land that will grow tobacco will grow potatoes, and those who can grow tobacco can raise potatoes —the latter is much the easier crop to grow, and it will compare with almost any crop in acreage value. The average value per acre in Illinois last year is put at $62; that of Kansas at $57, and for the whole United States the estimate is $58. At the same time oats in Illinois was worth only $9.85 per acre; in Kansas $9.02, and in the whole country $10.12.

The total potato acreage does not much exceed three million acres, and it has reached that figure by a very slow growth. Fifteen years ago it was 2,500,000 acres. The addition of only half a million acres since then is not at all keeping up with the increase of population, and that ought to be, and certainly is, the measure of the demand. We are in favor of boosting those crops that show a deficiency of supply, and shortening the ones that furnish an excess.

LOOK AFTER THE SCHOOLS

...Our strongest appeal to Our Up-toDate People at this time of the year, is to look after the schools. The county schools are all in session now, and millnions of dollars are invested in them; but far more than value of the money is the value of the minds whose development is intrusted to them. It is is only a small part of an education to learn and recite lessons, or even to stand at the head of the classes. The great field of life is before the pupils, and its problems are more numerous, and many of them more difficult, than the problems found in the books. All honor to the resourceful teacher who can go beyond the books and give his pupils lessons in life and its noblest requirements. If the pupils could be impressed with their own importance, or, rather, the importance of their future, and were given an ambition not so much for great things as for better things; were made broad minded and noble in character, the future of the great Republic woould be assured.

It is pitiful to see bright boys and girls go through the schools of the country, reciting lessons well and making records, and yet coming out as small as when they entered. The size of the body does not measure the size of the man or woman, any more than does the amount of learning measuse his or her greatness. A nobleness of soul, strong and healthy aspirations, greatness of purpose, bigness of spirit, broadness of thought, strength and unselfishness ot character—these make the men or women that carry the world up with them.. Oh, that the schools would make more of such men and women.

The Grand Junction Fruit Growers' Association in Grand Valley, Colorado, shipped 46 car loads of cantaloupes this year for which was netted $18,016.26. This is claimed to be the best price ever received for cantaloupes sent out of the west.

THE NATIONAL GRANGE

About the middle of November the National Grange held quite a successful meeting in the city of Washington. The Grange is the oldest of the farm organizations, and it has been a great educational force. In its earlier and more aggressive days it took up and worked out many needed reforms and its agitation secured some valuable legislation that the country is now enjoying, and that opened the way to other and still more important laws that have since been enacted.

But like all things else, with years came a retarding degree of conservatism, that made it fail or refuse to take up new questions concerning abuses that did not exist in the aggressive days of the Grange. This made room, if not a necessity, for other farm organizations, and they came, manifesting more or less life and activity, and doing more or less good; until finally came like a flash the idea that farmers must sell right before they can buy right; that if they could sell right they could well afford to let other people manage the selling end of other people's business. The consideration of this side of the question and a study of the history of the work done or attempted by other farm organizations is an attempt to control other business than their own, gave birth to the idea of equity in business, and resulted in the Society of Equity, a society that, while it demands equity to farmers, gives equity to all other classes. That society teaches what no other farm organization has taught, that production is only half of farming; that so far as an income is concerned and the ability to procure things not produced on the farm, marketing is more important to the farmer than production itself, and that the farmer has as much right to name the price at which he will sell as has the merchant to name the price of the goods that pass over his counter—as much right but no more. The doctrine and purpose, therefore, of the Society of Equity, instead of forcing the price of goods down to correspond to the price of farm products, is, to bring the price of farm products up to correspond with the price of goods, and, taking the price of products from the uncertainty of speculative control, make them as steady as are the prices of goods.

This is a purpose radically new, it is true, and before it the older farm organizations stand appalled, but it is simple as any plain business proposition, and as just and proper as the famous Bill of Rights—the universally recognized rights of property. We praise the Grange and the older organizations for what they have done, but we work for the Farmers Society of Equity for what it must inevitably accomplish.

POWER OF MONOPOLY

The Importance of Farm Organization

Some interesting things are coming out in the investigation of the tariff now going on before the congressional committee that has that matter in charge. The other day Mr. D. D. Colcock, a cane-sugar grower of Louisiana, testified that the sugar trust is so complete a monopoly that it fixes the price at which jobbers and retailers must sell, and also the price which producers must take. He instanced a case when the price of sugar was 4.16 cents a pound in Hamburg, 3.96 cents in New York, and yet the trust would not allow more than 3.62½ cents paid in Louisiana. This to the casual reader may seem a small margin between New York and Louisiana, but it means $6.70 per ton. Mr. Colcock also declared it was impossible for the growers to build their own refineries because the trust would soon squeeze them out of business.

None of this is news to the students of current events. The sugar trust is not the only combination that exercises like arbitrary powers over important commodities, and it only emphasizes the importance of farm organization, not organization merely for social and fraternal purposes, but to protect the farmers' business and take care of the products of the farms.

And while this tariff investigation is going on preparatory to the introduction of a so-called "reform" tariff measure into Congress, it is well for farmers to have an eye to their interests also. The great milling interests of the Northwest have long desired the existing tariff taken from wheat, that they might bring in the cheap Canadian product to force down the price of wheat at home. So strong an influence did they exert in this direction a few years ago that a secretary of the treasury virtually nullified the law and admitted Canadian wheat free on condition that its manufactured product be exported. No farmer need believe this influence is now sleeping. It is very wide awake, and its full power will be heard when a new tariff bill is to be formulated. If other interests are to be protected, as they certainly will be, the interests of agriculture should be protected too. A repeal of the tariff on wheat would reduce the price of that important product in this country 25 cents per bushel.

ENORMOUS SALE OF TOBACCO

Burley Tobacco Society Sells 1906 and 1907 Crops

By far the greatest single sale of tobacco ever made in this country or the world was consummated at Louisville, Ky., on November 19. It was by the Burley Tobacco District to the American Tobacco Company and for about 75,000,000 pounds. The prices agreed upon, which are also the highest ever paid for a large bulk of tobacco, are 20½ cents per pound average for the 1906 crop and 17 cents average for the 1907 crop.

The amount of money involved in the transaction will be around $14,000,000. As the tobacco is ready for delivery and the tobacco company needs the goods practically this amount of money will be put in circulation at once. This will boom every branch of business and prove a God-send to many poor families who have suffered many privations while waiting for the sale and holding to their principles of co-operation for mutual good.

People outside of the district can hardly realize the condition that has prevailed there. How these same people twice tried to solve their problem of profitable price and independence from the tobacco trust through capital stock companies to buy and hold the tobacco and failed each time. Then they accepted the Equity plan, organized, pledged, pooled, co-operated and finally sold two crops at prices equal to what they had been getting for three or four without the Equity plan. Will any person demand a more absolute demonstration of the practicability and efficacy of the plan? And it was all done without a dollar of capital.

We have reported some of the great demonstration in this district of twenty-two counties during the campaign of organization, pledging and pooling. But none of these equaled the popular demonstration when the great sale was announced. Everybody became wild with joy and enthusiasm. The high tension of suspense endured for many months let loose and old and young, men and women, joined in one great thanksgiving. Old men played pranks like boys and thousands marched in parades riding their tobacco sticks like boys ride sticks as imaginary horses. Women sank on their knees on the roads and streets and prayed in their thankfulness for the deliverance that had come to them and for the comforts the money from the sale of the crops would bring them.

And we predict these people will never need to go through a similar experience. Let them now larn wisdom from the past. They have won a great victory. They have demonstrated that farmers will stick together for the accomplishment of a good object. They have also demonstrated that the other people MUST HAVE what the farmers have first, and if they cannot get it at the price offered they MUST PAY the price asked. By friendly co-operation with the buyers in the future to grow only what the demand (the buyers) want, there never need be a repetition of the battle for supremacy. The buyers must now know the farmers will hold the winning cards AS LONG AS THEY DON'T OVERPRODUCE.

All of this points to the Farmers Society of Eqiuty as the means to make the most of the victory now and make it a permanent victory for the tobacco growers. Every producer should now come into the society. And so it may be with the growers of all other crops. If the reader has not yet read the article in this number, "The Farmers Society of Equity — Its Scope and Philosophy — The Cycle of Profitable Farming," he should do so now. The great lessons there referred to—Co-operation, Production, Selling or Marketing, and Mutual Benefits—must be learned by all and so learned and impressed upon him "that they will neither be forgotten nor disregarded."

Georgia is organizing the Georgia Fruit Growers' Exchange. It is to be a capital stock corporation. Growers are solicited to subscribe to the stock which is limited to $1,000 to a member, and pledge their 1909 crop to the exchange. Report is to the effect that many producers are subscribing and pledging. We cannot recommend it because the producers already own the fruit and through co-operation could market it without a large capital stock. We predict, while enthusiasm is high now, regrets will be as general a year hence.

Predictions are being made that stored eggs will prove very profitable before next spring when the cackle of the hen will be heard again in the land.

Prof. E. R. Bennett of the Colorado Experiment Station reports that his state will have a bumper crop of fine potatoes. The Greeley district, which is the largest potato producing section west of the Mississippi river, the crop is estimated at 10,000 to 12,000 cars. The U. S. crop reports gave the value of Colorado's potato crop at $4,500,000 last year, while this year it is estimated to be worth $6,000,000.

WHAT THE TELESCOPE REVEALED

And How it Looks to the Editor

An organization of the Indiana canners was completed last month at a meeting in Indianapolis. The stated object "is for the betterment of the industry and closer relations between the packers and jobbers." Each organization of this kind weakens the power of the farmers, who produce the stuff, to protect themselves. But we don't question the right and even the duty of the canners to organize.

According to the Government crop report for November the average yield of corn for 1908 is 26.2 bushels per acre. The final estimate for 1907 was 25.9 bushels. The total yield for 1908 is estimated at 2,643,687,000 bushels, against 2,592,320,000 bushels for 1907. This report came as a surprise to many, as it was quite generally expected that the great drought that prevailed over much of the country would seriously reduce the yield. We believe future reports will make the estimate lower and we caution farmers against dumping the new crop to an extent that will make unprofitable prices. Even if the estimate is correct it is a short crop should there be a normal demand.

A dry summer is usually good for the clover seed and turkey crops. The clover seed crop, we know, is large and of good quality. Our advices from the country have been, and are now, that the turkey crop is a good one and also of fine quality. In fact we saw no short crop scares until this time (about ten days before Thanksgiving). Now we see articles going the rounds of the papers headed "Turkey Crop Short," "Prices of Turkeys Advance," "Supply Light," etc. From a New York City market report we quote as follows:

"New York, November 13.—The market is working somewhat the way it did a year ago. The recent slumps in both live and dressed poultry induced shippers to lower their paying prices in the West beneath the ideas of most farmers who refused to part with their poultry at the prices offered. This caused a temporary shortage at this end and incidentally dangerously high prices. Shippers should not advance their paying prices to conform to the present unstable market, as with only a moderate increase in receipts, prices will undoubtedly fall to a lower level."

It is clearly another case of working the "big crop" tactics on the producers until poultry is in cold storage houses, when the "short crop" cry is heard in the cities and greed harvests its reward. And it will be so as long as producers allow it to be so and not a day longer.

We have referred to these things so often that it really becomes monotonous to us and probably to our readers. But it is only by pointing out the evils of the present lack of system in marketing and explaining the remedy that we can hope to arouse farmers to throw off the yoke they are wearing and protect themselves and the consumers in prices of the necessaries of life.

Last spring on the first page of this paper was a picture entitled "Making the Price of Eggs." To be exact it was in the April 15th number, and we wish each reader who preserves the paper would get that number and read the article accompanying the illustration. The predictions made there are being fulfilled earlier than we or the speculators expected. Egg speculators are elated over the prices and we quote from one of their organs as follows:

"It is seldom that such a large proportion of storage holdings have been sold so early as this season. Dealers saw some profit late in the summer and began to sell a part of their stocks. A few sold out altogether early in the fall. Most of the eggs now in storage have changed hands at least once. Only a small proportion of the present holdings remain in the hands of the original owners and it may be said that every man who has stored eggs in Chicago has already taken some profit. There are some dealers who have their original stock practically intact, and when the profit on eggs reaches $800 per car, which seems to be a matter of the near future, these dealers will begin to sell. Present prices do not represent much over $700 profit on Aprils, but some dealers are talking about $1,000 per car profit."

With the producers organized in the Farmers Society of Equity the eggs would be held, not by the speculators but by the original owners, until the demand is ready for them, which would then be supplied at equitable prices.

And it is the same way all along the line. We wonder how long it will be before the producers of the most necessary articles in the world will do like manufacturers do and husband their supplis until the season comes when they are wanted instead of displaying contempt for them and dump them to let another class of people hold them? Here is an example for fruit growers, taken from the Produce News of November 14, 1908:

"Most operators have so much confidence in the situation that they are holding their better lines until later in the season, when they expect higher prices. The supply of really fine apples is limited and these lines are readily cleaned up. Receipts have been liberal in both the yards and at the dock but both places have kept cleaned up fairly well. It was a little more difficult to keep the stores clean, as the buyers prefer to get their supplies from the docks. In the yards wheer there is a fair supply, prices ranged from $1.25 to $2.50. . . . Most of the receivers have their ideas around $5 to $6 a barrel."

The Grange, or Patrons of Husbandry, met in Washington, D. C., the week of November 9. A dispatch says "They will make a concerted effort to secure the postal savings bank and parcels post legislation." This leads us to remark that farmers may secure every good thing imaginable and the net profits will not be great as long as they do not secure independence in pricing their own products. On the other hand, we will say as we have often said before: "Give farmers the power to compel profitable prices for their crops and all other good things will come to them." Hence the chief end of farmers should be to organize to get profitable prices.

Large shipments of potatoes are expected to arrive from Europe, according to Eastern market reports. The Government estimate for yield per acre is 85.9 bushels and a crop of 274,660,000 bushels. In 1907 the average yield was 95.4 bushels and the estimated yield 297,940,000 bushels. This is a falling off of about 23,000,000 bushels. Notwithstanding European shipments, growers can hold firm for good prices if they have storage facilities as they should have.

When this Wisconsin case is finally decided we will probably know the difference between tweedledee and tweedledum. The report says: "A farmer brought suit against a firm that bought his crop of tobacco because it fused to take the tobacco, claiming it did not come up to the conditions specified in the contract. The lower court found for the plaintiff because of a ruling that the burden of proof was on the buyer to show that the goods did not come up to contract. The defendants then appealed the case to the higher court, which reversed the decision of the lower court and ruled that the law is that the burden of proof is on the seller to show that the goods complied with the terms of the contract.

WHAT GENUINE PLEASURE
To receive as a gift
WEBSTER'S INTERNATIONAL DICTIONARY
It is the BEST GIFT. A library in a single volume, of constant service and value to the home, professional and business man, and the student. The work answers correctly all kinds of questions in language, about places, rivers, men, names in fiction, foreign words, and many other subjects. 2380 Pages, 5000 Illustrations, Enlarged by 25,000 Additional Words. Useful, Attractive, Lasting. Its accuracy is unquestioned. The final authority for the U. S. Supreme Court.
Write for "Dictionary Wrinkles," and Specimen Pages, FREE. Mention in your request THIS PUBLICATION and receive a useful set of Colored Maps, pocket size.
WEBSTER'S COLLEGIATE DICTIONARY.
Largest abridgment of the International. The Thin Paper Edition is a real gem of bookmaking unsurpassed for excellence and convenience. A Choice Gift.
1116 Pages. 1400 Illustrations.
G. & C. MERRIAM CO., Springfield, Mass.
Remember the pleasure and benefit in owning an INTERNATIONAL

FLOWER-LANGUAGE POST CARDS, A SET OF 12 FREE

Do you know the "Language of the Flowers?" If you will send 10c for a six months' trial subscription to our large paper, The Epitomist, we will send to you, free, a set of twelve beautiful flower post cards. Each is different and represents the natural colors of the flowers and every card has the language of the flowers, portrayed in verse. These cards are strictly HIGH-CLASS and are not like any you have seen, for they are entirely new.

Write today and we will lose no time in sending them to you. Ask about the surprise which we are sure will interest you. We have only a limited supply of these beautiful cards, so send today if you want them. Address The Epitomist, 44 Main St., Spencer, Ind.

BANNERMAN Army Auction Bargains

Tents - $1.90 up | Old Pistols - - - $ .50 up
Shoes - 1.25 " | Officers' Swords, new 1.75 "
ARMY SADDLES 3.00 " | Cavalry Sabres " 1.50 "
" Bridles - 1.00 " | UNIFORMS - " 1.25 "
" Leggins, pr. 15 " | 7 Shot Carbine " 3.50

1907 MILITARY CATALOGUE, 260 large pages, containing thousands of beautiful illustrations—with 1908 supplement, wholesale and retail prices. Mailed for 15 cents (stamps). 15 ACRES GOVT. AUCTION GOODS.
FRANCIS BANNERMAN, 501 Broadway, New York

A Government Position for You

There are broad opportunities in the U. S. Civil Service for American men and women over 18. Life-long positions are granted to thousands every year. We enable you to qualify in your own home at small cost to pass any Civil Service Examination. Get free Civil Service Book.
International Corres. Schools, Box 1131 Scranton, Pa.

WAGON SENSE

Don't break your back and kill your horses with a high wheel wagon. For comfort's sake get an
Electric Handy Wagon.
It will save you time and money. A set of Electric Steel Wheels will make your old wagon new at small cost. Write for catalogue. It is free.
ELECTRIC WHEEL CO., Box 170 Quincy, Ill.

Publish a Paper

Publish a paper of your own; advertise your own business and make money on the ads and subscriptions of others. We are forming a syndicate of monthly papers, and your ads would appear in all the other papers in the syndicate, as well as in your own, thus affording a large combined circulation. By using the co-operative plan we are able to give you first-class service at a low cost. If interested send for our plan. Address, The World Press. 400 Cleveland Ave., Chicago

HOW I GOT MY FARM

Interesting Letters From Our Subscribers

HOW A FARM IN FLOYD COUNTY IND., WAS SECURED

Jos J. Zimmerman.

I was married in 1900 and had four hundred dollars. With it I bought a forty acre farm near Scotsville, Floyd County, Ind. There was not any thing on the place, but a little old rail fence, and we had to cut a road through the green briars. There were fifteen acres cleared once upon a time, but only four-acre field you could drive in with a team and turn around, so the first thing I did was to put up a two-story frame, with six 16-foot rooms, and I had to live in it when it wasn't half done. And then I put up a log pen with straw roof for my horse and cow; and then I had to cut briars and sasafras to get to the pen. This was in the spring of the year and I had to think about cleaning up some patches for my crop. I started with one horse, but found out that wouldn't work, so I bought an old plug of a horse. I didn't raise half enough feed for them. When I went to plow I carried my grubbing hoe and briar scythe and fork, and while the horses were resting and eating brush, I was grubbing and mowing briars. I kept this up for two years, grubbing, cleaning and building, and had not raised anything as yet. Then I got weak in my back and disgusted, and left my farm and worked by the day for one season. I worked from sun up 'till at night, when the stars were shinning, before I left the field.

My purse was empty, so I had to depend on my good old neighbor, who let me have some money, I suppose, on my honest face. Then I went back to my farm again and started to dig again. I had to build a barn, 24 feet by 40 feet, and then I had to dig a well. All this time I had not made a dollar on my farm. Then I set out strawberry and raspberry plants the first year, they didn't grow, too dry. So I tried it the next year and I made a few dollars; then I dug a cistern, 11 feet wide and 13 feet deep. By this time I had the brush cleared up pretty well, so I went to farming, and I began to raise crops and pay my old debts; then I dug a cellar, 16 feet by 18 feet, and put a room on it. When my money was all gone I had to go to my neighbors again and borrow. In 1907, in January, I sold my farm for $6,600, I had to pay my debts so I had $1,500 and my home less. I came down six miles north of New Albany, Ind., and I bought a ninty-two acre farm, it was grown up with some brush and a lot of old stumps, but I fixed them; they don't bother any more. It had a new six room cottage, but an old shaby log barn, so I cleaned up the farm and built a barn, 40x64 feet and 16 foot eve. Now I have all the machinery that the farmer needs, and I had a fair crop of 175 bushels of wheat, twenty ton of hay, and 400 bushels of corn. So here you have my start and end, and my age is 35 years and I have a family of four, and thank God all are well.

My farm now is valued at $5,000, so if any body beats this, please give him the first prize, for he certainly has earned it.

HOW TWO YOUNG COUPLE MADE A FARM

S. J. St. Clair.

Late in 1861 found me 21 years old, and married to a poor widow's daughter, without money, without a home, my only stock in trade was a good wife and my knowledge attained while growing up of farming.

Went in debt for seventy-seven acres full of stumps and roots, built a log cabin, borrowed skillet, lid and teakettle, made tables, used a shoe box nailed to the wall for a cupboard for three years. Cooked by an open fire place and lived happily. By close economy we finally paid for our home.

The war of '61 to '65 was on, seemingly every able bodied man was "off to the war." Labor was scarce and money scarcer. We worked for ourselves when we had anything to do and for others when we could. I lost all my crop by frost in August, 1863, and went to the army, leaving my wife and baby in care of friends, and helped finish the war at $16 per month; a slow process of accumulation. By perseverance and the good council of my wife we earned a good home of one hundred and twenty-five acres, and have it in a high state of cultivation, which makes us a luxurious living without the persistant efforts that it took to pay for it.

Yes, we did it by *Farming*, hired nothing, and of consequence earned our living and our home by the sweat of our brow, always jealously guarding our credit and retaining our friends.

I read UP-TO-DATE FARMING and preach its gospel where ever I go, and rejoice in its victory over those arch conspiritors that tried to destroy the best organization that the farmer ever knew. I hope some good missionary will come to Vigo County and open the eyes of the blind and unstop the deaf ear.

I have omitted all details, but think I have given you an idea how I got my farm —by *farming*, coupled with *industry* and *economy*, and the *assistance* and *council* of a *good wife*.

EXPERIENCE IN GETTING A MICHIGAN FARM

W. B. Spuren.

It was back in the early '80's, before I was married, I was full of energy and determination and imagined I could clear up the land in short order. I bought an ax and went after it. I managed to chop down about four acres of the timber, which was very heavy, maple, beech and elm. I then got a place large enough to build a small house on. "I exchanged work with a carpenter, who was building a barn, and by so doing got my frame for small house up and enclosed enough so my wife and I lived there the following winter, but we suffered terribly with the cold."

I remember full well our potatoes all froze in our cellar under the house and we had only one stove, a small box stove. But spring came at last, and while I was just as enthusiastic as ever, I made a firm resolve to have my house warmer before the next winter.

I worked out part of the time the first summer for 75 cents a day and my dinner in the bargain, to pay for a cow I had purchased that spring. I had to pay $30 for the cow.

I pitched in and worked every night until 10 or 11 o'clock, burning brush and logs near the house, and managed to get about one and one-half acres cleared and planted in potatoes. In the fall I worked for a man, whom I gave two days of my work for one with his team. I had a load of potatoes hauled to Cadillac and had to sell them for 15 cents a bushel and take store trade for them. When fall came I had scarcely anything to sell or live on, but had worked hard all summer, also my wife was taken with trouble with her feet and could not walk. I could not leave home to do any thing until I hired a lady to stay with my wife. I owed a mortgage on the land, which came due the following spring, and I had to give $40 bonus to get money to have the mortgage renewed.

I worked out for 70 cents a day and had to draw my pay at night to buy food for the next day. My people, or rather my mother, wanted me to come home and stay, but I refused. I knew if I gave up like that I never could get any of this world's goods, so I stuck to the farm. Things went this way for three years then the tide turned. I can not write half what I would like to about those pioneer days, but I believe such things are a blessing to us in disguise. It helps us to be more self-reliant and better able to meet adversity when fortune fails to smile on us, and since I have succeeded in getting and owning a splendid farm I can look back to those days of struggle and feel grateful that I had the courage and determination to stick to it as I did and win in the end.

CARVED OUT A FARM ON THE GREAT AMERICAN DESERT

A. C. Canble.

I located on a Mabel, Ark. government claim (or homestead), on the great American desert, October, 1886, and have carved out a fine farm on this once sandy desert. Our sailing has not been all smooth. We have had some wonderful large waves to ride, but we rode them and today we are on the side of prosperity.

When I got our claim of government land of 160 acres, and purchased lumber for a sod house 10x12, I had just $2.55 in Uncle Sam's coin to work on, but we went to work wherever we could find it and increased our wealth many folds the first year. In 1887 we put out fifteen acres to sod corn and millet. We raised enough for one horse. In October of this year the town of Holyoke was started, and being a little handy with tools I took up the carpenter trade for a few months, at good wages. And this was the beginning of our prosperity. In the spring of 1888, we put out another sod crop, and back-set our first breaking. We had a good crop of corn and millet that year.

During the fall months we went to work in Holyoke again and made some money. The next spring, 1889, we put out another crop, and raised a fairly good crop. We put in all of this year on the farm and had a large crop of broom corn to care for. The year of 1890 was a very disastrous one for eastern Colorado. Our crops were poor, and many, yes nearly all, left their land and went East (to see their wife's people), but the year 1891 was one of great prosperity, as our crops were all good and prices were also good. The year 1892 was also good, as well as 1893. But the year 1894 was a very disastrous year again to us, as crops were a total failure. In the fall of 1893 I put out forty acres of winter wheat. It looked fine until about March 1, 1894. In the spring I put out sixty acres of spring wheat, with twenty acres of barley and twelve acres of oats, and ninety acres of corn. But my harvest this year was very light, as I did not reap any of the grain, and the corn I cut and pulled up by the stocks and got two loads of fodder. With these two loads of fodder I took twelve head of horses and six head of cattle then the following winter. Of course, our means of support for a family of six persons was very meager and I was anxious to do any thing I could to earn an honest dollar. I took a job at $5 per month, and boarded myself, to look after about 125 head of stock, I had to see that they had plenty of water and did not stray away.

In the spring of 1895, with the aid of the State of Colorado, also the county of Phillips, the farmers were able to get a little seed grain, and the season was fair, but anything but good. We had our own seed for the following year, which was some better than 1895. We had plenty of rough feed for stock, but very little grain. But from this time on our crops began to improve, and for the last seven years they have been good, and we have prospered. Today we own 560 acres of Colorado soil that is reasonably worth $25 per acre; thirty-four head of cattle; seventeen head of horses; forty-seven head of hogs, and all up-to-date farm tools, consisting of two row cultivator seeders, press drill, disk plows, buggy and carriage. This season raised something like 2,500 bushels of wheat, oats, speltz and corn.

These are the ups and downs of a Homesteader's life on the great American desert of eastern Colorado.

First Prize, $5.00—Chas. C. Willson, Queenstown Md. Second Prizes, $1.00—to each five as follows: Mrs. Alex Cole, Quanah, Tex.; T. S. Melton, R. R. 4, Lawton, Okla.; W. B. Spuren, 200 6th Ave., Cadillac, Mich.; A. J. St. Clair, Riley, Ind.; Joseph J. Zimmerman, Floyd Knobs, Ind. Third Prizes—A year's subscription to UP-TO-DATE FARMING to each five as follows: S. T. Jones, Kassaw, Minn.; R. Sherod, Keosauqua, Ia.; A. C. Canble, Holyoke, Colo.; M. R. Clark, Brainerd, Minn.; Willie Mudd, Caneyville, Ky.

CHRISTMAS POST CARDS FREE

A Big Package Sent to All of Our Readers Who Write at Once

To any reader of this paper who writes immediately and incloses a 2-cent stamp we will mail a set of three most beautiful post cards you ever saw and our big farm paper on trial 3 months; 10 Christmas, floral and motto cards, all different, in exquisite colors, silk finish, beautifully embossed, etc., 10 cts.; 3 full sets. 30 cards all different and one year's subscription, 25 cents. Address Valley Farmer Postcard Dept., 530 Jackson St., Topeka, Kan.

How Did You Get Your Farm?

WE want readers of UP-TO-DATE to write out their experiences in getting their farms and send to us. We will pay you, see below.

If you inherited the farm and there is an interesting story connected with it, we want it; if you carved and dug your farm out of a forest, or perchance removed layers of stone before you had the soil to plow and plant, tell us about your patient labor and trials endured; or if you have a prairie farm which, when you acquired it, was ready for the plow, or bought your farm ready made, we want to know how you got it.

Nearly every farm has an interestng story of its acquirement by the present owner; struggles of labor or litigation; difficulties to meet the payments, discouragements and triumphs.

Our object is to make UP-TO-DATE FARMING interesting and help others who may be paying for farms or want to buy farms.

For the best article on this subject received between October 15 and December 15, 1908, WE WILL GIVE $5.00.

For the NEXT BEST FIVE, $1.00 EACH.

For the NEXT BEST FIVE, ONE YEAR'S SUBSCRIPTION TO UP-TO-DATE FARMING.

We will not put a word limit on the letters, but letters carried out to unnecessary length will be scaled down in points on that account. Be brief, give us the story and we'll fix it for publication. Send photographs of interesting features, the buildings, or of some members of the family, if possible, to embellish the story.

EDITOR UP-TO-DATE FARMING, Indianapolis, Indiana.

Building--Valuable Helps for Our Readers Who Will Build in 1908

CEMENT AS A SUBSTITUTE FOR WOOD

Probable Effect on Lumber Prices

The relation between the increasing use of cement and the diminishing timber supply in the United States has been the subject of some interesting correspondence between the Geological Survey and the Forest Service at Washington. In a letter to the Forester, the Director of the Survey took occasion to quote from a statement of a large Philadelphia firm to the effect that it would be difficult to estimate what the additional drain on the lumber supply would have been during the last few years had not cement come into such general use. The Forester replied in part as follows:

"The Forest Service is watching with a great deal of interest the increasing use of cement and other substitutes for wood. They are undoubtedly having some influence on the price of lumber, though I do not think that up to the present time they have greatly retarded the advance in lumber prices. The fact is that our industrial progress has been so great that our requirements for every kind of structural material have increased tremendously. We are using at the present time more lumber per capita than ever before and probably twice as much per capita as we did fifty years ago. The conclusion can not be escaped, therefore, that in the future we must depend more than in the past on other materials than wood for certain purposes at least. As to the increase that will take place in the production of cement, my impression is that this will be very great."

If the increase in the use of cement in the United States in past years is to be regarded as an index to its future use, the conclusion of the Forester is well founded. The statistics of the production of minerals show that our output of cement has more than doubled in the last five years, and it is well known that its use is being very widely extended. This is due to two conditons: In the first place, excellent cement materials are common in almost all sections of the country; in the second place, reinforced concrete for heavy building material is reciving increased favor among engineers, while in the country regons large amounts of cement are being used for building blocks for smaller structures. Reports received by the Survey during the six years from 1902 to 1907 show that the production of cement in the United States has increased from 25,000,000 barrels, valued at approximately $25,000,000, to 51,000,000 barels, valued at $55,000,000, the annual statistics showing a steady increase in production with some slight fluctuations in price.

CEMENT PLASTER FOR HOUSES

Cement plastering is being used quite extensively for outside finish, and is proving very satisfactory, durable, artistic and impervious to the weather. As a rule, two coats are used—the first, a scratch coat, composed of five parts of Portland cement, twelve parts of clean, coarse sand, three parts of lime and a small quantity of hair. The second, or finishing coat, consists of one part of Portland cement, three parts of sand and one part of slaked lime paste. Some masons prefer a mortar in which no lime is used, but this requires more time to apply.

In using this kind of a finish on a frame structure, first cover the surface with two thicknesses of building paper. Next put on furring strips about one foot apart, and on these fasten the wire or metal lath, of which there are several good kinds to be had from the dealers in building material. Apply the first or scratch coat one-half inch thick and press it partly through the openings in the lath, roughing the surface with a stick or trowel. Allow this to set well, and apply the finishing coat about three-fourths of an inch thick. This coat can be put on and made smooth with a wooden float, or it can be thrown on with a trowel or stiff brush if a spatter-dash finish is desired. A pebble-dash finish may be obtained with a final coat of one part of Portland cement and three parts of sand and pebbles not over one-fourth of an inch in diameter, thrown on with a trowel.

We think it best, however, to make a smooth finish and then paint the color desired. This is becoming quite the practice with many masons.

The work should be moistened twice daily for several days. There is no cracking when the work is well done and good material, free from clay or dirt, is used. We do not think such a covering would prove the best for a roof. The weight is so great that unless the supports were very strong and rigid there might be danger of settling sufficient to cause cracks and leakage. —The Wisconsin Agriculturist.

LOCATING FARM BUILDINGS

Two common practices that seem to prevail in grouping farm buildings on a particular side, or in placing them in relation to one another, are discussed from an economic standpoint by R. S. Shaw and J. A. Jeffrey in Bulletin 250 of the Michigan State Agricultural College. They say:

"Buildings are either grouped to form an unbroken line or square, or they are placed promisciously without any definite relation one to another. It is a common practice in some parts of the country, particularly New England, to have house, woodshed, carriage building, horse stable and other farm buildings joined in a continuous string, so that the most remote one can be reached from the house without going out of doors. Barns are frequently placed so as to form a court, three sides of a court, or an L. This is usually done to secure a yard protected from wind and have easy access to the stores of fodder in the barn and to the stock of straw in the yard.

"Undoubtedly the most satisfactory grouping of farm buildings, except for danger of loss by fire, is secured by placing them in the form of a square surrounding a court. The chances of complete loss by fire are such, however, that this plan should receive careful consideration before adoption. No matter how perfect the water system to guard against fire may seem to be, it is a general rule that if a barn takes fire from lightning or other causes, it is almost certain to be completly destroyed, because of the combustible material of which it is constructed, and the hay, straw and dust found therein. If barns are grouped to form a square, adequate gaps should be left at the corners of the square for fire protection; then the group is only measurably safe, even with a good water system."

PLANT TREES—BEAUTIFY THE HOME GROUNDS

An observing person when traveling through the country can not but be impressed with the general lack of shade trees and ornamental plants about country homes. While many have made such improvements, many other houses stand exposed to the heat of the summer sun and the untempered chill of the winter's wind. The home surroundings in this respect is a sure barometer of the people who live in the house and particularly of the head of the family.

It is easy to feel a warmth and friendship toward the farmer and his family who live in a comfortable house which has been beautified and enhanced in value because of the forethought and good judgment exercised years before by the owners. A man who looks ahead to profits and comforts will not delay long in planting trees, hardy shrubs and vines, including grape vines, and in grading the lawn and seeding it to grass or sodding it. The initial expense need not be much while it is difficult to make any investment that will return larger dividends. If these matters have been neglected until this time in the case of any of our readers let them believe that it is never too late to begin, and begin at once.

CONCRETE FARM BUILDINGS

Reinforced concrete is generally associated with large industrial buildings such as warehouses, mills or factories, and because of its use for structures of this kind it has become to have a rather bad reputation as far as its artistic side is concerned. That it is possible, however, to produce structures of this material, of a character acceptable to the owner of large country farm estates as well as to the landscape architect, says Concrete Age, is demonstrated in the group of farm buildings recently completed near Sterlington, N. Y., on the estate of Mr. F. L. Stetson. Designed as they are for the many diverse uses which occur in connection with a large estate of the character of Mr. Stetson's, these buildings constitute an unusual concrete group. The care with which the design was worked out is shown in the list of rooms provided for. There are, in addition to the cow barn and hay barn, bull pens, calf pens, feed pins, root cellar, boiler room, coal bins, milk room wash room, laundry, kitchen, grain bins, and complete living quarters for the dairyman's family.

The exterior of all of the buildings consists of a pebble-dash finish. This was composed of a mixture of sand, pebbles and cement, which was applied after the walls had been roughened or scratched at a considerable time after the completion of the buildings. A final brush coat of sand and cement was made very thin. To contrast with the Portland grey of the walls, the roofs of all buildings were made of red semi-glazed Ludowici tile laid on one by two shingle lath which was put directly on the roof and well imbedded in cinder concrete laid on the reinforced concrete slabs.

The partitions in the cow barn are formed of solid concrete three feet eight inches high and four inches thick, reinforced with one-fourth inch twisted steel bars. The partitions in the cottage, all of which are plastered both sides, are, in some instances, of reinforced concrete and elsewhere of terra cotta tile, generally three inches thick. The floors in the hay barn and cow barn have a granolithic finish one inch thick. In the living rooms of the dairyman's cottage, however, wooden floors one inch thick are laid on two-inch by three-inch sleepers imbedded in cinder concrete fill laid on top of the reinforced concrete floor slabs.

The waterproofing of the floor of the cow barn was done to prevent the moisture striking through the concrete floor and giving the cows rheumatism. In all these buildings where water was likely to be used such as in the cow barn, wash room and dairy room, the floors were given a slight pitch and bell traps were set at the low points. Connecting with these traps are tile drains leading to a cesspool near the buildings.

Connected to the cow barn by means of a pergola supported on large round concrete columns is a manure shed also supported on concrete columns and enclosed with wooden screens. A light steel trolley runs from this shed to the interior of the cow barn.

The cow barn is approximately 22 feet by 72 feet; the hay barn 42 feet by 42 feet, two stories in height; and the dairyman's cottage is also two stories in height and is approximately 40 feet by 50 feet.

Concrete Age is published at Atlanta, Ga., and we believe we are doing our readers who contemplate building a favor by recommending it to them.

HEATING FROM BENEATH

Reforms never go backward, we are told, and it is fortunate that it is so. Great improvements have been made since the old log fireplace that occupied nearly half of one side of the room, which in reality was the house. A roaring fire of logs blazed therein continually in winter, but many a crack and crevice made a way for the cold air to suck in in almost all parts of the room as though a fierce storm of cold wind was perpetually blowing. A common saying was: "My back is freezing, but I am burning in front!" and life and activity were manifested by the constant rising and turning of those who sat before the fire.

The tighter room and the heating stove, either wood or coal, has been a great improvement, a multiplier of comforts, but the end is not yet. The feet are the part of the body that is cold now, and the feet are the part health demands shall be kept warm. In the stove-heated room the coldest air in it is on the floor, and since the warm air is lightest and ascends that must necessarily be so. All the fresh air that comes in drops to the floor, and rises as it warms, only to give place to whatever cold air can enter the room. Besides, the cold beneath the floor keeps the floor cold. Thick carpets may mitigate this trouble some, but not enough to insure comfort to the feet.

This is particularly disastrous in country schools. Children often have to wade through snow and slush to get to school. When there they have but little opportunity to dry or warm their feet. We have often known grown, or half grown girls sit for hours back in the room at their desks, with drabbled skirts and ice-cold feet, while a red hot stove ten feet away made the air at their heads too hot for comfort. This is known to be not at all an overdrawn picture, and the wonder is that children from such schools ever grow up to be healthy men and women. Tuberculosis! Consumption! The real wonder is that there is not more of it.

The same is equally true of stove heated churches, except that they are so much less frequently occupied, and for shorter periods of time.

The next reform, therefore, in dwelling, school and church, is heating from beneath. Not another school house or church should be erected without provision for a furnace under it, and those already in use should be so remodeled as to admit of furnaces where it is at all possible. And that should be the rule also in the construction of dwellings. The inmates of houses so arranged and so heated, with modern appliances for ventilation, may go through a severe winter without realizing there has been a change of temperature, except as they leave the house; and then they take on outer clothing adequate to the change and it does not affect them.

Furnaces are now obtainable in many styles and at moderate prices, and their employment, as indicated, is not only conducive to comfort and health, but is economic as well.

LIME TREATMENT OF LAND

Lime can scarcely be called a fertilizer, and yet its application to land is often followed by greatly improved crops. There are various reasons for that. Some lands hold plant food in an unavailable form that the action of lime tends to release and make available. This has the same effects upon the subsequent crop that an application of fertilizer would have. Other lands are acid, and in that condition are not productive, especially of clover and other leguminous crops. Lime neutralizes the acid, gives life to such soil, and results in greatly increased production though no actual fertility has been added.

Where green crops, as clover, cow peas, etc., or even weeds, dry stalks, straw or other trash, have been turned under, an application of lime is useful, as it hastens the decay of the matter turned under, prevents the green stuff from becoming acid, and aids its incorporation with the soil as humus. An equally valuable effect is produced by an application of lime where the land has been heavily treated with barnyard manure.

The most imperative need of lime, however, is on sour or acid land, and there is more of that than the average farmer suspects. And soils are never in condition for profitable farming. Clover can not be made to grow in it at all, and where clover will not grow the farmer is robbed of his very best source of soil fertility. The acidity of soil may be determined by burying a bit of blue litmus paper in the damp earth. Taken up some twenty-four hours later, the paper will be found changed to pink in color if the soil has much acidity; and then a treatment of lime is an absolute necessity. Litmus paper may be obtained at almost any drpg store.

If successive efforts have been made to grow clover on a piece of land without success, the reasonable presumption is that the land is acid. We have known such land produce clover luxuriantly after a single application of lime; and then the land was ready for any crop. Sometimes a small patch may be acid, while the remainder of the field may be free from the trouble. This accounts for many fields growing clover in patches. Clover will not grow on sour land.

SPRING WHEAT 1908

The average yield per acre of spring wheat this year, as reported by the national department of agriculture, is 13.2 bushels, the same as that of the final estimate for last year, and a little below the last six year average. The indicated production of spring wheat this year on that basis, is 234,080,000 bushels against 224,645,000 bushels last year, the difference growing out of an increase acreage. The quality is slightly below that of last year.

The October estimate of the entire wheat crop for this year is 660,020,000 bushels, compared with 634,087,000 bushels, the final estimate by the department for last year.

FARMING ON POOR LAND

To farm on poor land is always an up hill business. Barring the additional weeds that may grow on rich land, it takes as much seed, as much work, and requires just about as much sweat to make a crop on poor land as upon the richest land in the country; and then there is never any certainty of results, except that the best results that can be hoped for are bad. Crops grown on poor or exhausted lands are like human dyspepsia or inebriates, badly nourished, weak in every fibre, and an easy prey to every adverse condition, be it drouth, flood, insect enemy or whatever else may assail them.

Every farmer should try to save himself from the cultivation of poor, worn-out or exhausted soil. It is a waste of material and energy.

But supose one has no other kind to cultivate? Then it is better,, far better, to cultivate fewer acres, and enrich them. Use the barnyard manure to the very best advantage. Plow under green crops. Treat with lime, and neutralize the acidity, if it be acid, and assist in releasing unavailable plant food. In this way get clover started, after which the trouble is over if proper management follow.

Change the crops. Shift the responsibility of the soil as to plant feeding. Run strong to the legumes, and do not hesitate to turn under, plowing deep for that purpose, and lightly top dress with lime to give the up turned earth life, and to hasten the incorporation of the decayed vegetable matter with the soil. A few years of this sort of treatment will make the poorest land productive, and each year may increase its fertility. And all the while it may be made to pay its own doctor bill.

Supose the land is hilly and inclined to wash. The treatment must be somewhat different. Use the levelest portions for cultivation and the above treatment, and get the roughest seeded to blue grass. The strongest sod you can get the better. Fll any ditches that may have already formed with straw, old hay, or any sort of trash, not even rejecting small bushes or brush, and keep then filled. Pasture these portions, and do not attempt to cultivate until it is clear the land is well restored. If weeds that the stock will not keep down appear during the time of pasturage, keep them cut out.

But, says the average farmer, all this involves a great deal of work, and he is inclined to inquire where his pay comes in. If the land is his own it is easy to see where. He is making land much cheaper than if he were buying it. He is not adding acres to his land, but he is adding to its richness and value. We have known the value of land, measured by its productiveness, doubled in this way in a very few years.

If the land is cultivated by a renter, then its improvement is a matter of mutual interest between the tenant and the owner—the one getting his pay in the increased value of the land, and the other in the increased yield of the crops. These two parties should join hands and gladly co-operate in the matter. Since the owner's benefit is permanent he can well afford to be liberal in this regard.

Shall We Dynamite or Pull Stumps?

First of all dynamite is dangerous. Few people without experience are competent to handle it. Secondly, it is expensive. But aside from the matter of danger and expense, dynamite is not the best method of removing stumps. It splits and shatters the stump but does not remove the roots from the ground. They quickly send up shoots and a thick growth of sprouts and brush results. It requires a large and long continued use of the grubbing hoe, which is avoided if the stumps, roots and all, be pulled in the first place.

Unquestionably pulling is the better plan. It is infinitely better since the perfecting of the all-steel triple power stump pullers made by the Hercules Mfg. Co., Dept. 11, Centerville, Iowa. These pullers are a great improvement in stump pulling machinery. They are wonders for power. They have a number of times the strength of iron pullers, and yet their weight is less. So they are easily handled. These latest steel Hercules pullers are guaranteed for three years. The old-style iron pullers could not be guaranteed. Send for the Hercules booklets for full particulars. They come free on request. Write for them and kindly mention UP-TO-DATE.

WHAT ARE YOUR SEEDING CONDITIONS?

Have you any peculiar seeding conditions confronting you? Are there any particular seeds that you want to plant? Here is a chance for our readers to get, free of all cost, any special information they may desire.

The American Seeding-Machine Co., Incorporated, Richmond, Indiana, manufacturers of the Hoosier Grain Drill, will be pleased to furnish any special information along this line to any farmer who will write and ask for it. If it is a matter of sowing fertilizers, or grain, or style of furrow opener best adapted to your needs, they will tell you frankly and honestly what they have found out by years of practical experience. This information places you under no obligations whatever. The Hoosier Drill is manufactured in many different styles and sizes, and the farmer can get a Hoosier Drill that will do his work as it should be done. Write them and ask for a free copy of their Hoosier Drill catalogue, then go to your local dealer and insist on seeing the Hoosier Drill before you purchase any other make. Every Hoosier Drill carries with it a guarantee that is of vital and protecting importance to the purchaser. Therefore, no farmer takes chances on buying the Hoosier, because it must, and will, do all that any reasonable man could ask. This is fair and honest and absolutely protects the purchaser.

DON'T FAIL TO MENTION UP-TO-DATE FARMING when writing our advertisers

OUR NATURAL RESOURCES

To Up-to-Date Farming:

I do not wish to startle your readers, but I do wish to ask a question seldom considered in any nation: What are the natural resources of the United States? Who knows? Who has ever seriously considered it? And yet what question could be more important to present and future generations?

The meeting of governors that assembled in Washington at the call of the President last summer, took the matter up, and since then it has been a live question not in the nation only, but in the different states, and the National Conservation Commission has been supplemented by state commissions in many of the states.

Since the meeting of governors, inquiries have been going out from this and that government office by the thousand. They have gone to special agents in the field, to government stations here and there, to bureaus of statistics all over the country, to county clerks, to township assessors, to manufacturers, to lumber dealers, to railroad and steamboat companies, and to farmers. The chiefs of the government bureaus have been wanting to know about lands—farm lands, timber lands, mineral lands; about crop and crop production; about swamp and over-flow lands; about irrigation; about navigation—how far the use of our inland waterways has decreased and the reason for the decrease; the cost of water traffic as compared with railroad rates; the use of water power and its possibilities; about all phases of the forests and of timber and lumber; about how much of minerals we have left and the probable duration of the mineral supply, and about live-stock and game and fish.

The scope of inquiry is very broad, and the compilation of the report will be a herculean task. But it will show as was never shown before the resources, the assets, of the United States, and the possibilities of their conservation and further development. A preliminary report is to be made to the national commission at its meeting in Washington, December 1. A week later the governors of the states and territories, or their representatives, will again meet in Washington to further consider the question, and two of the most interesting figures there will be Governor Frear of Hawaii and Governor Hoggatt of Alaska, who have already signified their intention to be present. They will not be particularly interesting in themselves, perhaps, but because of the desire to learn of the resources of the remote regions they represent.

It is gratifying to know that this partisan. Mr. Bryan, who participated in and addressed the governors' meetings, declared himself strongly in favor of it, and in his speech of acceptance, Mr. Taft approved it, the platform of both parties favoring it. The American Federation of labor has also endorsed it, as well as the National Association of Manufacturers.

Hence, this seems to be a movement without an opponent, and it will result in a vast increase in the popular knowledge of the resources of the country, with intelligent consideration of their conservation, or preservation and augmentation in value. But it is a little strange and regretable that, notwithstanding the wide range taken by the late inquiries, nothing is asked concerning the cost of farming, the prices paid for farm products, the handling of those products between producers and consumers, and whether or not farmers are accorded actual profits commensurate with those enjoyed by other lines of useful labor. I know this is not a designed omission, for I have talked with many in high places who freely concede that upon these questions turns the value of many of our most important resources; but the universal teaching has so uniformly ignored these matters and the world's investigators have so seldom considered them, it is not surprising that they are so often omitted even where they should occupy a place well toward the top. I have it on good authority that the agitation by Up-to-Date Farming is bringing these important questions to the attention of circles where they had been heretofore unthought of, and that they will soon find their proper place in the nation's thought and investigation.

CAPITAL EQUITY.

Washington, D. C.

STRANGE INVENTION! PROLONGS LIFE. ENERGIZES WATER.

A GOD-SEND TO MEN, WOMEN, CHILDREN. 50,000 already sold. Causing frenzied enthusiasm. Everybody surprised, happy over new, wonderful discovery. Centuries getting here but realized at last. Readers, listen, see, read about **OHIOANS PECULIAR LIFE PROLONGING APPARATUS.** Nothing Like It.

Making Agents Rich

"My sales $1281 one month, $1118 another. Best thing ever sold. Not one complaint from 2000 customers." SWORN STATEMENT by M. G. Stoneman, Mont.

Sectional view Comb. Portable and Bathroom Outfit.

Astounding, but true, no more bathing in water. Bath rooms, bath houses, bathing resorts no longer needed. ALLEN'S PATENTED BATH APPARATUS does combined work of all and more at one operation. Gives every home Ideal bath and health advantages. Automatically energizes and operates with only 1 gallon of water. Wonderful combination Mechanical and liquid forces producing at one application four exhilarating, scientific, hygienic baths. Used in any room, at home or when traveling—anywhere that water exists. Cost only $5.00 Complete—cost nothing to operate. Sounds strange, even impossible, yet it is no experiment—going on daily.

See how Simple, Easy, Convenient: To bathe—place Metallic Non-Corrosive Fountain on wall or shelf—fill with water—turn screw—that's all—thereafter it works automatically. Cleansing, friction, massage and shower bath all in one, hot or cold, one operation, 5 minutes time. See it Energize! Your body constantly flushed with clear running water, pores opened, cleansed, kneaded, invigorated by hundreds of little soft self-cleansing "fingers" working gently, soothingly, thoroughly, altogether. Only clear, running, energized water touches the body—no immersion—a delightful, tingling, sparkling spray that refreshes and cleanses simultaneously, every vein and muscle jumping with new life.

What a pleasure—could anything be more perfect? No tubs to clean, bowls or buckets to fill—no wash rags or sponges to harbor disease breeding germs—no dirt, odor, splashing or muss. No plumbing, pipes, tools, valves—not even a screw to insert. Move apparatus about at will—child can do it. Simple, durable, handsome, sanitary. Saves time, expense, labor, space. The Ideal Bath System for town or country homes, travelers, roomers, campers. Insures cleanliness without drudgery, inconvenience, annoyance. Promotes health, beauty, happiness, sound sleep—prevents colds, LaGrippe, contagious and other diseases.

WHAT OTHERS SAY

FAMOUS BATTLE CREEK SANITARIUM writes: "Bath Apparatus best we have ever seen. We endorse it. Send 6 more." DR. J. W. SKIDMORE, Miss., writes: "I don't pretend to use my bath tub any more. Your apparatus far superior. Everybody likes it. Wouldn't take $25 for mine." MRS. E. B. BUCKNER, Va., writes: "Enclose order for $80.80. Goods fine. Greatest convenience and comfort ever invented. No one would ever give it up." CHAS. DAY, S. D., writes: "Used apparatus 10 minutes after receipt. Feel like a giant, refreshed with new life." S. S. HAVENS, Utah, writes: "People seem struck dumb when they see this wonderful apparatus. Excels all methods." C. N. JENNE, Ill., writes: "Enclose order for $120.86. Can sell an outfit to every family. All think it the finest thing out. The talk of the neighborhood. Everybody wants one." JNO. F. PHAR, Mont., writes: "Makes a modern house on the farm. Great gift to mankind." REV. J. F. JOHN, Ill., writes: "After 2 months use am delighted. As near perfection as anything human can be. Will never be dispensed with. MRS. A. C. SUTTON, Ky., writes: "Perfectly splendid. So easy to bathe the children." C. R. MARTIN, Pa., writes: "Apparatus a marvel. Certainly will create a sensation." MISS EVA EDWARDS, Nev., after ordering 73, writes: "Everybody thinks apparatus finest thing. Sold 15 one afternoon." J. STRAHM, Kas., writes: "Enclosed order for $364.50, only 3 days work. No trouble to sell. Appeals to everybody. Every customer pleased."

Guaranteed by an old reliable $50,000.00 house. Price complete, ready to use, only $5.00 and up. Sent to any address. Order now—you'll be satisfied. Send card anyhow for full description, valuable book, catalogue, testimonials—ALL FREE.

THE ALLEN MANUFACTURING COMPANY, 1417 ALLEN BUILDING, TOLEDO, OHIO.

Rasp, Wis. "Canvassed 60 people—got 55 orders. Sold $320.00 in 16 days," writes W. H. Reese, Pa. "Enclosed order for $115.00 first days work. Best thing I ever worked," writes L. H. Langley, N. D. "I averaged $164.25 weekly for 3 months, undoubtedly best line on market," writes J. W. Beem, Kans. "Finest sellers I ever saw, catches the eye. Don't want anything better. Sell 8 out of every 10 houses," writes Wm. Maroney, Okla. "A man that can't sell your outfit couldn't sell bread in a famine. Send 48 more," writes J. B. Cashman, Minn.

Hundreds averaging $50 to $60 weekly. You can too. Experience unnecessary. New invention. Millions wanted. Costs nothing to investigate. CREDIT GIVEN. Write today for exclusive agency offer, Credit Plan, stories of success. ALL FREE.

CABIN AND COTTAGE

The forests the pioneers found in all these great interior states have disappeared, and the cabbins in which the pioneers and most of their children of the first generation lived, have gone with the forests. But in most cases tasty cottages, in some cases commodious farm houses and convenient out-buildings have taken their places. There is no prettier sight than a beautiful farm home, and every year marks home improvements, both in buildings and grounds.

As in all other lines, invention has been at work in house building, and has helped to make pretty homes. It has also contributed to convenience, comfort and health.

Cement—concrete—takes the place of stone, heating systems drive out the stoves as the stoves closed up the old fireplaces, sewers lead the slops from the kitchens, modern baths invite to cleanliness, and closets and pantries take the place of the cumbersome old cupboards. Paint, regarded a necessity now, beautifies and keeps the exterior new, and the modern wire or ornamental fence adds a charm to the surroundings.

The up-to-date builder of up-to-date houses, the provider of up-to-date homes, in country, village our town, has reason to congratulate himself on the period in which he lives. In no other period were there so many modern aids to tasty buildings; and it must be confessed they come well within the reach of the builder, even though of moderate means. The writer recently built a small structure of material that a few years ago was considered only for the finest and most expensive edifices, but now he made it cheaper than if he had used the old time coarse and rough material. Hence we advise Our Up-to-Date People, who contemplate building this year or next, to consult the furnishers of modern material before ordering the old and out of date.

If you want to buy good Michigan land, write to S. S. Thorpe, 29 McMullen Bldg., Cadillac, Mich. Farms in Michigan are money makers. Write for book.

A gasoline pump for $37.50! Who ever expected it? And besides it is made, sold and guaranteed by the Aermotor Co. One engine complete that can be attached to your present pump. You can attach it in 30 minutes. Get busy, Mr. Progressive Farmer. Write the Aermotor Co., Chicago, and tell them you read Up-to-Date Farming.

A gas or gasoline engine on every farm—that day is coming. Up-to-date farmers everywhere are letting machinery do their work more and more. Man is to direct the forces of nature for his benefit. Farmers, as a class, are perhaps the last to do away with the drudgery of everything being done by hand—muscle. The Gilson Mfg. Co., 130 Park St., Port Washington, Wis., make a dandy little gasoline engine for numerous uses about the farm. It costs only $60 and is sold on free trial. Better send for catalog.

A Roofing That Needs No Painting

Labor saving devices are constantly being discovered, and one of the most important for farmers has been the development of a new type of roofing which does not require continual painting to keep it tight.

The leader in this new development is Amatite Roofing, which has a surface of real mineral matter. The pitch in which this mineral is embedded is so adhesive that the mineral surface will not wash off.

After an Amatite Roof is laid there is nothing more to do to it. It is not necessary to look after it each year for painting or patching, and all the labor and cost of coating the roof is done away with.

The manufacturers of Amatite are glad to show samples of their materials, and these may be obtained by those who mention Up-to-Date Farming and send a postal card request addressed to the nearest office of the Barrett Manufacturing Company, New York, Chicago, Philadelphia, Boston, St. Louis, Cleveland, Pittsburg, Cincinnati, Kansas City, Minneapolis, New Orleans.

I am not bound to win, but I am bound to be true; I am not bound to succeed, but I am bound to live up to what light I have.—Lincoln.

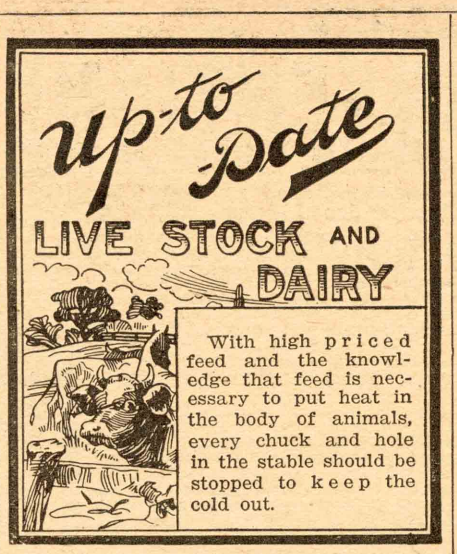
CALVES RAISE THEM WITHOUT MILK
Booklet Free
J. W. BARWELL, Waukegan, Ill



With high priced feed and the knowledge that feed is necessary to put heat in the body of animals, every chuck and hole in the stable should be stopped to keep the cold out.

LOOK AHEAD

Next year will develop some unusual livestock conditions. But little stock is being wintered over; as a rule only such as cannot be disposed of. Yearling and two-year-olds, such as are usually eagerly sought for the feed lots, are meeting but little demand, yet the bulk of them are going in at very low prices. Thirty-five and 40 pound pigs are offered in some portions of the corn and pork belt at from $1 to $1.25 a head. The owners haven't the corn to feed them. This idea is depleting the stock on hand, and next season must find these animals very scarce. Farmers would do well to hold their young stock, even though they do it at an apparent sacrifice. Economize the feed resources, but manage to keep the young stock growing. Live stock prices are arbitrarily made, it is true, and do not depend much upon whether the supply is great or small, but there must be such a scarcity next year as to compel fair prices in spite of the packers combine. It is our candid opinion that whoever has marketable stuff after next April, or even before that date, will get good prices for it.

PREPARE FOR HOG KILLING

Slaughtering time involves lots of hard work, and anything that will tend to decrease labor is of value. You should consider the most effective means of getting through the work and what is still more important, realize as much as possible from your hogs.

To this end, there's nothing that will help more than an "Enterprise" butchering outfit—"Enterprise" Meat and Food Chopper and a Sausage Stuffer and Lard Press. The cost of this outfit is comparatively small, and measured by the increased value that your hogs return, will pay for itself in one season.

The "Enterprise" Meat and Food Chopper chops the meat uniformly, without crushing and grinding—every minute piece retains all of its goodness and flavor.

Another machine of great value to poultry raisers and on the farm is an "Enterprise" Bone, Shell and Corn Mill. It is especially adapted for grinding dry bones, oyster and other shells, corn, grain, etc. It is a good general mill for farmers, poultrymen, etc., and for compactness, strength and durability cannot be excelled. It insures a variety in food supply for your poultry, increasing their yield and value tenfold.

"The Enterprise Housekeeper," a book of over 200 choice recipes and kitchen helps, will be mailed free to anyone sending their name and address to The Enterprise Manufacturing Co., of Pa., 218 Dauphin St., Philadelphia.

BREEDING STOCK

We all admire the fine show animals, especially the prize winners, and we take pleasure in walking around them, noting their fine points, and wishing we could grow animals like them. But these show animals do not always make the best breeding stock. In fact, they seldom do. They have not been brought up for that. Their mission is to be seen and to make a good impression on the public, and especially on the judges. Breeding stock must show good points, but they must have a strong vitality, good bone and muscle development, and constitutional vigor. These essential qualities are not always guarded in the preparation of show stock.

STILL GOOD FOR SHEEP

The continuation of the drouth that is so severly taxing the water supply in so many places is good for sheep. All the interior States are this year as well adapted to sheep as are the best sheep regions of Colorado, except, perhaps, the pastures are more bare. But sheep thrive best and have best health in dry countries, and the flocks in the drouth stricken states will go into winter quarters in much better condition than usual. If the ewes were mated to come in not earlier than April, and if they have fair treatment until then, unusual ficundity may be expected, and lambs of great strength and vigor. Such lambs will make rapid growth on the spring and summer pastures, and be ready for a good market in the fall.

THE WAGON-BOX MANURE SPREADER

Letters from Subscribers

We print below some more letters from UP-TO-DATE subscribers who have purchased and are using the so-called Wagon-Box manure spreader. This is the spreader which is furnished all complete except the trucks—every farmer has standard trucks that will fit. Then when the spreader is not in use the trucks may be used for other purposes.

We sent a request to a few subscribers for their opinion of this style spreader and are really surprised at the number of replies received. We have yet to hear from one dissatisfied—all seem to be enthusiastically in favor of these machines and their value.

Here are a few letters:

Hanesville, O., November 5, 1908

EDITOR UP-TO-DATE FARMING:

I have a Galloway wagon box manure spreader, and it is in every way just as that firm represents it. I would not do without it. There may be other makes better, but I hav'nt seen them. What I like about the Galloway is, you don't have to give an extra set of trucks barn room. I have a safety hoist, and when not in use I raise it on that in the barn, and on goes my box, or hay rigging, which ever I need.

The Galloway is also easy to operate. My five-year-old boy would drive and throw it in gear, and I could rest from loading. When the spreader was empty he would drive back and I could reload. They fit my trucks perfectly. I took the measure of them and sent it on and got them to fit and had no trouble at all following the directions they sent me.

I have'nt had any returns from the use of it yet, but hope to in the spring, as I put all the manure on my meadow. I intend though to use it on my corn ground next year. I have two ordinary farm horses, and they pull it with ease. I have a ten-bushel size. Anyone contemplating buying a spreader I would advise them to get a wagon box, unless they have more money to spend than I have.

Hoping this will be of interest to some one, I am

Respectfully yours,
ANTON J. ULRICH.

Zero, Va., November 5, 1908.

EDITOR UP-TO-DATE FARMING:

Yours of the first to hand and noted, will say in regards to your inquiry about a wagon box manure spreader, I think it is a perfect success. I use it on my farm wagon. It takes about twenty minutes to put it on or off, and the best of it is you get a machine that does the work and does it well for less than one-half what the big heavy machine will cost.

The value of a spreader is hard to estimate, in that it spreads manure so evenly and regular, as it could not possibly be done with hand the "old way."

In my opinion, I think, any farmer trying to farm, and raising manure, is not getting the value of his manure unless he is using a spreader.

Will say, further, that I am using the Wm. Galloway Spreader, and it is all it was represented to me.

Any further information I can give will do so with pleasure.

Yours truly,
E. M. HOUSE.

Newport, November 5, 1908.

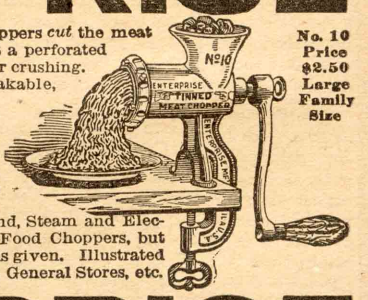
EDITOR UP-TO-DATE FARMING:

I am more than pleased to have you, or any of your readers, make inquiries regarding the use of a manure spreader. There is only one manure spreader that I can recommend, and that is the William Galloway Spreader; not because I am the user of one, but simply because they are got up right, with a very light draft.

One of the greatest features about them is they are made entirely from malleable castings, which makes them unbreakable. There are parts the same as in all machinery that will break if not kept well

ENTERPRISE

Meat and Food Chopper



No. 10 Price $2.50 Large Family Size

"Enterprise" Meat and Food Choppers *cut* the meat with a revolving steel knife against a perforated steel cutting plate without tearing or crushing. Easily cleaned. Practically unbreakable, and will last for years.

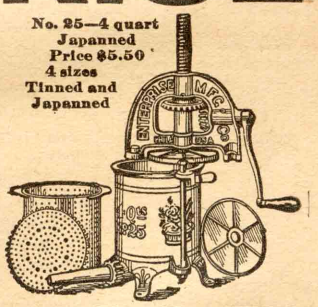
The No. 5 "Enterprise" Chopper costs only $1.75. No. 10, shown in cut, $2.50. They are standard family sizes, and not only save half the work at butchering time, but are useful in the kitchen every day in the year.

Made in 45 sizes and styles for Hand, Steam and Electric Power. We also make cheaper Food Choppers, but recommend the above for the reasons given. Illustrated catalog free. Sold at Hardware and General Stores, etc.

ENTERPRISE

Sausage Stuffer and Lard Press

No. 25—4 quart Japanned Price $5.50 4 sizes Tinned and Japanned



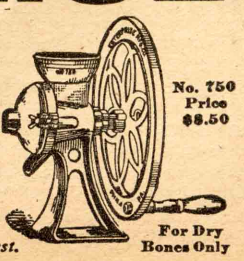
Lessens the labor at butchering time. Two machines in one. Well made and does its work quickly and surely. Cylinder is bored true and plate fits accurately. Pressure cannot cause meat to rise above the plate. The Patented Corrugated spout prevents air from entering casing, ensuring perfect filling and preservation of sausage.

Machine can be changed into a *Lard Press* in a minute's time. Can also be used as a Fruit Press.

Your dealer should be able to supply you with the "Enterprise" Sausage Stuffer and Lard Press. If not, order direct of makers.

ENTERPRISE

Bone, Shell and Corn Mill



No. 750 Price $8.50

For Dry Bones Only

The **"Enterprise"** Bone, Shell and Corn Mill is a good, general mill for farmers, poultrymen, etc., and for compactness, strength and durability is unexcelled. Handy for grinding poultry food and making bone meal fertilizer. Mill shown in cut $8.50, weight 60 lbs., grinds 1¼ bu. corn per hour. Look for the name **"Enterprise"** on the machine you buy.

Grind up dry bones, oyster and other shells, corn, etc., for your hens and watch results.

Other famous **"Enterprise"** household specialties are: Coffee Mills; Raisin Seeders; Fruit, Wine and Jelly Presses; Cherry Stoners; Cold Handle Sad Irons, Etc., Etc.

Sold at Hardware and General Stores, etc.

Write for "The Enterprising Housekeeper," a book of 200 choice recipes and kitchen helps. Free on request.

THE ENTERPRISE MFG. CO. of PA., 218 Dauphin St., Philadelphia, Pa.

oiled. My spreader is a Galloway, and to my opinion, the only way. It is a seventy-bushel spreader. I got trucks and all complete. There is no reason why the wagon box spreader is not just as good as mine.

I am satisfied, by what I have been told by Mr. Galloway, that the wagon box spreader is just as good a rig as the seventy-bushel. Sixty bushel is the largest they make without the trucks. There is no reason why they will not fit the wagon, as the Galloway has an adjustment for all kinds of wagon wheels. They can set the chain out, sprocket and all, and it has simply got to fit, and they are just as good as he others.

As far as to say just how much good I benefited by it this season I can not just tell you, as we had a big rain just in the time when I should have hauled my manure, and stopped from going on the ground, but to satisfy your readers you could not buy my spreader at any cost, if it impossible for me to buy another. Hoping this will be helpful to you, I remain

Very truly yours,
JAMES MUNRS.

Maddock, N. D., November 4, 1908.
EDITOR UP-TO-DATE FARMING:

I am in receipt of yours, November 2d, and wait the contents. There is no doubt that the spreader is of great value on the farm for many reasons. One man and two horses can haul as much manure with the spreader in one day as two men and one team can do in four days, saving time and work. One load of manure spread with a spreader will cover four times as much land as a load spread by hand, say nothing about the difference in the work. The result in spreading can not be compared. One who has plowed land covered by hand spreading, and also land covered by spreader, will know the difference. Results in crops can better be imagined than told. It is a fact that manure from the yard or barn is the best fertilizer, and, when evenly spread, gives best results.

The wagon box spreader is a desired success. There is no difference practically between this and those with truck.

I have the No. 1 Galloway Spreader, which fits my wagon truck like a glove. I have used it six months and have had no trouble to speak of.

With all machinery one must look it over once in a while to see that no nuts are loose and that all parts are in order, and oil or grease it.

As to results on the land I can not say, yet a farmer needs no proof as to that, because every baby knows that manure is the best fertilizer one can get.

Anybody who has an old wagon truck can make no better use of it than buy the box spreader and that outfit is always ready for use.

Yours truly,
B. OLSON.

We suggest that every farmer, who does not have a spreader, write to the Wm. Galloway Company, 509 Jefferson St., Waterloo, Ia., for their large catalog, and learn how they can even get one of these wagon box spreaders on free trial. Send today and save money.

I'm the man whose spreader is so much the best that I can afford to send one to you.

Freight Prepaid

All Freight Prepaid and I don't keep you waiting. I don't delay to write a lot of letters. I trust you to make the fair month's trial of my Galloway Spreader when you get it direct from the factory at Waterloo, Iowa, or shipped at once from one of my Factory's Transfer Stations—Minneapolis—Kansas City—or Madison, Wisconsin. Write me so you can get one for

30 Days Real Free Trial

Here's the idea—Keep your money in your own pocket. Order now—direct from this offer—by letter or postal. Let me send you one of my Galloway Spreaders on 30 DAYS' FREE TRIAL. No money down. Freight prepaid. I know you are a responsible man if you have any need for a manure spreader. Keep your money in your own pocket until you try my Spreader. Tell me to send you my Special Manure Spreader Proposition. I back the Galloway permanently with every guarantee that any practical and reasonable man could ask for. I back the Galloway to give Genuine Satisfaction. If it is not everything it is claimed to be—if it does not do all that the best spreader ought to do—send it back, and I will return every cent of your money without question.

I challenge the world to produce as practical, durable and all round satisfactory a spreader at any price as my

GALLOWAY'S

THE ONLY ENDLESS APRON FORCE FEED
WAGON BOX MANURE SPREADER

Take my hand and signature and bond on that—as legal binding as any contract ever made on earth. My Wagon Box Spreader is made in three sizes—capacity 50 to 60 bushels. It is built to last a lifetime and it fits any truck or high wheeled wagon—narrow or wide tread. It's the lightest draft and simplest machine made. For those who want a larger spreader, I have just perfected a 60 or 70-bushel pattern, complete with trucks. It's new. It's in a class by itself. It has all the merits of the famous Galloway Spreaders with some additional exclusive features that will interest you. It is 45 inches wide and has adjustable bolster stakes. Ask for full information about this new machine—all explained in my New Free Spreader Catalog for 1908-9.

YOU JUST WRITE ME ONCE. Just say on a postal or by letter that you want to get my New Free Spreader Catalog and my Special Spreader Proposition. I'll take care of you right.

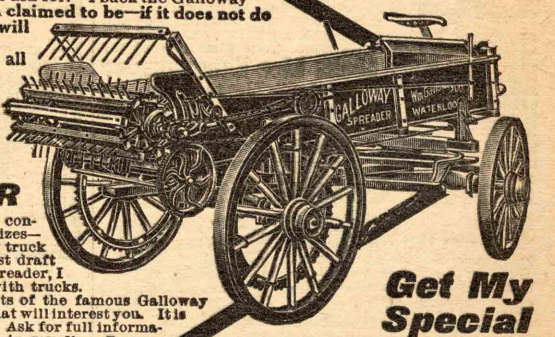
This Spreader Beats the World

—Galloway's is NOW the Standard



Get My Special Proposition

which is real co-operation between the Manufacturers and the Farmer. It gives you a chance to cut down the cost of your spreader and almost pay for it in one year. It means exactly what it says.

Every statement I make to you and every Galloway spreader is backed by my

$25,000 Bank Bond Guarantee

THE HORSE AND HIS FEED

The horse has come to rerpesent as much capital as any other animal asset of the farm, and as the up-to-date farmer counts the assets, the horse is receiving more than former attention. The question most generally asked is, What is the best feed for the horse?

In the days of our fathers oats was considered the very best grain feed, and every farmer made it a point to "grow enough oats for the horses." In spite of the discoveries and inventions of the modern days, oats is still the best suited and most valuable feed for the horse where strength of muscle, endurance and growth are the objects. Oats is specially adapted to the requirements of the brood mare in foal. Crushed oats and wheat bran mixed is an ideal feed for colts; it builds bone and muscle without producting too much fat. If it is desired that the colt shall be rounded out with a degree of fat, a small amount of ground corn may be added to the mixture after the eating habits of the colt are well established. A little later whole oats and ground or shelled corn in equal parts may be made the feed, though a due proportion of bran added thereto makes the feed more easily digested, or, rather, keeps the mixture in better condition to be acted upon by the digestive juices, and it affords valuable material for bone and muscle building. Colts will learn to eat long before they are weaned, and if kept up as they must be if the mother constitutes a part of the work team, nicely cured clover free from dust, mold or must, or alfalfa hay, or bright timothy, should be kept where the colt can eat it at pleasure. Don't try to raise a colt on roughage alone. The very best of rough feed does not contain enough protein to insure proper and uniform development. Good clover and alfalfa hay come as near it as any other, but for perfect development even these need to be supplemented with a little grain, oats being the preferable grain. A rich summer pasture is the very best place for a growing animal, but the pasture must be known to be good, and as it begins to dry in the fall, grain feed must not be too long withheld.

Work horses require feed for strength and endurance rather than for fat; and as the stomach should not be over filled during work hours, concentrated or strong feed is required. Corn and oats in equal parts by weight is a most excellent feed for such animals. This should be supplemented by the very best of hay, mixed clover and timothy, nicely cured and free from dust or mold, ranking far above any other. But the hay should be fed only at night when the animal is to have a period of rest. If fed hay in the morning and at noon, the hay should be given in small quantities. The stomach must not be distended when the eating is to be followed by hard work. Water before feeding rather than after. The ideal treatment is to give a light feed of hay, then a moderate drink of water, and then the grain feed. Water may also be given when the horse is brought from work; and if half an hour elapses between the grain feed and putting to work, a few swallows of water may be given then, but a large quantity of water at that time is not beneficial.

In winter another element enters into the purpose of the feed—the maintenance of animal heat—and calls for carbonaceous feed. As most of the grain feeds, feeds strong in protein, are also strong in carbon, there need be no change in the feeds of this character, except possibly an increase in quantity in very cold weather unless the animal is well housed. The hays mentioned are also carbonaceous, and very satisfactory as winter feeds, so much so that some horse owners think they may well leave off grain when the horses do not work. But in cold weather they need more heat producing material than the rough feed offords.

HOLDS WORLD'S RECORD

TIME TO BUY CREAM SEPARATORS NOW

There never was a better time to buy the best of Cream Separators than right now.

The advantages derived from the use of the good Cream Separator are greater in the fall and winter than at any other time,—when the cows are old in lactation, the loss of butter-fat is otherwise greatest, and butter prices are highest.

Likewise are the advantages of the superior DE LAVAL separators greatest over imitating separators when the milk is hard to separate and the weather cold and variable.

In every case a DE LAVAL separator, of suitable size, will surely at least save its cost between now and July 1st next, and go on returning 100% per year on the investment for twenty years to come.

The agricultural and particularly the dairying outlook was never brighter and more promising.

WHY NOT BUY NOW?

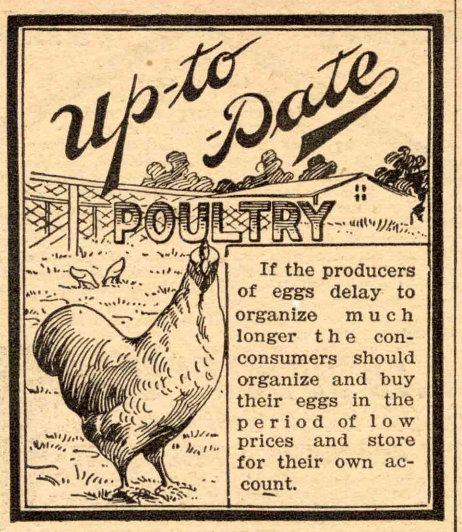
UP-TO-DATE FARMING



If the producers of eggs delay to organize much longer the consumers should organize and buy their eggs in the period of low prices and store for their own account.

THE LATEST POULTRY FRAUD

Farmers must be on the lookout for frauds. There has seldom, if ever, been a time when the rural population has not been plied with some dishonest scheme. This has made farmers unduly, suspicious, perhaps, especially of one another. For the latter we know no good reason; but to be suspicious of promoters of schemes or sellers of recipes or how to do things there is good foundation. The latest in the poultry line is how to pick out the good layers. It is said such "knowledge," or "discovery," has been sold in some places as high as $10, with a strong stipulation that it was not to be communicated to any one else.

It is a fraud pure and simple. Such knowledge is a physical impossibility. One may look at a hen and guess at her laying qualities, just as one may look at a cow and guess her milking qualities, though in the cow there are much more external indications to guess by. In either case the actual test is the only sure guide. The next best is the record made by the strain, for it is true, at least in a measure, that like begets like. It must have been observed by every poultry raiser that two good laying hens may not have a single conformation in common. The Utah station in a bulletin recently issued, says:

So far as our tests are concerned the theory that the shape of the hen is an index to her laying qualities doesn't hold good. Whatever the merits of the controversy, the facts are that there have been poultry and poultrymen for centuries, and yet in every flock there are hens that will lay from nothing to probably 200 aggs a year each.

The photographs given of the tested hens show that the formation is no guide at all, nor is any other physical appearance.

It is important to keep only the best layers. The poor layers not only make small the egg supply and diminish the aggregate receipts, but they unfairly reduce the percentage of profits. The trap nest is about the only test of what the hen actually does, and the eggs used for sitting should be from hens that have made a record; or, certainly, from the known best layers. Follow this with a careful selection of the thriftiest and most promising pullets, subjecting each again to the trap nest test, each season setting only the eggs from the best, and culling out those that do not make a satisfactory record. In this way a flock of hens may be built up, much as a dairy herd is built up, until hens from that flock, for laying purposes, are worth many times as much as hens of equal appearance and size from a flock that has not been to treated.

CHICK FOOD FRAUD

It comes to us that in some places parties are traveling through the country with large packages of what they call valuable, healthful and egg producing foor for poultry. This they offer for sale at a price for money. When they fail to make a cash deal, they say they wish their poultry food tried in the neighborhood, and propose to exchange it for a few chickens. This is often accepted, and the parties dispose, perhaps of several packages and get poultry worth several times the "food" even though it were valuable. But in truth it is of no value at all—a mixture of earth, sand, possibly a little bran, etc., gathered up and put in packages virtually at no cost whatever, and of little more value than the dust in which the fowls take their daily bath.

PRODUCTS OF THE FLOCK

An exchange estimated the average egg product to be seventy eggs per hen. We believe that is low; if not it ought to be. But consider it so. A flock of 300 hens on a farm is not unusual. That would mean 21,000 eggs a year, or 1,750 dozen. In many places in the country markets eggs at this time sell readily at 25 cents per dozen. Put the average at 15 cents, moderate for almost any locality where equity prevails, and the income from the flock is $262.50.

Three hundred hens, at the general market price, represent a capital of about $75—say $100. The proceeds is 262½ per cent. Of course, the keep of the fowls must come out of that, but the capital is practically unimparied.

And yet, our experience is that not one farmer in twenty can tell how many hens there are on his place. He knows how many horses and cows and calves, how many sheep and sows and pigs, but the poultry—that scarcely merits his attention! Suppose the average flock we have considered were brought up, by careful selection as is elsewhere recommended, to 140 eggs to the hen—200 eggs to the hen is not an unusual attainment. Both product and proceeds must be doubled, while capital invested remains practically the same. If there is not food here for thought, we are at a loss to know what sort of viands thought feeds on.

HELPS FOR THE POULTRY INDUSTRY

Early Chicks the Most Profitable—a Trustworthy Incubator Vitally Important to the Success of a Modern Plant

The incubator has doubtless done more for the poultry industry than has any other single factor. "Raising chickens" was of little importance before this machine was invented, simply because "hen-hatched" chickens could not be matured early enough in the season to get a good price. However, the incubator now makes it possible for chicks to be well matured by the time most hens begin to show signs of broodiness.

Thus incubators have come into common use and some few makes have established their right to the confidence of the public. Prominent in this class stand the Excelsior and Wooden Hen, the former having been one of the earliest artificial hatching machines put on the market.

Both types are built upon practical lines, and have won the approval of thousands of poultrymen everywhere. They are made in sizes varying from 50 to 600 eggs, thus adapting themselves to poultry plants great and small.

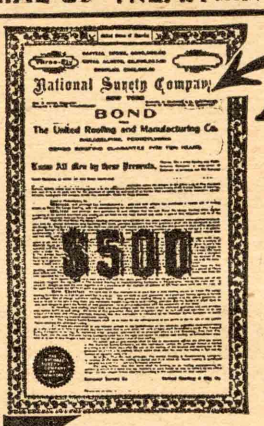
In Excelsior and Wooden Hen incubators the principles of heat, moisture and ventilation, so vital to the development of healthy chickens, have been perfectly worked out. Regulation of the heat, which may be supplied by kerosene, gas or electricity, is practically automatic, reducing to almost nothing the attention required to keep the machine going.

Excelsior and Wooden Hen incubators and brooders are illustrated and described in attractive catalogs and literature issued by the manufacturer, Geo. H. Stahl, Box 79B, Quincy, Ill., who will gladly mail same to any address upon request.

FREE TRIAL OF TREATMENT

DON'T WEAR A TRUSS

RUPTURE CURED by STUART'S PLASTER-PADS means a *permanent cure*, and you do away with the painful irritating, truss altogether. No *buckles*—no *straps*—no *springs*. Adheres closely to body, holds rupture *in place* and cures the most obstinate cases. Easily applied—soft as velvet—cannot slip, so cannot chafe. Comparatively *short time* required for *permanent cure*. Treatment is *private*, costs *very little* and does not interfere with work. Has cured thousands. Guaranteed under National Pure Food & Drugs Law. *Write at once* for *free* "Trial of Treatment" and illus. booklet. Address STUART PLASTER-PAD CO., *Block* 59 St. Louis, Mo.



A SURETY BOND WITH EVERY ROLL OF CONGO *NEVER LEAK* **ROOFING**

Congo is the only ready roofing on the market *backed by a Surety Bond.* We can afford to make our guarantee so strong because Congo itself is as strong as the guarantee.

Our ambition has been right from the start not only to make Congo the best all-round practicable and serviceable Ready Roofing, but to back it up by a guarantee so *sure* and *complete* that it will be the aim of every owner of a building to use Congo when needing roofing.

This bond covers a period of 10 years and gives to the user of 3-ply Congo the most reliable guarantee. It is issued by the National Surety Company of New York, one of the largest and most substantial companies in the country.

Congo doesn't cost much. It is extremely waterproof and *always stays so*, and it's very easy to lay. The new galvanized caps (a new feature with Congo) do not rust and cause leaks like tin caps or nails.

Write for a Sample to-day and further information.

SPECIAL NOTICE—If any Congo rolls that you purchase do **not** contain Guarantee Bonds, write us at once, telling us where and from whom they were purchased, and we will at once mail you the missing bonds.

PARSNIPS AND SOLSIFY

These vegetables are not so common in the country as they were several years ago. They are frequently met with as side-dishes in hotels, but they are seldom found on farmers' tables. They are easily grown, as easy as weeds, and parsnips, if left alone, soon become weeds. The ease with which they may be had for winter use ought to bring them into popularity. All that is required is to leave them in the ground. Freezing in the ground improves rather than injures them, and they may be taken out and cooked whenever the ground is not frozen. It is a good plan to heavily mulch a portion of the bed. Then the ground will seldom be frozen so hard beneath that the roots may not be obtained for use.

Beets are also easily kept for winter use. They may be pitted like turnips or potatoes, and had fresh for cooking at almost any time. Or they may be left in the ground where they grow if heavily mulched.

While on this subject we may say turnip greens are the earliest out door greens that can be had. Turnips, the small and ussalable will do as well as the better grades, may be set out any where, in the fall, or any time during the winter when the ground can be worked, or early in the spring. They may be set in out of the way places, along the fence, or any place where stock do not run, and they'll be about the first thing to grow, and may be cut for greens before any other growth is large enough to cut. If in the ground during the winter, it is best to mulch them heavily.

SMALL FRUIT PRODUCTION

Jacob Faith, writing from southwest Missouri to the Journal of Agriculture, says strawberries may be grown for two cents a quart. He has grown as high as 320 bushels or 400 crates per acre, but he admits that 200 crates is a fair average yield; and that is not bad. Raspberries may be grown for 4 cents per quart, and the yield varies from 60 to 150 crates per acre. Blackberries, everybody's berry, can be grown as cheap as 1 cent a quart, and yields from 60 to 120 crates per acre.

Strawberries bear a full crop one year after planting, and raspberries and blackberries bear the second year. We cannot see why any farmer should be without a full supply of berries and small fruits.

WINTER WASH FOR ORCHARD TREES

After the leaves have fallen from fruit trees, bushes and ornamental shrubs it is a good plan to wash the trunks and lower branches with something that will kill the insects or their eggs hiding in the loose bark. This work can be done at any time during the dormant season, says the Journal of Agriculture.

One of the best washes for fruit trees and shrubs is the kerosene emulsion. It not only kills mature and immature insects clinging to trees, but cleanses the tree in general, and that which runs down to the ground finds its way to the roots and kills insects and disease there.

Formula for kerosene emulsion: Kerosene, 2 gallons; common soap, ½ pound; water,, 1 gallon. Dissolve the soap in boiling water, add the kerosene and emulsify by violent churning. Dilute this to the required strength and apply it to the trunks and lower branches of fruit trees with a heavy piece of old cloth, brush, or stub of broom.

Wash all of the trees in the orchard with this emulsion, and the ornamental shrubs about the house. Insects breed and hide in the back of many kinds of plants, and now is a good time to kill them before they have time to hatch out and revive for next summer's work.

BIG PROFITS FOR PRODUCE GROWERS

The produce grower looking for unusually large profits for his labor, should turn his attention to the opportunities afforded by locating in Tennessee. Land selling for from $5 to $20 an acre will produce from $100 to $400 per acre clear, planted to cantaloupes, cabbage and tomato crops. The geographical situation of Tennessee enables the grower to furnish the extreme Southern markets at the expiration of the early home crop and also to send produce North several weeks earlier than the home-grown stuff. This means best prices. Send for descriptive literature to H. F. Smith, Traffic Manager, Desk U, Nashville, Chattanooga & St. Louis Railway, Nashville, Tenn.

I Will

I will start anew this morning with a higher, fairer creed;
I will cease to stand complaining of my ruthless neighbor's greed;
I will cease to sit repining while my duty's call is clear.
I will waste no moment whining and my heart shall know no fear.

I will look sometimes about me for the things that merit praise;
I will search for hidden beauties that elude the grumbler's gaze;
I will try and find contentment n the paths that I must tread,
I will cease to have resentment when another moves ahead.

I will not be swayed by envy when my rival's strength is shown;
I will not deny his merit, but I'll strive to prove my own;
I will try to see the beauty spread before me, rain or shine—
I will cease to preach you duty and be more concerned with mine.

E. Kiser.

"READY TO USE" TUBERCULIN TEST

The importance of tuberculosis in the dairy cannot be over estimated; 60 per cent of the herds in this country are effected. Is yours one of them? Write at once to G. P. Pilling & Son Co., 2256 Arch St., Philadelphia, Pa.,

asking them about their "Easy to Use" Tuberculin Outfit, the price of which is $5 delivered free at your door. Test your own herd and know where you stand. Their pamphlet of "Easy to Use" Cattle Instruments will be sent to our readers free.

Those of our readers who are interested in Southern farms or a change of location should write to Barney & Hines, 1006 Tennessee Trust Bldg., Memphis, Tenn. They are now selling 40-acre farms or larger from lands they own. Very favorable terms. This is a chance for the young man or renter. Information is free. Write them.

Understood It

"My dear, you are in very truth my right hand," said the doting husband.

"Ah, I understand it now," replied the wife, "you obey the injunction not to let your right hand know what your left hand does."

LOW FARES to the cheap Lands

Dec. 1 and 15
Jan. 5 and 19

Plan to go on one of these days—The trip will not cost much. These special low-fare tickets over the Rock Island-Frisco-C. & E. I. Lines will allow you to go one way and return another, without extra cost. You will see more of the Southwest than you could in any other way, and can better decide where to locate.

Ask the ticket agent to sell you a ticket over the Rock Island-Frisco-C. & E. I. Lines, either through Chicago, St. Louis, Kansas City, St. Joseph, Memphis or Birmingham, according to your location.

If you will tell me where you want to go, I will tell you the cost of a ticket and send you a map-schedule.

I will also send you some interesting books about the Southwest. They inform you of opportunities waiting for you there, and will open your eyes to new possibilities. Write for free copies today.

TIME TO SPRAY
Scalecide Kills San Jose Scale and Saves the Orchards and Shrubs
The New Jersey Bulletin No. 186 says "SCALECIDE did almost perfect work applied in October. No injury of any kind was caused on the trees or fruit buds."
Thos. Mehan & Sons, Landscape Gardeners, Mt. Airy, Philadelphia, Pa., say: "We recommend one of the oil solutions and at present are using 'SCALECIDE,' which we consider the best preparation on the market. We have discontinued the use of lime-sulphur treatment, having found the oils far more effective and much easier to apply."
DIRECTIONS FOR USE
For Fall Spraying mix one gallon of SCALECIDE to every fifteen gallons of COLD water. Spray after trees have dropped their foliage.
For Spring Spraying mix one gallon of SCALECIDE to every twenty gallons of COLD water. Use from April to June.
PRICES: 50-gal. bbl., $25.00; 30-gal. tin, $15.00; 10-gal, can, $6.00; 5-gal. can, $3.25; 1-gal. can, $1.00, f. o. b. New York.
Brass bucket spray pumps, $3.00.
Barrel spray pumps, for larger orchards, $6.00.
REMEMBER: One gallon makes 16 to 20 gallons of spray. Spray when the leaves have dropped off so the spray reaches the bark. "Procrastination is the thief of time," and also will steal your trees and bushes away from you. Order a supply of SCALECIDE now and mention UP-TO-DATE.
O. K. SEED STORE, Dept. A, Indianapolis, Ind.

The Housewives' Exchange

The following hint is so good that we give it to the other mothers who have suffered the same difficulty as the writer:

Having small children in my family, I found trouble in keeping them coverd at night. This is the plan I finally worked out. I bought a piece of common elastic, such as is used for hose supporters. Two strips were fastened to the comfort; two bits of tape were sewed to the mattress to form eyelets, and on the end of the elastic I sewed big hooks. The kind used for belts is the best. After the bed was made it was an easy matter to fasten the hooks into the eyelets, and behold! The children lay in the bed as snug as bugs in a rug. Of course the spread covered the hooked cover. Grown people sometimes find they are unable to keep cover on the bed. They should try this plan."

I wonder how many country women understand the method of doing their cooking in the base burner?" asks a woman reader.

"My plan is to do as much cooking as possible in my base burner, as I save fuel, also much bother in keeping up a fire in the kitchen. I find the base burner especially useful for cooking baked beans. A whole meal can be prepared in such a stove, with great saving of fuel and steps. Carefully shake down the ashes and remove the ash pan a few minutes before you are ready to use the stove. I have baked pies and cakes in the oven below. Also roasted meats. It may be a surprise to some to know that potatoes both Irish and sweets, can be cooked in the coal magazine. Coffee or cerials can be cooked on the back cover of the stove."

A correspondent wishes to remind women that kerosene is one of their best friends in household cleaning.

"I have a bathroom in my country home," she writes, "And I don't know how I should keep the tub clean without the aid of common coal oil. A cloth dipped in oil cleans the tub like magic. It is also invaluable in cleaning the kitchen sink. When it comes to washing the windows and keeping the furniture clean, again, I say that I could not get along without it. A little coal oil added to the water in which windows are cleaned helps to take off the dirt and gives the glass a nice polish. Furniture also needs cleaning. It is not enough to wipe off the dust. It must be washed. Soap is not good for it. However, a tablespoon of coal oil added to the pan of water will bring it out, nice and clean. There is just enough oil in the water to give a good polish, and the result will be more than satisfactory. Do not be afraid of spoiling the furniture. This method is for the very finest mahogany. It takes off the whitish tinge that the very best mahogany gets in time. I hope the readers of this paper will try using kerosene in their cleaning."

How many housewives have ever tried roasting meat in a stone jar or crock, The earthenware ramekin is one of the most used cooking utensils, but they are only to be found in the city stores and are perhaps a little more expensive than most cooks care to pay. A ramekin is nothing more nor less than a covered baking dish, made of earthenware, generally brown outside and white lined. For braising meats, or cooking anything that requires slow cooking, a ramekin is invaluable.

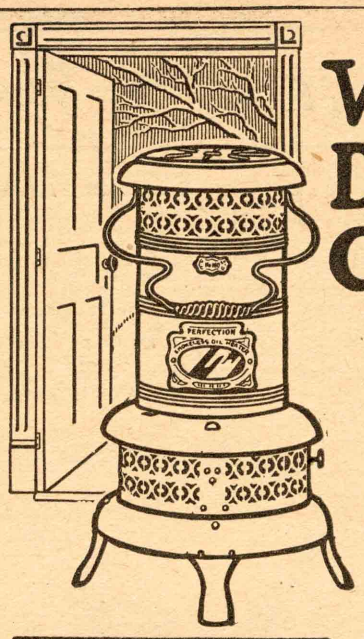
Now the country woman may have a ramekin that will serve the same purpose at much less cost. All she has to do is to buy one of those stone butter jars. A two gallon one is perhaps the best size. It will cost ten or fifteen cents. A tight fitting cover is needed. Then all that is necessary is to put the meat in the oven and let it cook. It will come out deliciously cooked, done to a turn, tender and juicy. There is no stooping down every few minutes to baste. One may put the pot in the oven and go about other work, being sure that it will not burn. It is a good way to prepare the Sunday dinner."

Here is a hint worth remembering. Now that eggs are high and promise to be more expensive this winter, it behooves every housekeeper to look up her eggless recipes and have them ready for use. There are many delicious cakes that can be concocted without eggs, as well as puddings and other desserts.

LOVE ONE ANOTHER

As I sat here the other day thinking of the men who had preached the greatest sermons of all time, and of generals who had issued commands which changed the destiny of nations, it came to me, like a silver flash across the blue, that the greatest command and the greatest sermon was given to us by Christ when he said: "Love one another." And it came to me, also that the greatest sermons are not always the longest and that the greatest commands are not given with an accompaniment of hissing bullets and bleeding dead. If all nations, all governments, all churches, all individuals, would only obey that one command of "Love one another," human misery and suffering would vanish like the morning mist before the sun. The pages of history are strewn with stories of the wrecks of institutions, polictical and ecclesiastical, whose builders had laid the foundation stones with the mortar of hate. Politicians and preachers who would redeem the world, and win for the majority that true happiness which has somehow given them the slip, can never do it by the calling of names and the fomenting of strife. The truth of the saying of Christ stands out like the sun at noon time. It is only the great lover that earns great happiness. In the world of business, where the clink of the coins drowns so much of the finer things of life, Love is daily entering in. Talks with busy men every day discover this. It is only the man who loves himself truly, who loves his business, who loves his employes, above whose sign may be placed the word SUCCESS.—Thos. Drier in The Fra.

The finest color printing, embossing, etc., in the way of elegant Christmas and New Year cards, calendars, books, etc., is done by Raphael Tuck & Sons Co., New York, London and Paris. Look for their imprint when you buy and be assured that you have the very best.



Where the Door Opens Constantly

You can quickly heat and keep cozy the draughty hall or cold room—no matter what the weather conditions are—and if you only knew how much real comfort you can have from a

PERFECTION Oil Heater

(Equipped with Smokeless Device)

you wouldn't be without one another hour. Turn the wick as high or as low as you please—there's no danger—no smoke—no smell—just direct intense heat—that's because of the smokeless device.

Beautifully finished in nickel and japan—ornamental anywhere. The brass font holds 4 quarts, giving heat for 9 hours. It is light in weight—easily carried from room to room. Every heater warranted.

If your dealer does not carry Perfection Oil Heater and Rayo Lamp write our nearest agency.

STANDARD OIL COMPANY
(Incorporated)

Here's Delight for a Boy or Girl at Christmas—Fine Fun All Winter Long

There is one gift which will make any boy, or any girl, supremely happy.

It's a gift that lets them enjoy out-of-doors to the utmost.

Boys and girls who are much in the open air grow strong in body, sturdy of limb and sound of lung. Outdoors-and-exercise a-plenty is nature's great tonic and invigorant.

What gives them outdoor fun is what a boy or girl likes most.

Skating is the finest of all Winter fun. The grandest of all outdoor sports.

Then let your boy and your girl enjoy this fine sport to the fullest.

Get them for Christmas each a pair of Barney & Berry Skates.

The skates that will delight them the most—the kind any knowing boy would himself pick out—the kind boys and girls for three generations have known as the keenest, swiftest, best-of-all skates.

They cost but little. And nothing else would please half as much.

Moreover, the delight they give is not for Christmas Day only. They bring huge fun all Winter long. And for many Winters to come.

For skating is the most ready-at-hand of all Winter pleasures. Where there's water there's bound to be ice, and lots of it. Always our full share of skating weather.

Most any dealer will show you these skates. They're made in all styles. Should your dealer not have the particular kind you want, he will get them for you.

Our free catalogue will help you to choose the right style. Better write for it to-day. Christmas will soon be here.

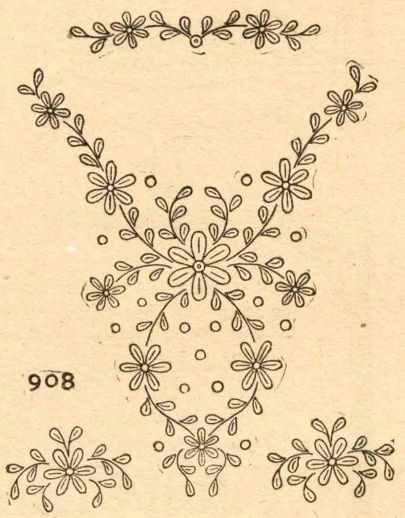
CHRISTMAS SUGGESTIONS

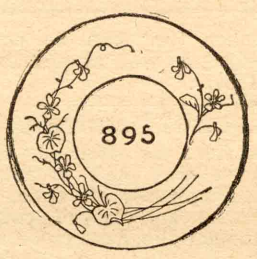
No. 908.—Certainly well balanced and graceful in its lines, this waist design for Wallachian embroidery is an extremely desirable number. The Wallachian embroidery, being nothing more than the button hole stitch, is decidedly simple and quickly executed, and derives a great part of its popularity as a result of its attractiveness when finished. The prices are:

Perforation, 25c; stamped on 2½ yards of fine linen, $1.85; material to work, 20c.



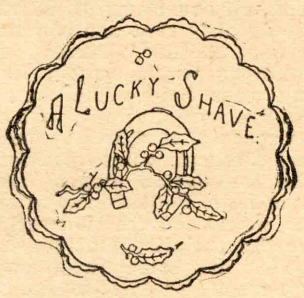
No. 895.—Many women prefer to make small and dainty articles as gifts and for this reason the design here shown should prove decidedly popular. It is graceful and dainty and when ordered on linen includes a cardboard back on which to mount it. The prices are:

Perforation, 15c; stamped on white or brown linen with cardboard mount, 25c; silks to work, 20c.



No. 906.—As a lucky shave is well to be wished by every man the real amount of appropriate sentiment may be estimated from this suggestive shaving pad design. It may be quickly embroidered and prove actually useful when made up with the cardboard back and pad of paper furnished with the stamped pattern. The prices are:

Perforation, 15c; stamped on white or brown linen with pad, 30c; silks to work, 20c.

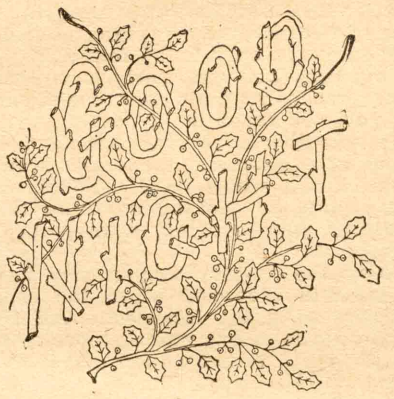


906

No. 567—568.—Equally attractive from both an artistic and practical standpoint, these pillow shams offer to the needleworker a subject that will be bound to please when finished. Used every day in the average household, and more appreciated when embroidered at home, these shams will make a well-liked gift for any occasion. The prices are:

Perforation, 25c each; stamped on fine muslin, 25c each; stamped on lightweight linen, 50c each; materials to work, 25c each.

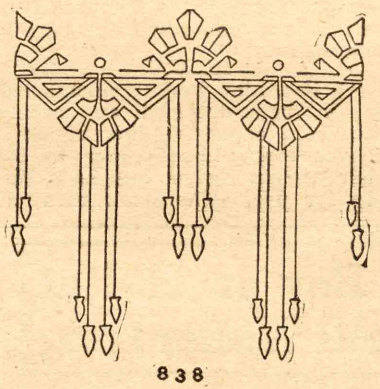
567



568

No. 838.—Of a strictly mission style and strikingly pretty, this pillow top on green burlap is easily worked in well-matched colors. Designed for hard usage, this cushion is ideal for a smoking or lounging room. The prices are:

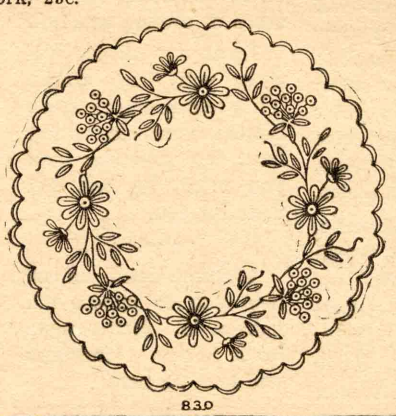
Perforation, 25c; stamped on burlap, front and back, 60c; material to work, 35c.



838

No. 830.—The life of an embroidered article depends solely upon its power to withstand washing and laundering. Wallachian embroidery becomes more beautiful with every washing and often outlasts articles of more complicated handwork. The prices of the 24-inch centerpiece shown are:

Perforation, 25c; stamped on linen, 50c; stamped on brown linen, 50c; material to work, 25c.



830

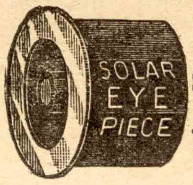
To Introduce Our New Excelsior Solar Telescope



Pat. Applied for.

THIS is a large powerful Achromatic Telescope for Terrestrial and Celestial use. This telescope is provided with an adjustable Solar Eye-piece. With this wonderful eye-piece you look the Sun square in the face, on the brightest and hottest day, and study its face as you do the moon by night. Every student needs one. This eye-piece alone is worth more than we charge for the entire telescope. Remove the Solar Eye-piece lense and you have a perfect telescope for land observations. Read what this customer says:

Never before sold on any telescope for less than $8.00 or $10.00.

Stevensville, Ont., Dec. 13, 1906.
R. C. Irving & Co., Indianapolis.

Dear Sirs.—I received your telescope last Saturday. It is a dandy and I am well pleased with it.

Yours very truly, Enos. Winger.

Positively such a good telescope was never sold for this price before. These telescopes are made by one of the largest manufacturers of Europe. Measure closed 12 inches and open 3½ feet in five sections. They are BRASS BOUND, BRASS SAFETY CAP on each end to exclude dust, etc., with POWERFUL LENSES, scientifically ground and adjusted. GUARANTEED BY THE MAKER. Heretofore telescopes of this size have been sold for from $8 to $10. Objects miles away are brought to view with astonishing clearness. Sent by mail

Postpaid for $1.10.

This is a grand opportunity and you should not miss it. We WARRANT each telescope just as represented or MONEY REFUNDED. Remit by Registered letter, Postoffice Money Order or Bank Draft, payable to our order.

FLOWER POST CARDS

Free to You

In order to introduce our large illustrated monthly, The Epitomist, which is of interest to every member of the family, we make this big offer to you.

Send 10c for a six months' trial subscription and we will send you, prepaid, twelve beautiful flower post cards absolutely FREE. These cards are strictly high-class and are something entirely new. Each card represents a scenic view and has THE LANGUAGE OF THE FLOWERS worked out most beautifully in mottoes in flower designs. For instance, in this series the violets spell out the words "Faithfulness;" the sweet peas, "Wish You Joy;" Chrysanthemums, "I Love You;" roses, "Love," etc. You won't be disappointed, for these cards are not like any you ever saw, and REMEMBER, we have a surprise for everyone that sends for these cards. There are only a limited number, so send today if you want them. THE EPITOMIST, 55 Main St., Spencer, Indiana.

DON'T FAIL TO MENTION UP-TO-DATE FARMING when writing our advertisers

Autumn In the Country

The present season is by far the the most delightful of the entire year to spend in the rural districts. It is the month when the farmers delight in "days off," in order to enjoy the hunting trips to which they look forward with such eager anticipation. Through force of circumstances, city dwellers prefer to visit the country in the summer time. That is the vacation period, and it is also the time when the heat of the city becomes unbearable. Moreover, comparatively few city people are familiar with the joys of an autumn tramp through the woods.

There are a few wise city-bred souls that appreciate the delights of a hunting trip, and to them the hunting season is the season of all seasons. The call of the wild is not only heard but hearkened to, and gun across shoulder and dog at heel, these wise ones go forth to spend long joyous days tramping through the forest, with an occasional bird to bring home as trophies of their skill as hunters.

However the farmer is the real hunter. The city-bred sportsman may perhaps laugh because the farmer boy goes forth in a hunting garb that does not bear the stamp of the fashionable tailor, but he would probably feel less scornful were he aware of the country boy's contempt for the city hunter's frequent awkwardness with the gun.

An hour's ride on any interurban road will bring into view a dozen farmers guns in hand and a dog or two following closely at their heels. In fact, on a fine day it seems as if the entire male population of the rural districts had gone hunting. They crowd the cars, they are encountered at every stop. And the talk is all about birds and rabbits and what a good dog this one has and how well that dog has been trained.

It must not be supposed that the sport is confined entirely to the men folk. Many women go hunting, and they enjoy the fun equally with the men. One does not meet so many women hunters on the road, but they hunt nearer home. It is a fact that many of the farm women handle guns with a facility equal to that of their husbands. Those who do not actually carry guns often go for tramps with the men of their families, and even the stay at homes are always interested in the tales told over the supper table by the hunters of the family.

"Come out and eat rabbit," is an invitation heard on every side in the country at this time. At one charming country home a gun room has been fitted up and city friends are invited out, two at the time, to spend a day or perhaps two days, hunting. The womenfolk hunt, too. Or rather, they tramp with the men, generally returning after three or four hours to have the meal ready on the return of their husbands. The gun room is the place where the two parties meet after supper to talk over the day's pleasures, and the women folk are never excluded.

Conceits of Fashion

Everybody is wearing ruches. No dress is considered complete without this pretty neck finish, and it certainly does help to soften the face. To the elderly woman the dainty ruche is a real boon. However, all ruches are not suitable to all faces. The deep ruchings that are now so popular are not becoming to every face, and it is always wise to try the effect before buying. The ruching can be bought in boxes of several cards each, and by keeping a box on hand one may always have a pretty, fresh ruche at hand. As the boxes do not cost a high price, there is no reason for wearing a soiled ruche. In fact, the whole attraction of the finish is in its immaculate whiteness.

Blue is one of the leading colors this year. Ther are several new shades but one can not go wrong on any tone of blue, all being equally popular.

Serge is back in fashion. This material is always satisfactory and wears well. It comes in fine French quality as well as the coarser but more durable and wiry kind. For a dress that is to see hard wear, the coarser serge is better.

The old-fashioned cashmere or henrietta is again in style. It is the material that the mothers of the present generation wore, and is so soft and graceful that it is surprising that it ever went out of style. Now that the soft, clinging fabrics are in demand for the new styles of dresses, the cashmere has become very popular. The dressmakers will not have anything to do with the coarse, stiff materials, except for suits made with coats. The stiff fabrics cannot be draped in the styles that now prevail.

White shirt waists are not so fashionable this year as they have been for several seasons past. This fall the stores are showing more silk waists than white ones. Flannel waists have also returned to popularity. Plaid silk waists are liked. The waist must be the same color of the skirt. It is not in good style to wear a black skirt with a colored waist. Neither should a skirt of one color be worn with a waist of another color.

The dress that is made all of one fabric is the proper costume this year. The most fashionable dresses are made in one piece. That is, the waist and skirt are joined together. Generally there is a belt joining the two. This style of dress is not difficult to make, and now that such good patterns are to be had, the home dressmaker can usually turn out a creditable dress for herself or her daughter.

Short coats are not fashionable this year. All of the new coats are long. Many of them are on Empire lines, with short waists and full skirts. This style coat is not becoming to all figures. Those who intend to buy a new coat this year should insist on having a style that is becoming, and not allow the saleswoman to give them an unsuitable coat because it is stylish. A becoming coat is better than a very stylish one any time.

Wings are popular as hat trimmings. They are put on stiff and straight. The ordinary hat is trimmed simply with a drapery of velvet around the crown and two wings. These wings are made from duck wings as a general thing.

This is a great year for sashes. All kinds of sashes are worn on all kinds of dresses. A graceful sash is beautiful, but unless well made and attractive, it will spoil a dress quicker than any other one feature. The short waisted dress with a sash drawn up close under the bust is not a dress to be made at home. They look pretty in the fashion books, but only good dressmakers can make them as they should be made.

EVERY BOY wants a STEVENS for Christmas

The love of a gun is born in a boy. Nothing will delight him more than a good gun of his own.

Why not let him have his long-wanted gun and learn how to shoot? It will please him immensely.

Moreover, that's by far the best way to insure his safety. For most boys will handle a gun every chance they get, whether you know about it or not.

Give him a Stevens Rifle for Christmas and see how happy it makes him. Then see how he'll take to outdoors—how he'll tramp the woods and fields—how manly and sturdy and healthy he'll grow out in the open air. See how keen of sight he becomes, how quick to think and to act. It's a good way to develop character in a boy.

Stevens Rifles are the safest of all guns and they're steady and true to the aim—straight-shooting, hard-hitting. And a Stevens Demi-Bloc Double-Barrel Gun, or any Stevens Shotgun, will please a man just as much as a Stevens Rifle will please a boy.

Send for the Stevens Catalog and learn how thoroughly well-made, how moderate in price these guns are. Tells how to choose and care for a gun. 5c for postage brings it.

Then, Dan Beard's book, **"Guns and Gunning."** A book boys revel in. Full of the lore of the woods and the camp—about birds and small game—hunting and shooting—and all that a boy wants to know about guns. Sent postpaid for 20c, paper cover, or 30c, cloth cover.

Your dealer can show you Stevens Rifles, Pistols, Shotguns, or if not, we supply you direct on receipt of catalog price.

IT STRIKES TO KILL

In the long winter evenings, the farmer has leisure for mental recreation, as no other class of the world's workers. He can find it in the pages of

THE BYSTANDER

an intellectual playground, where he may pass with both pleasure and profit his leisure hours. There is no other magazine in the world like it. It says what it thinks and thinks what it says, and is a friend to the farmer as it is to all producing classes.

Its satires are superb, its humor brilliant, its eloquence surpassing. A potential force in the discussion of current affairs. Sample copies 10 cents. By the year, $1.00. Published monthly. Address

THE BYSTANDER

231 Broadway, N. Y., or Security Bldg. Los Angeles, Cal.

HELPS IN THE HOME

Hang the woolens out on the line dripping wet, without wringing them at all. If dried this way they will not shrink.

The easiest and quickest way to keep knives always bright and clean, without the use of a knifeboard or machine, is to take a piece of wet rag, rub it well on a piece of soap and dip it in kitchen sand; rub each piece with this before putting it in the washing water. All the stains will disappear as if by magic, and the cutlery will be bright and shining with only a few minutes work.

When hemming dish towels, take two small pieces of tape and sew the tape at the center of each hem, putting the ends a little distance apart and turning them with the hem, stitching it on the machine. In this way there will be a firm hanger on each end of every towel.

Drive a hook or staple in small end of ironing board and hang in closet or inside of door.

When a garment is scorched, but not burned, the stain may be removed by hanging in the sun or in front of a blazing fire.

If you unexpectedly find your wire clotres line hopelessly rusted lay stripes of newspaper on it and pin clothes over them, then the first bright day give your line two good coats of gray paint.

In ironing handkerchiefs it is well to begin at the center; if one irons the hem first the middle will have a tendency to bulge or "full."

When food is accidently made too salty it may be counteracted by adding a tablespoonful each of vinegar and sugar.

Open canned fruit an hour or two before it is needed for use.

Keep a small box filled with quicklime in pantry and cellar. It will keep the air dry and pure.

If new tinware is rubbed over with fresh lard and thoroughly heated in an oven before used, it will never rust afterward, no matter how much it is put in water.

To clean stained tinware use borax; this brings the best results. A discolored teapot or coffee pot may be made to look like new by boiling in a strong solution of borax for a short time.

If wooden tubs or buckets are not to be used for any length of time it is well to rub them on the inside with glycerine to prevent them drying out and falling to pieces.

Remember that wood quickly absorbs impurities, so do not let the tubs stand around in the kitchen when frying or cooking onions, if they are later to be used for fine lingerie or table linen. This is the advice of a laundress of years of experience.

When ants gather on your pantry shelves, make a pie crust dough, using lard for shortening; bake in the oven and when done lay in pieces on the shelves, and in a few days there will not be an ant around.

A CHRISTMAS SUGGESTION

One would hardly expect Santa Claus to carry a stove from Iceland all the way here in his pack. And then deliver it down the chimney! No, hardly. But for all that, a stove is one of the best Christmas gifts a man can give his wife. Is there anything would please her better than a brand new shiny Steel Range? Nothing better in the world. Or maybe a dandy good Base Burner! Anything in the stove line, made of best material, can be gotten direct from the factory. Write Hoosier Stove Factory, 161 State St., Marion, Ind., for big 64-page free catalog. It contains lots of Christmas suggestions—and suggestions for other times, too. Send today and save money. Hoosier stoves are sold on 30 days trial, freight paid.

THE GIFT FOR A BOY OR GIRL

If you want to make your boy or girl mighty happy Christmas morning, give each a pair of good skates.

Think of the fun they'll have all winter long, and for many seasons to come. Skating is sport all boys and girls like and which all can enjoy, for there's always plenty of ice, plenty of good skating, before winter's over.

And Barney & Berry skates are the kind all boys and girls want. They have been known as the best for more than three generations. Yet they cost very little. Send for free catalog of Barney & Berry skates, and you'll find many styles your boy or girl will like. Write to Barney & Berry, 135 Broad Street, Springfield, Mass.

CARPET IN THE KITCHEN

A cold kitchen in winter is the despair of those who must arise on winter mornings to build the fires. The cold floor is the greatest objection, and even though linoleums are neat and clean upon the kitchen floor, a carpet is preferable for winter time. When does a linoleum ever get warm in the kitchen? It is always cold. If it must be used, then rugs should be abundantly supplied. A medium colored carpet should be used and the pattern should be small.

CREPE PAPER LUNCHEON

If you live in a town where ribbons and other decorations are expensive, why not give a crepe paper luncheon? A charming luncheon of this order was deftly managed by a small town girl the other day. She chose pink as the foundation for her color scheme. From her old-fashioned garden she picked a number of flowers of various colors and these she arranged loosely in a flat white dish. She cut a piece of crepe paper an inch deeper than the bowl and long enough to go around it. Then she frilled on both sides and fastened around the bowl. The doilies, made for the highly polished table, were circles cut from paper.

Little Girl (who likes to use large words)—"Mah, look at the man in hith human form!"

Mother, surprised—"Human form, my dear?"

Little Girl—"Yeth, that man with the brass buttons on hith coat."

Mother, smiling—"Oh, you mean his uniform."

A BLESSING TO ALL HUMANITY

How many of our readers are bathing with the same crude facilities as were used hundreds of years ago, thus missing that greatest boon to health and happiness—a thorough, modern bath. Let it be said to their credit that the bath room is an unknown comfort in their homes only because such things required running water plus great expense. But it is no longer so. Just think—for a few dollars and with no water facilities other than a cistern or well everybody can now surround themselves with bathing advantages equal to bath rooms, bath houses and bathing resorts combined.

With wonderful ingenuity a Toledo, Ohio, genius has embodied in one simple, inexpensive apparatus all the advantages known to modern bathing. It requires but one gallon of water, yet gives four distinct baths—cleansing, friction, massage and shower, either altogether or separately.

Our representative during a recent visit at the factory was astounded at the wonderful work of the invention. Everything considered, it is not surprising the factory is rushed with orders. He was shown hundreds of enthusiastic testimonials from prominent people, together with reports from agents who are evidently making big money supplying the enormous demand. Those of our readers who wish to make their spare time profitable or provide themselves with the most up-to-date bathing facilities, should read the advertisement of the Allen Mfg. Co., 1417 Allen Bldg., Toledo Ohio, which is in this issue, and answer it at once.

This is a rare opportunity which it behooves our readers to investigate, for it undoubtedly offers more genuine happiness for a little money than anything we know of.

Why Don't *YOU* Get This Phonograph On FREE TRIAL?

For almost three years I have been making the most liberal phonograph offer ever known! I have given hosts of people the opportunity of hearing the genuine Edison Phonograph right in their own homes without a cent of cost to them.

Think of it! Thousands and thousands and thousands of people have been given the opportunity to hear in their own parlors concerts and entertainments by world famous musicians just such entertainments as the greatest metropolitan theatres are producing.

So far you have missed all this. Why? Possibly you don't quite understand my offer yet. Listen—

MY OFFER:

I will send you this Genuine Edison Standard Outfit (the newest model), complete with one dozen Edison Gold Moulded Records, for an absolutely free trial. I don't ask any money down or in advance. There are no C. O. D. shipments; no leases or mortgages on the outfit; no papers of any sort to sign. Absolutely nothing but a plain out-and-out offer to ship you this phonograph together with a dozen records of your own selection on a free trial so that you can hear it and play it in your own home. I can't make this offer any plainer, any clearer, any better than it is. There is no catch about it anywhere. If you will stop and think just a moment, you will realize that the high standing of this concern would absolutely prohibit anything except a straightforward offer.

WHY I Want to Lend You this Phonograph:

I know that there are thousands and thousands of people who have never heard the Genuine **Edison** Phonograph. **Nearly everyone** is familiar with the screechy, unnatural sounds produced by the imitation machines (some of which though inferior are very expensive). After hearing the old style and imitation machines people become prejudiced against all kinds of "Talking Machines." Now there's only one way to convince these people that the Edison is superior and that is to let the people actually see and hear this remarkable instrument for themselves. **That is why I am making this offer.** I can't **tell** you one-twentieth of the wonders of the Edison, nothing I can say or write will make you actually **hear** the grand full beauty of its tones. No words can **begin** to describe the tender, delicate sweetness with which the genuine new style Edison reproduces the soft, pleading notes of the flute, or the thunderous, crashing harmony of a full brass band selection. The wonders of the new style Edison defy the power of any pen to describe. Neither will I try to tell you how, when you're tired, nervous and blue, the Edison will soothe you, comfort and rest you, and give you new strength to take up the burdens of life afresh. *The only way to make you actually realize these things for yourself is to loan you a Genuine Edison Phonograph free and let you try it.*

You Don't Have to Buy It:

All I ask you to do is to invite as many as possible of your friends to hear this wonderful new style Edison. You will want to do that anyway because you will be giving them genuine pleasure. I feel absolutely certain that out of the number of your friends who will hear your machine there will be at least one and probably more who will want an Edison of their own. If they don't, if not a single one of them orders a Phonograph (and this sometimes happens) I won't blame you in the slightest. I shall feel that you have done your part when you have given these free concerts. You won't be asked to act as our agent or even assist in the sale of a single instrument. In fact, we appoint no such agents and at the rock-bottom price on this wonderful new outfit we could not allow any commission to anyone.

If You Want to Keep

The Phonograph—that is if you wish to make the Phonograph your own, you may do so, but it is **not** compulsory. I am asking you merely to send for a free demonstration. I won't be surprised, however, if you wish to keep the machine after having it in your own home. If you do wish to keep it, either remit us the price in full, or if you prefer, we will allow you to pay for it on the easiest kind of payments.

Our Easy Payment Plan.

There are so many people who really want a phonograph but who do not have the ready cash to pay for it all at once that I have decided on an easy payment plan that gives you absolute use of the phonograph while paying for it. $2.00 a month pays for an outfit. There is absolutely no lease or mortgage of any kind, guarantee from a third party, no going before a notary public, in fact, no publicity of any kind, and the payments are so very small and our terms so liberal that you never notice the payments.

Get the Latest Edison Catalogs

Just sign your name and address on this coupon now and mail it to us. COONER & FORTUNE CO
Indianapolis, Ind.

HOME PAPERING

While house repairs are the order of the day, perhaps it would not come amiss to explain how the very economical woman may hang her own wall paper. Even when one is living on a basis of bed-rock necessity, it pays to have clean, new paper once a year, and the actual cost per roll of ordinary wall paper is but a fraction of the cost of having a room papered. You will not find the work half so hard as you think.

In the first place, you must be absolutely sure the walls are smooth. You do not hape to scrape off the old paper, although it is better to do so. For this purpose wet the walls thoroughly with warm water and then peel off the paper with a kitchen knife.

A lot of tools are unnecessary. You need only a paste brush and your own long clothesbrush, washed clean and perfectly dried.

You make the paste by boiling flour and water for five minute and then letting it cool.

Having measured the length of your room and cut all the strips necessary, you lay them one at a time face downward on the table and spred them with paste. As fast as you have done one-third of the strip you fold it down to the middle. In this way the two ends when covered with paste meet in the middle and effectually cover off the pasty surface. This prevents all possibility of smearing. You take your strip, mout a stepladder and unfold it as you apply it from the top downward. You smooth it down quickly by means of the clothesbrush, and if your paste has been properly strained there can be no lumps or bubbles. The seams you can press flatter by means of a celluloid ball such as you mend stockings with —that is, if you don't want to buy the tool which comes for that purpose. Whatever damp spots there are will dry if your paste is not too thin.

The selvage of the paper should be cut off after it has been covered with paste and folded over.

GIFTS

To choose an appropriate gift—one to be received with genuine pleasure—is truly an accomplishment. Perhaps a suggestion will be of assistance in making your purchases for the holiday season. Have you ever considered that an up-to-date unabridged dictionary is a gift to be longer enjoyed, longer treasured, and of more constant service to the recipient than almost any other selection you may make? The one great standard authority is Webster's International Dictionary, published by G. & C. Merriam Co., Springfield, Mass. It is recognized by the courts, the schools, and the press, not only in this country but throughout the English-speaking world as the highest triumph in dictionary making. It is the most choice gift.

FREE DEAFNESS CURE

A remarkable offer by one of the leading ear specialists in this country, who will send two months' medicine free to prove his ability to cure Deafness, Head Noises and Catarrh, Address Dr. G. M. Branaman, 1481 Walnut St., Kansas City, Mo.

Tremont Publishing Company
51 TREMONT BUILDING, DENVER, COLORADO

Worry Hurts, Work Doesn't

All our troubles are about things which never happen. We suffer through fear about tomorrow. When tomorrow comes the thing we worried about doesn't occur. If we work hard and keep busy we don't have time to worry. There is no real trouble or hard luck in the world but incurable sickness and death. Everything else in the world can be outlived and overcome.

We can shut our eyes and imagine we see a beautiful rose, or we can imagine we see a horrible murder. Both look real, but both are merely imagination. They are only mind pictures. Our worry is always only in the mind. When we think, we either let our minds run into worry or into pleasant thoughts. The great cure for worry is to occupy our minds with our work and with pleasant thoughts and then we kill worry. There is a wonderful book called DOLLARS AND SENSE which tells all about worry and happiness and how to live and act to get joy out of life. This book has 80 great helping chapters that tells us how to think, live, work and act to make our lives happy and full of peace and contentment.

You can get this book by sending 25 cents in stamps to R. Hunter & Co., Oak Park. Ill. The editor of this paper believes this wondeful book has done more to drive away the blues than anything ever published.

Everything in this great book is so simple, so sensible and so plain that you feel better the moment you start reading it. We want all our readers who want comfort and help to read this wonderful book. It brings joy and sunshine and drives away clouds and sadness.

The joy of every hunter is a good gun. To know that ones gun is safe, sure, quick, accurate—in short, reliable—is an ever present pleasure. A gun to meet every requirement is made by the Union Fire Arms Company, 277 Auburndale, Toledo, O. They make a hamerless repeater that hits the mark six times in four seconds, if desired. It is one of the fastest guns made. No matter what kind of a gun you want send for the Union catalog—they have a gun to suit.

So there is nothing finer for Christmas presents than handsome jewelry. A diamond ring is best of all. Genuine diamonds are increasing in value every year. Besides being most beautiful to wear they are a good and safe investment, judging from the past. See the advertisement of one of Chicago's leading jewelry houses in this issue; it is Loftis Bros. & Co., Dept. P221, 92-98 State St., Chicago. They will send a handsomely illustrated catalog free if you ask for it.

Dept. 36 Portland, Maine

WESTERN CANADA

More Big Crops in 1908

60,000 settlers from the United States in 1908. New Districts opened for settlement. 320 acres of land to EACH SETTLER—**160 free homestead and 160 acres at only $5 per acre.**

"A vast, rich country and a contented, prosperous people." Extract from correspondence of a Kansas Editor, whose visit to Western Canada in August, 1908, was an inspiration.

Many have paid the entire cost of their farms and had a balance of from $10 to $20 per acre as a result of one crop.

Spring and Winter Wheat, Oats, Barley, Flax and Peas are the principal crops, while the wild grasses bring to perfection the best cattle that have ever been sold on the Chicago market.

Splendid Climate, Schools and Churches in all localities. Railways touch most of the settled districts, and prices for produce are always good. Lands may also be purchased from Railway and Land Companies.

For pamphlets, maps and information regarding low Railway Rates, apply to **Sup't of Immigration, Ottawa, Can.,** or to the authorized Canadian Government Agent.

Indianapolis, Ind.

MENTAL RECREATION

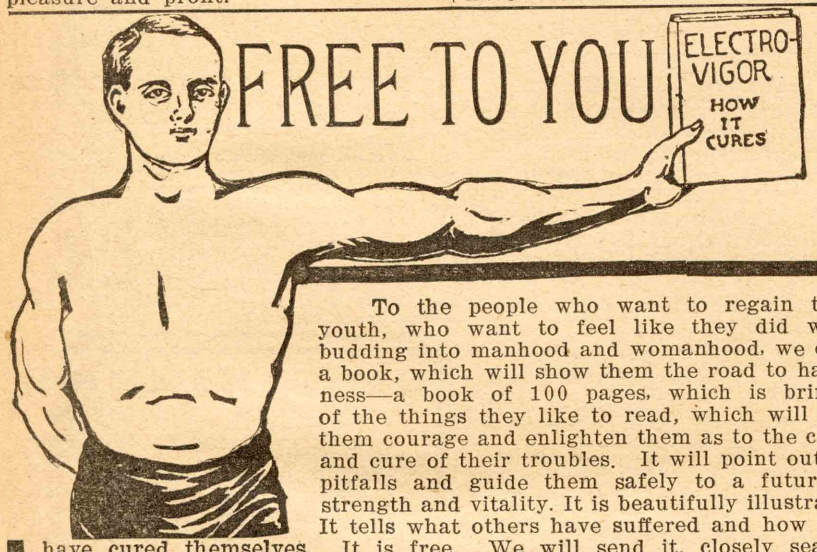
The body needs exercise to make it develop properly and be healthy, and so does the mind. The body needs rest and recreation, and so does the mind. The school days are here, and the boys and girls are at study. Work is being done, not for the present, but for the future, and the usefulness of the future man and woman depends upon the work of the boy and girl in the school.

Therefore, while many of the hours of both day and night are devoted to study, do not neglect proper rest and recreation. Idleness is not always rest. Sitting down with folded hands, doing nothing and trying to think nothing, does not always bring needed relaxation—the kind that invigorates. Provide for proper amusements. The dullest neighborhood need not be without them. Social communion, moral games, literary exercises, historic or literary readings, old fashioned singing socials, spellings bees—anything to improve the mind, broaden the thought, cultivate the social amenities, and bring the relaxation from lesson study both mind and body need. Make the approaching winter a season of pleasure and profit.

IN THE GARDEN

People who want to raise fine roses should prepare the ground for them in the fall. To begin with, an ideal location is one open to the morning sun and a little below the level of the adjoining ground. The soil, if wet, should be drained before snow comes, and this is best done by digging out the bed to a depth of about three feet and filling in one foot with broken bits of gravel, cinders or anything that will permit a free passage of water. The soil for filling the remaining two-thirds of the bed should vary to suit the species of rose grown. For the hybrid perpetuals heavy loam is decidedly the best. This contains some clay and if it can be taken from the cow lot, the better. Grass roots are very good to add, but they should be chopped fine and buried several inches below the surface to prevent all possibility of growth.

For tea roses, a lighter, warmer soil is desirable. In the heavy loam two parts of sand and leaf mould should be thoroughly mixed. In preparing all rose beds it is important to remember that manure should be mixed with the filling intended for the lower two-thirds of the bed. The top one-third should never contain recently added manure. In preparing a bed on the lawn or in the door yard the sod or top soil should be entirely removed and placed apart. Then the best of the subsoil should also be taken out and placed apart. This should be done to the depth of two feet. The bottom of the bed should now be loosened up with a pick, the good subsoil mixed with well rotted manure from the cow stable mixed, and returned, and then the topsoil mixed with small pieces of the soil and more manure should be put in to about three inches of the top. These last inches should be filled in with good, unmanured topsoil. When settled the bed will be slightly lower than the surrounding ground. It is the gravest error to make the rose bed higher than the ground surface. Beds should be made in advance, so that they will have time to settle.



To the people who want to regain their youth, who want to feel like they did when budding into manhood and womanhood, we offer a book, which will show them the road to happiness—a book of 100 pages, which is brimful of the things they like to read, which will give them courage and enlighten them as to the cause and cure of their troubles. It will point out the pitfalls and guide them safely to a future of strength and vitality. It is beautifully illustrated. It tells what others have suffered and how they have cured themselves. It is free. We will send it, closely sealed, without marks, if you will mail us this coupon. If you are not what you ought to be, send for it today. Electro-Vigor, Dry Cell Body Battery builds up broken-down people, restores youth and vigor and makes them look and feel strong. It will cure Nervousness, General Debility, Weakness of any kind, Stomach, Heart, Liver or Kidney Troubles, Rheumatism, pains in the back and shoulders, Sciatica, Lumbago, Indigestion, Neuralgia, Constipation, Dyspepsia and all evidences of physical break-down in men and women.

"For many years I was afflicted with Prostatic trouble and the various remedies that I tried did me no good. At last I tried your Electric Belt and it cured me completely."

LOUIS KOHLMEYER.
914 Bayard Ave., St. Louis, Mo.

"I am a farmer sixty years old,, had been suffering with Nervousness, Back and Stomach Trouble for a long time before I purchased one of your Belts. I tried all the local doctors, but they could do nothing for me. You Belt cured me."

STEWART HENDERSON.
R. R. No. 1, Triplett, Mo.

F. S. E. OFFICIAL DEPARTMENT

Farmers Society of Equity

(INCORPORATED)

This is a farmers society. Its chief object is to secure profitable prices for all farm crops to the producers thereof. Its other objects, plan of operation, etc., and constitution and by-laws can be obtained from the officers.

OFFICERS

President, J. A. Everitt, Indianapolis, Ind.
Vice-President, W. E. Greilich, Traverse City, Michigan.

Secretary-Treasurer, I. C. Rous, Indianapolis, Indiana.

Directors—President and Vice-President, and the following: N. M. Ashby, Sebree, Ky.; J. M. Myers, Ramsey, N. J.; R. Sherod, Keosauqua, Iowa.; W. H. Mitchell, Hutchinson, Kan.; L. H. Johnson, Attica, Ind.; S. W. Morris, Rochester, Minn.; A. G. Schmidt, Madison, S. D.

NOTICES

LOCAL UNIONS. The Farmers' Society of Equity has ready for delivery a complete assortment of blanks, forms and instructions for the use of local unions. If your union has not received them please apply to headquarters at once. Price with charter, 50 cents.

ORGANIZERS. Send us the dates of your meetings at least 10 days before the date of the paper you want them to appear in. Also keep a supply of report blanks on hand. They are free.

Members' buttons for F. S. E. cost secretaries and organizers one cent each. A supply should always be kept on hand for delivery to new members. The same way with members' cards and fee and dues stamps, but these will be sent on request without advance payment.

"The Farmers Society of Equity—Its Scope and Philosophy—The Cycle of Profitable Farming."

This is the title of an article in this number, beginning on page 2.

Every reader should study it very carefully. It defines the steps that are necessary in the perfection of agriculture as a business.

The Farmers Society of Equity is the means through which it is hoped this perfection, or completion, is to be accomplished. And the chief distinction from, or improvement over the original plan of the society lies in the four Great Lessons that may be taught in the local unions in the future.

These Lessons, or they might be called "Degrees," are called: (1) Co-operation; (2) Production; (3) Organization; (4) Mutual Benefits. All of these Lessons may be so thoroughly taught and so powerfully illustrated in the local unions that they will never be forgotten or departed from in the daily work of the member.

They can also supply what has been lacking in the past, viz.: the entertainment and novelty in the local unions to hold the members' interest until enough organization is effected to accomplish the great objects of the society.

But we refer to the article itself and will say that there is no compulsion placed on any local union to adopt these Lessons and teach them, or on any member to receive them. The 1908 convention ordered that they should be prepared and submitted to the unions and they were to be free agents in accepting or rejecting them, as they are allowed to govern themselves in other matters not contrary to the constitution of the society or laws of higher unions.

Therefore the presidents of local unions should apply to the National Union for the "Special Features" or "Lessons" on Co-operation, Production, Selling or Marketing, and Mutual Benefits and then decide whether his union will adopt them or not.

The attention of local unions is called to the notice in this number explaining how they can secure a new charter. For fear this will escape the notice of some officers, members are requested to call their attention to it.

Members in Nebraska are about to call a mass convention to elect State officers and prepare to organize the State. If such a desire exists in any other State it should be expressed to headquarters. This is particularly addressed to members in Virginia, New York, Kentucky, Indiana, Illinois, Wisconsin, Minnesota, North Dakota and South Dakota.

It is the intention to make UP-TO-DATE FARMING better each issue. We think we are succeeding, but what do you think? Don't be afraid to speak out whether to commend or criticise.

We have just issued a pamphlet "The Print Shop of UP-TO-DATE FARMING" that shows in pictures the place where "the paper with a mission" is produced. Our readers will enjoy looking over this pamphlet and we will be delighted to send a copy free on request.

"The paper with a mission" now has a few readers in nearly every county in the country and many in some; but this does not satisfy our ambitions, neither can it accomplish our object. We must have many subscribers in nearly every county in the country.

We have said before: "UP-TO-DATE FARMING is the greatest single force for improving farm conditions," but we want to multiply this force.

We believe these things can be done. We are already under heavy obligations to many good friends who have sent clubs of subscribers. We thank them from the warmest part of our heart and will thank all the others who do the same.

But, while we trust our friends—present subscribers—we don't put all trust in them as we never put all trust in Providence to solve farmers' problems. But we are employing every legitimate means possible to bring this paper to the attention of new people. To this end we have closed a contract for advertisements to appear in all the other good farm papers of the country.

When you see the advertisements of UP-TO-DATE appearing, please tell your neighbors who take such papers and who are not subscribers to UP-TO-DATE FARMING, that you can recommend the paper. In this way the results from the advertising can be greatly increased.

All of this is done at the expense of the paper, but it has for its ultimate object the establishment of the Farmers Society of Equity and the accomplishment of its good objects.

Boost the circulation of UP-TO-DATE FARMING.

MINIMUM PRICES

The following minimum prices were agreed upon by the 1908 convention of the Farmers Society of Equity. It is urged that all producers will familiarize themselves with them, keep them in mind, ask them, or if market affords it or conditions in any locality justify it, a higher price and hold for them.

Where the price is based on a central market the farm price will be the minimum price less the freight and a fair commission for the home handler, unless the owner ships direct.

Minimum Prices As Agreed Upon by the Convention:

Wheat, No. 1 hard at Minneapolis,	$1.25 bu.
Wheat, No. 2. red at Chicago	1.20 bu.
Corn, No. 2, at Chicago, until Jan. 1,	.60 bu.
Corn, No. 2, at Chicago, after Jan. 1,	.65 bu.

Contract seed peas, an advance of 25c a bu.	
Flax, at Chicago,	1.25 bu.
Wool, at home,	30c lb.
Broom Corn	$75.00 to $100.00 ton

Young Men Paid Too Little

Keeping back their rightful wages is a fruitful cause of discouragement in young men. Fathers often work their sons day in, day out, and all the returns they get are meals, a room and a few common clothes. Such young men are often faithful. They're steady, hard workers. They could earn much more at some other occupation. They could get ahead. They could save some money and learn to be independent. Instead of working for his "keep", or getting $20-$50 a month, by preparing himself he can multiply that by four and get $80. a month or multiply it by five and get $100. a month.

A call from the railroads—a steady one too—demands intelligent well-trained young men for places of responsibility. The Wenthe Railway Correspondence School, Dept. E-R-184, Freeport, Illinois, is manned by real working railroad men proven capable on the great railroads which employ them. These experienced teachers pass on to students all the information necessary to make successful railroad brakemen, firemen electric railway motormen and conductors. The school also offers excellent courses preparatory for the Government Railway Mail, postoffice and Carrier examinations.

Wouldn't you like to take your place behind a powerful monster? Wouldn't you enjoy speeding across the prairies of the West or through the hills and valleys of the East? It's pleasant, money-making work, full of charm and romance. Write Mr. F. C. Wenthe, Dept. E-R-184, Freeport, Illinois, for the new booklet that tells the "how" of it and gives a list of the salaries that railroads pay in comparison with farm work, store clerks, etc.

Notice to Local Unions

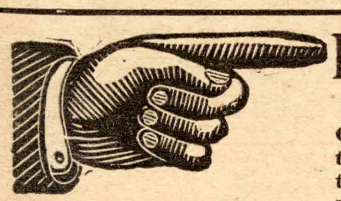
All local Unions desiring a charter from the Farmers Society of Equity can secure it by reporting its officers and members to the number of ten or more and remitting the dues as provided in the By-Laws to-wit: $1.50, less 40 cents to remain in the Local Union, or $1.10 per member. And an additional sum of 50 cents for supplies and delivery. Reports should be made to the Farmers Society of Equity, Indianapolis, Indiana, except for Kansas, they should be sent to C. W. Peckham, Secretary, Haven, Kan., and for Michigan to Charles Emmerson, Secretary, Traverse City, Mich.

The following was an act of the mass convention that incorporated the Farmers Society of Equity:

RESOLVED, That all members of the society who were in good standing in 1907, will be accepted into the Farmers Society of Equity upon the payment of the annual dues provided, viz.: $1.50, which will place them in good standing for one year from the date of payment; *Provided*, the terms of this resolution shall not be in force after the 1st day of March, 1909.

Members and officers of local unions are requested to recommend a person to act as organizer in their district.

FARMERS SOCIETY OF EQUITY, (Inc.)
Indianapolis, Ind.



IN the last issue of Up-To-Date Farming I told you of my plans for a greater paper and a greater society.

Amongst other plans was the incorporation of a company, the Equity Publishing Company, to publish Up-to-Date Farming in the future. I assume that you read that important article, but if you did not then hunt up the paper, November 15th number, and read it now. Please don't fail to do this.

The announcement that this paper will be published by a company, composed mainly of the subscribers, is one of the most important that we ever made. Up-to-Date Farming has had a great and creditable career in the past, but because of this latest move it is destined to have a much greater and glorious future.

No opportunity of equal advantage has probably ever been offered to the readers of this paper than the one to become interested with me in the great facinating and profitable work of publishing one of the greatest papers that goes into American homes. I cannot begin to tell you of this opportunity here. I would like to sit down in your home and explain all to you, but you are too far away. Therefore, I want you to send for two pamphlets, "A Prospectus," and "The Print Shop of Up-to-Date Farming." They will be sent free.

Don't think for a moment that I am going to relinquish my interest in Up-to-Date Farming, or that I have a thought of discontinuing my work through it. Nothing is farther from my intentions. I have no other business. My future is all tied up in the paper, and my future success will be the success of the paper. I am working as hard now, and doing as good work as ever in my life and I intend to continue along this line untill the end.

I want to hear from all the true hearts, who believe in the mission of this paper and who want to join with me in a work so good and as profitable as this. To write places you under no obligation, but I do want to hear from every one and, PERHAPS, you will find it was the part of wisdom for you to write. I THINK IT WILL BE.

Yours truly,

J. A. EVERIT, President.

Equity Publishing Company, Indianapolis, Indiana

ORGANIZERS

The Farmers Society of Equity wants organizers. Any person who considers himself competent to present the grand principles of this grand movement should send at once for terms and particulars. With the instructions and assistance we will give success is sure to attend your efforts.

Don't conclude that this does not interest you. It does, or should interest every person whose interests are in agriculture, and others who have time to engage in an honorable and profitable business.

☞The F. S. E. has added some new features that furnish entertainment and novelty in local union meetings and which will serve to hold the interest of the members until enough organization is secured to accomplish the main object. This supplies what the Society heretofore has lacked. These new features will multiply results for organizers. Local unions also should write for them. Address

FARMERS SOCIETY OF EQUITY, (Inc.)
Indianapolis, Ind.

HOLD ON TO YOUR MONEY

Don't Spend a Penny

until you are certain you are getting GOOD VALUE for it. In these times every man and woman must be careful of their money, must hold on to it and NOT WASTE A CENT. Sick people should BUY NO MEDICINE unless they feel sure it will give them more than their money's worth in benefit and health. We want our pay for our medicine, but NOT UNTIL YOU SAY "Here is the dollar; you deserve it," not until we HAVE EARNED IT, not until you are WILLING to send it to us. HOLD ON TO YOUR MONEY until you are SATISFIED to pay it, until we HAVE PROVEN TO YOU that we have what we claim, until VITAE-ORE HAS DONE FOR YOU WHAT YOU WANT IT TO DO. Until then, pay us NOTHING. After that, you will be willing to pay, GLAD TO PAY, as hundreds of the readers of this paper have been glad to pay. YOU ARE TO BE THE JUDGE! We leave it to you entirely for you to decide.

We want your money only when you can say that we and Vitae-Ore have earned the dollar.

How can you refuse to give this remedy, which has won an international reputation by the cures it has made, a trial on the terms of such a LIBERAL OFFER? If you need medicinal treatment of any kind, if you are sick and ailing, if anyone in your family is ailing, worn-out, sickly, you do yourself an injustice if you do not send for Vitæ-Ore upon the terms of this thirty-day trial offer. Read the offer! Send for this medicine! Do it today! Each day lost makes a case older, more obstinate, harder, and pains you more. YOU DON'T PAY A CENT UNLESS IT BENEFITS YOU.

Read This 30-Day Trial Offer!

If You Are Sick we want to send you a full sized $1.00 package of Vitæ-Ore, enough for 30 days' continuous treatment, by mail, postpaid, and we want to send it to you on 30 days' trial. We don't want a penny—we just want you to try it, just want a letter from you asking for it, and will be glad to send it to you. We take absolutely all the risk—we take all chances. You don't risk a penny! All we ask is that you use V.-O. for 30 days and pay us $1.00 if it has helped you, if you are satisfied that it has done you more than $1.00 worth of positive, actual, visible good. Otherwise you pay nothing, we ask nothing, we want nothing. Can you not spare 100 minutes during the next 30 days to try it? Can you not give 5 minutes to write for it, 5 minutes to properly prepare it upon its arrival, and 3 minutes each day for 30 days to use it. That is all it takes. Cannot you give 100 minutes time if it means new health, new strength, new blood, new force, new energy vigor, life and happiness? You are to be the judge. We are satisfied with your decision, are perfectly willing to trust to your honor, to your judgment, as to whether or not V.-O. has benefited you. Read what V.-O. is, and write today for a dollar package on trial. Address as below:

What Vitæ-Ore Is

(For Both Internal and External Use)

Vitæ-Ore is a mineral remedy, a combination of substances from which many world's noted curative springs derive medicinal power and healing virtue. These properties of the springs come from the natural deposits of mineral in the earth through which water forces its way, only a very small proportion of the medicinal substances in these mineral deposits being thus taken up by the liquid. Vitæ-Ore consists of compounds of Iron, Sulphur and Magnesium, elements which are among the chief curative agents in nearly every healing mineral spring, and are necessary for the creation and retention of health. On a package of this mineral-substance, mixed with a quart of water, equals in medicinal strength and curative, healing value, many gallons of the world's powerful mineral waters, drunk fresh at the springs.

ITS PURITY IS GUARANTEED

Vitæ-Ore contains no alcohol or any injurious or poisonous drug. It is absolutely guaranteed to be pure and wholesome, under all Pure Food and Drug Laws, both State and National. It consists of substances that the body needs and thrives upon, that all of the family may safely use, old and young, children or grandmother. It is a clean remedy, sold by clean people, through clean methods.

HELP A FRIEND!

If you have a friend or neighbor who is sick or ailing, show him this offer and tell him to write to this Company for a 30-day trial treatment. It is a little thing for you to do, but it may mean big things for him, and if so, he will bless you for it.

Made a New Woman After Months of Misery.

BELLEVIEW, TENN.—I have been suffering a long time from Female Weakness and Bladder Trouble. My Kidneys ached continually day and night and my periods were so bad that I could not sit up, but was in bed half of the time. They usually lasted for three weeks at a time. I had doctors attending me, but they did me no good. Then I saw the advertisement of Vitæ-Ore and concluded to try it for a month. I sent for a trial package and began using it as per directions. I can now testify that this one trial package has almost entirely cured me. I feel like a new woman. I can do all my housework with pleasure. I am only sorry that I did not see your trial offer long ago and thus save months of misery. MRS. M. A. CUMINGS.

She Is Perfectly Cured.

TONY, WIS.—I have been using Vitæ-Ore for two months. Before using it, no food would agree with me whatever. Now I can eat almost anything. I must say that I am perfectly cured. I cannot praise this medicine enough and will recommend it to every one. MRS. LENDERT BOS.

Permanent Benefit in a Serious Complication.

SUMNER, ILL.—I have been using Vitæ-Ore for five years. After having used local doctors' medicines which did me no permanent good, I found permanent relief in Vitæ-Ore. I find it a great remedy for the Stomach, Liver and Kidneys. It is a great relief for Rheumatism which I formerly had so often, particularly in Winter and Spring. My trouble was a serious complication of diseases and Vitæ-Ore is the only remedy which ever gave me any permanent benefit. It saved me many doctor bills. MRS. R. M. HARDACRE.

CURED HIS SCIATIC RHEUMATISM.

Left Leg Was Altogether Numb—Spent $280 for Treatment at One Time.

DES MOINES, IOWA—I am a brick-mason and have suffered with Sciatic Rheumatism for nigh on to three years. At one time I was in bed for ten months. The doctors first said that I had Lumbago and then others pronounced my condition Sciatica or Sciatic Rheumatism. I spent $280.00 for treatment at one time and received no benefit. At last I read an advertisement for Vitæ-Ore in my Lodge paper and sent for a dollar package on thirty days trial. I found it so beneficial that I sent for more. Before using Vitæ-Ore my left leg was numb; it had no feeling whatever. Vitæ-Ore fixed me up all right. It placed me on a solid foundation and I can use both my limbs now, the left as good as the right. I have no more pain, feel better in every way and have a splendid appetite. I suffered so badly that many a time I said to my wife that had I a dog that suffered as I did, I would shoot him to get him out of his misery, no matter how I loved him. I feel so good over my cure that I want to give every sufferer the benefit of my experience. FRED KOMBROWSE, 614 E. 16th St.

RESTORED TO PERFECT HEALTH.

Had Kidney Trouble and What the Doctors Called "Rose Cancer."

ERIE, PA.—Some time ago I was afflicted with Kidney trouble, and was all run down. I could not pick up a ten pound weight; none of my friends expected me to live. I procured a package of Vitæ-Ore and in three weeks from the day I began to use it I went to work. I continued the use of Vitæ-Ore and was restored to perfect health. I also had what the doctors called Rose Cancer, and I cured it by keeping Vitæ-Ore bound on the sore for six weeks. It has never bothered me since. I shall never cease to recommend Vitæ-Ore while I live. I am seventy years old, and strong and healthy. A. MYERS.

USE THIS COUPON

If You Don't Wish To Write a Letter.

THEO. NOEL COMPANY., Vitae-Ore Bldg., Chicago, Ill.

Gentlemen:—I have read your advertisement in Up-to-Date Farming and want you to send me a full-sized ONE DOLLAK PACKAGE of Vitae-Ore for me to try. I agree to pay $1.00 if it benefits me, but will not pay a penny if it does not. I am to be the judge. The following is my address, to which the trial treatment is to be sent:

NAME_____

TOWN_____

Street or R. F. D. Route_____ STATE_____

IF YOU SUFFER from Rheumatism, or any Kidney, Bladder, or Liver Disease, Dropsy, a Stomach Disorder, La Grippe, Female Ailments, Functional Heart Trouble, Catarrh of Any Part, Nervous Prostration, Anaemia, Sores and Ulcers, Constipation or Other Bowel Trouble, Impure Blood, or are just Worn-Out, send for a 30-day trial treatment of Vitae-Ore right away and see what it will do for you. It strikes at the root of disease, eradicating deep-seated lesions and cures where other remedies failed to benefit.

Address, THEO. NOEL CO,. UP-TO-DATE DEPT. Vitae-Ore Bldg. CHICAGO, ILL.

The Man of the Hour

THE MASTER EYE SPECIALIST WHO SAYS:

There is no excuse for you to wait and grow blind from Cataracts, Glaucoma, Iritis or any chronic disease of the internal eyeball, because it can be cured—the disease can be stopped—the inflammatory product can be absorbed and the sight restored.

There is no need for you to suffer with Granulated Lids, Wild Hairs, Red, Sore Eyes, Scums over the sight, Spots on the Eyes, Pterygiums, Ulcers of the eyes, because it can be cured.

There is no need for you to go around wearing glasses for weak eyes or eye strains or allowing your eyes to ache and pain and blur, and cause you to have headaches, because I have a treatment that stops these diseases quickly and completely and you can use it at home without interfering with your work or duties.

This treatment is not new. I have used it in my pracice for eighteen years, and treated a hundred thousand people with it and know the remarkable cures that I have made with it and say positively that it does cure these diseases when the structures are not injured.

After 28 Years Experience I Know That Ninety Per cent of the Total Blind People of the World

W. OAKLEY COFFEE, M. D.

EQUIPPED WITH EVERY DEVICE KNOWN TO MODERN SCIENCE, RIPE WITH 28 YEARS OF SUCCESSFUL PRACTICE in the treatment of the Eye and the Ear. Backed by thousands of testimonials from grateful patients. Dr. W. OAKLEY COFFEE offers you ABSOLUTELY FREE without one item of expense to you a 15 DAYS' TREATMENT in order that you may thoroughly test the famous absorption method which has unquestionably made him the foremost physician in this country today in the successful treatment by mail of the Eye and the Ear. Why should you hesitate? It costs you nothing! Dr. Coffee doesn't want your money nor to waste his time unless he knows that he can cure you. He won't even attempt your cure unless satisfied that he can master your ailment. Dr. Coffee is one of the foremost citizens of Des Moines, Iowa. His big Infirmary just completed stands as a monument to his successful career.

are made blind from simply neglecting simple diseases to start on that could be easily and quickly cured by simple remedies had they used them. I want to warn you that the little blurring of your sight, the running together of words when you are reading, the little floating spots before your eyes, the redness and congestion or slight inflammation in the eyes today, may mean a total and complete blindness in a year's time. Are you going to be one of these people? Are you going to allow your eyes to grow weak and grow blind or have an operation performed on them or burn them out with Blue Stone or caustic, without making an honest, reasonable effort? Remember that it does not make any difference what kind of an eye disease or weakness that you have, I want you to write to me, let me tell you about your case; let me prepare my marvelous Absorption remedies and send them absolutely free of charge for you to use on your eyes for fifteen days. This is what I want and what I ask of you.

DO NOT GO BLIND

You can't realize all the horrors, the terrible suffering, the long black night which blind people have to go through after you get blind. You would give anything on earth for sight, but if you wait too long until the Optic Nerve is destroyed, nothing can be done. Twenty-eight years of my life have been devoted to the studying and treating peoples' eyes and save them from blindness and restoring their sight. I have treated

A HUNDRED THOUSAND PEOPLE WITH THESE REMEDIES

and I know how they suffer and how they feel and how thankful they were to me for giving them eyesight and this is what I want to do for you if you will allow me, and I do it free—give you the privilege of trying this treatment without price and without money.

I have restored sight to many people past eighty years of age. I have restored sight to children, to babies in their mother's arms when they could not see the light of day before using the treatment. I have treated every form and character of eye disease and weakness. I have caused people to throw away their glasses after they had worn them twenty years. Their sight returned to normal. It is this twenty-eight years experience, these records of cures of the thousands of cases, with my prescriptions and my medicines that I am offering you absolutely free to try.

AFTER TWENTY-EIGHT YEARS EXPERIENCE

I have originated a combination of remedies that I think are the most wonderful and effective for removing all diseases and weakness from the eyes, ever known to the medical profession. These medicines have a particular action on the glands, blood vessels, and nerves of the eyes in causing them to throw off all diseases and weakness and I am offering my services and a fifteen days' course of these remedies absolutely free to you if you suffer with any weakness or disease of the eyes whatever.

I DON'T ASK YOU FOR MONEY

I simply ask you to write me a history of your cose—tell me all about it, how long you have suffered—let me prescribe the medicines and send them to you and restore your sight and cure your blindness.

Warning Symptoms of Failing Sight and Eye Diseases

Do your eyes smart or burn?
Do they weep or run water?
Do they ache or pain either in or above the eyeball?
Does the type blur or words run together when reading?
Do you have floating spots before the eyes?
Do your eyes feel weak, sore or tired?
Is your vision becoming smoky or cloudy, or dim?
Are your eyes red, sore, inflamed or lids granulated?
Are you wearing glasses now? If so, how long?
Have you any Spots, Scums, Pterygiums or Growths of any kind growing on the eyeball? If so, describe them.
Have you Cataract forming in the eyes?
Do you see two objects (or double vision?)
Do you suffer with Wild Hairs?
Can you see to read the smallest print?
Test the sight of each eye separately and see if one eye is failing.
Take a plain white card and stick a pin through it and close one eye and look through it with the other. If you see any spots or webs it is cataracts forming.
All these symptoms indicate disease, weakness or disturbed circulation in the eyes. Any of them may mean that a disease is creeping over your Optic Nerve that will make you totally blind if it is not stopped.
I want you to write me about any of the above symptoms; let me tell you what they mean; let me cure it before it is too late. Don't take chances on blindness. There is no excuse for it.

I am going to prevent blindness in every person that will let me help them. I have a large Infirmary which is equipped with every scientific appliance necessary for the successful treatment of eye diseases by the Absorption method. I am not going to give you any excuse for not trying this treatment. I am not going to allow you to go around wearing glasses or suffering with weak or diseased eyes or to gradually grow blind or to have an operation performed on them, if you will allow me to send you these medicines and prove to you how quickly and completely they cure these diseases and restore the eye to health and strength.

I DON'T CARE

who has treated you or who has pronounced your case incurable or how long you have suffered or whether you have any confidence in these statements or my theory or not, I simply ask you to investigate for yourself. Write me the history of your case—tell me your troubles and let me give you relief. I will send you the treatment—let you use it for fifteen days. If the treatment is not satisfatcory—that settles it. You have paid nothing, you owe nothing. I don't want anything of you. I believe that I have an absolute cure if it is used in time. I don't ask you to risk any money or place yourself under any obligations—simply to give the treatment a fair trial.

All this I do for every person suffering with eye diseases, absolutely free.

CUT OUT THIS COUPON---SEND TODAY

IF YOU WANT TO TRY THE MOST REMARKABLE TREATMENT ON EARTH FOR THESE DISEASES—A TREATMENT THAT IS CURING THOUSANDS—IF YOU WANT TO TRY IT ABSOLUTELY FREE; ACT NOW—YOU MAY NEVER HAVE THIS CHANCE AGAIN.

DR. W. O. COFFEE, Dept. 68, Des Moines, Iowa.

My eyes are bothering me and I fear there is something wrong with them. Please send me your diagnosis blank with full instructions how to test my eyes. I will fill out the blank carefully and return it to you. If you think your treatment will benefit me, you are to send me 15 days' treatment free as advertised in the November Up-to-Date. It is understood that I am under no obligation to continue the treatment unless I am satisfied that it will benefit or cure my case, and of this I am to be the sole judge.

BURLEY TOBACCO ALL SOLD

GREATEST FARM TRIUMPH OF THE AGE

The crowning triumph of farm organization along the lines of Equity, was achieved, or at least was made public, after the forms for the preceding issue of UP-TO-DATE FARMING had been closed. It was the culmination of several years of struggle between the tobacco growers of Kentucky and the tobacco trust, and the victory is all on the side of the growers. It has been said and quite generally believed that the side which has the money always wins, but we have contended otherwise. Our ar-

(Continued on Page 4)

"FOR THE CO-OPERATING OR ORGANIZED FARMERS OF AMERICA"

A LATE REVIEW

ADDRESSED TO FORMER READERS

When UP-TO-DATE FARMING recognizes a duty it never hesitates in its performance. In the past we have performed many pleasant duties and some unpleasant ones. But duty has always decided our course.

Thus we have hewn to the line marked by duty all through the troublous year that is closing and thus we approach another duty that we owe to about 25,000 former readers of this paper and members of the Society of Equity.

We will venture the assertion that not one of our many readers has a regret that he followed the advice given through this paper on the momentous problems that confronted us, but we have daily evidence that many former readers have regrets that they allowed themselves to be deceived and led astray.

The duty we owe to these 25,000 old members of the society is to acquaint them with the recent events that have been transpiring, as they effect the society. They are entitled to the truth and facts so that they may enter the new year with a full knowledge and guage their acts as their best interests dictate. In this way we hope to bring about a reunited society.

The last issue of UP-TO-DATE FARMING that was sent these people was April first number. We will assume that each number was read carefully, therefore we will confine this article to a cronological account of subsequent events.

* * *

CHICAGO TRIAL

April 9th, 1908, the trial of Bowne, Nelson and Gentner, eidtor and publishers of the Equity Farm Journal, for criminal libel, was called in the Chicago Criminal Court, and was concluded April 18th. The Jury promptly returned a verdict of GUILTY against all the defendants. A motion for a new trial was made by the defendants. The court granted it as to Gentner, but refused it to Bowne and Nelson who were sentenced to pay fines of $200 and $100, and costs, respectively.

In May first number of this paper was the following, referring to the trial:

Mr. Everitt, as the members of the A. S. of E. and readers of their paper, know, was charged with many misdemeanors including mismanagement of the society while he was its president and head. These things were charged or insinuated against him before, and at the October, 1907, convention, but he was prevented from facing his accusers at the convention.. But it is not necessary to review the acts of the convention or subsequent ones leading up to the arrest of the three people who now stand convicted of one of the most contemptible crimes in the calendar.

Mr. Everitt was not allowed his day in the convention, but he has had his day in court and after the most searching investigation of nearly every act of his life for thirty years, stands an exhonerated and vindicated man. He has borne accusations heaped upon him by his enemies who thought to profit by tearing his business down and besmirching his name and fame, always confident that right must prevail.

But we do not write this in the spirit of vindicativeness. The crimes were committed, the prosecution was necessary, the verdict of "guilty" was inevitable, if justice was done. Mr. Everitt regrets all the past as he would much rather that nothing had occurred to arrest the development of the society. Even the guilty people should be thankful that the end has come as they have known for some time that the pendulem had swung to the limit of its arc and must return and would rend asunder the fabric of malice, wrong, injustice and villification that they had woven. We believe every honest man, every true and loyal member of the society and every subscriber to Up-to-Date Farming will rejoice over the fact, as proven by the verdict, that their confidence in Mr. Everitt, the founder of the society, was not misplaced and had not been abused.

Right will prevail and wrong must perish. We now believe any who were placed in a position of doubt will doubt and hesitate no more, but that they will, without delay, renew their allegiance to this paper which was their guide and counselor in the past.

WALROD'S CONFESSION

July 10, Claire R. Walrod made a complete sworn confession of the base conspiracy we have often charged. This party was an employee of the headquarters all through 1907, was one of the most active people in the 1907 revolutionary convention, later was entrusted with the headquarters of the old society while President Barnett and Secretary Pauley were absent at their homes and finally went to Chicago to work on the official paper. In his confession he lays bare the whole conspiracy and the part each person played. We will not attempt to give even an outline of it in this article, but will send a printed copy free to interested parties on request.

ALLEGED OFFICIAL PAPER

November, 1907, the alleged official paper —Equity Farm Journal—was started. Previous to that time, Theo. G. Nelson and others, "by strategy," we use their own expression, secured a proof of the subscription list of UP-TO-DATE FARMING. With this as a basis, they, through misrepresentations and fraud, obtained a permit to mail the paper at second class rates. Then they began the most scandalous attacks on Mr. Everitt and sent their paper to nearly all his old subscribers and friends, whether members of the society or not. The publication of the lies in their paper and the circulation of the same and others by the headquarters of the society impelled Mr. Everitt to seek the protection of the law. He accordingly appealed to the state officers in Indiana and Illinois, which led to the arrest of the chief officers of the society, the editor and publishers of the paper and some of the employees and ex-employees while others fled from the state to escape arrest, all of which has been published in these columns. Outside of the Chicago case the others could not be brought to trial yet on account of postponement, secured by the defendents, but all are pending.

In June, or about that time, the post-office department became aware of some of the irregularities connected with publishing the Equity Farm Journal and required the publishers to obey the law. The paper suspended publication in July. At the Milwaukee convention, held in October, the debt of the official paper was reported as $7,543.19, with $2.25 cash on hand as published in the Equity Farm Journal.

A. S. OF E. HEADQUARTERS

Also from the same paper we get the statement that the indebtedness of the Barnett and Pauley headquarters was reported at the Milwaukee convention to be $5,400.00, with $195.43 cash on hand. But this did not include the debt of about $7,000 owing to Mr. Everitt and contracted in the early years of the society while it was being established, nor other claims against the society, which are now in suite in the Indianapolis courts and expected to be tried in January.

MILWAUKEE CONVENTION

October 6th, the Barnett-Pauley faction met in national convention at Milwaukee, Wis. This convention was declared illegal by their attorney and it then resolved itself into a conference. They will attempt to legalize the convention by representatives meeting in Indianapolis in December. Reputable attorneys and state officials of Indiana have expressed themselves that this will not legalize the convention. If they are right, then that society must be without legal standing until October, 1909, when, if there are any adherents, they may meet as provided in Articles of Incorporation, in Indianapolis in October and possibly give the society legal life again.

OFFICERS ELECTED

The Milwaukee convention elected C. O. Drayton, president; M. F. Sharp, vice-president; S. D. Kump, secretary, and Chas. A. Speer, one of the directors. This quartett and the parts they played in bringing the society to its present condition all through the years 1907 and 1908, are so well known to present and past readers of the paper that they need no rehearsal now. We will say, however, that it was a fitting tribute to them that they should now stand as sponsers for what remains of the great and good organization that they were largely responsible for wrecking in a vain attempt to gratify their personal ambitions.

THE MASS CONVENTION

October 27, 1908, members of the society met in mass convention at Indianapolis to consider what steps should be taken to save the society and reestablish it. Because of the unconstitutional and illegal conduct of the officers who had been in charge for a year and the irregular 1907 convention, the opinion was held that the charter of the society could be acquired if a contest was made for it. But when the cloud on the charter, and the debts of the society were considered the conclusion was reached that the old charter was not a desirable acquisition. It was then decided to incorporate the true principles, and the correct plan of the original society under the name Farmers Society of Equity. This was done October 30, 1908.

It should be born in mind that the mass convention was an expression of the second convention held in 1907 by the loyal members who refused to act with the revolutionary convention. The Farmers Society of Equity represented such convention down through 1908 but was not incorporated until the date above mentioned. It had many adherents before the convention and is now the only hope of farmers who want to see the great principles of the original society carried out.

CHAS. A. SPEER PLEADS GUILTY

The trial of Chas. A. Speer for criminal libel was called at Princeton, Indiana, Dec. 14, and came to an abrupt end by the defendant pleading guilty. Thus has ended another chapter in the conspiracy and this self-confessed criminal stands with all the baseness of his character exposed before the many people he and his co-conspirators succeeded in deceiving for two years. All these people may now well try to forget Chas. A. Speer and his efforts as they would a hideous night mare that appeared to frighten them in their attempt to establish the old American Society of Equity. As Speer is director of the A. S. of E., and its chief officers for the next year were co-conspirators with him, does it not follow that the old society must give way to the new until it is purged of all such people? Then there can be a coming together, but not before. Equity and iniquity cannot mix or harmonize any more than can oil and water.

Need we say more? We would not have reviewed these matters which are thoroughly understood by the present readers of UP-TO-DATE FARMING except to place them before the 25,000 old subscribers and members who may be uninformed or misinformed as to the true status of the society. We consider we owe this to them so they may be in a position to act with the greatest wisdom in the future and to maintain the organization at its original strength.

WHICH WILL YOU SUPPORT?

As the time to pay 1908 dues will soon arrive let each member consider the following:

1. Dues paid to the old A. S. of E., under Drayton, Sharp, Spear, et. al., will go, largely or entirely, toward liquidating its debts. As these debts were contracted in an unholy attempt to ruin the person who gave the society to farmers and who established it largely at his own expense and which debt remains unpaid, and later in paying fines and costs, the result of criminal prosecutions by the states of Indiana and Illinois, we believe the old members will refuse to pay dues for these purposes.

2. Payment of dues to the Farmers Society of Equity will be used entirely to build up the society along lines that were so successful before 1907. Every dollar can be used for development as the society has no debts.

OUR APPEAL

We again appeal to farmers and all who want more of Equity to prevail in all the business relations of life to once more rally to the accomplishment of the great purposes of the society and make it greater than it ever was in the past. Its plan is as potent as it ever was to give benefits, the unfortunate experiences of the past are the real safe-guards against a repetition in the future and the best guarantee that the movement will now go forward without hindrance to the accomplishment of its great objects for the betterment of the whole human race.

When you next meet in your local union decide this matter as your best interests dictate, always keeping in mind that the complete solution of farmers problems can only come through one society for all farmers, for all crops and for the whole country. The Farmers Society of Equity is the only organization now before farmers that has a practical plan which has been tested and is in successful operation.

The membership fee to join the Farmers Society of Equity is $2.00. Of this the local union retains 20 cents. This also pays the dues for one year. The annual dues is $1.50, out of which the local union retains 40 cents. The official paper—UP-TO-DATE FARMING—is sent to all members.

HOW TO AFFILIATE

Following is a resolution adopted by the mass convention:

Whereas, One of the objects of this Mass Convention is to bring about a re-united society, and

Whereas, The Farmers Society of Equity alone represents the true, original principles of the society and represents the correct plan to accomplish the good objects;

Therefore, Be it Resolved, that all members of the society who were in good standing in 1907, will be accepted into the Farmers Society of Equity on the payment of the annual dues provided, viz: $1.50, which will place them in good standing for one year from the date of payment; provided the terms of this Resolution shall not be in force after the 1st day of March, 1909.

* * *

On receipt of report as above to the Farmers Society of Equity, Indianapolis, Ind., and 50 cents extra, a charter will be issued to any organized local union and necessary supplies, members cards, buttons, etc., will be sent. Members at large will also be accepted on the payment of the dues as stated.

Subscription Price, 50 Cents Per Year.
Three Months' Trial Subscription, 10c.
Foreign Subscriptions, including Canada, 75 Cents Per Year.

YOUR ADDRESS should always be written very plainly, including *County*. Do not give street or box number when not necessary to facilitate delivery of your mail. If on a rural route use the letters R. R. before the number.

RENEWALS AND CHANGE OF ADDRESS. Give the same as before. If a change from one member of the family to another, so state. If you change your post-office give old office as well as new.

IMPORTANT. When writing about your subscription, requesting a change of address, renewing or ordering cancellation, send the printed address from your wrapper. This will help us very much.

THE LATEST DATE shown with your address is the date to which your subscription is paid. Please keep your time paid *in advance*.

MEMBERS of the Farmers Society of Equity will find the date on their wrapper to which subscription has been paid.

AGENTS WANTED. If you want to engage in a profitable business all your time or part time, write to us.

CLUBS. We want every subscriber to send clubs of three-months' *trial subscribers* at 10 cents each.

ADVERTISERS. Only reliable advertisers are admitted to our columns, and we guarantee that they will deal honestly with subscribers. Should they not, we will make good any loss to paid in advance subscribers. It is understood that this guarantee is not binding on the publisher unless you mention UP-TO-DATE FARMING when you write and you report any dissatisfaction within a month of the date of the paper.

A REPLY TO MANY

Hardly a day passes that I am not asked to reply to statements made in the Wisconsin Equity News or the Chicago sheet put out by the convicted criminals. We usually reply that it is of no use, for as soon as one lie is nailed these people invent others. The only safe course to follow is to not believe anything that appears in the papers. You cannot know a statement made by a known liar is true unless you knew it was true before spoken by him. Therefore such papers are certain to deceive their readers and may cause them much loss.

I am led to write this because Garrett M. Walrod, editor of the Wisconsin paper, who is one of the people out on bond, said in the last issue: "Everitt concluded that he did not want the trial to come off and had the case postponed."

The fact is the case has been set several times and postponed by the defense. It was last set for Dec. 7, but was postponed because their attorney, Carson, was ill. It is expected to be tried in January and will be tried on the first day I can force it. Speers' trial is now set for December 14th. The whole grist will be ground out and then the hopper will be filled with another. Let the Wisconsin Equity News people read the preceding sentence very carefully.

J. A. EVERITT.

MICHIGAN MASS CONVENTION

To be held in Bridge Street House, Grand Rapids, December 29th, beginning 9 a. m. The object:—To take final steps for organizing the state. Every member who possibly can should come. Each local send delegates.

CHARLES A. EMMERSON, Sec.,
Traverse City, Mich.
W. E. GREILICH, Pres.,
Traverse City, Mich.

DEAR EDITOR:

Since I moved to Virginia I have missed your paper. The farmers here need your paper to help them market their crops. The way it is here; a man raises a crop of tobacco and then hauls it 30 miles over the worst roads in the country to Richmond to be sold at auction and has to take what the buyers choose to give him. The farmers are helpless.—W. D. Jones, Dabney, Va.

(We can hardly conceive how it is possible for the growers of tobacco in Virginia to remain under the domination of the old system when the growers in their neighboring state have thrown off the yoke so completely. But "he who will be free, must strike the blow." As long as the farmers of Virginia want to perpetuate the old system they can.—Ed.)

Invest Your Savings

For years there has been a tendency among farmers to become connected with live publishing interests—and not without good cause. It is a well known fact that great profits are derived from some of the hundreds of agricultural papers printed in the United States. No brighter prospect was ever extended the farmers than this opportunity to invest in a few shares of the Equity Publishing Company stock, which now publishes UP-TO-DATE FARMING.

5000 shares are now offered for distribution amongst our subscribers, and friends. The price is $10.00 a share. We don't ask you to invest until you have investigated. We have issued two booklets,—one is a prospectus, the other illustrates the various departments connected with UP-TO-DATE FARMING. Both booklets will be sent FREE on request. Ask for them. Address

UP-TO-DATE FARMING

Representing the Organized or Co-operating Farmers of America

PUBLISHED TWICE A MONTH
At 227 W. Washington Srteet

Re-entered as a Semi-Monthly publication as second-class matter, January 20, 1908, at the Post-office at Indianapolis, Ind., under the act of Congress of March 3, 1879.

Volume XI | INDIANAPOLIS, INDIANA, DECEMBER 15, 1908 | Number 24

A GREAT TOBACCO DEAL

A WONDERFUL TRIUMPH OF FARM ORGANIZATION

Elsewhere in this issue we give a detailed account of the great Kentucky tobacco sale that marks the most signal triumph ever won by farm organization. The struggle has been a long and severe one, with unprecedented determination and persistence on both sides, each seeming to regard the issue a matter of life or death. But the contest finally ended where all such contests ultimately must, with the right triumphant. The farmers grew the tobacco and they had it for sale; but it was their personal property, and the common rights of property made them a party to any deal which gave that ownership over to another. That is all the farmers contended for. Heretofore they had not been a party to the sale of their own property, or, if considered a party at all, they were only a passive one. The purchaser offered a price. The owners of the tobacco could accept it or not as they pleased. Some may even yet contend that this gave the growers their say—their "day in court." But the tobacco was not grown for the growers' use, but as a needed supply for manufacturers, with the understanding in advance that the manufacturers would purchase the product. If the manufacturers had had no reason to believe tobacco would be produced, not a factory would have been established; and if the farmers had been given no reason to believe the tobacco would be purchased not a plant would have been set. Here lies the mutual dependence and obligation for fair treatment on both sides.

The situation, therefore, was this: The farmers grew the tobacco with the understanding that it would be purchased by the manufacturers. They had no use for it themselves in the quantities grown, and if unsold it would contribute nothing to their incomes or to the support of themselves and families. But the money they had a right to expect from its sale would do both. On the other hand, the manufacturers needed the product, and could not do business without it. They, therefore, stood ready to buy in whatever quantities they desired or could profitably use.

Thus far there was no hitch in the discharge of the mutual obligation. The manufacturers had established their plants, depending upon the growers for the needed supplies, and the supplies had been produced. The farmers depended upon the manufacturers to buy the product for money, and the manufacturers stood ready to do so. But there had been no agreement as to price. That had been left to some indefinite, something called the "market," regulated by something equally indefinite called the law of supply and demand. After the crops had been made, the manufacturers, knowing the farmers must sell to live, claimed the right to control the market, construe the law of supply and demand, and, without consulting the owners of the property, fix the price at which it should sell. The growers were unorganized and helpless, and thus was the business transacted year after year. The growers continued to furnish the supplies, and the manufacturers to purchase so much as they wished at prices determined by themselves; meanwhile encouraging the farmers to grow more and more every year, each increased production marking a lower price level.

Once in a while, different manufacturers, desiring to procure the same product, strove against one another, and temporarily bid up the price. But the docility of the growers and their ready acceptance of whatever price was offered taught the buyers that if they could arrive at a mutual understanding and cease to bid against each other, they would be masters of the situation, and could get their supplies at whatever prices they chose to name.

Out of that idea grew the tobacco trust. The large manufacturing establishments combined into the American Tobacco Company, and thenceforth there was virtually but one purchaser. It was easy now to fix the price at no matter how low a figure, and the growers must accept it or keep property that had been produced to sell, that was of no value to them, except in its sale, and that they had depended upon for money to meet their living expenses.

These low prices brought a constantly increasing deficiency, and, urged to an increased production to meet the deficit, each year brought the price lower and lower, until the growers found themselves more and more helpless, their incomes dwindling to nothing and disappearing, and their families, in spite of their increased labors, falling further and further into penury and want. There were a few independent buyers that resisted the golden arguments of the combination, but they were not strong enough to impede the progress of the trust, nor to relieve the growers.

At this auspicious moment UP-TO-DATE FARMING began to teach equity in business, and to contend that the producers of crops owned them by right of production and had a right to place a price thereon; that it was theirs to say, pay the price or do without the goods, rather than for the buyers to say accept our price or there will be no sale. The tobacco growers of Kentucky and elsewhere, as well as the producers of other crops in many places, saw the justice of this contention, accepted the plan, and prepared themselves by organization to put it to the test. The tobacco struggle has been a battle royal. Each foeman proved himself worthy of the other's steel. The trust had the money and the influence in high places, but the growers had the property and civilization's common sense of right and justice. So the struggle, at least for this time, and for all time, if wise counsel prevails, is ended, and its ending marks, if not the first, the greatest victory for the tillers of the soil.

We feel no inclination to gloat over the vanquished foe. The contestants know each other better than they did before; and it only remains for them, in the future, to meet on common ground, as parties with equal rights and mutual interests, doing business with each other, and adhering strictly to the true principles of equity and fairness. It would be just as wrong, and just as far from equity, for the growers to take an unfair advantage of their victory, and arbitrarily make prices too high as it was for the buyers' combine to take advantage of their power and the growers' helplessness, and make prices too low. No matter what extremists may say, and hot heads may urge, our advise is to carefully follow the lines of equity in all subsequent proceedings and deals. Produce to supply the demand, but not to glut the market. Sell so as to secure equitably remunerative prices, but never allow yourselves to be tempted to extortion to gratify greed.

In this victory there is a great lesson for the producers of every crop that grows from the soil. The hand of arbitrary prices, made by the buyers, is laid more or less heavily upon every product, and intelligent control of production and marketing, directed by unselfish but determined co-operation, is the only thing that will, or can, remove it, and the surest and safest road thereto is through the Farmers Society of Equity.

ONE FOR ALL AND ALL FOR ONE

Mr. Richard C. Hall, president of the Chicago Association of Commerce, reads a good lesson when he says: "If a grocery jobber is loyal to himself, his trade and this market, he will lose no opportunity of seeing to it that a country dealer in dry goods or saw mill supplies, or any other line, makes his purchases here." In other words, when a business man of a town is drumming up business for his own line, he should drum up business for all other lines; that the town and its interests comprise all the business done there, and that the prosperity of the town, city or community grows out of the prosperity of all its parts.

There is nothing truer. The man, no matter what his calling, that can see nothing above, beyond or below himself, would as well live in the midst of Sahara so far as progress is concerned. The person that sells eye salve can have a trade only by there being something to attract people to his store who have eyes; and since people who have eyes also have feet, bodies, heads and appetites, the eye salve seller is benefited by the sellers of shoes, hats, clothing and provisions. Besides, were the eye salve man left alone, he could not possibly build a town, whereas with all the others, working all for each and each for all, the town naturally grows. There is little room for exclusive selfishness in a world like ours inhabited by a people like us.

The lesson is just as valuable to farmers. That man must farm on a very large scale that can produce enough of any one commodity to attrcat a general market, and that one must have an unexpected pull who, by himself, can secure prices on the value level his products merit. Savage beast or man may "live for himself alone," and wrest his living from nature or his fellows, but he makes no progress and expects none. But the music of civilization is set to the tune of co-operation, of what is good for you is good for me, and I'll help you if you'll help me, all for one and one for all, and so stand together with the combined strength of the bundle of sticks that defy a power one of the sticks alone could not withstand for a moment.

SHORTAGE ADMITTED—HOW THE VICTORY WAS WON

In the United States Tobacco Journal's Louisville report of the "Big Deal," we find the following: "That the holding up of these enormous quantities of tobacco in the pools, and the reduced acreage this year, has caused a shortage in the supply of all tobacco manufacturers, is admitted!"

That such a course would accomplish that result, UP-TO-DATE FARMING said a year ago, two years ago, just as emphatically as it can say it now. It was not a prophecy. It was simply reasoning from cause to effect—an inevitable effect produced by an irresistable cause. And it will apply to every crop of general or specific demand in the United States. The farmers are masters of their business, if they will be.

PERSONAL TO SUBSCRIBERS

If a Square Below is Marked Please Read This Very Carefully

DEAR SUBSCRIBER:

We sincerely hope you have enjoyed reading this paper and that its teachings have benefitted you and will continue to do so. If you live on a farm or have farm interests, we don't see how it can be otherwise. Or if you live in town or city and may not be directly interested in farming, and have carefully read UP-TO-DATE FARMING, *you* must have been benefitted.

Agriculture is the greatest and most important business of this country. All other industries and institutions are so dependent upon it that every person, even if not engaged in farming, should study the problems of agriculture. It must be admitted that UP-TO-DATE FARMING has been, and is now, the great teacher of farmers and leader in thoughts and methods to better their condition. It has been and is the paper that is solving their serious problems.

These are the reasons why it has a large circulation in towns and cities as well as in the country. It is read by many of the foremost people of the nation.

We can, therefore, consistently appeal to you, whether you are farming or not, to renew your subscription now. We hope to have it promptly before your name is removed from our list. If you are a member of the F. S. of E. you should pay your dues promptly and thus renew the official paper.

The subscription price is 50 cents a year. Frequently we published Special clubbing offers and offers of premiums. Subscribers are at liberty to embrace them when renewing unless they are restricted to *new* subscribers. We solicit clubs of three months trial subscriptions, for 10 cents, at all times. These must be *new* subscribers.

☞ You will assist us very much if you will return the blank below with your order.

.....CUT OFF HERE.....

BURLEY TOBACCO ALL SOLD

(*Continued from page* 1)

gument has been that right must ultimately prevail—that in the markets of the world right is on the side of the producers, because their products are their own, and it is theirs to determine the price at which they can afford to surrender that ownership, and that organization and co-operation farmers can secure that right, not as an arbitrary advantage forced over any one else, but simply as an ascent to the business level occupied by other classes.

Our position has been proven correct and our arguments verified by the recent triumphs in Kentucky. To make the whole story plain we reprint below what appeared in UP-TO-DATE FARMING for December 1:

By far the greatest single sale of tobacco ever made in this country or the world was consummated at Louisville, Ky., on November 19. It was by the Burley Tobacco District to the American Tobacco Company and for about 75,000,000 pounds. The prices agreed upon, which are also the highest ever paid for a large bulk of tobacco, are 20½ cents per pound average for the 1906 crop and 17 cents average for the 1907 crop.

The amount of money involved in the transaction will be around $14,000,000. As the tobacco is ready for delivery and the tobacco company needs the goods, practically this amount of money will be put in circulation at once. This will boom every branch of business and prove a God-send to many poor families who have suffered many privations while waiting for the sale and holding to their principles of co-operation for mutual good.

People outside of the district can hardly realize the conditions that has prevailed there. How these same people twice tried to solve their problem of profitable price and independence from the tobacco trust through capital stock companies to buy and hold the tobacco and failed each time. Then they accepted the Equity plan, organized, pledged, pooled, co-operated and finally sold two crops at prices equal to what they had been getting for three or four without the Equity plan. Will any person demand a more absolute demonstration of the practicability and efficacy of the plan? And it was all done without a dollar of capital.

We have reported some of the great demonstrations in this district of twenty-two counties during the campaign of organization, pledging and pooling. But none of these equalled the popular demonstration when the great sale was announced. Everybody became wild with joy and enthusiasm. The high tension of suspense endured for many months let loose and old and young, men and women, joined in one great thanksgiving. Old men played pranks like boys and thousands marched in parades riding their tobacco sticks like boys as imaginary horses. Women sank on their knees on the roads and streets and prayed in their thankfulness for the deliverance that had come to them and for the comforts the money from the sale of the crops would bring them.

This deal, it will be observed, was with the American Tobacco Company, the so-called Tobacco Trust. But the finishing of the whole business, the crowning triumph, came a few days later, when the Independent Companies took, at the same price, the entire remainder of the crops, and took all the balance of the tobacco held by the growers. Speaking of this final transaction, Hon. H. B. Sherman, who was on the ground, writes under date of November 24:

About 30 minutes ago, 9 p. m., a contract was signed by the Burley Board and the Independent Manufacturers for all the remainder of the 1906 and 1907 crops of Burley tobacco. About 40 buyers are here, and they took it all and will divide it among themselves. The Independent buyers would have taken 40,000,000 pounds more if they could have got it. The whole amount sold will reach 100,000,000 pounds, and this was done under true Equity. The methods employed were not those of the side-tracked society that ran off after strange gods. There is a happy and jolly set of farmers here to-night, and as a representative of the reorganized society. I am getting the glad hand all around. The Burley Society does not own a pound of tobacco to-night, and everybody is saying, "This is the greatest victory ever gained in the United States or any other country."

H. B. SHERMAN.

From the Lexington, Kentucky. Herald, of November 25, we take the following unbiased newspaper report of the transaction:

The remainder of the Burley tobacco pooled in the hands of the Burley Tobacco Society was sold to the independent manufacturers today for the same prices as were charged the American Tobacco Company for what it purchased from the society at the Louisville conference last Thursday—17 cents per pound for the 1907 crop and an average of 20½ cents for the crop of 1906.

The buyers will arrange the division of their purchase among themselves, the Burley Society having nothing to do with that feature of the deal.

The tobacco sold today amounts to between 20,000,000 and 25,000,000 pounds and is of the same quality, grade for grade, as that disposed of to the so-called trust.

The following manufacturers who, it was alleged by the independents, were subsidiaries of the trust, were barred by the Executive Committee of the Burley Society and their bids were not considered:

The R. J. Reynolds Tobacco Company, Winston-Salem, N. C.; R. A. Patterson Tobacco Company, Richmond, Va., and the Nall-Williams Company, of Louisville.

The independent manufacturers and brokers held a conference at the Brown-Proctonie Hotel this afternoon, beginning at 1:30 o'clock, and at 2 o'clock, the hour set for the bids to be opened, sent representatives to the Burley Society, asking that more time be given them to formulate a plan they had under way to take up the whole 25 per cent of the pool not sold to the American last Thursday.

They stated they would take the entire twenty thousand hogsheads, it was thought, and asked until 4 o'clock. President LeBus replied that he already had more than enough orders to take up every pound of the tobacco, but that he would give the independents until 4 o'clock to file their orders.

The independents met again this afternoon and formed a temporiary organization for the purpose of buying the tobacco and H. D. Miller, of the Frischman Tobacco Company, of Philadelphia, was elected chairman of the organization. At 4 o'clock this afternoon their proposition was offered to the Executive Committee of the growers.

The committee went into executive session to consider the matter and except for a brief adjournment for supper, remained in session until 9:30 o'clock tonight when President LeBus came from the session room and handed the contract for the sale of the remainder of the Burley Society's holdings to Mr. Miller, closing the deal and disposing of the entire holdings of the society.

The tobacco is sold to the following independent manufacturers:

The Blue Grass Tobacco Company, Lexington, Ky.; The White Plume Tobacco Company, Lexington, Ky.; Globe Tobacco Company, Cincinnati, O.; the E. O. Eshelby Company, Covington, Ky.; People's Tobacco Company, New Orleans; Brown Tobacco Company, Rochester, N. Y.; Lovell & Buffington Company, Covington, Ky.; Flischman Tobacco Company, Philadelphia; U. S. Tobacco Company, Richmond, Va.; Pennsylvania Tobacco Company, Wilkesbarre, Pa.; Larus Bros. Company, Richmond, Va.; Weisert Tobacco Company, St. Louis, Mo.; Strader Brothers, Louisville, Ky.; Axton & Fisher, Louisville, Ky.; Clark & Scott, Milwaukee; J. L. Walker, Covington, Ky.; Smith Brothers, Scranton, Pa.; Whalen Company, Rochester, N. Y.; Boone Tobacco Company, Covington, Ky.

It was given out that all the independent manufacturers in the United States would be provided for and that each could obtain his share of the purchase by application to the independent Tobacco Manufacturer's Association of America.

President LeBus, after the sale was concluded, expressed his pleasure at the end of the contest and said that he had enjoyed the fight almost as much as the victory which finally crowned the efforts of the growers.

Mr. LeBus is being congratulated on all sides on the result of the sale, which means the bringing into Kentucky of between $3,000,000 and $3,500,000 in addition to the $12,000,000 which will be realized when the American Tobacco Company settles for its Louisville purchases.

Secretary Gus A. Brooks, of the Burley Society, said tonight that the growers were happy over the final settlement of their troubles and that the independent manufacturers were now placed in a much stronger position as an organization, which would mean much livelier competition for the future in the purchase of tobacco crops and that business in the future would not be so one-sided as it had been, with only one large purchaser for the grower's goods and the purchaser fixing the price which he would pay for the tobacco.

For more than one reason this is an unusual triumph in such contests. It not only won the price fixed by the growers but it protected and preserved the independent companies, and kept the Society's deal on the strict lines of Equity—fairness to all. The Trust no doubt would have excluded the Independent manufacturers and kept all the raw material out of their hands, and the Independent companies, for the same reason, would have preferred that the Trust be not allowed to have any of the stock. This was manifest in the exclusion of certain firms that were thought to be allied with the Trust. But the Society, adhering to the principles of Equity, stood for all and supplied all on precisely equal terms. The firms which were excluded by the Independents were not excluded from the deal, because they could look to their great ally, the Trust, for their supply. Thus was monopoly actually broken by the Society, and users as well as growers were benefited.

A word of explanation may not be out of place concerning the difference in price paid for the crops of the different years. We presume it is enough to say that the crop of 1906 graded higher than that of 1907, and that the former crop had been held longer than the latter. When farmers are compelled to hold their crops for equitable prices, it is but fair that they be remunerated therefor. It is well to say also, for the benefit of the general reader, that Burley tobacco is a much higher priced product than the ordinary tobacco; hence the price paid for these crops is not an index to what would be an equitable price for dark tobacco.

These results are a signal vindication of the Society of Equity and they are stronger arguments than any we could adduce aside from them. The same influence, the same power, the same justice, right and equity, extends its hands to every crop grown by farmers, and the same triumph awaits those who avail themselves of the same opportunity. The Farmers Society of Equity, freed from entangling alliances and visionary schemes foreign to our true purposes, stands today better and stronger than the Society ever stood before.

THE RESPONSIBILITY OF THE PRESS

If any actual lawlessness manifested itself in the great struggle between the tobacco growers and the purchasers of their product, the United States Tobacco Journal, published in New York, and other trust publications cannot escape their share of the responsibility therefor. All during the fight their emisaries were busy torturing rumors into facts, manufacturing outrages, if not actually instigating them, and employing every possible means to foment strife. Now that the fight is over and they, themselves, have to confess that the growers have won a most remarkable victory, the editors of these journals, like Bunyan's Giant, sit at the mouths of their caves biting their finger nails and making faces at the victors. The United States Tobacco Journal, in the same issue in which it gave the details of the victory, said in an editorial:

The sale of pooled tobacco to the American Tobacco Co., the telegraphic news of which was conveyed to our readers in our issue of last week is likely to be interpreted as a victory for the Kentucky Tobacco Pooling Trust. If so, it would signify that violence and lawlessness are the proper means to bring big corporations to terms. That the Pooling Trust employed the most reckless and criminal methods to establish its terrorism, both over the tobacco growers and against the A. T. Co., is of undeniable record. That it was neither checked nor suppressed by either State or Federal authorities will remain an everlasting disgrace to American Government as well as American civilization. And in gaining the goal for which it started out it has set the worst possible example for making defiance of law and commission of crimes successful vehicles for upsetting both the economic law of demand and supply and the ordinary regulation of justice.

This deal was made with the Burley growers for the Burley tobacco. If the editor of the United States Tobacco Journal is sufficiently well informed to intelligently promulgate the doctrine of monopoly and serve the interests of greed, he knows that the disturbances he has done so much to distort and magnify, began in the dark tobacco area, and that the Society of Equity, though accused, has never countenanced, encouraged or tolerated any form of lawlessness; that on the very first outbreak, or report of an outbreak, Mr. J. A. Everitt, national president of the organization, offered a large reward for the apprehension and conviction of the law breakers. He felt sure such conviction would never fall on a member of the Society, and it never did.

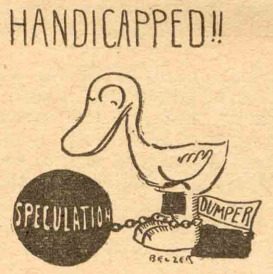
The Tobacco Journal admits that these much heralded outrages have not been brought to account in the courts, and to declare, as the journal does, that such lawlessness "was neither checked nor suppressed by either State or Federal authorities," is to admit that there was no such lawlessness, or it is to defy State and national authority, or to commit treason against the State and Federal governments through their officers and courts. Such articles as the above compel us to minimize the so-called night-rider outrages, especially so far as they have any connection with the struggle between the farmers and the tobacco trust.

We are quite willing that these monopoly papers, pensioners on the bounty of the trusts, may be placed side by side with UP-TO-DATE FARMING in a study of the course of each during this contest. We have urged firmness, but have insisted upon fairness and moderation. We have advocated union and co-operation, but we have plead for strict observance of law. We have advised the sacrifice of self for the common good, but we have held out no hope of victory, except on the true principles of equity.

And now that victory has come, we can extend our hand to both parties to the contest, and plead for equity, fairness and good will in all their future dealings. Such papers as the one from which we quote can accept the result only as it is forced upon them, and then, like whipped beasts, retire to their lairs with a snarl.

TWO COTTON CONVENTIONS

On November 10-11, at the call of Harvie Jordan, president of the Southern Cotton Association, a large number of business and professional men and farmers met at Memphis, Tenn., "to discuss the cotton situation, and, if possible, to take some steps to advance the price of the southern staple," as the report states.



Also the same week another convention was held at New Orleans by the Farmers Union and the New Orleans progressive Union (a business men's organization) for the same objects.

Commenting on the two conventions, the National Co-operator says, editorially:

The cotton conventions have passed into history and the question naturally arises, what has been accomplished?

Neither convention carried to maturity any definite plan for holding the cotton crop for satisfactory prices, because of the many difficulties in the way of taking care of that part of it which is under mortgage for the supplies on which it was made. But both did much to overcome these difficulties by bringing forcibly before the business world

the fact that when this fraction of the cotton is forced upon the market in advance of the demand for it, the price on the entire crop is depressed and the South loses millions of dollars. And not only did they bring these conditions clearly before the business world, but representative bankers and business men expressed a willingness to co-operate along safe and sound methods of improving them.

In the matter of marketing that part of the crop not under the necessity of immediate sale, the work of both conventions is calculated to have a very beneficial effect. The support of the holding and gradual marketing movement by leading financiers and large planters should be a powerful stimulus to those who have hesitated as to what they should do, and where one bale has been held back before, two should be held since these conventions.

It is too early to say what may be expected from the great warehouse scheme of the New Orleans convention, because the committee in whose charge it was placed has not given a definite outline of the plan. Some such arrangements at New Orleans as that made at Galveston by the Farmers' Union of Texas would materially help, and it seems quite probable that this much will be accomplished. As to the organization of a great cotton holding company, that is another question. We do not believe that the time will ever come when it can be made successful. Our opinion is that the remedy does not lie in that direction.

The one damaging result, in our opinion, of both conventions was the disposition to compromise with the cotton exchanges. At Memphis, gambling in cotton futures on the exchange was boldly defended and the claim was made that anti-bucket shop legislation in the Southern states had helped to depress prices to the present low level. Of course, bucket shops were condemned, altho the speakers did not show why gambling on exchanges is any more beneficial to the cotton growers than on bucket shops, but the spurious claim was advanced that buyers of futures on the exchanges supports the spot market.

At New Orleans no defender of future gambling raised his voice on the floor of the convention, but in some way press reports went out to the effect that a strong sentiment had developed, or was developing, in the union in favor of amending our anti-bucket shop legislation so as to permit gambling on "legitimate exchanges," whatever they are. This ought not to have been, because there is no such change of sentiment in the union and the spreading of such reports will strengthen the speculators and gamblers in their war upon these laws, which will be renewed before the next legislatures.

As a whole we believe the New Orleans convention has greatly strengthened the holding and gradual marketing movement; has strengthened confidence in the final outcome for better prices, and we confidently expect to see more cotton held for better prices and a gradual advance in the market.

It is unfortunate for the cotton growers that, notwithstanding the two organizaions under which the two conventions were held, and which have been in existence for several years have not yet, quoting from the editorial, "any definite plan for holding the cotton crop for profitable prices." As holding part of the crop is necessary to have controlled marketing to compel profitable prices it is plain enough that relief cannot come from either of the southern organizations until they have a definite plan and a plan that is practical. And we don't see why this should be such a serious problem. A certain statesman once said, regarding the financial policy of the country, "the way to resume is to resume." It might be said also of cotton, the way to hold is to hold.

Of course there is very much more necessary than simply to send out the word to hold. The cotton growers might well study the example afforded by the tobacco growers. The former are not in worse financial condition than the latter were four years ago, and cotton is not as difficult to store, handle and market. Therefore we may conclude there is a remedy, a definite plan of action if they would only discover it and follow it.

But we wonder if there are not influences in both organizations calculated to lead the farmers away from the direct road and keep them confused? False leaders we might say. The mention of a great cotton holding company would seem to confirm our suspicion, and "the disposition to compromise with the cotton exchanges is another suspicious feature. The cotton exchange gamblers know, and farmers' leaders ought to know, that when a definite price is set on cotton and when the cotton is held for this price and sold for it there will be no gambling and no occupation for the cotton exchanges. And we will say in conclusion, until farmers conclude that they have got to set the price and sell for the price, they may about as well give up the struggle. Therefore, how can the farmers society and the gambling exchanges and boards of trade co-operate?

THE WORLD'S SUPPLY OF COAL

Every year coal becomes more and more of a necessity, not only in this country, but throughout the world. As the wood supply becomes exhausted, even the rural districts are being driven to the use of coal both for heating and cooking purposes. All this makes it interesting to know where the coal comes from, and in this, as in so many other things, the United States leads. The Geological Survey, not long since, published a report, which is to be a part of the "Mineral Resources of the United States," from which we take the following table of the world's coal production. The figures are in tons of 2,000 pounds each, and show that the United States furnishes nearly 40 per cent of the world's supply:

TABLE OF COAL PRODUCTION

United States (1907)	480,363,424
Great Brittain, (1907)	299,970,677
Germany (1907)	266,773,605
Austria-Hungary (1907)	43,955,315
France (1907)	40,708,215
Belgium, (1907)	26,261,745
Russia and Finland (1906)	23,857,961
Japan (1907)	15,362,467
India (1906)	10,957,240
Canada (1907)	10,510,961
New South Wales (1906)	8,541,525
Spain, (1906)	3,620,588
Transvaal (1907)	3,261,533
New Zealand (1906)	1,937,080
Natal (1905)	1,264,995
Mexico, (1906)	846,416
Queensland (1907)	765,265
Holland, (1906)	587,283
Italy (1906)	521,711
Sweden (1906)	327,361
Victoria, (1906)	179,907
Cape Colony (1906)	142,877
Tasmania (1907)	65,958
Other countries	8,400,000
Total	1,209,184,109

Suppose—we suppose it is no harm to suppose things. Suppose this vast coal output of the United States could be gathered into one control, as completely as natural oil is now controlled by the Standard company? Then supose the transportation systems of the country were also merged into one management or control, or had a working agreement, amounting to about the same thing. Then suppose the power which controlled the trapsportation and the power which controlled the coal output were one and the same. What further supposition is possible?

Oh, yes, we know about government and law. We know tne people have the ballot and rule. We know they elect men to office on certain great issues, but we don't know the real forces behind it all that brought out the candidates; and we don't know of any great monopoly that has been seriously interfered with by government or law. We know, too, that control of the coal output, modeled after the control of the oil output by the Standard Oil company, but to go further than Standard Oil and include transportation, has been suggested in high circles and is under consideration. We do not know that such a thing will ever be done, or even at tempted; but we know that concentrated wealth could do it, and that in a government dominated by great special interests, if there were such a government, and that seemed to be afraid to hold to account powers apparently greater than itself, if, we repeat, there were such a government, the temptation to do all this, backed as it would be by unlimited greed, would be almost irresistable. Then would the warmth and comforts of the masses of the people be in the grasp of greed as is now the simple lights used to drive the darkness out of their homes?

LOOKING TO GOOD ROADS IN INDIANA

Some broad-minded business men of Indianapolis are seeking to establish a Bureau for Good Roads in Indiana. Its object is to start a campaign of agitation and education which will lead to more effective road working and to better roads in the State.

In a circular recently sent out we find the following:

> Under the present system millions of dollars have been expended upon public roads in Indiana. A large part of these millions has been thrown away because the system is inherently bad. No matter how good or how bad, our roads are they should be very, very much better.

That is eminently true in all the States, especially the interior ones. We imagine there is more labor thrown away in road work than in any other public service. Some men of ordinary common sense do not seem to know the first principles of flowing water. We have actually seen culverts built up the hillside several feet above the point where the water would naturally seek an outlet. In other cases where ditches have been made beside the road with a grader, we have seen the machine turned out of the ditch into the road without lifting the blade, thus carrying the water directly into the road instead of from it. This merely illustrates how carelessly or ignorantly road work is done in the country. The circular referred to also has the following that is well worth consideration:

> The farmers of Indiana have vital nterest in better roads. They are not realizing their own desires for ideal highways. The cities are making rapid strides in building good and permanent streets. The country and city are alike interested in good streets and good roads. Their interests are wholly mutual. Free rural delivery, the automobile, farm traffic and comfort, as well as fair economy demand that roads should be more permanently constructed, more practically repaired and more economically maintained. This can not be done under the present system.
>
> Road building material has been wasted with a profligacy that is appalling. Thousands and thousands of yards of material are dumped upon the roads, which, because of bad drainage, bad grading and subsequent neglect, are of but little practical utility. This waste should be stopped.

MISTAKEN IDEAS OF FARM PROFITS

The exaggerated figures given out by the Department of Agriculture and the high prices consumers in the cities are compelled to pay for articles of food, give a mistaken idea of the profits received by farmers. These people think the prices they pay their baker and grocer and at their meat market, verify the Deparment's figures, and, therefore, the farmers must be the richest people on earth. But the prices paid in the cities are no index to the prices received by the farmers. A Chicago contemporary gives the following table of prices paid to the farmers within a radius of 200 miles from Chicago and the prices charged at the same time for the same articles by the retail dealers in Chicago:

	Farm prices	*City retail prices*
Milk, per quart	.03½	.07
Butter, per lb	.24	.31
Comb Honey, per lb	.15	.22
Extracted Honey, per lb	.10	.25
Potatoes, per bushel	.55	1.00
Apples, per bushel	.80	1.60
Tomatoes, per bushel	.75	3.00
Eggs, per dozen	.18	.26
Stewing Chickens, per lb	.11	.18
Spring Chickens, per lb	.16	.25
Hogs on Hoof, per lb	.06	...
Pork Loins, per lb	...	.18
Little Pig Sausages, per lb	...	.25

These, very truly says our Chicago neighbor, are but a few examples of the differences between what the producers receive on the farms and what the city consumers are required to pay for identically the same articles and of the very same quality. These differences amount, in some instances, to more than 100 per cent. So far as the equity of this proposition is concerned, it matters little where this excess of profits goes. It is bound to go to some one who has not earned it. For instance, it cannot cost approximately as much to get a bushel of potatoes to the city and sell it to the consumers as it does to furnish the land, the seed and the team, to cultivate and harvest and deliver to the local market. Yet the consumer must pay for it almost twice as much as the farmers receive. For apples the consumer pays twice as much; for tomatoes four times as much; for milk twice as much, and so on.

Hence it is readily seen that the farmer is not the one that puts the extortionate price upon the consumers, and he is not the one that gets the profits wrapped up in those high prices. Producers and consumers ought to know each other better. Consumers ought to get their supplies much cheaper than they do, and yet farmers ought receive more than is paid them. Equity proposes to bring about just such a readjustment.

HOPEFULLY LAUNCHED

What "A Friend of the Farmers" Has to Say

Editor Up-to-Date Farming:

I have watched with interest the Equity movement to put farm marketing on a better business basis. At times I have ben discouraged. But it is nothing new that dissentions should arise. Human beings are ambitious, and when men see a great thing going to be accomplished, there is a little demon somewhere within that tells them they ought to do it, and whispers that they can certainly follow the road after it has been blazed out, and be in "at the killing," as the old fox-hunters used to say, and get the glory and the pie.

Hence every great movement must necessarily pass through its initial storm, but history stands out unmistakable that when the real principle emerges from the clash it comes purified and strengthened. You may readily understand, then, that I was an interested spectator at the recent Equity Mass Meeting held in your city. I was surprised at the earnestness of the men who composed that meeting, at the great distances they came, at the number of States represented, and at the unanimity of sentiment as to what should be done.

It is unreasonable to expect a body of intelligent people, assembled in a Mass convention, to have no divergent views, but the spirit in them which prompted fair discussion, and the open-mindedness which enabled all to accept the deliberate judgment of the majority was admirable, and augurs well for the future work of the society. The absolute oneness of mind on the vital points was the most remarkable I ever witnessed in any deliberative body.

I think the convention did well, and as a lover of justice and fairness to all classes, I am exceedingly hopeful. The farmers are now about the only class that has no organized protection, and for lack of it, they have naturally been crowded pretty close by the organized classes around them. And that is why I am anxious to see them organized, not absurdly but on an equitable basis, that the equilibrium of rights and opportunities may be restored, that human effort may again move on in smooth channels.

I congratulate the people, and especially you, Mr. Everitt, on what was accomplished.

A Friend of Farm Organization.

LEARN to be a Carpenter

MAKE YOUR OWN FURNITURE

BIG DEMAND for trained Carpenters the year around. We train you by mail at your home, by illustrated lessons and plans, in one winter's leisure hours to earn $80 to $100 a month. Experience unnecessary. Big factories anxious to get our trained graduates.

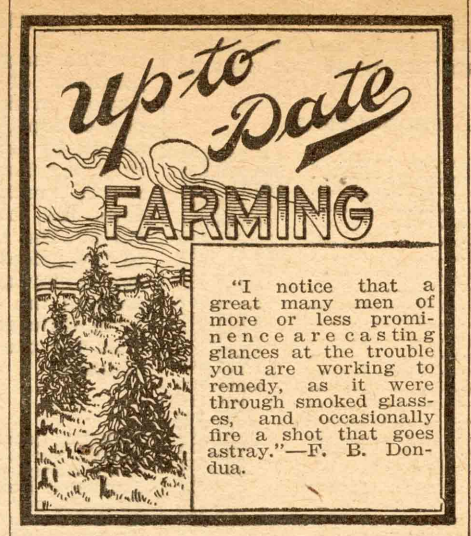
$5 SHAVING SET $1.00

To introduce our marvelous vegetable shaving cream, we will send prepaid the following five dollar shaving outfit; Choice of either double hollow ground or safety razor, strop, hone, brush and 25 cent tube of of our new vegetable shaving cream. Mail $1 or send for reasons why we make this unusual offer. VEGETABLE SHAVING CREAM CO., 3403 Virginia Av. Cleveland, O.



No more forcible demonstration of the value of range control now existing with the National Forests of the United States can be found than that afforded by the meeting of the advisory board of the Carbon County Wool Growers Association, which was held at Rawlins, Wyo., October 29, to arrange for the grazing of sheep upon the Hayden National Forest during the season of 1909. The Hayden Forest is situated in southern Wyoming, a part of it extending into Colorado, and has been one of the important summer ranges of the West, its open parks and ridges among the timber being of particular value for the grazing of livestock.

In past years, before the land in the Hayden Forest was placed under administration, numerous conflicts took place between the opposing livestock interests. The sheepmen found that these summer ranges were essential to the welfare of their business, and brought in their sheep in constantly increasing numbers. The cattlemen who had previously occupied the country, viewed these advances of the sheep with disfavor and alarm, and range wars of the most serious character, not only threatened, but occurred. The rivalry among the sheep-owners themselves was also keen, there were long hard races for the choicest ranges, resulting in heavy losses of sheep and in still further clashes.

Under the administration of the forest service conditions have been changed for the better. There are no encounters between the two interests, as both sheep and cattle owners know that they will be protected in the use of the range in which they have an equity, and there is no further necessity for a sheep owner to go on to his summer range before it is ready for use, against his best judgment, in order to hold it against some other sheep man.

In 1906, the wool growers of Carbon County, Wyoming, who were users of the Hayden National Forest, secured official recognition from the Forest Service in accordance with the regulations, and in the spring of 1907 the advisory board of their association, working in co-operation wth the Supervisor of the National Forest and other Forest Service officals, settled some very important questions of range division, allowances, and grazing periods during the year.

This year, the services of the board were again requested by the supervisor. It was pointed out that the ranges within the forest were carrying a greater number of stock than they should, with due regard to all interests represented, that a reduction in the number allowed was necessary, and that an equitable method of reduction should be established. The meeting of the board at Rawlins was the result. There the various matters were taken up and discussed, the amount of the reduction was decided upon, a satisfactory sliding scale to be followed in making the reduction in each individual case was established, the grazing periods were changed to conform to the needs of the stock owners while giving attention to the proper protection of the forest interests, changes in sheep driveways or trails were taken up and approved, and the short meeting resulted in a harmonious agreement whereby the stock owners received all consideration requested by them, while the forest interests were fully protected.

Under the old regime such an agreement would have been impossible, for each stockman would have been prompted by his desire for individual gain, rather than by a wish to promote the general welfare of his industry, and his range. The number of stock allowed on the Hayden forest for the season of 1909 is 6,000 head of cattle and horses and 240,000 head of sheep.

THE march of progress compels revolution—the abandoning of the old, the inauguration of the new. Those who bring this about are called Revolutionists, dangerous people, and they are indeed undesirable citizens to those who are in power. Revolution means death to the old, but it also means birth to a better life.

Revolution is fraught with great danger, much sorrow and suffering. The leader is a man with a prophetic vision, who knows that in order to bring harmony radical measures are necessary.—Thomas Jefferson.

Surely there are at least four of your neighbors who would give you their subscription to UP-TO-DATE FARMING at 25 cents each. Send us a dollar bill, and four names. We'll send them the paper for a year.

WHAT THE DISC DRILL HAS DONE FOR THE FARMER

It may not be known to the users of grain drills in general, but nevertheless it is true, that the disc grain drill has practically revolutionized the method of sowing small grains. Thousands upon thousands of acres, where it would be absolutely impossible to put in grain by the employment of old style grain drills, have been transformed into golden-hued grain fields by the invention of the disc drill. Not only is this true, but the disc drill has lessened the labor for both man and beast. It has also enabled the farmer to reseed his worn out meadows and run down pastures. The farmer nowadays who has a Kentucky Disc Drill need not worry if his fields are trashy and the ground covered with pea vines, crab grass and trash. He no longer worries if his fields are muddy, or his ground is hard and difficult to sow. He knows full well that his Kentucky Drill will go through it all, put the seed in the ground and cover it well. The Kentucky Drill is made in a wide range of styles and sizes—plain and fertilizer—by The American Seeding-Machine Co., Incorporated, Richmond, Ind., whose ironclad warranty protects every purchaser. You can get in the Kentucky line a drill that will do your work right, no matter what state or territory you live in. Send to the manufacturer for the Kentucky Drill catalogue, read about Kentucky drills and then call on your retail implement dealer and insist on seeing the Kentucky drill before buying any other. Should you want any special information, ask for it, and the manufacturers will be pleased to send it to you.

SEED CORN

Diamond Joe's Big White. Earliest maturing Big Eared Corn in the world. Made 153 bushels per acre. It costs but 25 cents per acre for seed. CLARK'S CUTAWAY TOOLS

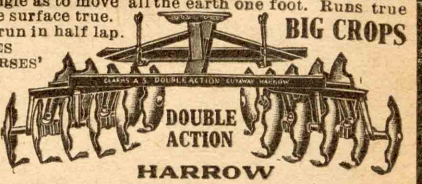
CLARK'S DOUBLE ACTION "CUTAWAY" HARROW

WITH EXTENSION HEAD is needed on every farm. It will INCREASE your crops 25 to 50 per cent. This machine will cut from 28 to 30 acres, or will double-cut 15 acres in a day. It is drawn by two medium horses. It will move 15,000 tons of earth one foot in a day, and can be set to move the earth but little, or at so great an angle as to move all the earth one foot. Runs true in line of draft and keeps the surface true.

All disk harrows have to run in half lap.

THE JOINTED POLE TAKES ALL THE WEIGHT OFF THE HORSES' NECKS, and keeps their heels away from the disks.

BIG CROPS



We make 120 sizes and styles of Disk Harrows. Every machine fully warranted. Entire satisfaction guaranteed. Send today for FREE Booklet with full particulars

up-to-Date LIVE STOCK AND DAIRY

The see-saw movements of the prices of live stock will end when the demand is known and the supply directed to equal it and no more be sent to market.

BETTER PRICES FOR CATTLE

Col. Pryor, president of the Cattle Raisers' Association of Texas, is of the opinion that beef cattle must bring better prices, and he gives as his reason for that belief that cheap range land is a thing of the past, and the big ranches are cut up into small ranches or farms. After the farms have been improved the farmers will raise more cattle in the same territory, perhaps, but they will be more expensive to raise, and must bring higher prices than the range cattle. On a big ranch, a section of land, says Col. Pryor, will take care of 30 or 40 head of cattle. When that land is turned into a farm it will care for at least twice as many, besides growing some other farm products, but the farmer cannot afford to sell his steer for the old price of grass fed cattle, and prices must be so he can sell at a profit.

FOOT AND MOUTH DISEASE IN CATTLE

The Department of Agriculture is alarmed over what threatens to become an epidemic of foot and mouth disease in cattle. It was hoped that the disease might be kept east of the Alleghenies, but it is said to have appeared in portions of Michigan, and it is now officially known to exist in New York, Pennsylvania and Maryland, besides Michigan. It spreads rapidly and is very difficult to keep within limits. Once a herd is attacked, it goes through the entire herd, large or small. It is seldom fatal, but it destroys the value of the cattle, and makes the milk of the dairy herds absolutely unfit to use.

Though not generally fatal, say the authorities, its ravages financially are more terrible than any other of the known pestilences among animals, and it spreads more rapidly and insidiously than any other disease.

If the disease spreads westward, it is said, the losses to cattlemen will run into millions. Extra precautions are being taken to prevent its spread, the transportation companies being careful to disinfect all their stock cars.

There was an outbreak of this disease in the New England States in 1902-03, to stamp out which a half million dollars were expended. The present epidemic seems to have started in Buffalo, N. Y., less than two months ago, and it is now known to exist over a larger territory than did that of 1902-03. Secretary Wilson, it is said, proposes to use half a million in fighting this outbreak and risk Congress to approve his action. A million dollars may be asked for.

This disease is said to have been introduced into this coutry from Belgium in 1869, and seems to recur more and more frequently, and each time spreads over a larger area. It attacks sheep as well as cattle, and may be transmitted to swine, and even to the human family, hence the danger of using infected milk. It is a specific poison of obscure origin, and remains in the system from one to four days before the symptoms become manifest. Then an increase in the temperature of the body is followed by an eruption of small blisters, of the size of a dime, on the tongue, the roof of the mouth, inside the lips, and occasionally on the udder. Such blisters also appear in the clefts of the hoofs and along the upper margin of the coronet.

The disease is reported now as prevalent in Belgium, France, Italy and other European countries, which would seem to indicate that world conditions are favorable to the spread of the disease, and makes its present stubborn appearance in this country all the more alarming. We will not presume to suggest a remedy, for the Department of Agriculture will no doubt soon make an official recommendation of a course of treatment. Meanwhile we urge our readers to take every precaution against infection. The department now is said to have at work in infected districts a force of 125 experienced men. These are divided up into forces. One force kills the diseased cattle and buries them in quick lime, another fumigates the entire premises where the disease was found, another investigates the neighborhood to be sure there is no other point of attack, and so on. The government pays for the cattle thus killed. The disease, it is thought, may be carried in the clothing, or by pigeons or sparrows, or by flies when the weather is warm enough for flies to be abroad.

SHELTERING FARM STOCK

There is a great outcry now about a scarcity of feed, and feedstuffs of all kinds are high. As a consequence much stock is being rushed into market prematurely and at a sacrifice. This scarcity of feed calls for shelter for the stock. It is well known that sheltered stock will winter well on less feed than those exposed to winter weather. If that is true, the cheapest feed is shelter for the stock, saying nothing of the humanity of it.

THE TRUTH ABOUT STOCK TONICS

A stock tonic is not a medicine, a cure, a remedy, but an aid to the digestive and assimilative process of nutrition. It is thus a preventative of disease. A rightly compounded stock tonic simply supplies the animal artificially with certain necessary elements for the perfect regulation of the process of nutrition, just as does the supplying of salt in the same way.

Note that we say a rightly compounded tonic. For either an excess or a lack of certain ingredients depreciates the value of a tonic, just as an incorrectly balanced feed lowers its nutritive value.

There is no secret about the composition of the well-known stock tonics. Indeed most states have laws requiring that the ingredients of the contents be plainly printed on every package.

The exact proportion of certain elements differ in different brands, but the approximate proportions are known to most stockmen, or can be obtained from the national department of agriculture or from the different state experiment stations.

The question then arises, why cannot a farmer make his own tonics? He can, just as he can make his own clothing, if he can spend the time, get the correct proportions and accomplish the most effective combination. For it must be remembered that the right amount of each material simply put together in some sort of a way—does not make a suit of clothes—no more does it make an effective stock tonic. Not only must the proportions be correct, but the condition of each ingredient must be right and its consistency such that it will properly blend with all others. The makers of stock tonics have the proportions and the proper consistency of the elements "down fine" and the thrifty stockman knows that he is not only buying the right material in a reputable stock tonic, but he is also buying the skill and experience it takes to compound the tonic correctly.

TIME TO BUY CREAM SEPARATORS NOW

There never was a better time to buy the best of Cream Separators than right now.

The advantages derived from the use of the good Cream Separator are greater in the fall and winter than at any other time,—when the cows are old in lactation, the loss of butter-fat is otherwise greatest, and butter prices are highest.

Likewise are the advantages of the superior DE LAVAL separators greatest over imitating separators when the milk is hard to separate and the weather cold and variable.

In every case a DE LAVAL separator, of suitable size, will surely at least save its cost between now and July 1st next, and go on returning 100% per year on the investment for twenty years to come.

The agricultural and particularly the dairying outlook was never brighter and more promising.

WHY NOT BUY NOW?

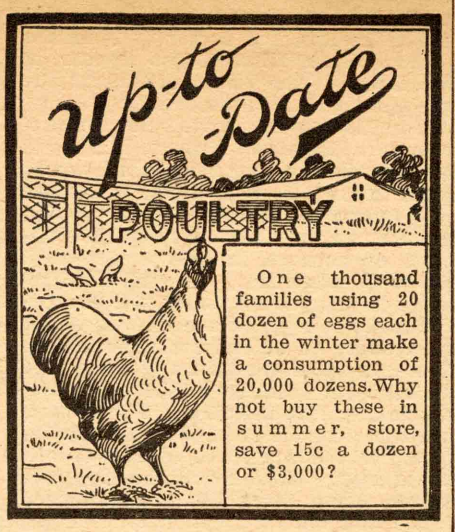
P. G. TOWNSEND MFG. CO.

629 E. 6th St., Hutchinson, Kan.



One thousand families using 20 dozen of eggs each in the winter make a consumption of 20,000 dozens. Why not buy these in summer, store, save 15c a dozen or $3,000?

RAISING PULLETS FOR BEST RESULTS

Except where roosters are raised for special breeding purposes, the growing pullet is the most interesting fowl in the poultry yard; and it has long been a disputed point whether it is best to force the pullets in their development by high feeding, or to retard them by scant feeding. Prof. James E. Rice, of Cornell University, has made a test of this very matter, and gives the following results as he reached them:

Forced pullets made a better profit than retarded pullets.

Forced pullets ate less food per hen at less cost per hen than retarded pullets.

Forced pullets produced more eggs of a larger size, at less cost per dozen than retarded pullets.

Forced pullets produced more eggs during early winter than retarded pullets.

Forced pullets have better hatching results of eggs than retarded pullets.

Forced pullets made a better percentage of gain in weight than retarded pullets.

Forced pullets showed less broodiness than retarded pullets.

Forced pullets had less mortality than retarded pullets.

Forced pullets showed better vigor than retarded pullets.

Forced pullets showed the first mature molt earlier than retarded pullets.

He found also that pullets fed on dry mash gave better results in gain of weight, production of eggs, hatching power of eggs, days lost in moulting, mortality, health and profit per hen than those fed wet mash.

Early layers gained as rapidly in weight as those that began to lay later, but the ones that laid earliest did not always lay the most eggs during the winter.

THE DUST BOX

The winter poultry house without a good sized dust box lacks one of its most important accessories. The dust bath is necessary to the health and happiness of the fowls. Without it they cannot do their best, and in winter it must be provided by their keepers.

The dust box should be large enough and deep enough to provide a free and easy bath, if for two or three hens at a time all the better. A supply of dust should be gathered while it is yet dry, and stored in boxes or barrels, so that the dust in the dust box may be changed occasionally—perhaps it is better to say frequently.

A box of gravel or grit and crushed shell or ground bone is another important piece of poultry house furniture that will add to both health and eggs. An occasional feed of meat scraps, and of chopped or crushed roots or other vegetable substance, with clover, millet or pea hay to pick or scratch in, goes far toward completing the list.

LEVEL AND MOVABLE ROOSTS

The old idea of having the roosts in poultry houses on an inclined plane, rising one above the other like seats in an amphitheater, is clearly not the best arrangement. It is the nature of fowls to want to roost high. This is true of the heavier breeds as it is of the smaller ones. The Cochins and the Brahmas go as high as they can get by easy stages. They roost low because the distance from the lower to the higher perch is a material obstruction to them.

The objection to the inclined roosts is that the fowls all try to get on the higher perches. Crowding is the result, excessive warmth frequently, to be followed by colds and roup. If the perches are on a level there is no inducement to crowd; the birds will comfortably distribute themselves, an even temperature will prevail, and they will come from their roosts in the morning in much better condition.

Movable perches need only be tried to realize their advantages. There should be too sets, so that when one set is in use the other set can be "taking the weather," and a set should not be used more than two or three days in summer, and a week or so in winter. Such change of perches reduces the trouble from lice and mites to the minimum. And movable perches make it so much easier to clean the poultry house. Remove the perches, and the way is open; only the frame work is to work under and around, and only the frame work and walls are to treat for pests.

THE WINTER EGG

The hen that is kept busy to keep dry and warm has no time to make it. The hen that must pick around a barren lot or yard what food she gets, and is compelled to swallow lumps of ice for water, has nothing to make it of. The hen that is chased around the barn and never knows where she'll get her next grain of corn, nor where she'll find her next roosting place, is kept too busy thinking of other things to give any attention to making eggs.

The hen that has a comfortable home, a perch for a roost, a dry, dusty floor to amuse herself upon, plenty of good clean water to drink, enough of grain to keep her strong but not too fat, a mess of warm mixed feed every day or two, meat scraps to supply the place of the insects she got in summer, a little lime to make the shells and supply the need of the bones, some sharp grit to keep the mill in order—that's the hen that must be depended upon for the winter egg.

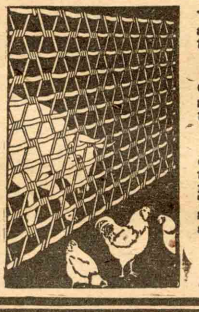
PROGRESSIVE POULTRY CULTURE

Farmers—most of them— neglect their poultry. It could be made a profitable adjunct to nearly every farm. Study the industry. Learn all about the different breeds, select one and go into the business to win. It is interesting work too. A book that should be read by everyone who keeps chickens for profit is Progressive Poultry Culture by Arthur A. Bingham. Published by The Torch Press, Cedar Rapids, Iowa. Price, $1.50.

WHY RENT

This is addressed to thousands of people who rent their farms. Do you know that farms can be bought for nearly what high priced eastern and northern land rents for per year? The land is often better and certainly the climate is if you go south. R. Duddles, of Spurlington, Ky., advertises in the Business Exchange a fine farm he will sell on favorable terms. Write him.

STRONGEST FENCE MADE



When you buy our **High Carbon Coiled Spring Fence** you buy strength, service and durability combined. Twenty years of experience—hard knocks, has taught us that the best fence is made from heavily galvanized **Coiled Spring Steel Wire**

CLOSELY WOVEN FROM TOP TO BOTTOM

Low Fares to the Cheap Lands

December 15 Jan. 5 and 19

Plan to go on one of these days—the trip will not cost you much. These special low-fare tickets over the Rock Island-Frisco-C. & E. I. Lines will allow you to go one way and return another, without extra cost. You will see more of the Southwest than you could in any other way, and can better decide where to locate.

Ask the ticket agent to sell you a ticket over the Rock Island-Frisco-C. & E. I. Lines, either through Chicago, St. Louis, Kansas City, St. Joseph, Memphis or Birmingham, according to your location.

If you will tell me where you want to go, I will tell you the cost of a ticket and send you a map-schedule.

I will also send you some interesting books about the Southwest. They will inform you of opportunities waiting for you there, and will open your eyes to new possibilities. Write for free copies today.

THE KIEFER PEAR

A few years ago Kiefer pear stock was the best seller that came from the nursery. The agent had only to show the large, beautifully formed pear and dwell upon the hardiness and blight proof quality of the tree to get orders fast and large. Just about that time the writer of this article had an attack of pear fever, and it was an easy task for the agent to land an order for trees enough to set a very respectable pear orchard.

And we were just about as well pleased when the stock came, nice, thrifty looking, tall slim trees, as we were when we gave the order. And they grew rapidly, made fine uniform trees, and before we expected it, were full of bloom. Then in a little while they were full of pears —nice, big pears, just like the ones the agent showed. By and by they were ripe, or were supposed to be, and eating time came. Ah, then is when we took the shivers, and sighed for the old Bartlett's of youthful memory.

But the trees still looked pretty, and were full of bloom next year. But what meant the black leaves and twigs that appeared toward the middle of the summer? Blight; as clearly defined and as fatal a case as we ever saw. The dream of Kiefer greatness was over.

But it is said now the Kiefer is coming into favor again. Treated as a winter pear it is claimed that it redeems itself, and when kept late develops fine flavor. This report comes from Michigan, but the agent must bring a pear to be tasted as well as to be seen when he comes for the next order.

ORCHARD PLANT LICE

The study of plant lice, aphides, is very interesting, as well as it is an important economic study. Almost all plants are preyed upon by lice, most plants having lice peculiar to themselves. They are small, soft insects, generally bare, though a few of them, the wooly aphis, are clothed with wool that seems much too long for the size of their bodies, and most of them have two small tubes projecting from the hinder part of their bodies from which exudes a honey like substance called honey dew. Whether these aphides or plant lice produce all the honey dew that sometimes appears on the leaves of certain trees in spring and from which bees gather a great deal of honey some seasons, is a question; but it has been traced to no other source.

It has been observed that wherever these aphides or lice are abundant in a tree ants are there in abundance also, and are very busy. Some have concluded from this fact that the ants live upon the lice, and are therefore useful as destroyers of them. But not so. The ants are there for the honey dew exuded by the lice, and are never seen to attack the lice themselves. Some have even asserted that the ants tickle the little tubes we have mentioned, apparently to increase the exudation. From this fact the lice are called the ants' cows.

But these plant lice have insect enemies, the most important of which are the "lady birds" or lady beetles. There are also a few flies that prey upon them.

These food of these insects is the sap of the plants they infest, which they obtain by inserting a beak thru the bark and sucking the sap. They never eat the leaves.

They are preserved thru the winter by a few eggs that that survive the inclemency of the weather by being protected in sheltered cracks in the bark of the body or branches of the trees, or in still more secure places on the roots beneath the surface. Tho not many are thus saved, they multiply very rapidly. A single female may give life to from 75 to 150 lice, and and as they mature from eight to ten days from hatching, they begin to multiply very early, and keep it up till late in the fall. The living lice all die as winter comes on, but eggs enough have been put carefully away to insure the ceasless round of production and destruction next season. The wooly aphis, however, which looks more like a lump of mold than an insect, is an exception, and lives thru the winter in the insect form.

This woolly aphis is about the worst orchard pest of this kind, and nursery stock should be carefully examined before it is set out. If the roots are puddled in mud or covered with any substance, it is almost certainly done to hide the aphis, and the purchaser is justified in rejecting the trees unless he can be convinced that the trees are not infested.

A great many remedies are recommended and employed more or less effectively. But we shall mention here only the Kerosene emulsion. Take half pound of soap, one gallon of water and two gallons of kerosene or coal oil. Dissolve the soap in one gallon of soft water. When well dissolved and boiling hot, remove from the fire, and add two gallons of kerosene, stirring all the time as brickly as possible. The water must be kept hot or the mixture will not properly emulsify. Sometimes it is necessary to reheat it after the oil has been added. In that case it must be carefully watched, as it may quickly boil over and take fire. The vessel should be some distance from the fire while the kerosene is being added, for the same reason. After heating continue to stir. When properly emulsified it should have the appearance of whipped cream. When finished add to 27 gallons of water, and it is ready for use—should be used at once as a spray.

We recommend the making of this emulsion on a fire out of doors, away from the buildings. There is absolutely no danger if any caution at all is observed, but the safe side is always safest.

Not the Best

"We've had a splendid time," said the guest starting home.

"I'm so glad," replied the host, "but what a pity it is that the storm kept our best people away!"

Cream separators have been sold for many years and there is not a community in the country where leading and up-to-date farmers do not use them. Still there are some who have not invested in one of these money making machines. If you keep three or more cows a separator will pay for itself. The liberal principle on which Sharples Separators are sold, "try before you buy," is winning friends all over the country, and making sales for this big company. We suggest that readers send for their catalog 136, which explains these points of merit. Address Sharples Separator Co., West Chester, Pa.

Free to Farmers

By special arrangement Ratekin's big 1909 seed catalog, with a sample of "Diamond Joe's Big White" seed corn that made 153 bushels per acre, will be mailed free to every reader of UP-TO-DATE FARMING who is interested in the crops they grow. This big book tells how to make the farm and garden pay. It's worth dollars to all who plant or sow. Write for it and mention UP-TO-DATE FARMING. The address is Ratekin's Seed House, Shenandoah, Ia.

THE CHRISTMAS TIDE

The Year's Glad, Merry Time

"Peace on Earth! Good Will to Men"

The child of civilized parents must be very young not to know of Christmas, and the civilized man or woman must be very old not to enjoy it. Since the angels sang for the shepherds in the fields of Bethlehem, Christianity has welcomed Christmas day, and made it a time of happy greetings, exchange of presents, and expressions of good will.

That is the poetry of Christmas, but in reality it is a day arbitrarily fixed by the Church to commemorate an event which did not occur at that time. The ancient church was great in the observance of holidays and feasts. In lieu of books and miscellaneous sources of amusement the church arranged festivals to bring the people together for sociability, recreation and relaxation. What day could be more fitting to celebrate than the birth day of Christ? And the church decreed that December 25 should be celebrated as that day, and it has ever since had a fixed place not only in the calendar, but in the hearts of young and old. It appeals to the young as the first of their merry days, and the time for gladness, presents and good words. To these the fingerboard of time points forward, and they are far down a road where naught is visible but sunshine and flowers, triumphs and achievement. To the aged on these days the fingerboard points backward, and the path it lights up is strewn with sorrows as well as joys, with thorns as well as victories. But there is a fascination in looking them over again.

But there is a great mystery in Christmas days—to the young they are so far apart; to the old there is so short a span between! Let us then, with the poet—

"Shake off the pressure of business,
Lay aside work for a season,
lay aside work for a season,
Christmas is now at your door,
Happy lips are proclaiming
Bright expectations in view;
Hopes the dear hearts have long cherished
Claims recognized from you.

"Cast to the winds every selfish,
Miserly feeling of gain;
Let the heart's noblest promptings
Just for one day hold the rein;
Make it the merriest Christmas,
Happiest, brightest of days;
Fill your own heart with the sunshine,
Till all shall feel warm in its rays.

"Many a bosom is throbbing,
Weary and sick at the core,
Held by successive misfortunes
Closely to poverty's door.
Open your eyes to the needy,
Open your purse to their aid,
Give them one day of glad sunshine—
Lift them up out of the shade.

"Shame on the hoarder of riches,
Giving to Christmas no share,
Shutting his stony heart coldly,
Deaf to humanity's prayer.
Happier the humblest boot-black,
Filled with the jolliest glee,
Sharing his two-penny purchase
With those who are poorer than he."

And Santa Claus! We must not forget that—

"Children Teething"

Mrs. WINSLOW'S SOOTHING SYRUP should always be used for children teething. It soothes the child, softens the gums and allays all pain, cures wind colic and is the best remedy for diarrhoea. Twenty-five cts.

"There's a jolly little fellow who comes riding into town
When the north wind blows his trumpet, and the snow is dancing down;
In a coat of fur and ermine, he is muffled to his chin,
And his face, whate'er the weather, always wears a pleasant grin.

"He's a friend of all the children, for he carries on his back
Gifts to make their bright eyes sparkle, safely stowed within his pack;
And they always hang their stockings by the fireplace, because
Christmas eve is sure to bring them presents from old Santa Claus."

Let the children rejoice. Cares of which they now know little, will soon be upon them, and they will have problems to solve that they do not find in their arithmetics. What matter if, as the glad day comes, they see only—

"Pies of lemon, apple, mince,
Jams and jellies, peaches, quince,
Purple grapes and apples red,
Cakes and nuts and gingerbread;
That's Christmas.

"Turk or goose! A great big fellow,
Fruits so ripe and rich and mellow,
Everything that's nice to eat,
More than I can now repeat;
It's Christmas.

"Lots and lots of jolly fun,
Games to play and races run,
All as happy as can be,
For this happiness, you see,
Makes Christmas.

"We must love the One who gave
All the good things that we have;
And for His sake observe the day,
Giving gifts, good people say,
Merry Christmas.

But in their joys the young folks must not forget that their parents have been busy providing the very pleasures that seem to have come so naturally. Many a mother has made sacrifices to bring joy to the hearts of her children, that, if fully known, would bring tears to the dryest eyes; and many a father's heart has been saddened because he could not do more. It is all for love, and love sanctifies the effort. The following quaint verses describe the situation in many a home:

"I must own that all this fussin's
Rather tryin' on the nerves;
For a week back I've been runnin'
To the cellar for preserves,
To the loft to bring the hams down,
To the barn for eggs; you see
All our young folks are a-comin'
Home to mother and to me."

We said Christmas pointed backward for the old, and there is a sad, sweet pleasure in living the old days over again. Let the poet tell it:

"We sat beside the old-time fire,,
And in its ruddy gleams,
We talked about the old time things,
And dreamed the old time dreams;
And wife was knittin' slowly,
While I was hummin' low,
And both of us were thinkin'
Of a Christmas long ago.

"We old folks—well, we ain't so gay
On Christmas now-a-days,
Although the Lord has led us along
On all our wanderin' ways;
But, sittin' by the old fireplace,
The bright flames seem to glow
And light a little face we loved,
Each Christmas long ago.

"A little face, the sweetest face
Of all the village girls,
Like spring's red roses blossomin'
Rimmed round with golden curls,
A face we've kissed, but that we've missed
For many a weary year;
How sweet this Christmas time would be
If that dear face was here!"

Christmas emphasizes the broken homes, and, while it is well to let tender sentiments soften the heart, we must not forget that the dominant spirit of Christmas is joy and gladness, the dominant sentiment good will to men. Then let the—

"Christmas bells chime out triumphant
Over land and over sea!
Send their happy tidings floating
On sweet waves of melody;
Softly tell the tender story,
O'er and o'er and o'er again,
'Glory in the highest, glory,
Peace on earth, good will to men.'

"To some doubting, weary spirit,
Bring a gentle, holy calm;
May the notes on hearts sore wounded,
Fall like consecrated balm.
To some life's storm troubled waters
Christmas chimes say 'Peace, be still!'
And our sleeping souls awaken
With a glad, exultant thrill.

"On your wings of music, sweet bells,
Bear our thoughts to Him above;
Teach our hearts to time their pulses
To the rapturous song of love.
Oh, ring out all strife and malice,
With the story of His birth;
Ring in Faith, and Hope, and Love,
An the reign of peace on earth."

And we wish Our Up-to-Date People a merry Christmas and a happy, successful New Year.

CHRISTMAS INFLUENCE

Christmas is generally considered a time of rejoicing and festivity, and so it is to most people. But to many it is a time of sad retrospect. If one is lonely, he is doubly so on Christmas, for that is the time when memories come thronging, thick and fast, of

DIAMONDS ON CREDIT

XMAS GIFTS

For Christmas Presents there is nothing more lasting and appropriate than a beautiful sparkling diamond or high grade watch. On the Loftis system the outlay of ready money won't be as great as if you paid cash for some cheaper articles. By giving credit and lowest prices we make $5 or $10 do the work that $50 does in a cash store. We deliver the goods on a small payment, balance you pay in 8 equal monthly amounts. MAKE YOUR SELECTIONS NOW from our Christmas Catalog. You will find it a veritable gold mine of Xmas gift suggestions, and with its aid you can quickly select appropriate presents for all. Write for catalog today.

LOFTIS BROS. & CO. Dept. P221, 92—98 State St., Chicago
Diamond-Cutters, Watchmakers, Jewelers

"days that are no more," Our happy childhood looms up before us, for childhood is generally happy, even when there are privations. As life goes on, illusions gradually drop away from us and we see things as they really are. The pathos of life takes a firm grip on our hearts and the glamour of youth fades away.

To those who have lost most of their illusions, Christmas means sadness and loneliness. These are the people who should be remembered with kindness and cheerful words at this time. Go over the list of your acquaintances and pick out the people whom you know to be lonely, and if you can't send them a gift, at least send them a post-card with a few cheery words on it. The mere remembrance will go straight to their hearts, and although you may not know of it, there will be a grateful thought for you in the minds of those lonely people whom you have thus remembered. It is not the rich and happy ones of earth that need our remembrance; it is the ones who have lost their illusions.

Above all things, be kind at Christmas time. Speak a cheerful word to everyone, lest at this time of sad memories you might leave a wound where it is not intended. We are all more susceptible to hurts and unkind words when the bars of worldy influences are down, and those bars are much weakened just at this time. Taken up with our own affairs, as most of us are, we must not forget that there are sad and lonely people who can be deeply hurt by thoughtlessness.

So, in these days of merry-making, let us not forget to be good-natured, cheerful and kind, especially to the erring ones, for they feel every slight more keenly now, when the tender influences of the Christmas days is over all.

THE WORLD'S GREATEST HOLIDAY

How to Prepare for Christmas and How to Observe It

In all Christian nations, Christmas is a day of festivity and thanksgiving. Everywhere good cheer reign and the sending of Christmas gifts is still recognized in most countries as the proper mode of expressing personal regard. The Christmas season is also looked upon as the most fitting time for the exercise of charity and deeds of friendship. Here, as in other lands, a portion of Christmas day is spent in religious services, but aside from that, feasting and merriment prevails over the whole country.

There are many superstitious and curious customs connected with the coming of Christmas. It is believed in some parts of Europe that on Christmas Eve oxen kneel in honor of the manger, that bees sing a Christmas hymn, and that bells are heard from under the earth.

In Norway, the peasants extend their Christmas hospitality to the birds. They hang an unthreshed sheaf of grain on a pole outside the barn doors and this draws the sparrows and other small birds, where they feast and make merry.

Christmas is made a great feast day in most the European countries. Cheer and good-will prevail generally, enmities are forgotten for the time being and humanity seems to reach up to a state of exaltation seldom touched at other times.

In the United States the anniversary of the birth of Jesus is honored with solemn worship as well as social joy. In the large cities, the poor are provided with food and fuel, and the homeless are fed and clothed, "Down on the farm," the sturdy farmer gives the horses and cattle double rations, and even the chickens get an extra "feed."

There are various ways of celebrating Christmas in different parts of the world, but all nations who have the christian spirit unite in the one grand sentiment of "peace on earth, good will to men."

THE SPIRIT OF GIFTS

Everyone just now, even the ordinary prosiac and dull person, is laughing excitedly and looking musterious and smuggling bundles into closets and corners, while the children are fairly on tiptoe with expectation of what Santa Claus has for them in his great pack. The universal tide of mirth flows about all humanity. The blessed Yuletide is here once more.

Christmas sentiment finds expression in the exchange of gifts. One of the nicest things about this custom is the fact that everyone knows it is bound to come and there are twelve months in the year to prepare for Christmas. One who has any foresight can watch for hints long before Christmas of what family and friends would like to have for a present. It is just as easy to give what people want as it is to load them up with things for which they have no earthly use. But there are a great many people in this world who don't care what they give, so long as they can get the matter done with and off their minds. Misfit Christmas presents might be termed inappropriate tokens of regard which convey the idea of obligation. To express the real Christmas spirit, a gift at this time must be personal, chosen with a real meaning and full of a loving message. The sordid motive the thought of reciprocity, should never enter into the giving of a Christmas present. As much as possible, the idea of cost should be eliminated. A gift should mean the spirit of love and kindness, and one should not feel that he must make the gift a testimony to the fullness of his purse. A Christmast card sent with the right spirit is better than a costly gift which carries only a feeling of obligation.

What to Give a Boy

Think how much healthful fun a boy on the farm can have with a good gun. No wonder the gift a boy will prize most is a

STEVENS

It's a gift that will give pleasure for years. And it's useful. A boy with a Stevens Rifle will soon rid the farm of all rats and hawks and similar thieving pests. And he'll bag rabbits for the family table.

Every boy should know how to shoot. It's only the boy who doesn't know how to handle a gun, who meets with accidents.

Stevens Firearms are straight-and-true to the aim, hard-hitting, far-carrying. More marksmanship records have been made with Stevens Rifles than with any other.

Send for the **Stevens Catalogue.** See for yourself the superiority of all Stevens firearms—Rifles, Shotguns, Pistols. It will help you to choose the right style of gun. 5c. for postage brings it.

Your boy will also like **Dan Beard's book, "Guns and Gunning."** He'll learn about hunting, shooting, camping, etc. Sent postpaid, 20c. paper, or 30c. cloth cover—stamped in gilt.

If you cannot obtain the Stevens from your dealer, we will ship direct, express prepaid, on receipt of catalogue price.

Here's What Will Please a Boy or Girl for Christmas

Of all things the young people like, and long for, they'll get the most fun, and the most good, out of skates.

It's because skating is such fun—because it fills the lungs with so much beneficial air—that it does them more good than any other winter exercise.

It develops them all over—lungs, legs, the whole body; makes them strong, husky and healthy. So, let your boys and girls make the most of this great winter sport.

Give them a pair of Barney & Berry Skates for Christmas—the keenest, the truest, the best skates you can buy.

The kind which fathers for three generations have bought for their children.

These best-of-all Skates cost but little. Yet they'll give longer-lasting delight than any other gift. Think of the fun ahead—not only this year, but for years to come.

Skating is always plentiful. We're sure to get our full share of ice every year. If not in December, then in January and February.

You can get Barney & Berry Skates at almost any dealer's. In all styles. Should your dealer not have the particular kind you want, he will get them for you.

Our free catalog will help you choose the skates your boy or girl wants.

Write for it to-day, while you've time before Christmas.

BARNEY & BERRY
135 Broad Street, Springfield, Mass.

Barney & Berry Skates

CHRISTMAS SUGGESTION FOR MEN

An excellent Christmas present is offered by The Vegetable Shaving Cream Co., in an advertisement appearing in this issue. It consists of a shaving outfit usually costing $5 but the entire outfit is offered by them to our readers for only $1. Read their advertisement and write them for particulars.

A CHANCE FOR FARMERS

Here's a Splendid Way to Get a Big Farm Paper Easily

We will send you our great farm paper, absolutely free three months, if you do us a small favor. Just send names and addresses of ten good farmers and enclose 2-cent stamp. Address Valley Farmer, 515 Jackson St., Topeka, Kan.

FLOWER POST CARDS Free to You

In order to introduce our large illustrated monthly, The Epitomist, which is of interest to every member of the family, we make this big offer to you.

Send 10c for a six months' trial subscription and we will send you, prepaid, twelve beautiful flower post cards absolutely FREE. These cards are strictly high-class and are something entirely new. Each card represents a scenic view and has THE LANGUAGE OF THE FLOWERS worked out most beautifully in mottoes in flower designs. For instance, in this series the violets spell out the words "Faithfulness;" the sweet peas, "Wish You Joy;" Chrysanthemums, "I Love You;" roses, "Love," etc. You won't be disappointed, for these cards are not like any you ever saw, and REMEMBER, we have a surprise for everyone that sends for these cards. There are only a limited number, so send today if you want them. THE EPITOMIST, 55 Main St., Spencer, Indiana.

F. S. E. OFFICIAL DEPARTMENT

Farmers Society *of* Equity

(INCORPORATED)

This is a farmers society. Its chief object is to secure profitable prices for all farm crops to the producers thereof. Its other objects, plan of operation, etc., and constitution and by-laws can be obtained from the officers.

OFFICERS

President, J. A. Everitt, Indianapolis, Ind.
Vice-President, W. E. Greilich, Traverse City, Michigan.
Secretary-Treasurer, I. C. Rous, Indianapolis, Indiana.

DIRECTORS

President and Vice-President, and the following: N. M. Ashby, Sebree, Ky.; J. M. Myers, Ramsey, N. J.; R. Sherod, Keosauqua, Ia.; W. H. Mitchell, Hutchinson, Kan.; L. H. Johson, Attico, Ind.; S. W. Morris, Rochester, Minn.; A. G. Schmidt, Madison, South Dakota.

HEADQUARTERS
INDIANAPOLIS, INDIANA.

Please turn to page three of this number and see if a notice is marked. If it is, we want you to cut it out and send to us for UP-TO-DATE FARMING another year.

There is also a loose subscription blank enclosed in this paper. While we want you to use the one on page three if a renewal, because of the information it gives us, we hate to have the loose subscription blank go to waste. Won't you help us by using it to send a new subscriber?

Every present subscriber must be interested in the mission of UP-TO-DATE FARMING. Are you not enough interested to do this much and thus help a great movement that helps all the people?

* * *

The Farmers Society of Equity is spreading.

This is the time of the year to increase the frequency of your local union meetings. While the by-laws provide for meetings at least once a month, all locals should meet twice a month for the next three months and might well meet weekly.

The old trouble, how to make the local union meetings attractive, entertaining and profitable, is completely solved by the new features of the F. S. E. So valuable and interesting are these features that we believe the tendency now will be to err on the side of too frequent meetings rather than the opposite. This is a remarkable statement, but investigate and you will find it true. Local union meetings, if made what they can be by the new features provided in the Farmers Society of Equity, will be as great centers of attraction as your home or church, and will supply what cannot be gotten in either of these.

* * *

Is there an organizer of the Farmers Society of Equity in your community?

If you know there is none, won't you recommend a man? Or if you don't know and want to know, write to headquarters and we will tell you.

Five hundred organizers are wanted at once. The Farmers Society of Equity is organizing now to stay organized. The plan insures this as certainly as the great railroad systems, great insurance companies and great manufacturing corporations are sure of the perpetuity of their organizations and the effective working of their systems.

Satisfactory compensation can also be insured to those who engage as organizers and they will be put in a position where they can, through industry, and fidelity to their trust, be insured of a permanent position of increasing honors and emoluments.

A position as organizer of the Farmers Society of Equity is not confined to getting members only. Its scope is far broader than this.. The organizer or representative of this society will be one of the important personages in the community he represents and will be sought for counsel and advice on subjects affecting farming and the marketing of crops.

This movement is a serious one. It will not be built today to be thrown down tomorrow and forgotten next year. It will be built on the foudation of agriculture itself—it will be a component part of the business of agriculture—absolutely necessary to it and will be as permanent as that industry.

Therefore we fully appreciate the necessity for a sound plan of organization. Our plan is sound and it is capable of giving to agriculture what all other great industries have, viz., a system of marketing its products to supply the legitimate demand and no more.

To accomplish this our organizers are made an essential part of the great machine. We need them. They will be given to understand that the success of the movement depends on them as much as on the national headquarters, or the state, county or local unions. They will be well compensated for good work and since their positions will be growing in importance and profits to them, they will in turn be anxious to render good service and to continue in the enjoyment of a position second to none to be given by any company or institution, or county office.

Therefore we ask again: is there an organizer of the Farmers Society of Equity in your community? If not, please refer this matter to a capable, deserving man, one who is well acquainted with the people or who will cultivate their acquaintance. Notify headquarters of such a man in your community.

* * *

This number of UP-TO-DATE FARMING is sent to all old members of the society who did not renew their subscriptions for 1908.

It is not up to the usual standard—the usual standard is 24 pages—but it is the best we could do with the print paper in stock after the decision was made. Time would not allow getting more paper from the mill.

We say, "this number is sent to all the old members of the society who did not renew." Our experience proves that, except for the treachery and perfidy of about a score of people who were the enemies of the editor of this paper and of the society itself, practically all these people would have renewed their subscriptions.

All such are referred to page two of this number. Read it carefully. After being enlightened as regards the few things stated there, you can well afford to forget the past and let us all unite to make 1909 enough greater in education, organization and co-operation that we may count past troubles blessings in disguise.

Trust UP-TO-DATE FARMING to make up for all lost time. With the education that has reached every farming community in the country, and with the matchless plan of the Farmers Society of Equity, it is not going to be near as difficult to build up now as it was six years ago when scarcely an individual was ready to accept the truth or to receive the society. Keep in mind the stupendous results of the first four years.

National Organizer Sherman has sounded the people in many places and he reports that they are ready and waiting for the Farmers Society of Equity. They cannot see their Fredom and Independence through any other source. And this reminds us again of the great necessity for more organizers. The harvest is truly great, the harvesters must be great, too.

Farmers should be hopeful. There is more reason to hope now than ever before. The society has gone through the fire and for a truth it has come out stronger, better and more beautiful than before. This paper sees no excuse for souding a single note of discouragement. Always looking on the bright side, and having sublime faith in the ultimate triumph of truth, right and Equity we are more optomistic now than ever before.

OSCEOLA COUNTY (Mich) MEETING

The annual meeting of Osceola County County Union of the Society of Equity will be held in Reed City, Tuesday, Dec. 22, 1908, at 10 a. m. Let every member who was in good standing in 1907 or 1908 consider himself a delegate and attend the convention. At this meeting we must decide whether we will go with the F. S. E. or stay with the A. S. of E.—G. G. Schlegel, County, Sec., Hersey, Mich.

ORGANIZERS

The Farmers Society of Equity wants organizers. Any person who considers himself competent to present the grand principles of this grand movement should send at once for terms and particulars. With the instructions and assistance we will give success is sure to attend your efforts.

Don't conclude that this does not interest you. t does, or should interest every person whose interests are in agriculture, and others who have time to engage in an honorable and profitable business.

☞The F. S. E. has added some new features that furnish entertainment and novelty in local union meetings and which will serve to hold the interest of the members until enough organization is secured to accomplish the main object. This supplies what the Society heretofore has lacked.

FARMERS SOCIETY OF EQUITY, (Inc.)
Indianapolis, Ind.

Michigan Ladies Society *of* Equity

President, Mrs. James Howey, East Jordan.
Vice-President, Mrs. M. N. Drake, Trufant.
Secretary, Mrs. Bertha Hammond, Traverse City.
Treasurer, Mrs. Nellie Thompson, East Jordan.

NOTES OF THE SOCIETY

Rose Local

Rose Local met with the president, Mrs. Frank Kidder. Meeting opened in usual form—singing, prayer and Bible lesson. The president, vice-president, five members and three visitors were present. No sickness reported. Expressions of sympathy were recorded for sister Mrs. Nellie Thompson on the loss of her mother. In the communications read was one from the board of directors with plans for work. It was approved.

The resolution by the National Mass Convention that the ladies should orbzganize a National Society of Equity was read, and it was discussed. A vote showed all in favor of such a step. Mrs. Kidder, in a short address, reviewed the forward progress of the society.

Report was received from the delegate to the State convention at Traverse City.

An article in the Fort Branch (Ind.) Herald, published by Chas. A. Speer, and referring to the recent convention at Indianapolis, was read and discussed. The result was that the article was condemned and Speer was held as an object of derision. A unanimous endorsement was made of the Farmers Society of Equity and its National officers.

Mrs. Kidder, just home from a visit to the south, told how true and loyal the members are in the south and urged that we do all we can to become a strong organization of farmers' wives.

In new business, a box and shaddow social was arranged for to be given at Mrs. Murphy's on Dec. 4.

Meeting adjourned and our kind hostess invited all to the dining room where we enjoyed a bountiful supper with Mr. Howey and Mr. Kidder as guests of honor. This was voted an Equity supper because it did equal and exact Justice to all, and all did the same ti it.

MRS. JAMES HOWEY.

Golden Rod Local

This local met Nov. 11 with Mrs. Ella Johnson. Ten members and one visitor, Mrs. Cash, were present. Opened in usual form. Reading by Mrs. Ross, "The Old-fashioned Woman"; recitation by Mrs. Alice Shepard and Mrs. Carrie Lanway; question box, and closing hymn—Sweet Hour of Prayer. Next meeting with Mrs. Shepard. After the meeting, our hostess, assisted by Mrs. Danto, entertained us at an elegant supper where all also enjoyed a delightful social time.

On the Benefits of Organization

By Martha Myers, Evart, Mich.

DEAR EQUITY SISTERS:

In response to your request for plans and suggestions to help the work of our society I can only give thoughts suggested by my own limited experience.

In this practical age, women, especially farmer's wives, look for some direct benefit from joining a society which asks even a small part of their time and money, so much needed in their home. And we who have looked into this matter believe that Equity, rightly understood and applied, would bring a satisfactory benefit to its followers.

We have the privilege while our society is yet young, to engraft into it much that will make it a blessing in Uplifting, cheering and brightening the lives of the noblest of our nation's women, the class who, more than any other are the actual helpmeets of their husbands, the farmer's wives.

We have before us a large uncultivated field and our work seems to lie not in what to do, but rather in how to begin. We are so often told that farmers and their wives cannot be organized into a permanent union, and yet no other class could form so powerful a union if once organized and successfully managed. Much can be done where unions have been started to advance the society by members being true to each other in every way. Let outsiders see in our daily lives those to whom we are joined in this union are indeed our sisters, and while we are kind as usual to others, we are just a little nearer and dearer to our Equity sisters in business affairs, and in the joys and sorrows that come to each of our homes let us truly rejoice with those who do rejoice and weep with those who weep. Nor should sympathy alone be our limit, but in the practical and financial affairs let thise to whom the Lord has entrusted the five or six talents help the sister to whom perhaps but one has been given, and the result of such work, in bringing sunshine into our home of life will be an advertisement for our society which will endure through time and into eternity.

Let the public know we are on earth through the press. Use every oportunity to furnish our papers with spicy, well written accounts of the good things we are enjoying and the benefits we are receiving through equity. Let the outsiders feel that they are missing great privileges, and they will seek admission as members. Never permit gossips or unkind words or criticism in our unions. This miserable habit does more to bring discord into women's societies and clubs than all other causes combined. If a bright idea comes to us, let us in a kindly way make it known. It may help and be used by our officers who may act upon it and value it very highly. But if not, let us remeber that this sister has been elected to her position by popular vote and is no doubt doing the very best she can to fill her position creditably and our duty is to loyally support and assist her in every way in our power, and let our criticism be of the unspoken variety.

To my sisters, the board of directors I send greetings. I very much regret that I cannot meet with you but I hope and look for a very successful year through the fuller teachings, principle and practice of equity.

A HINT FOR CHRISTMAS

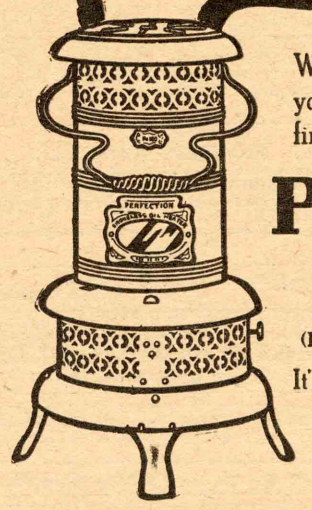
Just now parents are beginning to wonder what to give for Christmas. Wondering what will give a boy or girl the greatest delight.

Why not a good pair of skates?

There's nothing a boy or girl enjoys more than skating. And the invigorating air and the exercise do them an immense amount of good. Winter never fails to bring plenty of good skating weather—maybe not right at Christmas, but before the season is over.

Skates are a gift all parents can afford. If you'll send for the free catalog of Barney & Berry Skates, the kind which a boy or girl will like best, you'll find they cast very little. They're made in all sizes. Write to Barney & Berry, 135 Broad St., Springfield, Mass.

Glowing Heat
From Every Ounce of Fuel



When the mercury drops out of sight, and you just *can't* keep the house warm, you'll find it wonderfully convenient to use a

I back the Galloway to give **Genuine Satisfaction. If it is not everything it is claimed to be—if it does not do all that the best spreader ought to do—send it back, and I will return every cent of your money without question.**

I challenge the world to produce as practical, durable and all round satisfactory a spreader at any price as my

GALLOWAY'S

THE ONLY ENDLESS APRON FORCE FEED

WAGON BOX MANURE SPREADER

Take my hand and signature and bond on that—as legal b'nding as any contract ever made on earth. My Wagon Box Spreader is made in three sizes—capacity 50 to 60 bushels. It is built to last a lifetime and it fits any truck or high wheeled wagon—narrow or wide tread. It's the lightest draft and simplest machine made. For those who want a larger spreader, I have just perfected a 60 or 70-bushel pattern, complete with trucks. It's new. It's in a class by itself. It has all the merits of the famous Galloway Spreaders with some additional exclusive features that will interest you. It is 45 inches wide and has adjustable bolster stakes. Ask for full information about this new machine—all explained in my **New Free Spreader Catalog** for 1908-9.

YOU JUST WRITE ME ONCE. Just say on a postal or by letter that you want to get my **New Free Spreader Catalog** and my **Special Spreader Proposition.** I'll take care of you right.

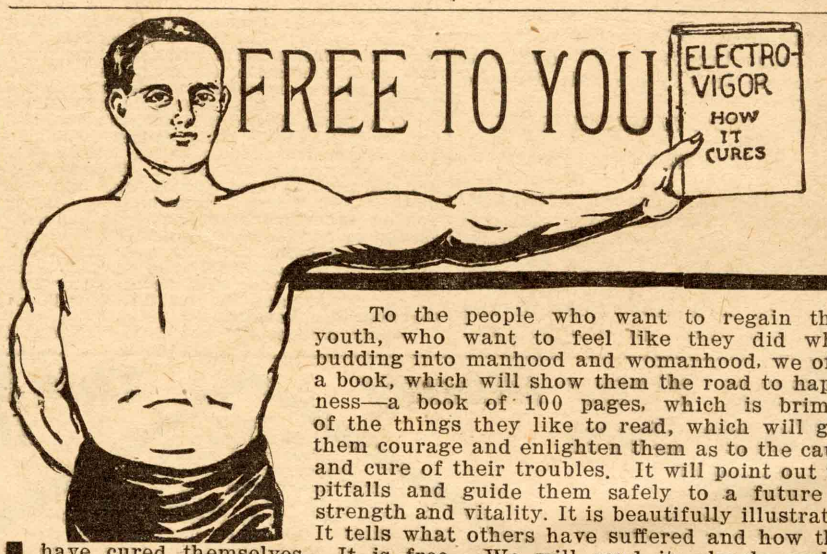
LATE IMPROVEMENTS IN STOVES

The newest and latest improvement in base burner construction is the hot air flue, which takes the cold air off the floor, passes it up through the stove, throwing out hot air at the top, creating a circulation that will change the air in a room 15 feet square every 40 minutes. This was not had by the old style construction. The Hoosier Stove Co. have just built the latest thing in this line. The hot air flue in Hoosier Stoves is guaranteed to have 54 cubic inches more heating capacity than any stove heretofore put on the market, and it is said, on account of this improved hot air flue, to heat at least one room more, with the same amount of fuel, than the old style make of corresponding size. One can easily see the advantage of getting a stove with those new improvements, as the saving in fuel will soon pay for its cost. The Hoosier Stove Factory is located at 161 State St., Marion, Ind. To anyone that will send their address on a postal they will mail free one of their 64 page catalogs, and quote their lowest factory price direct to you. They allow you to try a Hoosier Stove or range thirty days free, in your own home, and will send it to you freight prepaid, so that you are not out one penny. If you need a stove you should try one of these before buying.

STUART'S RUPTURE CURING BUSINESS VERY SUCCESSFUL

The Stuart Plaster-Pad Co., Block 59, St. Louis, Mo., have built up a large business on the Plaster-Pads, the newly patented support and cure for hernia (rupture) in only a short time. A few days ago, Mr. Stuart made the following remarks to a representative of UP-TO-DATE FARMING: "About a year ago a Reverend Father who has charge of a parish in St. Louis County called on us and we found he was suffering from a severe hernia (rupture). We explained the Plaster-Pads to him and he was at once impressed with their simplicity and immediately ordered them. Soon after we received another order from a Reverend Father in Kansas City, who wrote us that his friend who had charge of a parish near St. Louis had recommended the Plaster-Pads to him. Since that time we have received orders from Catholic institutions and the clergy from all over the United States. All the result of the first buyer who was well pleased. Truly a satisfied customer is the best advertisement. The mere fact that we send out a trial of our remedy without money or without price is conclusive evidence that the treatment must be meritorious. Every ruptured sufferer has a chance to try the remedy first and see if it proves beneficial. Our treatment has cured old men who had been suffering from rupture and the truss for years, in only a few days. As the Plaster-Pads have no buckles, straps or springs attached to them it is easily seen that they must work on the correct principle, and cannot cause the troubles due from the great pressure. We base our statements, not upon theory, but upon facts, and what the Plaster-Pads have already done prove that they are the greatest treatment the world has ever known for rupture."

Raphael Tuck & Sons of New York, London, and Paris, have done more than any other firm to promote the use of beautiful post card remembrances at Christmas and New Years. Their work in cards, calendars, books, etc., is the heighth of the printers' and engravers' are. Ask to see the Tuck production at all the best stores.



To the people who want to regain their youth, who want to feel like they did when budding into manhood and womanhood, we offer a book, which will show them the road to happiness—a book of 100 pages, which is brimful of the things they like to read, which will give them courage and enlighten them as to the cause and cure of their troubles. It will point out the pitfalls and guide them safely to a future of strength and vitality. It is beautifully illustrated. It tells what others have suffered and how they have cured themselves. It is free. We will send it, closely sealed, without marks, if you will mail us this coupon. If you are not what you ought to be, send for it today. Electro-Vigor, Dry Cell Body Battery builds up broken-down people, restores youth and vigor and makes them look and feel strong. It will cure Nervousness, General Debility, Weakness of any kind, Stomach, Heart, Liver or Kidney Troubles, Rheumatism, pains in the back and shoulders, Sciatica, Lumbago, Indigestion, Neuralgia, Constipation, Dyspepsia and all evidences of physical break-down in men and women.

"For many years I was afflicted with Prostatic trouble and the various remedies that I tried did me no good. At last I tried your Electric Belt and it cured me completely."

LOUIS KOHLMEYER.
914 Bayard Ave., St. Louis, Mo.

"I am a farmer sixty years old,, had been suffering with Nervousness, Back and Stomach Trouble for a long time before I purchased one of your Belts. I tried all the local doctors, but they could do nothing for me. You Belt cured me."

ADVANCE OF THE GRAND ARMY.

NAPOLEON'S name fills more pages in the world's solemn history than that of any other mortal. The advance of his Grand Army into Russia is the turning point in his career and marks the beginning of his downfall. The picture shown herewith from Ridpath's history, the original of which was displayed at the World's Fair at Chicago, marks but one event out of thousands which are fully described and illustrated in the world-famed publication.

RIDPATH'S HISTORY OF THE WORLD

THE PUBLISHER'S FAILURE placed in our hands the entire unsold edition of this monumental work. BRAND NEW, down to date, beautifully bound in Half-Morroco, which we must sell immediately. We are offering the remaining sets

AT LESS THAN EVEN DAMAGED SETS WERE EVER SOLD

We will name our price only in direct letters to those sending the coupon below. Tear off the Coupon, write name and address plainly and mail now before you forget it. Dr. Ridpath is dead, his work is done, but his family derive their income from his History, and to print our price broad cast, for the sake of selling these few sets, would cause great injury to future sales. Send Coupon Today. The sample pages are free.

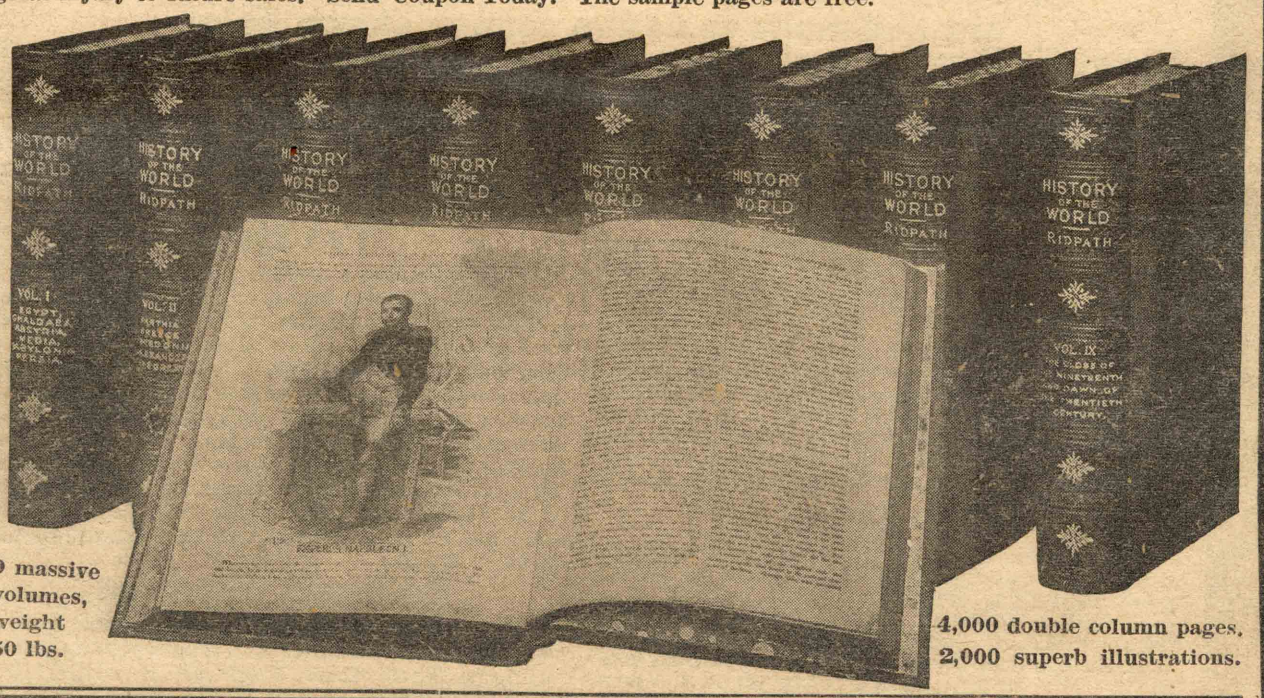
President William McKinley said: "I am familiar with the merits of Ridpath's History of the World, and cordially commend it to the scholar as well as to the plain people generally.

Prof. Warren, President Boston University, said: "I should be glad to see it placed in the library of every young person in the United States, and even in the English speaking world. In families where there are bright children it will render excellent service to the cause of popular intelligence."

Prof. Long, Supt. Public Schools, St. Louis, said: "I unhesitatingly commend Dr. Ridpath's History of the World as the ablest work on that subject which I have ever examined. The engravings, maps and charts are alone worth the entire cost of the set."

The Boston Post said: "John Clark Ridpath is above all things an historian. His historical works are accepted as standards in schools and colleges, as well as in business houses and homes. His style is simple, his manner charming."

The Christian Herald said: "No other work of its kind has ever supplied a history so well suited to the needs of all classes and conditions of men. We cheerfully commend this most popular and complete of all world histories to our readers.



9 massive volumes, weight 50 lbs.

4,000 double column pages. 2,000 superb illustrations.

RIDPATH'S enviable position as an historian is due to his wonderfully beautiful style, a style no other historian has ever equalled. He pictures the great historical events as though they were happening before your eyes; he carries you with him to see the battles of old; to meet kings and queens and warriors; to sit in the Roman Senate; to march against **Saladin** and his dark-skinned followers; to sail the southern seas with **Drake**; to circumnavigate the globe with **Magellan**; to watch that thin line of Greek spearmen work havoc with the Persian hordes on the field of Marathon; to know **Napoleon** as you know **Roosevelt.**

RIDPATH in your home means you need never spend a lonely evening. You can associate with the world's heroes; you can cross the Rubicon with **Caesar**, after which Rome was free no more. You can sit at the feet of **Socrates**, the loftiest genius of the ancient world. You can kneel at the shrine of **Lincoln**, "the greatest character of all time; the gentlest memory of our world." It is ennobling to commune with these children of destiny. To be associated with great men and events is to be great one's self, and you will add to your store of knowledge, which is power, and to the richness of your life. You owe it to yourself and family to place this book in your home.

Send Coupon Today

RIDPATH takes you back to the dawn of history, long before the pyramids of Egypt were built; down through the romantic, troubled times of Chaldea's grandeur and Assyria's magnificence; of Babylonia's wealth and luxury; of Grecian and Roman splendour; of Mohammedan culture and refinement; of French elegance and British power; of American patriotism and religious freedom, to the dawn of yesterday. He covers **every race, every nation, every time**, and holds you spellbound by his wonderful eloquence. Nothing more interesting, absorbing and aspiring was ever written by man.

RIDPATH throws the mantle of personality over the old heroes of history. **Alexander** is there; patriot, warrior, statesman, diplomat, crowning the glory of Grecian history. **Xerxes** from his mountain platform sees **Themistocles** with three hundred and fifty Greek ships smash his Persian fleet of over a thousand sails, and help to mould the language in which this paragraph is written. Rome perches **Nero** upon the greatest throne on earth, and so sets up a poor madman's name to stand for countless centuries as the synonym of savage cruelty; **Napoleon** fights Waterloo again under your very eyes, and reels before the iron fact that at last the end of his gilded dream has come. **Bismarck** is there, gruff, overbearing, a giant pugilist in the diplomatic ring, laughing with grim disdain at France, which says, "You shall not." **Washington** is there, "four-square to all the winds," grave, thoughtful, proof against the wiles of British strategy and the poisoned darts of false face friends; clear-seeing over the heads of his fellow-countrymen, and on into another century, the most colossal world-figure of his time.

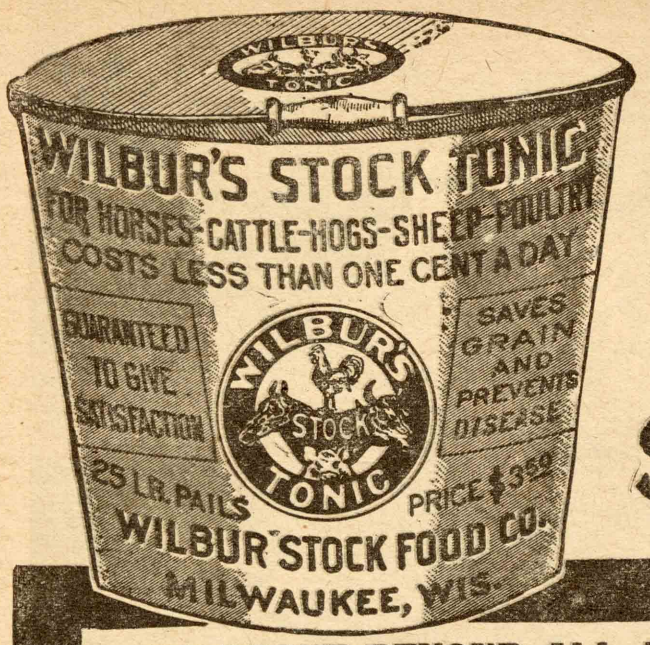
UP-TO-DATE FARMING

200,000 AMERICANS OWN AND LOVE RIDPATH



FREE THIS $3.50 PAIL

TO PROVE BEYOND ALL DOUBT TO EVERY INTELLIGENT STOCK RAISER THAT

WILBUR'S STOCK TONIC

Is the World's Greatest Conditioner and Feed Saver we will actually give this 25-lb. Pail Absolutely Free where we have no agent, to Every Reader of this Paper who fills out and mails to us the coupon shown below

What Wilbur's Stock Tonic Is

NEARLY a quarter of a century's actual experience has proven beyond all doubt that Wilbur's Tonic is a money-maker for feeders. We KNOW THIS. It has been PROVEN to us thousands upon thousands of times in the most forceful manner. We want to convince YOU and are willing to do it AT OUR OWN RISK.

You know the value of the pasture for any kind of stock: how it keeps the animals in good condition—nature's own way of doing it. There is no argument about the value of the pasture, but it does not last the year 'round. We prepare a tonic which, mixed with grain and fed to stock, furnishes in stall and feed box, in the proper proportion, the ingredients of pasture diet, invigorates and fattens stock at small enough cost to make the tonic a money-making investment for the owner of one cow, horse, hog or sheep, and a proportionately larger one for the owner of thousands of head.

For Cows

You know when the pasturage goes down in the fall, the milk goes, the butter goes, the flavor goes, until all are shortest when the price is highest. Wilbur's tonic invigorates cows; it supplies the needed roots, barks and leaves of the pasture, sustains the flow of milk and color, quantity and flavor of the butter. Take a cow right off the pasture, feed her Wilbur's Tonic in the stall and she will show very little loss of milk, and one cent's worth of Tonic per day saves one dollar's worth of grain per month.

For Horses

Wilbur's Tonic builds up run-down horses, prevents colic and keeps them in good appetite. If keeps the bowels loose, water clear, blood cool and in a healthy condition. They are always ready for work. Wilbur's Tonic makes them relish their food, keeps the hair smooth and sleek and prevents that rough looking coat. It is a pure vegetable food, positively prevents disease, and makes horses strong, large and full of life. Wilbur's Tonic should be fed mares while they are suckling the colt and mixed with the colt's grain while weaning. It will prevent scour and keep them healthy and growing. Stallions should be fed Wilbur's Stock Tonic during the standing season every day. When out of the standing season, feed Wilbur's Tonic two or three times a week, to keep them regular and healthy.

For Hogs

Hogs, you know are the most susceptible animals to contagious disease. But you know, too, if they escape contagion, they are kept cheaper than any other stock. If you keep your hogs healthy they can resist contagion, will fatten quickly and cheaply. If they get sick and refuse to eat you know how quickly they will die. Nothing will save them; medicine is useless. To keep them healthy you must feed them something they will eat, and something that will satisfy the demands of their systems, We believe that there is only one thing in the world that will do this, and that is Wilbur's Tonic.

Prevents Abortion

By counteracting colds, and soothing the nerves while the mother is in a delicate condition, Wilbur's Stock Tonic PREVENTS ABORTION and saves for the breeder at least one-half more of his increase. Wilbur's Stock Tonic, fed in small quantities to young animals, will make them grow large, strong and fat.

Wilbur's Tonic

It is not medicine. It is a pure vegetable conditioner, made from selected barks, roots and seeds. For calves you are raising, or ones you are fattening for veal, you can obtain the most wonderful results by using one-half measure of Wilbur's Tonic, mixed with one pint of ground oats or corn meal.

Our Responsibility

Nearly a quarter of a century in successful business has given us a very enviable position in the business world. Any banker can tell you whether we are responsible, and the publishers of any large agricultural paper can tell you whether we do as we agree. Further than this, we can refer you to any bank or wholesale house in Milwaukee, or to R. G. Dun & Company, Bradstreet, or any other commercial agency, and the First National Bank of Milwaukee in particular. Ask your local banker.

$1,000 REWARD

Remarkable Letter Received by Editor of Up-to-Date Farming.

A few days ago the Editor of this paper received the following letter from Mr. F. P. Wilbur, President of the Wilbur Stock Food Company, Milwaukee, Wisconsin.

Editor, Up-to-Date Farming,
Indianapolis, Ind.

Dear Sir: Enclosed please find a few letters selected at random from thousands on file in my office, all of which were sent to us without solicitation. You will notice that these letters are all from intelligent stock raisers who have used Wilbur's Stock Tonic and testify that it is the greatest conditioner, feed saver and preventive of disease in the world.

Now in order to prove beyond all question to your readers that Wilbur's Stock Tonic will give the wonderful results mentioned in these letters I hereby authorize you to print a few of the letters in your paper and I also unconditionally agree to pay $1,000.00 cash to any man, woman or child who can prove that these letters were not sent to us voluntarily, without solicitation by us or that the original of any or every letter you publish is not on file in my office, and my files are open to inspection at all times. Furthermore, I want every reader of your paper who feeds stock to try a 25-pound pail of Wilbur's Stock Tonic ABSOLUTELY FREE and find out for himself what a money maker my tonic is.

Yours very sincerely,
F. P. WILBUR, President."

The Editor of Up-to-Date Farming has selected the letters printed below from those sent in by Mr. Wilbur and can only add that any reader of this paper who owns stock and fails to take advantage of Mr. Wilbur's generous offer of a $3.50 pail of his tonic absolutely free is missing a grand opportunity.

The Wilbur Stock Food Company has been in business for 25 years and bears a reputation for honesty and fair dealing second to none. The following letters and $1,000.00 offer to prove that they are genuine should convince the most skeptical that Wilbur's Tonic is a wonderful conditioner and profit maker.

Read These Letters Carefully

Wilbur Stock Food Company, Milwaukee, Wis.

Gentlemen: Your Stock Tonic is more than I expected it would be. There is so much poor stuff put off on the farmers that I had lost all faith in any kind of stock tonic. I thought at first that yours was so dear I could not afford to use it, but when I received the 5 pails and found that one teaspoonful was actually a dose, not a handful as I had used of the other tonic, I find now that your Stock Tonic only costs about half the price of the other stock tonic that is inferior to yours.

I find it works on the bowels and keeps them open and in good condition, and don't weaken the kidneys as most other stock tonics I have used do. You may think I am writing you a long love letter, but I cannot help from telling you your Stock Tonic is just what you advertise it. I sold two pails the next day at home before noon.

You may send me 5 pails more of your Stock Tonic, and oblige. Yours truly,
Lilley, Mich. E. L. GORDON.

Wilbur Stock Food Company, Milwaukee, Wis.

Gentlemen: We have been using your free pail of stock tonic since March 1st, and can recommend it to anyone as a sure thing and no fake. Our farm team has gained so much in flesh since we began feeding your tonic, that we will have to get larger collars for them. They have not had any change in their daily ration in weight or quality to make this change, but your STOCK TONIC. Yours truly,
MRS. F. W. DAVIDSON.
Waupaca, Wis., R. No. 2.

Wilbur Stock Food Company.

Dear Sirs: I thought I would drop you a few lines to let you know I am well pleased with my pail of stock tonic and those who bought of me seem to be pleased with theirs. We received very good results from your tonic and our stock are in better condition than they ever were. They look as though they had been on clover pasture. No worms and no ailments in any way. My horses have a good appetite and look well and are ready for work and they all have a good, clean coat as if they had just shed off. My friends who tried your tonic all tell me the same about their stock. We fed it to horses, cows, hogs and chickens and they are all in good condition. A number of parties have been inquiring for the tonic, but I had to tell them I was out. Please make me prices on larger quantities. Yours respectfully,
HARRY K. WISEMAN.
Oblong, Ill., R. D. No. 2, Box 87.

Wilbur Stock Food Company, Milwaukee, Wis.

Dear Sir: I am well pleased with the Tonic and I do not care if I sell any of it or not, as I have a good many stock to feed it to. We fed it to our cows and we are making just double the amount of butter. I will take great pleasure in advertising your Stock Tonic and will guarantee it to everyone who wants to use it. I think I can sell lots of it to my friends. I would not take $50.00 for the five pails I bought, if I knew I couldn't get any more. Respectfully,
Vera, Okla. R. E. L. JORDAN.

Wilbur Stock Food Company, Milwaukee, Wis.

Gentlemen: I would like to handle your goods because it is the only tonic and appetizer, also preventive of Hog Cholera I have ever used. Everything I fed the tonic to went right on thriving, and will send you an order for another pail soon. If I had time to act as your agent I could sell a car load for hog cholera alone. Yours truly,
Groveland, Ga. C. N. CORNELL.
